The bill would not allow any Federal water user to obtain release from acreage limitations by arguing reliance on general Bureau of Reclamation policy statements or Bureau representations made to other contracting entities. It defines "written representations" restrictively, including only those representations that are addressed to or logically encompass a specific project, district, or other contracting entity. And, for purposes of eliminating the cloud presently hanging over the title to acreage in these districts, the Secretary of the Interior would be required to issue a recordable document which states that the land is no longer subject to certain restrictions—in legalese, that the release is "appurtenant" to the land.

As my colleagues know, several bills have been introduced that would affect one aspect or another of the current controversy involving reclamation. Let me take a moment to explain why, in my judgment, the legislation I have just introduced merits expeditious consideration and broad bipartisan support in the House.

For many years, the Bureau of Reclamation has interpreted reclamation law to allow for the release from acreage limitations of some or all water users whose allocated construction costs were repaid. Reclamation water was not available to holders of excess lands unless all allocated costs were fully repaid. Pursuant to this long-standing Bureau policy, contracts were entered into with irrigation districts and individual entities—individuals, partnerships, and corporations—which specifically provide that the excess land provisions "shall cease to operate when the construction charge obligation allowable to such land has been paid in full to the United States." Because of various court decisions and administrative interpretations, the Bureau has ruled that the "pay-out" provisions in 50 years of contracts are now inoperative.

In the Klamath project alone—a Federal reclamation project partially in my congressional district—over 170 contracts exist with irrigation districts and individual entities which either contain, or have been represented to be subject to, "pay-out" provisions. It must be remembered that these contracting bodies agreed to the restrictions and conditions of the reclamation contracts only because of Government assurances that the restrictions would terminate upon repayment of the allocated construction costs. In fact, in many cases, the reclamation contract was proposed and entered into primarily to facilitate the Government's own interests. Contracting individuals and other entities agreed to forego existing water rights and allow the Government to undertake its reclamation project only after strict assurance that a "pay-out" provision would be included.

Most of the contracts in the Klamath project have been fully paid out—some for over 20 years. During this period there has been general compliance with the existing reclamation laws, as interpreted by the Bureau of Reclamation. Both the water users and the Federal Government have recognized and acknowledged that the paid-up entities were no longer subject to excess land provisions. Prospective purchasers of land within these districts have often inquired whether a release had in fact been effected and were always assured by the Bureau that it had been. Without this legislation, these purchasers would be required to dispose of their excess acreage at only a fraction of the price at which it was purchased.

I recognize, Mr. Speaker, that our reclamation laws are currently the subject of intensive reviews being conducted by the administration and by Congress. The administration hopes to send to Congress a package of recommended changes soon after March 1, 1978, and in January the House Interior Subcommittee on Water and Power Resources intends to hold field hearings to better inform itself on what changes will be needed. One can anticipate with some certainty that throughout the next year the subcommittee will intensively study the basic acreage provision itself, the residency requirement, the regulatory definitions or "neighborhood" and "family," a class I equivalency factor and many other provisions which currently constitute our reclamation laws. It is my hope, however, that Congress will not wait and include today's "contract-ratification" proposal in this comprehensive revision. Whether or not the Government should honor its word to those who have relied thereon, is not an issue to be relegated to a general discussion of what our reclamation laws should accomplish. Congressional action should not depend upon an examination of the accuracy of the Bureau's former interpretations of reclamation law. The only issue is whether or not the United States Government does indeed intend to keep its word to the Federal water users in our Western States.

Mr. Speaker, it is my sincere hope that this legislation can be adopted in a nonpartisan and expeditious manner. Thank you very much.

BANKRUPTCY HEARINGS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. EDWARDS of California. Mr. Speaker, the Subcommittee on Civil and Constitutional Rights has scheduled hearings in December on the court and administrative structure for bankruptcy cases. I wish to announce the dates of the hearings, the witnesses we have invited, and the scope and nature of the hearings, so that all interested members, groups, and individuals will have an opportunity to attend or to submit their views to the subcommittee. Though we will not have time to schedule any additional witnesses for oral testimony, we welcome written comments for the record on this important aspect of the bankruptcy revision legislation. The record will remain open through January 6, 1978:

SCHEDULE

Monday, December 12, 1977—2:00 p.m.:

Harold Marsh, Former Chairman of the Bankruptcy Commission.

American College of Trial Lawyers (The Honorable Simon Rifkind, Immediate Past President).

J. Stanley Shaw, Esq., Long Island, New York.

Tuesday, December 13, 1977—9:30 a.m.:

The Honorable Shirley M. Hufstedler (9th Cir.).

Commercial Law League of America, (Robert B. Chatz, Esq., President; Louis Levit, Esq.).

Robert Morris Associates (John W. Ingraham, Citibank, N.A.).

Tuesday, December 13, 1977—2:00 p.m.:

Judicial Conference of the United States (The Honorable Wesley E. Brown (D. Kans.), Chairman, Judicial Conference Ad Hoc Committee on H.R. 6; The Honorable Edward Weinfield, (S.D.N.Y.), Chairman, Judicial Conference Committee on Bankruptcy Administration; The Honorable Ruggero Aldisert (3d Cir.)).

National Conference of Bankruptcy Judges (The Honorable Conrad Cyr (D. Me.), Immediate Past President; The Honorable Joe Lee (D. Ky.); Arthur Moller, Esq.).

American Bar Association (Stanley Chauvin, Esq., Ky., Chairman, AB Task Force on Bankruptcy Law Revision).

Wednesday, December 14, 1977—9:30 a.m.:

The Honorable Griffin Bell National Bankruptcy Conference (George M. Treister, Esq., Los Angeles; William Rochelle, Jr., Esq., Dallas; Professor Frank Kennedy, University of Michigan Law School; Professor Vern Countryman, Harvard Law School).

NATURE AND SCOPE

The following letter is being sent to all witnesses that will testify:

DEAR ——— ———: We are looking forward to your testimony before the Subcommittee on Civil and Constitutional Rights during our hearings on the court and administrative structure for bankruptcy cases.

The purpose of the hearings is to examine how the substantive bankruptcy law changes in title I of H.R. 8200 can be carried into effect. Title II of H.R. 8200 proposes one system. We wish to explore others as well.

The other important aspect of title II of H.R. 8200 is the establishment of United States trustees. We expect that United States trustees will solve, to a large degree, the first problem listed above. There is little disagreement over the establishment of the system. However, the proper placement of United States trustees remains a difficult question. We would like you to address that issue also.

We will appreciate your informed views at the hearing, and hope to have your prepared statement as soon as your schedule allows, so that we may be able to discuss your ideas in sufficient depth.

With kind regards,

Sincerely yours,

DON EDWARDS,
Chairman, Subcommittee on Civil and Constitutional Rights.

WHY THE RUSSIANS ARE HAPPY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. DERWINSKI. Mr. Speaker, while the news media is concentrating on the recent developments in the Middle East and the problems of southern Africa, one should not forget the status of the SALT talks between the United States and the U.S.S.R.

Frankly, I am concerned. The administration is so eager to reach agreement for agreement sake that our national security could be affected.

An editorial in the Chicago Tribune of December 5, warns of this possibility, and I insert it at this time for the attention of the Members.

WHY THE RUSSIANS ARE HAPPY

Sources in the State Department said recently that United States relations with the Soviet Union have improved in the last six months. They think the strategic arms limitations negotiations have had something to do with it. We think so, too, although we certainly don't feel any of the State Department's euphoria.

If Paul Nitze, a former deputy secretary of defense, is right, the Russians have ample reason to be pleased with us. He charges that the U.S. has been overly generous in its SALT concessions to the Soviet Union and that this will have an adverse effect on future national security. Although he has been criticized for this, we have great confidence in Mr. Nitze's judgment. In fact, we have considerably more confidence in him than in President Carter, who recently said: "A SALT II accord must spell out a fixed and sensible balance. Thereafter, a SALT accord would advance us toward the final goal of reducing nuclear weapons to zero."

A President who talks of "zero" nuclear weapons is being unrealistic, for several reasons, and might logically be expected to encourage the kind of SALT concessions which alarm Mr. Nitze. As columnist Patrick Buchanan pointed out on our Perspective page last Tuesday, a U.S. without nuclear weapons "becomes indeed the 'paper tiger' of Mao's phrase." Without nuclear weapons, Mr. Buchanan said, "God would again be on the side of the big battalions. And today the big battalions are Asian, Communist, and Russian, not American." We suggest that Mr. Carter, an advocate of reduced defense budgets, reflect upon that. We do not like living in a world of nuclear weapons any more than anyone else, but we know that in an atomless world we are going to need far more big battalions than the President seems to think.

Mr. Carter also favors an end to nuclear tests, and Mr. Brezhnev has obliged him recently by proposing one. We suggest that the President heed the warning of his defense secretary, Harold Brown, that the land-based Minuteman missile force will become vulnerable to Soviet nuclear attack by the mid-1980s. Without tests, how will we develop a replacement?

It is not surprising to hear reports that the Defense Department, worried about that impending vulnerability, has begun a major review of our strategic defense posture. We hope this study is conducted soon and in great detail and that its findings are enunciated clearly and heard by the American people. If the impending SALT II agreement in itself is not fatal to this country, certainly the attitudes of the Carter administration can be. We cannot hope to survive in a superpower world unless we remain as potent as those who would destroy us. Idealism is not enough to deter a Soviet attack.

NEW YORK POLICE CHIEF MICHAEL J. CODD

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MURPHY of New York. Mr. Speaker, the city of New York is about to lose one of its most valuable public servants. Police Commissioner Michael Codd's second retirement marks the end of a most remarkable career, the termination of a 36-year career during which he rose the entire distance from the rank of patrolman to chief inspector—the highest uniformed rank—when he first retired in early 1973, and was later called out of retirement to become commissioner at Mayor Beame's request.

Mike Codd was not only a good policeman; he was also a good administrator. The New York Police Department is a multimillion dollar enterprise with an extremely intricate institutional structure. It is not only constantly changing within itself, but within the environment of the Nation's largest city. It is a position which requires tough executive leadership, and those are the qualities which he brought during his tenure.

It is not an easy job, but his supreme handling of such emergency problems as the power blackout and the city's fiscal crisis which forced huge layoffs and other "economy" moves within the police department, has brought the city a tradition of quality leadership which will be hard to match. His has been an administrator known to be tough, honest, and highly deserving of the public's confidence.

The words which he himself chose to describe the department's performance during recent times of crisis are an equally fitting tribute to his career: He rose to the challenge and served the city magnificently.

EXPERTS PREFER NUCLEAR ENERGY OVER SOLAR ENERGY

HON. TOM BEVILL

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. BEVILL. Mr. Speaker, I read with great interest a recent news story out of Miami concerning some energy conclusions of 14 of the world's leading scientists.

At a nuclear energy conference in Miami, the scientists called for expanded development of nuclear energy as a major means of meeting growing energy demands of the immediate future.

The scientists concluded that because of the cost factor involved in making solar energy practical in the near future, our major energy efforts should be directed toward nuclear energy systems.

For those of us concerned with exploring every avenue for increased energy production, I would strongly recommend the contents of the accompanying article.

Experts Push N-Energy Over Costly Solar Work

Miami.—Fourteen of the world's leading scientists have concluded solar energy is too expensive and called for stepped up development of nuclear energy, including the fast breeder reactor program vetoed by President Carter.

The conclusions were contained in a position paper simultaneously released yesterday at Miami, Tokyo, Paris and Montreal.

The group includes four Nobel laureates and Stanford University's Dr. Edward Teller, father of the H-bomb. Floyd Culler, director of the Oak Ridge National Laboratory, and Alvin Weinberg, of Oak Ridge, also took part in the conference.

The 14 gathered at Fort Lauderdale, Fla., last week at the invitation of the University of Miami for a five-day "International Scientific Forum on an Acceptable Nuclear Energy Future of the World." A 14-point white paper was drafted by the group at the close of the meeting. Its contents were disclosed yesterday.

The paper acknowledges there is a danger that nuclear power facilities will be converted to production of weaponry. But the scientists concluded that proper precautions could prevent that. It found the threat of nuclear accidents insufficient to abandon nuclear power projects.

The paper said fast breeder reactors, which President Carter opposes for fear of nuclear bomb proliferation, are among a number of "candidate systems" to replace current methods of nuclear power production.

Dr. Behram Kursunoglu, director of the University of Miami's Center of Theoretical Studies, who was host to the conference, said yesterday solar energy is impractical in the foreseeable future because in addition to its cost, it takes up too much space.

He estimated that nuclear fusion (harnessing the hydrogen atom) may be impractical for as much as 20 years. But he said nuclear fusion might be combined with existing nuclear fission techniques into an acceptable, efficient hybrid system before that.

CLARIFYING THE INTENT OF CONGRESS: AUTHORIZING ACCESS ROADS FOR THE GREAT RIVER ROAD

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. OBERSTAR. Mr. Speaker, today I am introducing a bill to authorize access spurs along the Great River Road to cross the Mississippi River.

The Great River Road is a recreational and scenic highway, running parallel to the Mississippi River from Lake Itasca in Minnesota to the Gulf of Mexico. It was established by section 14 of the Federal-Aid Highway Act of 1954, Public Law 83–350. Federal funding for the Great River Road was first authorized by the Federal-Aid Highway Act of 1973.

The 1973 act provided that Federal funds could be used on only one route parallel to the river. It was the intent of Congress that there not be two parallel roads. However, States are allowed to construct the Great River Road alternate on the other side of the river with their own money.

On November 22, 1976, the Federal Highway Administration (FHWA) issued regulations to govern Great River Road construction. Aside from the one route parallel to the river, their regulations provide for "access spurs to areas of scenic enhancement proximate to the Mississippi." The FHWA has interpreted the prohibition against roads on both sides of the river to mean that these spurs cannot cross the river. The FHWA feels it needs a specific expression of congressional intent before it allows access spurs to cross the river.

The result of the FHWA regulations has caused a reduction in the scenic and recreational value of the Great River Road. The purpose of the road is to provide for greater accessibility to places of interest along the river. Access spurs enhance this accessibility. But when those places of interest happen to lie on the other side of the river, no access is provided.

To remedy this situation, the legislation I am introducing specifically provides that access spurs may cross the river, where necessary. The bill does not allow Federal funding of either new bridges across the river or two parallel roads along the river route and does not require new authorization or appropriation.

Mr. Speaker, there are countless places of scenic, historical, and recreational interests along the Great River Road whose esthetic and cultural value should be made available to all Americans.

DISPLACED HOMEMAKER ASSISTANCE ACT

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mrs. BURKE of California. Mr. Speaker, today I am introducing legislation which will amend the Comprehensive Employment and Training Act of 1973 (CETA) to include a program of assistance for displaced homemakers.

This amendment follows the conclusion of House and Senate hearings on H.R. 28 and S. 418, respectively. I am particularly pleased to have my esteemed colleague, AUGUSTUS HAWKINS, chairman of the Employment Opportunities Subcommittee of Education and Labor, as a cosponsor today.

To a great extent, the problems of today's displaced homemakers reflect the dramatic changes in our society. Today, nearly one out of three marriages ends in divorce. With the continuing trend to no-fault divorce, many women are suddenly finding themselves alone and independent, a status for which they are completely unprepared. Alimony is rapidly becoming a relic of the past. The National Commission on the Observance of International Women's Year discovered that only 14 percent of divorced women receive alimony and within this group, only 46 percent receive alimony regularly. The trend in many States with divorce reform legislation on the books is to limited alimony, alimony which is granted for a specified period of time, for example, 5 years, at the conclusion of which time the women are expected to be self-supporting.

Widowhood presents other difficult problems for older women. Survivors' benefits vary enormously. Often, the carefully developed plans for retirement are found painfully inadequate in the light of galloping inflation. Insurance money ordinarily covers only a few years of living expenses. Presently, there are four times as many widows as widowers. The life expectancy of women is 75 years compared to 67 years for men. The painful reality is that the older women become, the more likely it is that they will be on their own.

This tragic situation is compounded by a marked departure in the customs of previous generations. In the past, there were fewer divorces and widows were taken in by relatives. Today, because of the mobility of families, differences in lifestyles and smaller homes, this solution is often impractical.

The displaced homemaker cannot turn to the usual sources for temporary financial relief. Even though she is unemployed, she does not qualify for unemployment compensation. Under present law, if she is divorced after having been married less than 20 years, she may not qualify for social security benefits. If she has no children under age 18, she will be ineligible for aid to families with dependent children.

Having fallen through the cracks of every income security program devised, displaced homemakers are left to fend for themselves in the job market. I need not tell you that the middle-aged woman who has spent her adult life in the traditional role of homemaker finds it extremely difficult to make the transition from dependence on a family breadwinner to being self-supporting. Aside from the psychological adjustments, she may not be able to overcome the obstacles of the job market. Her lack of recent paid work experience combined with her age and sex make her chances of immediate employment dim in a youth-dominated culture. She may never have had to look for a job in her life and is confronted with such problems as conducting a job search, writing a resumé, competing with younger workers and mastering the technology of today's business world.

The most recent statistics compiled by the Bureau of Labor Statistics indicate that in November 1977 there were 280,000 unemployed women aged 55 or older. That statistic, however, includes only those who are actively seeking work. Many displaced homemakers are so traumatized by their first ventures into the job market that they retreat to lives of quiet desperation. Some turn to alcohol, others to prescription drugs to ease the burden that has been placed so unexpectedly upon them.

Displaced homemakers have, for some time, been isolated individuals desperately in need of assistance. However, many have recently found themselves an organizational vehicle in the Alliance for Displaced Homemakers, whose coordinators Tish Sommers and Laurie Shields, are themselves displaced homemakers. Ms. Somers and Ms. Shields have forged a network of displaced homemakers that stretches across this country and into every State in the Union. It is small wonder that in a very short time, displaced homemakers legislation has been adopted by 14 States and introduced in a number of others.

Having become acquainted with the problems of displaced homemakers through my contact with the Alliance for Displaced Homemakers, I introduced H.R. 28 to assist displaced homemakers during their difficult readjustment period. H.R. 28 provides for the establishment of 50 multipurpose centers to offer job training and placement services, counseling and referrals in health care, education, legal assistance and financial management, as well as outreach and information services relating to already existing programs.

I realize that Government resources are limited and that they must be deployed as efficiently as possible. For this reason, I have drafted an amendment to the Comprehensive Employment and Training Act of 1973 which will come before the House Employment Opportunities Subcommittee early next year for reauthorization.

My amendment retains the basic provisions of H.R. 28 in that it provides for the establishment of a minimum of 50 multipurpose service centers for displaced homemakers which would provide job counseling, training and placement services for work in both the public and private sector. It provides referrals for existing services in health, legal assistance, education and financial management. Additionally, provision is made for payment of stipends to those demonstrating financial need.

I am aware that in the past, CETA has not been particularly responsive to the needs of older workers. Research done by Ms. Sommers indicates that although CETA serviced 1.5 million persons in 1975, only 3 percent of that number were age 55 or older, despite the fact that from the fourth quarter of 1973 to the first quarter of 1975, unemployment more than doubled for persons age 55 and older.

Many CETA programs have not been designed to meet the needs of displaced homemakers simply because they were intended to move persons from the welfare rolls into the job market. Others were devised to take care of the large numbers of unemployed workers following the long recession we recently experienced. Displaced homemakers, because they are older, have never worked or are not currently receiving Federal assistance, have not been perceived as a group in need of assistance.

Because CETA programs funded under title I, II and VI have not been attuned to the needs of older workers in general and displaced homemakers in particular, I have drafted my amendment to place an assistance program for displaced homemakers under title III, which serves designated groups in need of special assistance. Funding would be available through title III to nonprofit and community-based organizations which have to date been the most responsive to the needs of older women.

I am confident that this amendment will enable displaced homemakers to receive the assistance they need without duplication of existing services or agencies and I look forward to action on this proposal early in the second session of the 95th Congress.

Thank you.

CLINCH RIVER VETO: A BAD DECISION

HON. MORGAN F. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MURPHY of Illinois. Mr. Speaker, President Carter has cast his first veto since he took office as President. On November 5, the President vetoed a bill authorizing $80 million for the experimental breeder reactor at Clinch River, Tenn.

The President's decision is well intentioned but poorly reasoned and badly timed, given our current energy problems. Carter justified his veto by saying that the breeder reactor would encourage the spread of nuclear weapons. In addition, Carter charged, the breeder would be "technically obsolete" and "economically unsound" once it was constructed. These charges are untrue.

Mr. Speaker, I would like to draw my

colleagues' attention to an article I have written on the Clinch River project, which responds to the President's criticisms of the breeder reactor. The article appeared in the Daily Calumet on November 18, 1977:

JIMMY TAKES FIRST VETO ACTION

(By Representative MORGAN F. MURPHY)

President Carter, in what has aptly been called a "retreat from reality," has cast his first veto since he assumed the Presidency. In an attempt to scuttle the nation's breeder reactor program, Carter vetoed a bill Nov. 5 that authorizes $80 million for the experimental breeder reactor at Clinch River, Tenn.

Carter sent the legislation back to Congress, saying that approval of the Clinch River project would undermine efforts "to prevent the proliferation of nuclear weapons" throughout the world. Carter further charged that Clinch River would be a "large and unnecessarily expensive project, which, when completed, would be technically obsolete and economically unsound."

Carter had to veto a $6.7 billion energy research and development bill to stop the funding of Clinch River. Fortunately, the President's veto may not be enough to kill the breeder reactor program. That's because later this month Congress will send Carter another bill appropriating $80 million for the breeder reactor and almost $7 billion for a host of other programs.

Carter's only alternative, short of vetoing the entire appropriations bill, would be to "impound" the breeder funds—that is, refuse to spend the money. But under a 1974 law, Congress has 45 days to overturn the President's decision by a majority vote in either house.

Carter's veto of the Clinch River project is well intentioned but poorly reasoned and badly timed. The President cited the danger of nuclear proliferation, noting that breeder produces (or "breeds") plutonium, a fuel which can be used to construct atomic bombs. But Carter's decision to halt the breeder does not really reduce the risk of nuclear proliferation, since it affects only the use of plutonium in the U.S. The danger of proliferation can be lessened only if other nations choose to follow the U.S. example, and that does not appear to be the case.

France, Britain, West Germany, the Soviet Union, and Japan have all conducted extensive fast breeder research programs for many years. Except for perhaps the Soviet Union and Britain, these countries are eager to find energy alternatives to coal, gas, and oil—which are in diminishing supply. Regardless of what the U.S. does, these nations will probably go forward with their breeder research programs.

The General Accounting Office (GAO) correctly noted in a report last July that the U.S. may actually run a greater proliferation risk by abandoning the Clinch River project. Other countries will most likely go on developing their breeders, and this will weaken America's ability to influence the safety features and design of breeders around the world.

It should be kept in mind that Clinch River is a research and development project. A decision to commercialize the breeder does not have to be made for perhaps seven to 10 years after Clinch River's construction. The purpose of Clinch River is to test the feasibility of operating a fast breeder reactor in a safe, economical, sound way. GAO pointed out that by completing Clinch River, the nation can move to a point where it can make an informed decision on whether to commercialize the breeder. But to stop construction now would retard U.S. progress in nuclear technology and dramatically increase future costs should the project be resumed later.

An example of how costs could soar: the Energy Research and Development Administration (now part of the new Department of Energy) estimated that if construction of Clinch River were stopped for just four months and then restarted, costs would increase nearly $350 million.

President Carter charged that Clinch River would be "technically obsolete and economically unsound" once it was constructed. These criticisms are untrue. There are no known advanced nuclear fission technologies (such as light water, molten salt, or gas-cooled breeder reactors) that promise economic or technical advantages to the liquid metal Clinch River breeder. Nor have any of these alternative breeder reactors been proven scientifically feasible. Moreover, all of the known breeder alternatives have some potential for producing weapons grade material. Alternatives such as solar, wind, or sea power won't be useful sources of energy for at least another 15 years.

As for Clinch River's cost, it is undeniably true that the breeder's price tag has jumped from an estimated $450 million when it was first approved by Congress to more than $2.2 billion. But much of that cost growth has been caused by inflation and higher interest rates. And while the breeder's economic benefits are not absolutely certain, its potential is great.

The world supply of uranium for conventional reactors is unknown and may not be adequate to meet our expanding energy needs in the future. In addition, the price of uranium—with the help of an international uranium cartel—has soared from $6 to $40 a pound in recent years. The value of the breeder is that it can extract 60 times more energy from each ton of uranium than today's light water reactors. This will allow the U.S. to extend its uranium supply for centuries to come.

Ironically, President Carter's veto comes at a time when he is pushing an energy program aimed at reducing America's dependence on depletable natural gas and foreign oil. By switching to atomic energy, the U.S. can reduce this dependence and move toward its goal of energy self-sufficiency.

GEOTHERMAL FUNDING IN ERDA AUTHORIZATION

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. PICKLE. Mr. Speaker, contained in S. 1340 is a small amount of money for two geothermal test wells off the coast of Texas. I am very pleased to see this money now on its way. It is not a large part of the bill, but it potentially is one of the more important.

Off the coast of Texas and Louisiana lie vast geopressured areas. They used to be the bane and headache of drillers seeking oil in the Gulf of Mexico. Now we are beginning to realize that they represent a significant energy source in their own right—more so, I think, than most people realize.

Congressman BOB GAMMAGE and I worked together to see this funding included in the bill, and we are very pleased at the prospect of actually tapping this energy source in the next few months.

BANKRUPTCY REVISION BILL

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. EDWARDS of California. Mr. Speaker, at Chairman HARLEY STAGGERS' request, I wish to include for the RECORD an exchange of correspondence between myself and Chairman RODINO and Chairman STAGGERS concerning a provision in the bankruptcy revision bill currently pending before the Committee of the Whole House on the State of the Union. The letters follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., October 27, 1977.

Hon. PETER W. RODINO,
Chairman, Committee on the Judiciary, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing in regard to H.R. 8200, a bill to establish a uniform law on the subject of bankruptcies, which was ordered favorably reported, as amended, by the Committee on the Judiciary on September 8, 1977. Section 332 of H.R. 8200 repeals section 3(c) of the Emergency Rail Services Act of 1970, which prohibits the guarantee of a certificate of indebtedness in a railroad reorganization case by the United States unless the claim of the United States is treated as an expense of administration and receives the highest lien on the railroad property and priority in payment under the Bankruptcy Act.

As you know, the Committee on Interstate and Foreign Commerce has jurisdiction over railroads. Having reviewed section 332, I wish to state that I have no objection to its inclusion in H.R. 8200, without prejudice to the jurisdiction of this Committee.

It is understood that the repeal of section 3(c) of the Emergency Rail Services Act of 1970 will be effective only insofar as future railroad reorganizations are concerned and would not prevent the Secretary of the Treasury from demanding the same priority now required by section 3(c) if he determines that circumstances so warrant.

Thank you for your consideration in this matter.

Sincerely yours,
HARLEY O. STAGGERS,
Chairman.

JULY 5, 1977.

The Honorable HARLEY O. STAGGERS,
Chairman, House Committee on Interstate and Foreign Commerce, Washington, D.C.

DEAR MR. CHAIRMAN: The Subcommittee on Civil and Constitutional Rights has recently reported favorably the bill H.R. 7330, a bill to establish a uniform law on the subject of bankruptcies. This bill is the first major revision of the bankruptcy laws in nearly 40 years.

As part of the Subcommittee's proposed revision, we have looked at other laws of the United States that directly or indirectly impact the bankruptcy process, in order to conform them with the general bankruptcy policies expressed in H.R. 7330. The areas of impact are few: priorities in bankruptcy, assignability of property of a bankrupt debtor, and discrimination by the government against bankrupts solely on account of their bankruptcy. There is one provision in a law that generally comes within the jurisdiction of the Commerce Committee that has such an impact on bankruptcy. H.R. 7330 proposes a conforming amendment to this provision, and the Subcommittee requests your support.

Section 3(c) of the Emergency Rail Services Act of 1970, entitled "Financial assistance," prohibits the guarantee of a certificate of indebtedness in a railroad reorganization case by the United States unless the claim of the United States is treated as an expense of administration and receives the highest lien on the railroad property and priority in payment under the Bankruptcy Act. This provision, we feel, impairs the Secretary of the Treasury's flexibility in dealing with the exigencies of a major railroad reorganization case, and is generally contrary to the policy of H.R. 7330 to treat the Government as a general creditor without special priority. Section 332 of H.R. 7330 proposes repeal of section 3(c).

I fully understand the circumstances under which section 3(c) was enacted, and the priority there called for made sense in the reorganization of the seven Northeast roads. However, if this provision is to be used in the future, more discretion on the part of the Secretary may be a wiser course, from a bankruptcy perspective. The amendment H.R. 7330 proposes does not, of course, prevent the Secretary from demanding the same priority now required by section 3(c).

I note in passing that section 3 as written applies only to railroads under reorganization under section 77 of the Bankruptcy Act. If H.R. 7330 becomes law, railroads will no longer proceed under section 77, but rather under chapter 11 of proposed title 11 of the United States Code. This may make the entire debate over section 3(c) academic. However, in the event that the loan guarantee program is revived by amendment to section 3(a), the amendment proposed by H.R. 7330 would be beneficial to bankruptcy administration, and more in conformity with general bankruptcy policy.

I would appreciate hearing your comments on the changes proposed in H.R. 7330. I enclose a Ramseyer of the proposed change for your information. We expect full Committee to begin mark-up on July 14, and Floor action in September.

With kind regards.

Sincerely,

DON EDWARDS,
Chairman, Subcommittee on Civil and Constitutional Rights.

OSHA REPEALS IRRELEVANT RULES

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mrs. COLLINS of Illinois. As Chairwoman of the Government Operations Subcommittee on Manpower and Housing, I was pleased to hear Secretary Marshall announce on December 5 that the Occupational Safety and Health Administration will no longer expend its precious time and energy enforcing rules of questionable relevance to the health and safety of American workers. It is my strong hope that by unburdening itself from such wasteful preoccupations as the permissable size of knotholes in the siderails of stepladders, that OSHA can now turn its attention to the real issues that inspired its creation in the first place: the deadly hazards that plague one out of four Americans on the job, according to a recent study of the National Institute of Occupational Safety and Health.

This same study, summarized in the New York Times on October 3, 1977, supported the findings made by my subcommittee in hearings that we held last May, to the effect that an estimated 7 million workers are exposed to toxic substances, many of which are known—or suspected of being—cancer-causing. Even more shocking was the revelation that OSHA has been lagging far behind in its ability to regulate the use of these hazardous substances. I am pleased that OSHA has shown a willingness to redirect its efforts in a more promising direction.

THE 60TH ANNIVERSARY OF THE NATIONAL FEDERATION OF FEDERAL EMPLOYEES

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. UDALL. Mr. Speaker, I would like to take this opportunity to pay tribute today to the National Federation of Federal Employees, the oldest of all general Government employee organizations and the largest independent union of Federal employees in the Nation.

The National Federation of Federal Employees this year is celebrating its 60th anniversary of distinguished service to our dedicated civil servants and to the Nation as a whole.

The National Federation of Federal Employees was founded in 1917, at a time when Government workers had seen no general pay increase for 50 years and World War I had increased the cost of living to the point of causing financial problems for many. But money was not at the very heart of reasons the NFFE founders came together in September 60 years ago. Among the goals adopted at the Washington Charter Convention of NFFE were ideas that may have seemed somewhat radical at the time: a retirement program for Federal employees; a modern system of duties classification; elimination of the spoils system; and establishment of a sound personnel system and broader scope for the Civil Service Commission.

Because of the National Federation of Federal Employees and the precedents it continues to set, we have come a long way toward achieving these and other very worthwhile goals. Though the goals of today are different the original purpose of the organization continues to ring true to the American spirit.

I ask you to join me in saluting the National Federation of Federal Employees and in recognizing the untold accomplishments of an organization whose purpose, as stated in its constitution, includes "to aid in the perfection of systems that will make for greater efficiency in the various services of the United States."

MANIPULATION OF PUBLIC AND CONGRESSIONAL OPINION BY THE CENTER OF DISEASE CONTROL

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. OBERSTAR. Mr. Speaker, recently some very disturbing information regarding the CDC's involvement in modifying public and congressional opinion on a national political issue—the controversy over funding abortions under medicaid—has come to light. I commend for my colleagues' information the following copyrighted article, "Facts Don't Back Link of Abortion Death in Texas to Fund Cutoff," published in Ob. Gyn News by Mr. Richard Grauel and Mr. Frank Murray, and my letter to Secretary Califano asking for a thorough investigation of the CDC's involvement in this matter:

FACTS DON'T BACK LINK OF ABORTION DEATH IN TEXAS TO FUND CUTOFF

(By Richard Grauel and Frank Murray)

The woman portrayed as a martyr to the Hyde Amendment after she died from complications of a Mexican abortion actually may have crossed the border to keep the abortion secret from her family, despite a federal investigator's conclusion that she was motivated by the cutoff in funding brought about by the Hyde Amendment.

This newspaper obtained information that the woman had gone to Mexico for another abortion 2 years earlier, while covered by Medicaid, and that low-cost abortion had been available to her in her Texas home town when she opted for the second Mexican abortion.

It was learned that these facts were known to the federal investigator but were disregarded by him without making them public. He said he accepted instead the statement of a relative that the woman went to Mexico because of the Medicaid cutoff.

The woman's death, and the report by the Center for Disease Control linking it to the funding cutoff, have been cited in the national press, in congressional debate, and by Planned Parenthood in Washington as justification for rejecting the controversial Hyde Amendment, which bars expenditure of federal funds for most abortions.

The federal investigator, Dr. Julian Gold, officially reported five cases of abortion complications clustered in McAllen, Tex., (the other four not fatal) in connection with a survey of the effects of the cutoff Aug. 4 of Medicaid funds for abortions.

When asked about facts obtained by Ob. Gyn. News suggesting that his conclusion was at least questionable, Dr. Gold said he had known of those facts but chose to accept the word of the dead woman's relative, whom he refused to identify.

Asked how he had corroborated that statement, he replied, "How can you corroborate that kind of thing?"

(Another source, Dr. Daniel Chester, an ob. gyn. who treated the woman in the days prior to her death, said the relative was a cousin.)

Dr. Gold also conceded that he believes all of the other four women in the "cluster" were motivated to go to Mexico for abortions by their wish to keep the procedure secret from their families.

He said he knew that many women from Mexican Catholic backgrounds living along the border customarily go to Mexico for abortions so that their families won't learn of the procedure.

When told that the dead woman apparently had gone to Mexico for another abortion in 1975, when Medicaid would have paid for the procedure if it were done in Texas, Dr. Gold conceded that he also had known this and that he assumed she had done so then for privacy.

None of these facts had been reported either in official announcements of the "cluster" of abortion complications or in subsequent interviews by Dr. Gold, the CDC's principal investigator on the case and the person authorized to release facts from the file.

The cases were reported in the Nov. 4 issue of the CDC's Morbidity and Mortality Weekly Report. Dr. Gold wrote that report.

In his report, Dr. Gold said the woman consulted her physician on Sept. 1 and Sept. 19 about sternal pain.

"On the second visit, when she indicated to her physician that she might be pregnant, he informed her that Medicaid no longer paid for abortions. She subsequently obtained an induced abortion in Mexico," the report said.

The physician, Dr. Homero Rivas, longtime family physician for the woman, told this newspaper he did not tell the woman that Medicaid no longer paid for abortions. He said he told Dr. Gold that she had volunteered that information herself and that he merely confirmed it.

When asked about this, Dr. Gold insisted the report was accurate and said, "It's a semantic problem; I know people are reading it to say he turned her down for an abortion because she didn't have the money."

"The press have printed the things they want to print," said Dr. Gold..

Dr. Rivas said that if the woman had returned as instructed and the pregnancy was confirmed, he would have referred her to one of two medical groups "regardless of whether she could pay for it, because it's more important that she get an abortion done correctly than done cheaply."

"I do not do abortions," Dr. Rivas added in an interview.

Dr. Gold's superior, Dr. Willard Cates, head of the Abortion Surveillance Branch of CDC, said in an interview that data from Dr. Gold's investigation were being analyzed but were open to several possible conclusions. He said the relationship between the funding cutoff and the death was merely a temporal one.

Among those possible conclusions, Dr. Cates mentioned the possibility that the cutoff of funds was responsible for her death; the possibility that the specific facility in Mexico where the women were aborted was using unsanitary instruments or bad technique; and the possibility that the women had gone across the border to obtain more privacy than they thought would be available in McAllen.

Dr. Cates said it would be unscientific to draw any conclusion now.

Asked if the public had been misled, he said, "The public was very quick to jump and make the causal association, but I wouldn't use words as strong as saying we have misled them."

He said no statements or press releases had been issued to correct any misimpressions that might exist on the issue.

He referred all other questions to Dr. Gold, who said, "As for the woman who died, I feel it was reasonable to assume that's why she went. In that particular case, I'm convinced she went over because of the lack of Medicaid funding," Dr. Gold said.

Told that Lila Burns, the head of the Planned Parenthood Clinic in nearby Mission, Tex., where the dead woman had been a client, as well as Dr. Kenneth Landrum, a physician who treated her in McAllen General Hospital after the abortion, both felt she had gone to seek privacy, Dr. Gold said he would stick to his conclusion.

Asked why she would go to Mexico in 1975 for an abortion in privacy when she had Medicaid and not be assumed to be going for the same purposes now, he said: "I've thought about that point. I don't know."

The woman entered McAllen General Hospital on Sept. 26. A hysterectomy was done the next day. She died Oct. 3 of renal and cardiac failure attributed to disseminated intravascular coagulation secondary to sepsis. Clostridium perfringens organisms were demonstrated in blood culture. No autopsy was done.

For much of the week after she was admitted to the hospital, the woman herself continued to deny even that she had had an abortion. Near the last, while she was intubated and unable to speak, Dr. Chester again pressed her on this and asked her to squeeze his hand once for "yes" and twice for "no" to the question: "Did you have an abortion?"

He said she squeezed his hand to indicate yes.

When the death was revealed by CDC, the broadcast and print press gave it wide play with an approach typified by the three-column headline in The Washington Post: "Woman Dies After Mexico Abortion/Had Been Told of Medicaid Cutoff." A New York Times editorial, titled "First Victim," said "the dead woman carried a Medicaid card but it did her little good."

Jeannie I. Rosoff, head of the Planned Parenthood Washington office, said. "Members of Congress who support the ban on Medicaid abortions are responsible for a chain of events that inevitably led to the death and sufferings of these poor women.

A church memorial service was arranged during the meeting of the American Public Health Association. National family planning figures attended and heard the service's organizer, Elisa Sanchez, president of the Mexican-American Women's National Association, say, "The only thing that stood between her and life was a Medicaid card that wouldn't buy her an abortion she chose to have."

Ms. Sanchez told this newspaper she knew nothing more about the case than what had been in The Washington Post.

The Post report said, "A CDC spokesman said his investigators could not determine whether the dead woman had been refused a Medicaid-funded abortion. But he confirmed that she had been informed that they were no longer available before she crossed the border to get her $40 abortion in Reynosa, Mexico."

At a press briefing shortly afterward, Secretary of Health, Education, and Welfare Joseph A. Califano Jr. was asked about the case by a reporter who said, "But aren't you concerned at all about the involvement of federal policy in those deaths?" He corrected the number of deaths to one, called it sad, but said it did not justify a change in the law.

At a nationally televised press conference the next day, President Carter was asked a similar question by a reporter who said, "A young woman in Texas recently was unable to obtain a Medicaid abortion and went across the border into Mexico, obtained a cheap botched-up operation, and died.

President Carter did not directly address the question about the death, but restated his objection to public funding of abortions.

The entire appropriations bill for the Department of Health, Education, and Welfare has been tied up for months over the Hyde Amendment fight. In the most recent debate on the issue, on Nov. 3, several members of Congress cited the death of the woman in McAllen, Tex., and linked it to the issue before them.

Rep. Elizabeth Holtzman (D-N.Y.) was perhaps the most vivid:

"As a result of the actions of the House in restricting Medicaid abortions, a woman has already died. An unmarried mother of a 4-year-old girl, who was too poor to afford a safe medical abortion, crossed the border into Mexico to obtain an unsafe abortion. She died in a hospital in McAllen, Tex., just a few days ago. Hundreds, if not thousands, of other women will suffer the same fate."

House of Representatives,
Washington, D.C., December 2, 1977.

Hon. Joseph A. Califano,
Secretary, U.S. Department of Health, Education, and Welfare, Washington, D.C.

Dear Secretary Califano: I am writing in regard to what I believe to be a very serious problem, the apparent manipulation of public and Congressional opinion by Federal official's at HEW's Center for Disease Control in Atlanta.

Specifically, I am referring to information, recently published in the Washington Post, surrounding the tragic death of an American woman due to complications resulting from an abortion she had in Mexico, supposedly because Medicaid would not cover the costs in this country. The Post story suggests that the incident may have been fabricated. My purpose here is not only to question the findings of the CDC report, but to question the propriety of that agency in using that report in an effort to modify public and Congressional opinion on a national political issue.

When Congress established the CDC, it clearly did not intend for them to engage in winning political acceptance for the views of special interest groups or political parties. Furthermore, this thinly veiled attempt to manipulate opinion runs counter to both your and President Carter's publicly stated position on abortion.

The CDC, is not, nor should it be, a propagandizing agency. I urge you to conduct a prompt and thorough investigation of this matter and encourage the CDC to abandon these wasteful, misguided activities and proceed with urgent matters.

Sincerely,

James L. Oberstar, M.C.

EULOGY FOR CARLETON J. KING

HON. DONALD J. MITCHELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MITCHELL of New York. Mr. Speaker, I note with deep regret the passing of a former colleague and member of the New York State delegation, the Honorable Carleton James King. Representative King, a native of Saratoga Springs, served his birthplace and the people of the 29th district of New York with distinction for 14 years, from 1960 until 1974. Prior to that, his years of law practice and bar experience in his native area made him a well-known and respected public figure in eastern New York.

I wish to acknowledge a personal debt to Representative King from my days as a freshman Congressman and colleague of his on the Armed Services Committee. In the course of our brief service together, Congressman King's earnest commitment to the security of our country through a strong national defense posture made a lasting impression on me. America's spirit of national strength, which he sought to keep alive and vital for many years, will survive as a legacy to his dedication.

The people for whom Congressman King spoke in Washington join me in mourning his passing. Since many of my own constituents were formerly served by Mr. King, I am especially aware of the mutual regard and respect that existed between them. He will be remembered by those whom he represented for so many years, well and fondly.

TRYING TO REGULATE THE REGULATORS

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. LEVITAS. Mr. Speaker, as you know, one of my main congressional interests which I share with many of my colleagues, is the regaining of control over the bureaucracy and making its processes more rational. An article by Hugh Sidey in the December 5 issue of Time magazine has caught my eye. It is entitled "Trying To Regulate the Regulators," and deals with President Carter's proposed Executive order, "Improving Government Regulations" which appeared in the Federal Register of November 18, 1977.

I commend the President for his initiative in issuing this Executive order, and I hope that he will not be frustrated by the bureaucrats in fully implementing it in reality and not just in words. President Carter has taken a good first step. However, it is only a first step. If the President is to fulfill his commitment to the American people to get the bureaucracy in hand, he will have to go much further. It is not enough simply to get Government rulemakers to think before they promulgate. More control is needed. It is necessary for Congress, as elected representatives who delegate to the unelected rulemakers the authority to make rules, to have the power to review and veto these administrative rules and regulations. If the President is to achieve the goal of getting the bureaucracy in hand, he would be taking a major step by endorsing this proposal. Indeed, President Carter would prove to the American people that his pledge to control big government is being kept by providing this means of legislative veto for controlling regulations which have so burdened, confused, and harassed the American people for so long.

I want to bring the article from Time magazine to the attention of my colleagues. It contains some glaring examples of why control over bureauratic regulations is imperative:

TRYING TO REGULATE THE REGULATORS

(By Hugh Sidey)

(Regulations should be as simple and clear as possible. They should achieve legislative goals effectively and efficiently. They should not impose unnecessary burdens on the economy, on individuals, on public or private organizations, or on state and local governments.)

That unusually straightforward passage of governmental prose, printed in the Federal Register a few days ago, is a declaration of intent by Jimmy Carter. It is the preamble to a presidential order he hopes to issue before the end of the year. For those who dwell in the world of red tape, which is most of America, the words shone like diamonds in a mountain of slag. The wisdom rivaled that of Solomon.

Georgia's Charles Henson, had he read this, would have wept. For 28 years he manufactured Red Fox denims. Then one day came a ruling from the Federal Trade Commission: since his denims did not have any red fox fur in them, he could no longer use the name. Think of the joy Carter's sensible proclamation would have brought to the parsimonious New Hampshirite who had to spend $26.23 in postage to mail the bulky forms for a license renewal for his small radio station. Pity the distress the Carter doctrine will cause the Occupational Safety and Health Administration bureaucrat who propounded the 39-word, single-sentence definition of exit: "That portion of a means of egress which is separated from all other spaces of the building or structure by construction or equipment as required in this subpart to provide a protected way of travel to the exit discharge."

And, surely had the folks at the Bureau of Land Management known about the new dictum, they never would have issued 155 pages of requirements, including 23 foldout diagrams, for fire equipment to be purchased for two bureau pickup trucks. The low bid was $31,000, an estimated $8,000 for the equipment and the rest for processing the regulations.

Carter's campaign to force Government rulemakers to think before they promulgate may not be the moral equivalent of war, but if he wins a few skirmishes he will be blessed from Bangor to Chula Vista.

Fred J. Emery, director of the Federal Register, looks over his desk each day at a 15-ft. shelf containing 73,000 pages of the Code of Federal Regulation. There are millions of entries, new rules for life in these United States. It grows as much as 5,000 pages a year. Emery has started a school for the rule writers. He is trying to make the language at least understandable. He illustrates the problem with a parable: "It is like the two fellows in the hot air balloon who get lost in a cloud and, emerging, call down to a man on the ground, 'Where are we?' The fellow calls back, 'In a hot air balloon.' The answer, like a lot of regulations, is absolutely accurate but totally useless."

Wayne Granquist and Stanley Morris at the Office of Management and Budget are guiding Carter's campaign. They drafted the presidential proclamation. In a few weeks they will present Carter with a final draft of an Executive order to all federal agencies and departments.

The next task will be to pump the order through the governmental circulatory system. Part of the problem is that the proliferation of rules often takes place in the depths of the bureaucracy, not at the top. A program chief hears a complaint and summons a committee, which calls in lawyers. New regulations are drafted, then sent to a boss who approves them. The regulations are printed; sent to the field; and one morning a federal authority is insisting—to take actual cases—that ice cannot be added to drinking water, chickens cannot be processed in rooms with tile floors, fire extinguishers are to be lowered 6 in., and cowboys must work within 5 min. ride of a toilet. The reasons for, and meanings of, the regulations have been lost somewhere between Washington and Pocatello.

At the very heart of the issue is the attitude of the thousands of people who concoct and enforce the Government rules. The best of the bureaucratic breed talk sincerely of transforming regulators from cops who are out to punish offenders to public servants who help citizens solve their problems. After all, it was partly a rejection of oppressive, expensive regulation by far-off authorities that led to the creation of this country 201 years ago.

H.R. 41 IS THE WRONG APPROACH TO ABUSES IN THE NAME OF CHARITY

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. BONKER. Mr. Speaker I am sure other Members of the House share my concern over abuses made in the name of charity; there is something particularly offensive about the person or organization that takes advantage of the nobler human emotions for selfish ends. Such abuses have recently prompted reform proposals, including Congressman CHARLES WILSON's bill, H.R. 41, to require charitable organizations which solicit contributions to disclose the percentage of a contribution which would actually go to the charitable purpose for which it is intended.

Although the purpose of H.R. 41, to limit possible abuses by ostensibly charitable organizations, is certainly commendable, I do not believe it is the proper way to remedy the problem. The legislation would be open to serious constitutional challenges on first amendment grounds, and it would do more to burden legitimate charities and religious groups than it would to discourage unethical solicitations. To impose on all religious and charitable groups the accounting, paperwork, and reporting required by H.R. 41 would punish the vast majority of worthwhile causes in order to halt the abuses of a tiny minority.

H.R. 41 has aroused some vigorous opposition. Regrettably, part of this opposition is based on misinformation. It was therefore especially instructive for me to read a very thorough and responsible analysis of H.R. 41 in a recent issue of Christianity Today. I heartily recommend the following article, by William Proctor, to my colleagues.

H.R. 41: THE STATE DEMANDS CHURCH DISCLOSURES

(By William Proctor)

Watergate cover-ups and clandestine Central Intelligence Agency activities have thrust us into an era when baring the organizational soul to the public has become a virtue—and the eighth deadly sin is refusing to do so.

Despite traditional protection from state interference, religious organizations are not immune to these pressures for disclosure. During the last year religious groups have been the targets of proposed legislation in bill, H.R. 41, introduced into the House of Representatives by Charles H. Wilson (D-Calif.), chairman of the Committee on Post Office and Civil Service.

Wilson's bill seeks to regulate any charitable organization, including churches and other religious groups, that solicits "in any manner or through any means, the remittance of a contribution by mail." In plain language, this means that a religious group asking in any way for money to be donated to it through the mail is subject to the disclosure requirements of the bill. Groups covered by the bill would have to include with their solicitations the following information: the legal name and address of the charity; the purpose of the solicitation and intended use of the money contributed; and the percentage of contributions "which were directly applied" to the charitable purpose, after deducting "all fundraising and management and general costs during the most recent complete fiscal year."

This information must be provided at the point of solicitation, or when the appeal for funds is made, rather than at the demand of prospective contributors or investigators. The bill requires groups that solicit on radio to make their communications clearly audible. Those that use television must make their disclosures in clear lettering and for a sufficient period of time to allow the viewer to read the wording. The bill exempts some very short radio and TV appeals, and also "bona fide membership organizations," including churches, that make exclusive solicitations to their members.

Any charitable organization, including churches, that falls under the bill would find its records subject to the watchful eye of the Postal Service. At the request of postal authorities, church would have to supply "audit reports, accounts, or other information as the Postal Service may require to establish or verify information which such organization is required to include in solicitations."

From a legal point of view, there are two main problems with H.R. 41. In the first place, there is good reason to believe that the courts would find the bill unconstitutional. Secondly, even if the bill is constitutional, some of the key words and phrases are so vague that the courts would have to work overtime to give them meaning in future lawsuits.

The possible conflict of the bill with the Constitution centers on the First Amendment, which prohibits Congress from passing laws "respecting an establishment of religion, or prohibiting the free exercise thereof." If H.R. 41 becomes law it seems likely to restrict the freedom of churches and other religious organizations in fundraising. Television appeals would have to be interrupted by an extensive disclosure statement, and the impact of the appeal would be blunted. Also, the additional accounting and paperwork in delineating management and "direct" charitable costs will put an added financial burden on religious groups. In a kind of religious Catch-22, as churches spend more money on administration to comply with the disclosure law, the percentage of money they can apply directly to their charitable purpose will decrease. And in the public eye they may appear to be spending an inordinate amount of money on administration, partly because the disclosure law requires them to do so. The power of churches and other religious organizations to raise money freely to support their activities is necessary if they are to remain an independent force in society. Otherwise, financial pressures may force these groups to rely more on foundations or even government aid, and our constitutional priniciple of strong, separate spiritual institutions will be lost.

The U.S. Supreme Court has traditionally avoided taking an active role in restricting or regulating the activities of religious groups. On the contrary, most active steps by the court have been to broaden the power of religious groups. For example, in the 1952 *Zorach v. Clauson* case, the court held that a New York City ruling which allowed students to leave school for religious instruction during regular school classes was constitutional. The court again approved a form of state aid to religion in *Sherbert v. Verner* in 1963. Writing for the majority the late Justice Tom C. Clark said it was a violation of freedom of religion not to allow a woman who was a Seventh-day Adventist to receive state unemployment compensation. She had been fired by her employer because her religious convictions prohibited her from working on Saturdays.

H.R. 41, in contrast, would cast the federal government in an active role opposing religion. This role appears to be in conflict with the Supreme Court's landmark 1947 decision of *Everson v. Board of Education*, in which the late Justice Hugo Black declared that "State power is no more to be used to handicap religions than it is to favor them." Chief Justice Warren Burger reinforced this line of thought in 1970 in *Walz* v. *Tax Commission*, which upheld tax exemptions for property used solely for religious worship. Burger wrote, "We must also be sure that the end result—the effect—is not an excessive government entanglement in religion."

He established two tests to determine excessive state entanglement in religion: "whether the involvement is excessive, and whether it is a continuing one calling for official and continuing surveillance leading to an impermissible degree of entanglement." Although Justices Byron White and William Rehnquist criticized this entanglement standard in a later case. Burger's ruling still stands as the law of the land.

The Chief Justice conclued in *Walz* that a principle of "benevolent neutrality" should control the state's dealings with the church. The provisions of H.R. 41 seem anything but "benevolently neutral" as they attempt to impose an active fundraising and accounting burden on religious groups.

But the constitutional problems that surround H.R. 41 are only part of the problem. The language of the bill is so vague that considerable litigation is inevitable on that ground alone. One phrase that poses serious problems of interpretation is the statement that charitable organizations that solicit *"in any manner or through any means"* the remittance of contributions by mail must include the various financial disclosures with the solicitations. But what about the lay chairman of a local church pledge drive who stands in front of his congregation and tells them to take pledge cards from the ushers and mail them to the church? If nonmembers are present, must the chairman exclude them explicitly from his appeal, or recite the disclosure litany from the pulpit? Will missionaries writing of their financial needs on the field be under similar obligations? Which federal agencies will implement and police such requirements?

Or how about the pastor who is pulled aside by a nonmember who wants information about giving money to the church? If the pastor suggests that the inquirer drop his contribution in the mail, will this suggestion be a solicitation "in any manner and through any means"—a solicitation that would require a full, on-the-spot disclosure of management percentages? If so, the pastor's freedom in asking for contributions will be severely limited.

What it all boils down to is this: the phrase "in any manner or through any means" is so sweeping that it is bound to be challenged in court by religious groups that are understandably reluctant to surrender control over their fundraising.

An even more difficult section of the bill to define is the requirement of disclosure of the *percentage* of all contributions that were directly applied to the charitable purpose "after deducting all fundraising and management and general costs during the most recent complete fiscal year of the organization." In any charity, there is a large gray area of costs that cannot be defined clearly as either "management" or purely charitable. In a local church, is the ministers' salary a management cost, when a large part of his time is devoted to counseling and preaching? If the costs attributable to counseling and preaching are not being "directly applied" to the charitable purpose, it is difficult to imagine what would be. But the pastor is also an administrator. So to comply with H.R. 41 it will probably be necessary to allocate his salary between charitable and administrative functions.

Also, what about the church secretary's salary? Granted, the secretary may be doing "fundraising" work, like typing appeal letters. But the job may also include typing the minister's sermons and putting together the Sunday bulletin. That part of the secretary's salary required for both of these latter tasks would seem to be money "directly applied to the charitable purpose," but some postal investigator might well decide otherwise. If the bill becomes law, the failure to define these terms clearly could create a nightmare of paperwork and accounting costs for religious groups, and will make enforcement by the Postal Service even harder.

The problem of enforcement and surveillance brings up another difficult problem raised by the language of the proposed law. Recent amendments, apparently in response to constitutional questions about excessive state entanglement in religion posed by the *Walz* case, give lip service to restricting the Postal Service's power under the bill to oversee religious groups. For example, the Service cannot audit charities "at regular intervals" and can intervene only where there is a "specific need." But postal authorities still retain broad discretion under H.R. 41 to demand "such audit reports, accounts, or other information as the Postal Service may require to establish or verify information which such organization is required to include in solicitations."

Taken at face value these words seem to give the Postal Service the right to demand such confidential records as contributors lists. If these lists should become public, and there is reason to think that they might under the provisions of the Freedom of Information Act, a church or other religious organizations would lose control over who would have access to their hard-earned and carefully-guarded donor lists. Donors to unpopular or controversial evangelistic groups might find themselves being harassed by the group's opponents.

Finally, though churches and other religious groups that solicit "exclusively" from their "members" are excluded from the bill, the definition of the word "members" raises a knotty question. There are some churches with different classes of membership. The United Methodist Book of Discipline, for example, provides for "affiliate members" who can participate fully and hold office in one United Methodist church while staying on the rolls of another. There are also "associate members," who are members of a different denomination but who elect to participate in a United Methodist church on the same terms as an affiliate member. H.R. 41 is unclear whether the term "members" includes all these types. Defining the term precisely is essential to determine whether solicitations to one or more classes of "members" require disclosure under the bill. Furthermore, in some organizations all donors are regarded as members of a contributors' organization or club, and their membership gives them certain privileges and recognition. If the word "members" in this bill can be read so broadly, religious groups might be well advised to use the same escape hatch to avoid compliance with disclosure requirements.

But looking for ways to escape the requirements of H.R. 41 is not really the answer to this proposed legislation. Instead of imposing onerous, vague, and constitutionally questionable disclosure requirements on religious organizations, the federal government should concentrate on enforcing mail fraud and other statutes that are on the books. The most that is called for on the federal level is a statute that would preempt the various state laws now in force so that charity regulations would become more uniform nationally. Any such legislation, however, should only give federal authorities power to compel disclosure and investigate religious groups when there is evidence of some criminal or civil violation. Bills like H.R. 41 that require disclosure with no evidence of wrongdoing and give the Postal Service broad discretion in auditing confidential church records seem more an overreaction to the enthusiasm for disclosure than a measured proposal for effective long-term reform.

MERIDIAN EMPLOYMENT SECURITY OFFICE RECOGNIZED FOR WORK ON BEHALF OF VETERANS

Hon. G. V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MONTGOMERY. Mr. Speaker, because of my deep interest in employment programs for our Nation's veterans, I am pleased to call attention today to the outstanding work being done by the Meridian, Miss., office of the Employment Security Commission for veterans. The attached materials explain quite thoroughly the outstanding work being done by James T. Dawson, Edward Furgalak, and William H. Wright. I include at this point in the Record a newspaper article detailing national and international awards the office won, plus letters and resolutions of commendation they have received:

EMPLOYMENT SERVICE OFFICE TAKES AWARD

The Meridian office of the Mississippi State Employment Service has won a second award for its services to veterans, Jim Dawson, office manager, announced.

It is the top award in the larger office category from the International Association of Personnel in Employment Security, a worldwide organization, according to Dawson.

The award was presented at the association's convention held in Hot Springs, Ark., marking the first time any office in the State of Mississippi has won the honor, Dawson said.

It was accepted on behalf of the Meridian office by John E. Aldridge, executive director of the Mississippi Employment Security Commission.

The Meridian office earlier was announced the winner of the top national Veterans of Foreign Wars award for its outstanding services to veterans.

The VFW presentation was made to Dawson at a banquet Saturday night in Jackson.

"I am highly pleased and honored that my staff has received both national and international recognition for its work," Dawson said. "It's a very nice feeling to be named number one from two areas."

JUNE 30, 1977.

Mr. JAMES DAWSON,
Mississippi State Employment Service,
Meridian, Miss.

DEAR MR. DAWSON: I want to take this opportunity to extend to you my personal congratulations on your recent awards for providing services to veterans. To receive national awards from two prominent organizations as the Veterans of Foreign Wars and the International Association of Employment Security is indeed a most commendable achievement.

The employment security system in this country has achieved great success due to outstanding and dedicated employees such as yourself. Please know that I am very proud to be associated with you and your agency.

On behalf of the entire regional staff here in Atlanta, I extend to you best wishes for continued success in your local office operations.

Sincerely,

JULIAN O. COLQUITT,
Regional Administrator.

RESOLUTION

The Mississippi Employment Security Commission in regular meeting, duly assembled, hereby expresses special commendation and personal congratulations to the Meridian Employment Service Local Office for winning two national awards for its services to veterans from the International Association of Personnel in Employment Security and the Veterans of Foreign Wars of the United States.

While we commend the entire staff of the Meridian Employment Service Local Office, we wish to especially commend James T. Dawson, Manager, and Edward Furgalak and William H. Wright, local Veterans Employment Representatives, for their leadership in making these accomplishments possible.

These commendable achievements reflect the cooperation and support of the Meridian area in the Employment Security system and services to its people.

We are indeed proud of our dedicated employees, and order that a copy of this Resolution and commendation be forwarded to the Meridian Employment Service Local Office.

RESOLUTION

The Lauderdale County Board of Supervisors, Meridian, Mississippi, in regular meeting, duly assembled, hereby expresses special commendation and personal congratulations to the Meridian Employment Service Local Office for winning two national awards for its services to veterans from the International Association of Personnel in Employment Security and the Veterans of Foreign Wars of the United States.

While we commend the entire staff of the Meridian Employment Service Local Office, we wish to especially commend James T. Dawson, Manager, William H. Wright, Placement Manager, and Edward Furgalack, local Veterans Employment Representative, for their leadership in making these accomplishments possible.

These commendable achievements reflect the cooperation and support of the Lauderdale County area in the Employment Security system and service to its people.

We are indeed proud of our dedicated Job Service staff and order that a copy of this Resolution and commendation be forwarded to the Meridian Office of the State Employment Service.

NINE DE KALB BOY SCOUTS RECEIVE EAGLE AWARD

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. LEVITAS. Mr. Speaker, on December 3, 1977, nine Boy Scouts received their Eagle awards at St. Timothy's United Methodist Church in De Kalb County, Ga. Excluding military bases, this is the largest number ever to receive such an award at a single ceremony in De Kalb County, and in Georgia. All of the young men were from Troop 70, sponsored by St. Timothy's United Methodist Church.

The Order of the Eagle is the highest award that a Boy Scout can obtain. To do so, a boy must earn 24 merit badges and complete a community project which benefits the church, the local government, or the local community with a minimum of 8 hours and includes leadership through supervision of other scouts who assist in the project. Most of the young men from St. Timothy's spent from 30 to 50 hours on their projects.

It was my honor to be present at the awards ceremony, and it reminded me anew of the effect scouting has had on my own life. As a former Boy Scout, I learned the tenets of obedience, leadership, loyalty, comaraderie. The lessons of scouting have continued to be relevant in my life. The values imparted through the Boy Scouts are those that I still value highly. It was my pleasure to see the following young men receive their Eagles: Bruce Carraway III, Michael T. Craft, Jay R. Craytor, Michael R. Duryea, Norman L. Engard, Jr., Ronald W. Funkhouser, Kenneth N. Hickox, Jr., William T. Howe, and Kurt G. Winters. Their Scoutmaster is William E. Funkhouser, and the chairman of the Troop Committee is William Winters. They are all to be congratulated.

SECRETARY MARSHALL—HE GETS RESULTS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. PICKLE. Mr. Speaker, a soft-spoken Texan is not quoted often in the press. But he gets results.

His latest is a growing list of achievements is the proposed revocation of 1,100 Occupational Safety and Health Administration regulations. The proposal to take 1,100 regulations and—not modify them—not improve them—not add more pages to clarify their intent—but to chuck them in the trash can—is one of the healthiest steps this Government has taken in a long, long time. President Carter promised to make Government more sensible and serviceable.

I applaud Secretary Marshall and his plain English, commonsense attitude toward government. I applaud the results of that attitude.

This is not the first occasion I have had to praise this man. Secretary Marshall joined forces with the IRS and Justice and carried forward the investigation of the Teamsters Central States pension fund with vigor and, again, with results. Under his and others efforts, the funds assets have now been turned over to independent investment managers of highest reputation who can now begin to safeguard these funds so that Central States participants can be better assured of a good pension at a reasonable cost and so that the allegations fund abuses can be put to rest once and for all.

Secretary Marshall has been effective in other ways, too. And he has through it all done the difficult job of simultaneously being true to the President, true to his Department, and true to the American people. He is a breath of fresh air. He is not an old Washington hand, and he is proof that you do not have to be to get things done.

BOSTON'S DESEGREGATION PROGRAM ENDS UP IN RESEGREGATION

HON. RONALD M. MOTTL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MOTTL. Mr. Speaker, in today's Washington Post article by Evans and Novak titled, "Boston's Busing Stage II," the authors cite the results of Federal Judge Garrity's plan to desegregate the Boston school system.

Because of the great white flight out of Boston proper to the suburbs the end result is massive resegregation of a school system which was supposed to be desegregated.

This article does not tell of the astronomical cost the taxpayers had to bear nor of the waste of precious gasoline to transport students across town.

If you would like to put this devisive issue of busing behind us and restore the concept of the neighborhood school by giving each child the right to attend his neighborhood school, please sign discharge petition No. 1 at the Clerk's desk.

Hereafter is the eye-opening article by Evans and Novak:

Boston Busing, Stage II

(By Rowland Evans and Robert Novak)

Boston.—When Federal District Judge W. Arthur Garrity Jr. on Nov. 29 made clear that he—not the elected Boston School Committee—will ultimately decide which schools close here, he continued the judicial overlordship that has driven half the city's white students out of the school system.

What makes this remarkable is that the school committee is no longer the bastion of bitter-end anti-busers. Its Chairman, Kathleen Sullivan, provides moderate leadership that accepts the inevitability if not the wisdom of court-ordered busing. She led all candidates for reelection Nov. 8, when Boston's voters elected the committee's first black (a moderate) and defeated its foremost anti-busing zealot.

But the new school committee is treated no differently from the old school committee by Judge Garrity. He and what Miss Sullivan calls "those crazy experts of his" are not surrendering control. That suggests continued white exodus from the system, in which Garrity's rule has brought soaring per-pupil costs without improving education. "The victims are the kids," Sullivan told us.

This is stage II of Boston's busing. Violence and demonstrations have ended, and one-issue politicians are driven from office. But liberals elsewhere make a mistake if they interpret this as approval of busing. "The people don't go out and chant slogans," Sullivan told us. "They merely creep out of the system."

Unable to overcome the judge, they escape him. Since Garrity's busing order in June 1974, white school enrollment has dropped from 58,000 to 29,000. Experts had predicted a normal yearly loss of 3,000 whites, due to population patterns—12,000 over the last four years. So, because of busing, an additional 17,000 white students have left the system. In a city where the black population is only 20 per cent, the black school population is nearing 60 per cent.

A classic case is the Morris School in the West Roxbury section, which in November 1974 had an all-white enrollment of 347. A 1975 "masters' panel" of distinguished citizens (appointed by Garrity) recommended, as part of a citywide plan, a total of 260 whites and 70 blacks at Morris. But Garrity rejected the whole plan and redrew school boundaries to ensure a 50–50 racial mix. The result: Current enrollment at Morris is 23 whites and 123 blacks. The whites have all but disappeared.

Nor has the exodus concluded. A Garrity-ordered school reassignment last summer (later suspended) led many white liberals finally to give up and put their children in private schools. Garrity's resistance to the special program for gifted students has lowered another possible barrier to flight from city schools.

The decline of the Morris school enrollment, down from 347 to 146 in three years, is no extreme example. Unfilled classrooms, along with busing costs, have boosted annual costs per pupil to over $3,000 (and $5,500 at embattled South Boston High).

Mayor Kevin White, the tragedy is that high costs have produced education no better and likely worse than it was. But Garrity and his chief expert, Boston University Dean of Education Robert A. Dentler, have fought school closing as a covert attempt at resegregation.

When we interviewed Sullivan and Dean Dentler on television in September 1976, Dentler steadfastly denied *any* white flight. "It was then for the first time," Sullivan told us more than a year later, "that I realized how little those people understand what was going on."

Ignorance of political realities is characteristic of colonial rule by overlords who do not live in the political unit they control. Garrity lives in suburban Wellesley, Dentler in Lexington.

Garrity obviously regards Boston's politicians and people with intense suspicion. Although he may relinguish school control in about two years, Garrity exhibits a paternalistic need to protect Bostonians from themselves—another colonial characteristic.

Constitutional scholar Raoul Berger, in "Government By Judiciary," concludes: "The judges might begin by curbing their reach for policy-making power, by withdrawing from extreme measures such as administration of school systems—government by decree—which have disquieted even sympathizers with the ultimate objectives. Such decrees cannot rest on the assertion that the Constitution demands busing, when in truth it is the justices who require it in contravention of the framers' intention to leave such matters to the states."

For Garrity to take that advice would be welcome news for Bostonians and their elected school committee, who want nothing more than to run their own affairs without the good judge's protection.

THE NONGAME FISH AND WILDLIFE CONSERVATION ACT OF 1978

HON. EDWIN B. FORSYTHE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. FORSYTHE. Mr. Speaker, on July 28, 1977, Congressman Bob Leggett and I introduced the Nongame Fish and Wildlife Conservation Act. The purpose of this legislation is to provide financial and technical assistance to the States to enable them to develop and implement conservation programs for nongame fish and wildlife.

Although the Pittman-Robertson and Dingell-John programs have gone a long way toward fulfilling the conservation needs of game species, the sad truth is that no comparable legislation exists for the protection of nongame fish and wildlife. I recognize that the Endangered Species Act does provide protection for nongame species, but I submit that our national goal must be the preservation of wildlife before they become endangered.

What I am talking about is the quality of life in America—the quality of life for over 89 million Americans who each year venture into the outdoors to enjoy the nongame wildlife heritage of this great land of ours. It is time that we seize the initiative and move forward in an effective manner to insure that the full range of wildlife values in America are protected and conserved for the enjoyment of present and future generations. To accomplish this purpose Bob Leggett and I introduced the Nongame Fish and Wildlife Conservation Act of 1978.

On September 30 the Subcommittee on Fisheries and Wildlife Conservation and the Environment conducted hearings on this legislation. The testimony received by the subcommittee revealed a compelling need for the bill. Nongame fish and wildlife represent the overwhelming majority of the 3,700 vertebrate species found in the continental United States. Yet, at the present time, only 10 percent of these species receive any scientific management to insure their welfare, and with few exceptions these represent the game species. If the States had adequate resources to establish comprehensive nongame conservation programs, new or increased attention would be given to an average of 279 species in each State. This number is approximately twice the number of species which are legally harvested in each State and is probably more than three times the number of species which are currently the subject of a State wildlife conservation program.

During the September 30 hearings the subcommittee heard virtually unanimous support for the legislation and received several recommendations. The two major suggestions were that the bill be amended to provide an opportunity for comprehensive fish and wildlife planning that reaches beyond the boundaries of nongame species, and that the authorization levels be increased to accurately reflect the needs of the States.

Subsequent to the hearings, the legislation was redrafted to incorporate the many positive suggestions received. In particular, the authorization levels were increased and a comprehensive planning option was incorporated into the legislation. Today I am reintroducing the Nongame Fish and Wildlife Conservation Act with subcommittee cosponsors.

The Subcommittee on Fisheries and Wildlife Conservation and the Environment will be conducting additional hearings on the new legislation early in the second session and it is my hope that these hearings will lead to prompt passage of the bill.

Mr. Speaker, if we as a nation are to meet the challenge to protect and conserve our natural wildlife resources, it is critical that the Congress enact a comprehensive nongame conservation program.

FIFTY YEARS OF LOVING KIDS

HON. JOSEPH P. ADDABBO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. ADDABBO. Mr. Speaker, the year 1977 marks the golden anniversary of the Queensboro Children's Shelter. Operated by the Queensboro Society for the Prevention of Cruelty to Children (QSPCC), which itself has survived 58 years as a volunteer social effort, the shelter was the first of many programs and facilities devoted to child care services.

Today, there is a variety of residential services, protective-preventive services, an innovative group home program, and a newly acquired day care center. Through it all, the society has fostered a unique understanding of parents and children in conflict. And, in these trying economic times, which have done little to prevent the incidence of violence against or by children, staff, and volunteers have given of themselves to make up for funding deficits.

Four members of the society have been honored for their devotion and service: Morris Horn, Maurice Nalven, Ann Thompson, and Herbert Prezant. In addition, I would like to add a few words of high praise and admiration for the chairman of the board and outgoing president, Ralph H. Kress; Louis L. Theiss, the new president of QSPCC; and, the executive director, Eric B. Brettschneider. From all of us—and on behalf of the children of Queens—thank you.

I insert into the RECORD an article concerning the honorees:

THE HONOREES

MORRIS HORN

It is with a sense of privilege and pride that the QSPCC bestows upon Morris Horn, labor statesman and community leader, the Youth Development Award. As the QSPCC pauses to celebrate 50 years of service through the Children's Shelter, it is appropriate that recognition be given a community resident who also has been a leader in the cause of caring for children and youth.

For more than 45 years, Morris Horn has been an active member and distinguished leader of the trade union movement in the United States. As a founder and secretary-treasurer emeritus of the Provision Salesmen and Distributors Union Local 627 A.F.L.-C.I.O., Mr. Horn has earned for himself an enviable position in union ranks.

In 1963, he inaugurated the Morris Horn Scholarship Fund which, under the sponsorship of Local 627, provides funds to deserving high school graduates wishing to continue their education.

During his many years of community involvement Mr. Horn, a resident of Bayside, Queens, has devoted himself with enthusiasm and great effectiveness to humanitarian causes such as the Boys' Town of Italy, the Muscular Dystrophy Campaign, the Negro College Fund and the United Fund, as well as numerous other philanthropies. He was a pioneer investor in Israel Bonds and has contributed generously to the United Jewish Appeal, the Weitzmann Institute and the Red Mogen David. He has ben honored by many organizations including the Parkinson Foundation and the International League for the Repatriation of Russian Jews.

As a founder, president and now honorary president of the Jewish Center of Bayside Oaks, Mr. Horn is carrying on in the noblest tradition of trade union ideals when he works for the betterment of young people.

ANN THOMPSON

For her dedication in active service to the children and families served by the QSPCC, Ann Thompson is being presented with the Distinguished Service Award.

Ann joined the QSPCC board of directors in 1973 and has served in a number of capacities including Assistant Secretary and Assistant Vice President for Development, her current position.

Eric Brettschneider speaks of Ann's involvement, "whether it's writing letters to companies requesting raffle prizes, selling chances at the Summer Garden Party, working on a Phonathon or Street Fair, or contacting someone whose support is needed, we can always count on Ann to pitch in and help."

The list of community organizations that benefit from Ann's participation is long and impressive. She is presently chairperson of the Central Civic Association of Hollis, a member of Community Planning Board No. 12, and the Jamaica branch of the NAACP. She has served as secretary, co-chairperson of the housing and education committees, and New York State membership chairperson of the NAACP, First Vice President, Second Vice President and Financial Secretary of the Central Civic Association of Hollis, executive board member of the League of Women Voters, member of Queens Borough President Donald R. Manes' Decentralization Committee, Treasurer of the South East Queens Community Organization and member of the District 29 panel to screen nominees for the community school board.

And the list continues ... Ann is recording Secretary for the St. Gerard Drum and Fife Corps, member of the Human Resources Council of the Greater Jamaica Chamber of Commerce, Publicity Chairperson of the 705th Precinct Community Council.

In the political arena, Ann is a member of the United Democratic Club, 29th A.D., New York State Committeewoman for the 29th A.D. and in 1972 and 1973 was elected to the Democratic Judicial Convention for the 11th Judicial District. Ms. Thompson was also an elected delegate to the First National Women's Conference in Houston, Texas.

Ann feels her seven years' work experience as a Manpower Development Analyst and Director of manpower outreach programs for New York City's Office of Manpower and her B.A. in political science from Queens College have helped make her more effective in her community work.

A longtime resident of Queens, Ann currently resides in Hollis with her husband Otis and their two children, Steven, 15 and Denise, 12.

MAURICE NALVEN

In gratitude for and recognition for his many years of service to the QSPCC, Maurice ("Mal") Nalven, is receiving the President Emeritus Award.

Born in Brooklyn, New York in April of 1925, Mr. Nalven was educated in the public schools of that borough. Upon his high school graduation, he attended Syracuse University and attained his Bachelor of Science degree in 1949.

Mal came to Jamaica in 1957 and, though he had various prior civic interest (i.e., YMCA, Kiwanis), he was introduced to the work of the QSPCC in 1961 via the efforts of James Holton, a long time member and past President. Mr. Nalven had entered the insurance business with Mr. Holton, subsequently became a partner and, later on, bought him out.

He speaks of the QSPCC with abiding affection, particularly relating to its actions under his presidency (1973–1975). Mr. Nalven said he was "pleased with the awareness of the Board and extremely gratified to be a member and officer."

Regarding priorities for QSPCC, he realized long ago that there is a role that must be played in helping children become "productive adults." Said he, "Our policy should be to take the course of action so determined for mutual understanding. The professionals have been telling us that the best corrective way is to de-institutionalize." This idea is the foundation in the Society's group home endeavors.

No stranger to high office, Maurice Nalven is a past Chairman of the Board of the YMCA. In October, 1972, he was selected as Man of the Year for Outstanding Service. Well-known and respected in his chosen profession, he was President of the Insurance Agents Association of Queens County, Inc., 1963–64, from whom he received a Certificate of Appreciation.

At six feet and 185 lbs., "Mal" keeps himself in good shape by engaging in year-round recreation with his sons Glenn, 19, Todd, 14. It's golf, tennis and sailing in the summer and skiing and skating in the winter. Paddleball is another favorite.

Herbert Sam Prezant, Chairman of the 1977 Annual Awards Dinner Dance, is QSPCC's First Vice President and is known throughout Queens for his dedication to community service.

Sam served in World War II from 1942 to 1946, after which he successfully operated an automobile agency in Elmhurst, where he now heads a real estate and insurance brokerage business.

Mr. Prezant is a member of Temple Israel of Jamaica and the Jamaica Estates Assn. He also holds membership in the National, New York State and Queens County Insurance Agents Association and has served on the Community Councils of the 110th and 112th Precincts of the New York City Police Department, Salvation Army Service Unit of Queens and as Special Assistant to the State Attorney General. He is a Master Mason, Elk, and Odd Fellow. Recently, Sam became a member of the Relationships Committee of the Greater New York Councils, Boy Scouts of America.

Sam was responsible for organizing the Elmhurst Chamber of Commerce and is President and Chairman of the Board of Directors. He also helped to form and heads as its president, The Elmhurst Economic Development Corporation.

During the last fourteen years, Mr. Prezant has devoted much of his energetic existence to Lionism. He is a charter member of the Lions Club of Elmhurst, having served it in every office and capacity. In July 1969, in Tokyo, Japan, he was installed as District Governor of Lions International, heading a District comprising all of Queens and Brooklyn, and consisting of 44 individual Lions Clubs. His pet project has been an Eye and Ear Mobile Unit which provides free vision and hearing screeming to all and is often seen in the local communities of both boroughs. He has received many Appreciation Awards and Citations from international, state and district levels of Lions International for Outstanding Service.

Sam was introduced to the QSPCC seven years ago when he became a member of the

Board of Directors. In 1974, he saw a tremendous need for an official publication and with the approval of all concerned the QSPCC NEWS, VIEWS, newspaper was born. The first edition went to press in September, 1974, and the paper has completed three years with Mr. Prezant as its editor. For this and other outstanding service, Mr. Prezant was honored by the QSPCC's Board of Directors in December, 1975.

A TRIBUTE TO THE "LUCKY LOU"

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. PICKLE. Mr. Speaker, I am sure that my colleagues recognize that today is the anniversary of one of the most tragic events in the history of our Nation.

We are all familiar with the events that took place at Pearl Harbor on that Sunday morning 36 years ago, but I would like to bring to the attention of my colleagues one story that began on December 7, 1941, that has continued through today.

The cruiser U.S.S. *St. Louis* was one of about 100 American ships anchored in Pearl Harbor that day and it was the only major American warship that was able to get underway and reach open sea.

The ship became known as the "Lucky Lou" and the luck held throughout the war. After a distinguished battle career, the Navy called the *St. Louis* "the ship that couldn't be sunk."

I had the honor of serving on the *St. Louis* from October 1942, through September of 1944. I was a member of the 5th Division, antiaircraft battery and an assistant officer of the deck. During the time I was on board, we were torpedoed in the Battle of Kula Gulf on July 3, 1943. I must admit that at that moment we did not feel that the "Lucky Lou" was very lucky but we were able to return to harbor for repairs. Our spirits were good. And the spirit and dedication of officers and men over the years have remained good and steadfast. To a man, we all have been proud to serve on the U.S.S. *St. Louis*.

In 1951, the ship was sold to the Brazilan navy and after 25 years of service there it was decommissioned and scheduled for the scrap heap. A group of former shipmates of the *St. Louis*, headed by A. L. Seton, formed the U.S.S. *St. Louis* Association to try to save the ship from being scrapped and to bring it back to the United States to be preserved as a museum.

While the association has worked hard in this preservation effort, it now appears that most of the ship has already been dismantled and only the hull of the ship remains.

It is a sad ending for this valiant ship that played a major role in our victory in World War II, but it appears that the obstacles of lack of time and money could not be overcome.

Even though it could not be saved as a memorial, I think we should at least give tribute to this ship and the spirit that it represented as it steamed out of the holocous of Pearl Harbor 36 years ago today. That valiant action represented our determination to survive and it gave us some reason for hope on that dark day.

I hope that my colleagues in the House will join me in saluting the men who served aboard this ship and their efforts to establish an appropriate memorial for the "Lucky Lou."

Mr. Speaker, the following article from the Associated Press which was written in August provides a good summary of the efforts to save the U.S.S. *St. Louis* from the scrap heap:

NOSTALGIC EX-CREW TRIES TO SAVE FAMED CRUISER

WASHINGTON.—Some sentimental ex-crew members have succeeded in saving their old ship, the U.S.S. St. Louis, from a scrap heap in Brazil—at least temporarily.

Their eventual goal is to restore the "Lucky Lou" and maintain it as a museum.

The St. Louis, a cruiser, won its initial fame and began earning its nickname on the morning of Dec. 7, 1941, when it was berthed at Pearl Harbor for maintenance and repairs.

As Japanese planes and submarines began destroying the American fleet in a sneak attack, the St. Louis crew managed to get its ship underway. It steamed out of the harbor and reached the open sea, the only major U.S. warship to do so that morning.

The ship's crew later claimed six Japanese planes and was officially credited with three during the attack.

By the end of the war, the St. Louis had survived torpedo attacks and kamikaze pilots. It fired more rounds than any other Navy ship and sank one submarine, two cruisers, five destroyers and 14 planes.

But in 1951, the United States sold it to Brazil, where it was renamed the Almirante Tamendare, after the founder of the Brazilian navy. In 1975, Brazil retired the ship, cannibalized its working parts and prepared to sell the hulk for scrap.

That was when retired Cmdr. Al Seton of Staten Island, N.Y., found out what was going on. Seton, who was on the St. Louis at Pearl Harbor, began contacting other ex-crew members. He talked to representatives of the Brazilian government.

Another ex-crew member, Rep. J. J. Pickle, D-Tex., wrote to Brazilian Ambassador Joao Baptista Pinheiro, asking him to intercede to help save the St. Louis.

This week, a Brazilian government spokesman said that the plans to scrap the St. Louis have been abandoned for now. The spokesman said that Brazil is aware of the interest in saving the ship and has no present plans to dispose of it.

"That's great news," said Seton. "Now we have to raise some money." But he said fund-raising could not begin until Brazil gives some indication it is willing to sell the ship to its would-be rescuers.

The money required will be substantial, Seton said. The hulk is probably worth about a million dollars. Simply painting it would cost more than a million. Add towing charges and the cost of some basic restoration, and the amount needed approaches $5 million, Seton said.

Seton said he is exploring the possibility of joining with former Almirante Tamendare crew members in a joint project by both countries.

Another problem is finding a site and sponsor for the ship. States like Massachusetts and North Carolina have given berths to the battleships that bore their names, but Seton said the city of St. Louis has expressed little interest in becoming the permanent home of the "Lucky Lou."

STATUS OF PINEY WOODS COUNTRY LIFE SCHOOL

Hon. G. V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MONTGOMERY. Mr. Speaker, I recently received the following article on Piney Woods School from Mrs. Nellie E. Bass of Jackson, Miss., who is president of the Laurence C. Jones Student Aid Foundation. Mr. Jones was the founder and guiding light of the Piney Woods School for many, many years. Because of the importance of Piney Woods School to Mississippi, I would like to share the newspaper article with my colleagues.

[From the Simpson County (Mendenhall, Miss.) News, Nov. 3, 1977]

PINEY WOODS CHANGES CALLED "KILLING OF A DREAM"

"The old order changes" and "a new broom sweeps clean" is the policy of the president and chief executive officer, James S. Wade, and the board of trustees of Piney Woods Country Life School, Piney Woods, Miss.

Dr. Laurence Jones, founder and long-time president of Piney Woods School, had acquired a loyal, hard-working, self sacrificing group of people, affectionately called "The Piney Woods Family". He tried to make justifiable provision for their residence at the school as long as they wished to stay and could render some useful service to the school after his death. He did not leave a formal will, but to many he gave a tenure statement which read: "______, faithful employee more than 10 years, upon the recommendation of Laurence Jones, founder and president, in whose judgment we have full confidence, is hereby elected to membership in the Piney Woods faculty and is to be retained in that capacity until charges of mis-conduct are brought against him in writing before the board of trustees in open meeting by president and secretary of board of trustees, with accused one having opportunity of hearing by the board with the accused one present. At that hearing the board shall either sustain or dismiss the charges. Until one of the above contingencies has happened, the person above named shall have full security of tenure." Signed, Everett Reese, chairman of the board, and Vaughn Watkins, secretary, Laurence Jones, president.

No holders of such tenure agreements were ever given a hearing by the board. Mr. Wade, in a bulletin to Dr. Jones, soon after he took office, stated that he was in complete authority of all affairs of the school, and "it would do no good for anyone to make complaints to you about me."

The mortal remains of Laurence Jones had scarcely had time to adjust to their new surroundings under the cedar tree, when the rumblings of disharmony indicated that his passing signaled the eviction of the Piney Woods family.

Mrs. Nellie Bass, sister of Dr. Jones, had occupied a small home on the campus which she had remodeled and repaired at her expense, with the intention to remain there at her pleasure because of a request of Dr. Jones on March 13, 1961, to Mr. Reese, chairman of the board which stated: "My family-that is my late wife and my sister Mrs. Nellie Jones Bass-gave many years of their time to the development of Piney Woods School without practically any salary. . . . She should be allowed to use the house and grounds she is now occupying as long as she lives. All the furniture in this house belongs to her and her estate-excluding the plumbing." In

March of 1976, Mr. Jack Halen, buildings and grounds supervisor, notified her that she should vacate the house by May 1, 1977. She challenged his order with the above letter, saying also, if she must vacate, then Mr. John Halen, Sr. should also vacate his home, since she was included in the same letter which gave him residency rights for life. She received a negative reply, and after several harassments, she left the campus and moved to Jackson.

Mrs. Eula Kelly Moman, now in her seventies, had lived with the Jones family since she was nine years old, and expected to stay in her small apartment in the Community House where Dr. Jones and family had lived. She had been school treasurer, dean of women, hostess at the community house and chief guide and receptionist to guests at Piney Woods School. She felt capable and desired to retain her apartment and fill the latter position as guide and receptionist—public relationist. She, too, received warnings and harassment, and in spring of 1977 was served an eviction notice by the deputy sheriff of Rankin County. She challenged the case in view of her tenure statement, and a hearing was held in chancery court in Brandon on August 4 & 5, 1977. She lost the case and departed from the campus in September, 1977.

Several other long-time staff members held similar residence tenure statements and none were granted a hearing before the board of trustees.

Mr. and Mrs. Paul Fosness, long-time friends of Dr. Jones and supporters of the school, came to Piney Woods School, June 1, 1970, after they had retired from previous employment—Mrs. Fosness, as teacher, and Mr. Fosness, in industry. They were volunteers, paid their personal and household expenses, furnished their home, received free housing and meals in the dining hall. They received no "token pay." A verbal agreement with Dr Jones provided that they make expenditures to remodel a facility as a little theater in return for a permanent residence on the campus. In addition to the thousands of dollars they invested, their friends in Central Iowa matched their investment to provide the beautiful, useful facility. Mr. Fosness died of long-term cancer in April, 1975. Dr. Jones then repeated that Mrs. Fosness should continue her residence there as long as she wished, in return for the previous investment. Soon after the death of Dr. Jones in July, 1975, Mrs. Fosness received notice from the president and chief executive officer, Mr. Wade, that her volunteer services were not needed, and she must vacate the house by September 1, 1975. She complied with the request without objection, but appealed to the board of trustees for some return on her investment since her right to residence had been terminated. At this writing, two years later, she has received no reply to her request.

In a recent interview on television, Mr. Wade was asked why these people had been denied residency on the campus and had been requested to retire, and his reply was two-fold: it was the decision of the board and the administration, and the school could not receive accreditation with unqualified personnel. This statement is not valid in most cases, and in the case of Mrs. Fosness is untrue, for she holds two valid teacher's certificates to teach in Mississippi issued by the Mississippi State Department of Education.

Mrs. Nellie Bass, sister of Dr. Jones, in personal comment said: "The tactics and present policy of Piney Woods School, might be called 'the killing of a dream'. It is almost unbelievable that a man who spent his life helping people had to leave Piney Woods School in the hands of people with no compassion or consideration for the people who worked closely with him for many years. Piney Woods School is more able now to give help to children than it was in the early days when no one was turned away and everyone was given a home. In 1917, there were more work opportunities there for students than there are now. There was community involvement with farmers' conferences, mothers' club and community fairs. Piney Woods School was not founded to be a big, prestigious school, but a small school to meet the needs of the needy.

Dr. Laurence Jones preferred that his grandson, Laurence C. Jones, III, should be his successor. He has had valuable experience as an administrator, and knows the philosophy and needs of Piney Woods School. The chairman of the board of trustees refused to consider him. Dr. Jones was too old, and too sick to challenge this refusal, so he conceded to the choice of the board. He said he had done all he could, but he hoped the old Piney Woods Family of workers would carry on the traditions and activities of the school. Those wishes were negated when all the relatives and older staff members were banished from the school."

WORLD BANK SALARIES CAUSES ENVY AMONG CONTEMPORARIES

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. YOUNG of Florida. Mr. Speaker, for many months, I have taken issue with the high salaries and benefits which are paid to employees of the World Bank. While this institution is supposed to be active in economic and social development in the less developed countries, it's own employees are becoming a rather high living elite, especially when contrasted with those they are supposed to serve.

The employees of the World Bank are charged with the responsibility of providing assistance to the "poorest of the poor," yet the American taxpayer is helping to foot the bill for the "richest of the rich" of international bureaucrats. In this regard, the following Wall Street Journal article by Mr. Urban C. Lehner which appeared on November 28, 1977 does an excellent job of confirming my earlier reports to the House relative to the very generous benefits received by World Bank employees. Following is a reprint of the Wall Street Journal article and I hope my colleagues will take the time to read it.

SALARIES AND BENEFITS AT WORLD BANK ARE ENVY OF WASHINGTON—AT 8TH LEVEL, PAY GETS DOWN TO CONGRESSIONAL STIPEND; A COUNTRY CLUB FOR IMF

(By Urban C. Lehner)

WASHINGTON.—The World Bank is a 130-nation institution that from its headquarters here lends billions of dollars to underdeveloped countries, some of which are so poor that their people subsist on less than $100 a year.

The bank, whose biggest contributor is Uncle Sam, also is openhanded to its 2,200 professional employes here, several hundred of whom subsist on salaries of more than $50,000 a year. Indeed, the bountiful pay and perquisites of the World Bank and three similar organizations—the Asian Development Bank, the Interamerican Development Bank and the International Monetary Fund—are the envy of official Washington.

The agencies' staffers can dine on gourmet meals in graciously appointed dining rooms subsidized by the institutions so that employes pay as little as 75% of the cost of the food. For $42 a month and no initiation fee, high-level officers of the IMF and some of the other organizations swim and play tennis and golf at their own country club near Washington; lower-ranking employes pay less. And on overseas business trips, World Bank people last year made nearly 600 first-class flights on the Concorde supersonic jet even though Concorde fares are twice as costly as regular jet fares.

STRINGS MAY BE ADDED

This munificence, however, is evoking rising resentment in Congress, which is threatening to add cost-cutting strings to the more than $2 billion a year the U.S. is spending to help support the four international financing bodies. The personnel practices of the organizations, the Senate Appropriations Committee complains, "are suggestive of an institutionalized granting of lifetime sinecures where extraordinarily high salaries are commonplace and the pursuit of fringe benefits has been raised to an art form."

The Carter administration shares Congress's resentment. Treasury Secretary Michael Blumenthal, told that high salaries are needed to induce foreign employes of the organizations to come here to work, snapped sarcastically that "Washington is *not* a hardship." (The Treasury is in charge of obtaining appropriations for the organizations from Congress.)

All this criticism has the institutions' employees feeling much maligned and misunderstood. One World Bank man, trying to illustrate the frustration employes feel, tells of treating a Treasury Department official to lunch in the bank's dining room. "The guy didn't know a thing about any of our development projects, but he knew the exact amount of the dining room's subsidy," the bank man complains.

The organizations contend they are being unfairly compaired to U.S. government agencies when in fact they are international financial institutions controlled by many nations, not just the U.S. and they insist their pay and perks must be competitive with private business's to attract top executives.

CHARACTERIZING A NEIGHBORHOOD

There isn't any question that the institutions' emoluments are generous. In the Washington real-estate market "A lot of World Bank people live here" is a catch phrase for a well-to-do-neighborhood.

Robert McNamara, the World Bank's president and a former U.S. Secretary of Defense, grosses $115,000 a year, or almost double the $66,000 annual salary of Cabinet members. His pay also is well above the $75,000 salary of Vice President Mondale. Among U.S. government officials, only President Carter, at $200,000 a year, makes more than Mr. McNamara.

But what particularly rankles many Senators and Representatives is that at least 350 World Bank employes make more than the $57,500 annual pay of members of Congress. In fact, it isn't until the eighth level down on the bank's pay scales that salaries fall below $57,500, to a minimum of $56,310 if the employe is a U.S. citizen. A foreign employe on that level earns at least $35,220, but that's tax-free; U.S. citizens are paid more so that their after-tax salaries will equal the foreigners'.

On a "taxable equivalent" basis, the average World Bank salary is $43,000 a year. The pay is comparable at the other three international financing organizations here.

Equally generous are the perquisites. In addition to cut-rate meals and country-club fees, education allowances of up to $2,500 a child supplement salaries at many of the institutions. When a World Bank employe wants to buy a home, he may be able to borrow the down payment at an 8.5% interest rate. Every two years, foreign employes get air fares back to their native lands for "home leave."

On business, World Bank staffers fly first class, often taking the Concorde, for longer trips, such as those to Asia, Africa, or southern Latin America—even though their boss, Mr. McNamara, makes a point of flying tourist. The difference between first-class and tourist-rate travel last year added $1.8 million to the bank's air-travel bill, which totaled $12 million.

The institutions argue that their perquisites are comparable to those businesses and governments give employes assigned to work thousands of miles from home. "Washington isn't New Delhi," one staffer concedes. "But if you're from New Delhi, it (Washington) isn't necessarily where you want to be, especially if your wife's visa doesn't allow her to work and you're traveling to projects for weeks at a time." (About 75% of the banks' professional employes are from foreign countries.)

Nor do the employes consider themselves overpaid. "We manage $40 billion of high-risk projects, from building hydroelectric dams to expanding village agriculture in Upper Volta, and we make a profit" says a World Bank official. "To do that, we have to recruit successful people at the prime of their careers in competition with private enterprises."

Such arguments fail to impress critics. Citing what it called the "unparalleled pay and allowances" of "those whose primary mission is to assist the poor and needy of the world," Congress recently decreed a maximum $50,000 salary for each of the three U.S. officials who cast America's votes at the World Bank, the Asian Development Bank and the Inter-American Development Bank. For Edward Fried, the "U.S. executive director" of the World Bank, that means nearly a $34,000 pay cut from $83,830 a year. (The banks are free to pay the three men more, but if they did so, they would forfeit this year's U.S. contribution.)

Sen. Daniel Inouye, who chairs the subcommittee that writes the institutions' U.S. appropriations, calls the Fried pay cut a "message" to the organizations to reduce their employes' salaries to U.S. civil-service levels. "If this is not forthcoming, the Congress can attach strings to the U.S.'s contributions," the Hawaii Democrat warns.

The World Bank and the IMF staff associations have begun a study of the issue. In addition, the five leading subscribers to the World Bank—the U.S., West Germany, England, Japan and France—have quietly asked two private consulting firms to do another study.

But how the various officials stand on the issues seems to depend on where they sit. To one World Bank official, "the issue is, Do you want to turn this place into another civil-service bureaucracy by limiting salaries to U.S. civil-service levels?" To one Treasury official, however, the issue is "How much of a premium do you need to pay to motivate these people?"

PERSONAL EXPLANATION

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MAZZOLI. Mr. Speaker, responsibilities in my district prevented my being present Thursday, December 1, 1977, for rollcall No. 759. Had I been present I would have voted "yea."

MAYOR ABRAHAM D. BEAME OF NEW YORK

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MURPHY of New York. Mr. Speaker, leadership is not an easy quality to define, nor is the job of leading the largest city in this great Nation. Yet Abe Beame has most impressively demonstrated that quality which has provided a strong foundation for the revitalization of the government of New York.

His has been an exceptional lifetime of public service, with his background particularly well suited for the difficult road that lay ahead. During the times of crisis, such as the riots sparked by the power blackout and in particular the masterful handling of the city's financial crisis, Mayor Beame brought a depth of understanding and guidance unequaled in our city's heritage.

Abraham David Beame took the oath of office as the city's 104th mayor on January 1, 1974, capping a unique 31-year career by becoming the highest officer in the Nation's largest city.

Born in London, England, on March 19, 1906, Beame was brought to New York City by his parents in that year. He grew up on the Lower East Side, attended the city's public schools, and received a B.A. cum laude from City College of New York in 1928.

After establishing his own accounting firm while in college, Beame became a certified public accountant in 1930 and continued in this profession until 1946 Beginning in 1929, he also taught accounting and commercial law in city high schools and at Rutgers University, and served as legislative representative for the joint committee of teachers organization.

Beame was appointed assistant budget director for New York City in 1946 and promoted to budget director in 1952. In these posts, he analyzed the wide variety of diverse municipal programs and evaluated their usefulness and efficiency. In 1948, he initiated a pioneering management improvement program, updating the city's antiquated procedures.

In 1962, Beame was elected comptroller of the City of New York and continued in this post until 1965, when he won the mayoral nomination of the Democratic party. Until his reelection as comptroller in 1969, Beame was a consultant in the area of finance, serving as a director of the finance committee of the American Bank and Trust Co.

During his terms as comptroller, Beame introduced a number of improvements in the handling of pension funds and municipal debt and issued a major report on upgrading the city's credit rating. He went beyond the traditional fiscal aspects of his office by initiating additional studies on narcotics control, hospital care, housing and day care centers. He spoke out for free tuition and open enrollment in the City University system and advocated positive steps to increase consumer representation in many areas of government which had traditionally been unresponsive to consumer input.

During his career, Beame has served on the Mayor's Committee on Management Survey and was a member of the New York State Commission on Constitutional Revision. In addition to an extensive array of organization and committee memberships, he was on the Board of the National Conference of Christians and Jews and served as trustee at large for the Federation of Jewish Philanthropies.

The mayor and his wife, the former Mary Ingerman, were married in 1928. They have two sons, Edmond and Bernard, and five grandchildren.

Service to his city was always first and foremost in Abe Beame's public life. He has served admirably, and the people of New York owe him a debt of gratitude which will be hard to repay.

PRESIDENTIAL CHRISTMAS TREE IS FROM WASHINGTON'S THIRD CONGRESSIONAL DISTRICT

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. BONKER. Mr. Speaker, I am proud to announce that a 21-foot noble fir from Washington State's west slope of the Cascades has been selected as President Carter's first White House Christmas tree. The Pacific silver fir was donated by Weyerhaeuser from its property on snowy Mount St. Helens near Spirit Lake, which is located approximately 100 miles southeast of Olympia. The tree was selected and shipped by the J. Hofert Co., which also donated the White House Christmas tree in 1972. The tree was trucked across the country in a refrigerated trailer by Ed Humbert, accompanied by his wife and daughter, and was delivered to the White House today. The fir is being erected in the Blue Room where it will be on display for visitors.

It is appropriate that the tree is from western Washington, for the west slope of the Cascades contains some of the most productive and beautiful timberlands in the world. The abundant precipitation, proper soils and other factors combine to provide an ideal environment for fir, hemlock, spruce, and other valuable species. These west slope forests are one of our most precious renewable resources. In addition to their material value, these forests provide protected watershed, balanced ecosystems, wilderness, and recreational opportunities, and many other benefits. So when we see the traditional Christmas fir, I hope that we would remember the importance of this resource in our daily lives.

Let us also not forget the special significance of the tree, apart from its com-

mon uses. Although greenery—especially from oaks—was a part of pagan customs over a thousand years ago, it was Saint Boniface, in the eighth century, that dedicated the fir to the Holy Child, and began its association with Christmas. The evergreen has become a symbol of vigor, life, and survival. As the Nation's "first tree," may it be a symbol of our own renewal and life, and serve as a reminder of the importance of our spiritual resource.

JAMES JAY GARMAN

HON. ALBERT GORE, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. GORE. Mr. Speaker, I want to call my colleagues' attention to a tragedy which has occurred recently in the district I represent in this House which demonstrates a need for a change in current law.

Early last month, James Jay Garman, the commander of the ROTC Rangers at Tennessee Technological University in Cookeville, was killed during a training exercise. Mr. Garman was instructing other cadets in important military skills when he accidentally fell and was swept over a waterfall. This young man was a credit to his family, to his community, and to this country's military service. As one of his professors commented after Jay's death, "He represented the highest standards of professionalism and integrity and scholarship."

The shock of this tragedy is only compounded by the fact that, under existing law, Jay's widow will apparently not be eligible to receive benefits normally paid to widows of U.S. servicemen killed in the line of duty. Jay's death occurred in the service of his country, as much so as the death of any serviceman killed during peacetime. But inquiries by members of his family and my own inquiries have indicated that Jay's widow will receive only the benefits of his group life insurance policy, not the dependency indemnity compensation ordinarily paid to widows of servicemen. I believe this is an unfortunate oversight in the law and demonstrates the need for legislative changes to correct it.

I wish to insert here copies of the newspaper articles published following Jay's death last month. I hope that my colleagues will consider these articles as a memorial to Jay and to the tradition of patriotic service to his country which he and his family believed in so much.

[From The Oracle (Tennessee Technological University), Nov. 11, 1977]

ARLINGTON FUNERAL HELD

(By Tracy McMahan)

James Jay Garman, a 21-year-old senior physical education major and commander of the ROTC Rangers, was swept to his death over the 100-foot Fancher's Falls in White County during an ROTC training exercise on Saturday, Nov. 5 about 10:30 a.m.

Garman, who was buried yesterday in Arlington National Cemetery with full military honors, was the son of Col. and Mrs. Fred Garman of Cookeville.

Garman and nine Rangers, building a rope bridge and practicing rappeling during a training session lead by Garman at the falls, were familiar with the wilderness area in White County where previous training sessions had been held.

Walking down a ledge above the falls to secure a rope, he lost his footing, and the rapid waters carried him to his death. His body was recovered about 12:45 a.m. at the bottom of the falls from the waters of Center Hill Lake.

Lt. Col. Jon Eiche, professor of Military Science at TTU said, that Garman was working about 12 feet from the falls on a rope bridge located above the falls. He had built bridges similar to this several times before and had already been up and down the slope three or four times; therefore, he used no safety hookups.

On the east bank the rope got tangled in branches; as he went down the slope to free the rope he lost his footing about five feet above the water.

The Rangers on the opposite bank watched helplessly as the strong current forced their commander over the 100-foot falls and held him underwater at the base of the falls. The water was moving rapidly because of recent rain.

Garman screamed twice, but, according to White County Deputy Melvin Werley, there was no way he could escape the falls. "The water there is very rapid because it has been traveling over a stair-step of smaller falls by the time it reaches the large one," Deputy Wherley said.

Another group of ROTC students were in training five miles away at Tech Aqua under the supervision of Major Yates, deputy professor of Military Science, and Captain Stempel, assistant professor of Military Science. The other students did not join in the search, but Cpt. Stemple came to the falls and took the other nine Rangers away from the scene of the accident.

Cpt. Stempel said the nine Rangers conducted themselves in the best manner possible. After searching about two hours, a rescue squad boat using dragging equipment found Garman's body at the base of the falls.

According to other Rangers who have trained in the area before, the water at the bottom of the falls varies in depth from around 18 inches to 20 feet, and Garman was probably held by an undertow in deeper areas of the water.

Garman, a graduate of James Robinson High School in Fairfax County Virginia, has always been an active participant in school activities. In high school he was president of the student government, captain of the track team, and a member of "Who's Who In American High Schools."

Entering TTU in 1974 as a physical education major, he got involved in many aspects of campus life. During the past three years, he was a member of the track team, a president of the P.E. Club, and a resident adviser for two years in Maddux-McCord in 1975–76, and in Cooper-Dunn in 1976–77.

He served as head resident of Warf and Ellington Halls this year. Also, he took photos at home football games and on campus for the University Photo Services.

He had a three-year ROTC scholarship that he received after his first year as a ROTC cadet. He received the Distinguished Military Graduate award and several other awards.

He graduated from the U.S. Army Airborne School and the U.S. Army Ranger Training Fort Benning, Ga. His training record was so outstanding that he was allowed to wear the Ranger Tab earned rarely by U.S. Army officers in active duty.

Garman leaves behind his wife of two months, Jerrie Jennings Garman, a senior journalism major, and former ORACLE managing editor and former photographer for the Hearld-Citizen; his parents, Col. and Mrs. Garman, 125 Scenic Lane; four brothers, Frederick Garman of Falls Church, Va.; Joseph and Thomas Garman of Cookeville; Wiliam Garman, a TTU sophomore; and one sister, Teresa Jane Garman, a TTU freshman.

Memorial services were held at Hooper & Huddleston Funeral home on Tuesday with Rev. Dan Haskins officiating. Rev. Haskins, who is the BSU advisor at Tech, also, officiated at the graveside services at Arlington National Cemetery.

FRIENDS COMMENT

I would not do justice to Jay Garman, who died Saturday during an ROTC training exercise at Fancher's Falls, to paint him as a one-dimensional person. Rather, he was a multi-dimensional person who would not fit a typical stereotype of an army career man.

Jay displayed various interests and a multitude of talents. Lt. Col. Jon Eiche, professor of Military Science, said, "He demonstrated leadership qualities in every facet of life." According to Jay's friends and superiors a major part of his life could be summed up in three words: challenges, competition, and care.

The outdoors and the military presented many challenges for him. He graduated from the U.S. Army Airborne School and was one of few Tech ROTC students to complete the U.S. Army Ranger Training Program at Fort Benning, Ga.

The Ranger program is one of the most rigorous offered by the ROTC program. His superiors were hesistant to let him go into the Ranger training, his friends said, but he met the challenge and returned with the coveted Ranger Tab.

Captain Stempel, a professor of Military Science and advisor of the Orienteering Club, said, "Jay thrived on challenges." He set his goals high and although some of them were unfulfilled, he always tried to do his best and learn from his experiences according to Stempel.

Charles Fletcher another ROTC student, recalled that Jay said, "It isn't adventure if everybody does it."

He was a member of the Orienteering Club and often helped president Jeff Macintire organize activities. In 1976 he placed sixth out of 80 contestants in the Vanderbilt Orienteering Contest helping his team take first place.

Cpt. Stempel said that he played a regulation role in Jay's life often telling him "no" when he wanted to engage in risky out door training.

However, he not only enjoyed the challenge the outdoors offered; nature also offered him chances to laugh and love. Steve Swann, a friend of Jay's, told of one 45-mile hiking trip in the Smokeys last summer on which Jay and his friends relaxed and laughed together.

The Reverend Dan Haskins, Tech BSU director and friend of the Garman family, said, "Jay was raised in an extremely warm family situation, and high moral values were instilled in him."

Jay participated in athletic competition. He ran cross-country track and played tailback for the football team at James Robinson High School in Fairfax County, Virginia.

He was a member of the TTU track team and broke one relay record. All of his friends said he liked to keep in top-notch physical shape. MacIntire said, "His most unfavorite type people were lazy people who didn't try."

He did not neglect academic competion. He recieved a three year ROTC scholarship during his first year as a cadet in ROTC and had a QPA of around 3.6 He was president of the Student Government in high school and was listed in Who's Who In American High School Students.

Lastly, Garman showed he cared. He took pictures for the University Photographic Service. His interest in photography was promoted by his wife of two months Jerrie Jennings Garman, who is a senior journalism major, former editor of the ORACLE, and former photographer for the Herald-Citizen. Don Reese, head of University Photographic Service said that Jerie and Jay enjoyed taking pictures at the football games and experimenting with dark room techniques.

Jerrie often joined Jay and his friends in their adventures. MacIntire said Jay met Jerrie in a PE class about 2-3 years ago.

Serving as a resident advisor for two years in Maddux-McCord in 1975-76 and in Cooper-Dunn Hall in 1976-77 and as a head resident in Warf-Ellington Halls, he came in contact with many students and their problems.

Mrs. Fox who helps select the Head residents said that Jerrie helped Jay in dorm activities and, "both their lives blended together in everything they did."

Jay cared about his residents and their problems, residents said. One resident in Jay's dorm said, "He always had time to talk to me about anything on my mind."

This spring Jay was to be commissioned in the army, fulfilling one of his goals. Swan said he often said that he wanted to be the best second lieutenant the army ever had.

Garman's fellow ROTC students served in a memoral service for him at Hooper & Huddleston Funeral Home last Tuesday. He was buried Thursday in Arlington National Cemetery with full military honors.

Many described him as someone whose unchanging confidence and limitless enthusiasm engulfed them. While he was here he touched many lives not by his services or achievements, but by "living life to its fullest—just being Jay."

[From The Cookeville (Tenn.) Herald-Citizen, Nov. 7, 1977]

Cookeville Man Swept to Death Over Falls

(By Bronwyn Turner)

James Jay Garman, of Cookeville, 21-year-old commander of the ROTC Rangers at Tennessee Tech, was killed Saturday during a training exercise when swept over the 100-ft. Fancher's Falls in nearby White County.

Young Garman, a distinguished ROTC student who had looked forward to a promising military career, was the son of Col. and Mrs. Fred Garman of Cookeville. He died in the plunge over the towering waterfall about 10:30 a.m. Saturday and his body was recovered from the waters of Center Hill Lake at the foot of the falls about two hours later.

Memorial services will be held here at Hooper & Huddleston Funeral Home at 10 a.m. Tuesday, and he will be buried Thursday in Arlington National Cemetery with full military honors.

Garman was in charge of the group of nine Rangers practicing rappelling and building rope bridges in the area above the falls and was securing a rope on one bank when he lost his footing and was carried to his death in the rapid waters.

Rangers located on the opposite bank were helpless to save him as the TTU senior was forced by strong currents over the falls, White County authorities said today. Garman's body was found two hours later at the base of the falls, apparently held underwater by the current.

News of Garman's death brought shock to ROTC students and staff at the university. "He was the guiding light of our program. He representsd the highest standards of professionalism and integrity and scholarship," Lt. Col. Jon Eiche, professor of Military Science at TTU said this morning.

Garman was well-trained and an outstanding soldier, Col. Eiche said, and the accident Saturday was apparently the result of the student's loss of footing on the bank.

Garman was working on a rope bridge located some 15-20 feet above a shallow stream about 12 feet from the falls. Rope on the east bank had become tangled in branches, and Garman was on the slope freeing the line when he lost his foothold and fell. The other Rangers participating in the exercise were on the opposite bank and could not reach him, Eiche said.

The Ranger fell about 15 feet to the water below, White County Deputy Melvin Wherley said today. He shouted for help twice as the strong currents forced him over the falls.

"The water there is very rapid because it has been traveling over a stair-step of smaller falls by the time it reaches the large one," Deputy Wherley said.

"There was no chance of him swimming out and escaping the falls," he said.

Some 15 other ROTC students training in the area joined with the remaining Rangers and White County Rescue Squad in searching for Garman, Col. Eiche said. The Rangers used ropes to reach the bottom of the falls as soon as possible after Garman fell, he said, but could not find him.

A rescue squad boat, fighting the strong turbulence beneath the falls, located the body using dragging equipment about 12:45 p.m. Saturday.

Garman will be buried in military uniform, Col. Eiche said today, and a uniformed honor guard will be pallbearers at the funeral scheduled here for 10 a.m. Tuesday. A gun salute and the playing of taps will be part of the ceremony honoring Garman, he said.

The student was the head resident of Warf Hall at Tennessee Tech and was on a three-year ROTC scholarship at the school.

"I think it's safe to say that Jay lived life to the fullest and he died doing what he enjoyed most," Col. Eiche said. "He was a sterling young man."

Garman is survived by his wife of two months, Jerrie Jennings Garman, a senior journalism major at the university and a former Herald-Citizen photographer, his parents, Col. and Mrs. Garman, 125 Scenic Lane; four brothers, Frederick Garman of Falls Church, Va.; William, Joseph and Thomas Garman of Cookeville; and one sister, Teresa Jane Garman, of Cookeville.

Garman graduated from James Robinson High School in Fairfax County, Virginia, in 1974. He was president of the Student Government, captain of the track team, a member of the cross-country track team and gained listing in "Who's Who In American High Schools."

He entered Tennessee Tech in the fall of 1974, a physical education major. During the past three years he was active in all phases of campus life. He was a member of the track team, a past president of the P.E. Club and for two years served as a dormitory resident advisor, during 1975-76 in Maddux-McCord and 1976-77 in Cooper-Dunn Hall. This academic year, Garman was selected as head resident for Warf and Ellington Halls. He assisted the University Photo Services by taking photos on campus and particularly at home football games.

As an ROTC cadet, his achievements were many. At the end of his first cadet year, he was awarded a three-year ROTC scholarship. Since that time, he received numerous awards and medals, including the Distinguished Military Graduate award. He served in most leadership positions and graduated from the US Army Airborne School and the US Army Ranger Training Program at Fort Benning, Ga.

As a result of his outstanding training record as a ranger cadet, he was authorized to wear the coveted Ranger Tab which is earned by few active duty US Army officers.

Tuesday services here will be at the chapel of Hooper & Huddleston. The body will lie in state at the funeral home today from 1-9 p.m.

The services at Arlington Cemetery will be at 1 p.m. Thursday.

[From the Cookeville (Tenn.) Dispatch, Nov. 7, 1977]

Jay Garman, Tech Ranger Dies in Mishap

ROTC Cadet James Jay Garman, 125 Scenic Lane, Cookeville, died on November 5, 1977 while participating in a U.S. Army ROTC Ranger field problem at Fanchers Falls in White County.

Cadet Garman, who was 21 years old, was graduated from James Robinson High School in Fairfax County, Virginia, in 1974. He was the President of the Student Government, Captain of the track team, a member of the cross country track team and gained listing in Who's Who In American High Schools. Cadet Garman entered Tennessee Technological University in the fall of 1974 and selected physical education as a major. During the past three years he was extremely active in all phases of campus life. He was a member of the track team, a past President of the P. E. Club, for two years served as a resident advisor; during 1975-76 in Maddux-McCord and 1976-77 in Cooper-Dunn Hall. This academic year Cadet Garman was selected as Head Resident for Warf and Ellington Halls. He assisted the University Photo Services by taking photos on Campus and particularly at Eagle home football games.

Garman, leading a party of 10 Rangers in tactical exercises at the falls, where they often trained, apparently lost his footing while working on a rope bridge about 10 yards above the falls. He slipped into the stream and was swept over the falls, plummeting some 200 feet to his death.

The White County Rescue Squad recovered the body at the base of the falls where it falls into Center Hill Lake and transported it by boat to the Johnson's Chapel Boat Dock. He was dead on arrival at White County Hospital.

"He was a model student, model soldier, model athlete," said Lt. Col. Eiche. "He was no doubt one of the best, if not the best officer to come out of this university, or any university," the officer said.

As an R.O.T.C. cadet Jay's achievements are long listed. He enrolled in the R.O.T.C. program as a freshman. His first training exercise was during the pre-1974 fall term, prior to the start of the academic year. Cadet Garman, through correspondence found out about a Ranger Club and joined early so that he could receive pre-training for his future cadet days. At the end of his first cadet year he earned and was awarded a three year R.O.T.C. scholarship. Since that time he has received numerous R.O.T.C. awards and medals including the distinguished military graduate award. Additionally he served in most leadership positions, was graduated from the U.S. Army Airborne School and the U.S. Army Ranger Training Program at Fort Benning, Ga. As a result of his outstanding training record as a ranger cadet, Jay was authorized to wear the coveted Ranger Tab which is earned by few active duty U.S. Army officers. This academic year Cadet Garman was serving as the commander of the Tenn. Tech. R.O.T.C. Rangers.

Orienteering was high on the list of the many loves enjoyed by Cadet Garman. His capabilities in this cross country navigational sport were well known because he was a frequent winner. During the past two years he applied his abilities in orienteering to organizing meets, setting up courses and training students in techniques of the sport.

Cadet Garman was married to Jerrie Jennings of Woodbury, Tenn. at Hidden Hollow on Sept. 1. Jerrie is a senior at Tenn. Tech majoring in Journalism. She was the managing editor for the Oracle, the campus newspaper during academic year 1976-1977. Jay's parents are Colonel and Mrs. Fred Garman of Cookeville and his brothers are Rick of Fairfax, Va.; Bill, Joe and Tag of Cookeville and a sister Terry of Cookeville.

Although only 21 years old, Cadet Garman has accomplished many praiseworthy objectives. He was advisor to many new university students, a leader in the ROTC Program a 3.6 academic grade point student finishing his senior year, and a loving and devoted husband, son and brother. His truly christian way of living each day is a tragic loss to his family and friends, this community and to those he would have served.

Funeral services for Cadet Garman were held at 10 a.m. on Tuesday, October 8, 1977 at the Hooper and Huddleston Funeral Home. Burial was at the Arlington National Cemetery, Arlington, Va. Donations to the James Jay Garman Memorial Orienteering Fund, c-o American Bank and Trust are appropriate.

NEW PROTECTION FOR AMERICA'S FISH AND WILDLIFE HERITAGE

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. LEGGETT. Mr. Speaker, along with my colleague, ED FORSYTHE, and other members of my Subcommittee on Fisheries and Wildlife Conservation and the Environment, I have today introduced a bill to assist States in improving and invigorating their nongame fish and wildlife programs. This bill refines and strengthens the provisions found in H.R. 8606 which also would assist State nongame programs.

The basic purpose of this new bill is to benefit those species of fish and wildlife which are not taken for sport or food. These so-called nongame species have received little direct benefit from State fish and wildlife programs up to now, although they are enjoyed by increasing numbers of bird-watchers, students, photographers, and nature lovers. The available habitat for these nongame species has decreased at the same time the public is demanding increased opportunities to enjoy nongame wildlife experiences.

Wildlife experts and conservation organizations have urged the Subcommittee on Fisheries and Wildlife Conservation and the Environment to give greater attention to the needs of nongame species. Their requests have been supported by ecologists and scientists who recognize that protection of our fish and wildlife heritage requires scientific management of both game and nongame species and the ecosystems in which they live.

My subcommittee held hearings on H.R. 8606 in September. Those conservationists and wildlife biologists who testified agreed that there was a need for a comprehensive approach to fish and wildlife planning and management. They pointed out that each species, regardless of its desirability as a hunting trophy, is an integral part of the natural environment. The bill introduced today was drafted in response to this testimony. It would assist the States in preparing statewide fish and wildlife plans which would cover all vertebrate species of fish and wildlife. These long-term plans will help assure that State management will not develop into a piecemeal system with each category of fish and wildlife being awarded its separate share of attention.

The subcommittee also was told during its hearings that adequate revenue for State nongame fish and wildlife is critical. Many States have already introduced some form of nongame programing with funds being derived from general appropriations, sale of nongame stamps, and sales of personalized automobile license tags. Yet these revenues have not been adequate to the task. Voluntary citizen contributions have not been as productive as was hoped and nongame projects have proven unable to compete successfully for appropriations against other programs. The financial support of the Federal Government, the subcommittee learned, is essential to the success of State conservation programs. The matching fund program of H.R. 8606, therefore, was strengthened in the new bill. Its $100 million program should provide an effective incentive to generate local interest in and support for State wildlife conservation efforts on behalf of nongame species.

Several regional and local public bodies testified during the subcommittee hearings concerning their programs for nongame fish and wildlife. In the San Francisco Bay area of Alameda and Contra Costa Counties, for example, much of the responsibility for the conservation of nongame fish and wildlife is borne by the East Bay Regional Park District which administers over 46,000 acres of land. This land provides important habitat for nearly every fish and wildlife species found in the San Francisco Bay area from the smallest wren to the largest bird of prey. The East Bay Regional Park District, however, is not unique in its concern for nongame fish and wildlife. Other urban park agencies including those of Cleveland, Minneapolis, Chicago, and northern Virginia are equally involved. Public agencies such as these would have the opportunity to seek the support they need to continue their important work under the bill introduced today.

Mr. Speaker, this new nongame fish and wildlife bill would encourage each State to increase its efforts to benefit all species of fish and wildlife. Moneys available under this bill could be used to acquire and protect significant fish and wildlife populations and their habitat in their natural state for all of us to enjoy. I believe that all Americans benefit when we take steps, as this bill proposes, to assure the future of the fish and wildlife heritage of our country.

EXPLANATION

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. HARKIN. Mr. Speaker, due to an illness in my family, I was necessarily absent from the proceedings of the House yesterday, December 6. Had I been present, I would have voted as follows:

Rollcall vote number 761, "yea."
Rollcall vote number 762, "yea."
Rollcall vote number 763, "yea."
Rollcall vote number 764, "yea."
Rollcall vote number 765, "yea."

IMPACT OF FUEL AVAILABILITY AND OTHER TRENDS ON GENERAL AVIATION

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. GOLDWATER. Mr. Speaker, unfortunately, the national energy debate often results in attempts to find energy scapegoats. One such scapegoat has been general aviation, which is one of the most efficient users of fuel. In addition, general aviation means jobs and is a positive factor in our balance of payments. One of aviation's leading spokesmen, John Winant, recently delivered a timely and thought-provoking speech on the fuel crisis and general aviation. I commend his address to Congress and the Nation:

IMPACT ON FUEL AVAILABILITY AND OTHER COST TRENDS ON GENERAL AVIATION

(By John H. Winant)

Five years ago, an appeal for creation of a "national energy policy" would likely have been greeted with reactions ranging from boredom to bewilderment. Today the subject occupies the center of the national stage, and is identified by our President as the most urgent of all domestic issues.

Those few fast-paced years since have pervasively focussed our attention on energy, with emphasis on its sufficiency and cost.

In terms of impact on general aviation—and perhaps in its broad implications to our entire society—we have gone through two stages of crisis, and are now, half a decade later, enmeshed in a third.

First came the trauma of drastically curtailed supply at aviation fuel pumps all over America. That stage witnessed an attempt by the Nixon Administration in late 1973 to cut general aviation's fuel supply by up to 40 percent—a move which, if enacted, could have sounded general aviation's death knell.

A Congress with vision broader than that of the Administration called off the funeral, and general aviation survived. Supply levels, after several agonizing months, returned to near-normal when the OPEC nations decided, on the most pragmatic of terms, that they simply could no longer withhold from the marketplace a product on whose sale their political and economic existence depended.

Enter then, in 1974 crisis state two: the regulatory phase, aimed at constructing an artificial marketplace in which supply, demand and price would not freely interact on one another. Three years later, we are still feeling the effects of this stage, largely because 11,000 persons have been placed on the Federal payroll and more than 7 billion dollars have been invested to insure that the artificial marketplace has been built on a rock foundation.

And now we are in phase three; the attempt to piece together a "national energy policy" which aims at conserving energy (a worthy goal), at reducing dependence on imported petroleum, and at maximizing energy sources of new or different kinds.

Two Administrations have addressed the energy policy challenge. Mr. Ford's proposals were badly managled on Capitol Hill, and the resulting Energy Policy and Conservation Act of 1976 emerged as a patchwork quilt rather than an exquisite tapestry.

And now (as of this writing) we see Mr. Carter and the Congress hard at it in October trying to fashion an energy strategy proposed in April. The Senate version differs dramatically from that of the House and there may be a classic battle in conference committee to reconcile the two versions.

The results, to date, appear to be more of a tax plan than an energy plan. There still exists wide divergence of view as to whether energy sources are running out—or whether there still are a good deal yet to be discovered, if producers will be given the incentive to explore for them.

Through other legislation, we now have a Department of Energy which will try to take all the pieces—those already existing and those which emerge in the National Energy Act—and put them together into a workable whole. We understand it will take 20,000 employees to do the job.

All of these events and developments have impacted on general aviation, and that relatively small community has, through determination and creativity, managed to cope with them rather handily. What appeared to be monumental problems have generally been turned into productive opportunities, and general aviation has prospered despite apparent constraints.

Looking ahead, general aviation will continue to strive for certain principles and actions, because we believe they are the key elements in maintaining sufficiency of energy supply.

First, we believe that a national energy policy should stress development of energy sources as well as conservation. Within our community, a strong conservation ethic has emerged in the past five years, and it will continue into the future.

But we believe that conservation alone does not guarantee long term sufficiency nor does it provide a basis on which to sustain a growing economy. American producers of energy must be given adequate incentive to aggressively explore for new sources of petroleum. We must accept the fact that the costs of energy will increase to that point—and that point only—at which willing purchasers will begin to leave the market place, and this may be the only truly effective conservation tool.

A second keypoint in general aviation's position is that allocation and price controls should be removed from aviation fuels at the earliest possible date.

By mid-November, FEA plans to remove motor gasoline from allocation and price controls. Naptha-based jet fuel controls were scrapped some time ago. Controls on diesel fuel and home heating oils have also been removed.

The cumulative effects are that, as other products are removed from controls, the incentive for refiners to producte additional jet fuel is diminished.

We have, then, an emerging situation in which the demand for other products is more important to supply levels of aviation fuels than any other current factor. Removal of controls on aviation fuels would remove that factor as a potential problem area.

A third keypoint of general aviation's position is that research should be intensified toward the goal of developing alternative fuel sources for use in aviation.

Fuel efficiency has been dramatically improved in general aviation in recent years. New design concepts and new aircraft engines are helping to accelerate the thrust already generated through fuel-efficient piloting techniques.

But we need to go further, and general aviation strongly supports a stepped-up program which would involve NASA, ERDA and the industry in research to probe fuel sources other than petroleum.

Dependency of aviation on petroleum is absolute today. We feel that alternatives, such as liquified hydrogen, hold promise for aircraft propulsion, as well as for other transportation vehicles, and that research should go forward, with concentration on solving the problems which are associated with shipment and storage of such cryogenic fuels.

Finally, there are several other structural factors involving demand, supply and refining which general aviation believes may have bearing on aviation fuel supplies in the near-term future. They require close monitoring by our community for at least the next five years.

Even though it competes with no-lead motor gasoline in the distilling spectrum, aviation gasoline is plentiful. But, as automotive model years go by in the future, the demand of no-lead will increase sharply.

In the refining process, jet fuel competes with diesel and home heating oils. We should monitor the market acceptance of diesel-powered automobiles, now being manufactured in the United States for the first time. The House-passed energy act calls for cash rebates to consumers of heating oils, which may translate into increased demand.

The U.S. Air Force continues to mull over whether it can economically manage a shift from naphtha-based JP–4 to kerosine-based JP–8 fuel. Twenty-four percent of jet fuel is consumed by the military, six times that in general aviation.

The sum and substance of what I have said today may leave the impression that general aviation is depressed by uncertainties and complexities which have existed for half a decade with respect to energy. Such an impression would not be correct.

General aviation has an aggressive and forward-looking position predicated on the healthy belief that we can cut through complexity and dispel uncertainty. In summary, then, here is how we see the situation in broad terms:

There is today a sufficiency of supply for all types of aviation fuel. We believe that refiners will meet the challenge of maintaining sufficiency in the future if the Federal government will let them get on with the job.

The price of fuel has not proven to be a deterrent to a vigorous and growing general aviation community. Putting aviation fuel in an uncontrolled free market place would benefit the entire general aviation community.

Conservation measures already undertaken by the general aviation community have resulted in substantially increased utilization by its fleet, but at very modest increased fuel consumption.

In short, general aviation has adroitly managed the ongoing energy situation for half a decade, and has been able to turn it to its advantage. Given a national policy which will aim for the elimination of government regulation, for intensified conservation, for the development of new petroleum sources and for alternative fuel sources, our future will be as bright as our recent past.

CONGRESSMAN CRANE PLANS MIDDLE EAST TRIP

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. CRANE. Mr. Speaker, during the congressional recess I intend to travel to the Middle East, with several stopovers in Europe. This trip is strictly of a fact-finding nature, and is being made at the request of the World Jewish Congress, and under their sponsorship. No public funds will be expended during this trip, and all regulations set down by the Ethics Committee will be observed. I intend to make a public declaration of all the details of my trip as soon as they are finalized.

AN UNFAIR LIMITATION

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to take this opportunity to bring to the attention of my colleagues an excellent editorial from the Santa Maria Times, concerning the enforcement of the 160-acre limitation. The views expressed in this editorial provide sound advice for all of us; I commend it to your attention:

AN UNFAIR LIMITATION

The question of enforcing the 160-acre limit for farms drawing water from federal water projects is now before the Senate Energy and Natural Resources Committee. In our opinion the moratorium on enforcement and review of the act itself is an urgent necessity.

In our opinion, the 1902 Reclamation Law, if enforced, will have disastrous effects on the agricultural industry and on the new overly-strained food budgets of the American consumer.

Profitable farming and lower consumer prices are based on the same principle as is all modern manufacturing—mass production. This has brought useful, needed goods and a healthy diet to a larger number of people in our nation than that of any other nation in the world.

To suggest that the large, successfully productive farms be broken into parcels under an agrarian reform styled after a "Banana Republic" type revolution slogan, is to throw one of California's vital industries back into the economic dark ages.

It is an industry that could be in serious trouble if the 160-acre parcel rule is enforced.

California agriculture produced $8.9 billion in gross receipts for 1976 and harvested over 49 million tons of farm crops. It supplies millions of dollars in payroll directly and indirectly in supplying its need for labor, packaging materials, transportation, machinery and energy. It contributes millions of dollars locally, county, state and federally in tax base. To tamper with its workings is to court disaster.

Experts point out that the American system of farming is the most efficient in the world, requiring fewer man hours per acre and thus providing the most healthful diet at the lowest possible cost.

One of the ingredients of success is the size of the farm. Studies based on 15 years of research show that the cost advantages, meaning lower consumer prices, are found on farms of acreage well over the 160 acre limit, and most efficient cost advantage farms fell in the 1200 to 1500-acre sizes. This was further substantiated by farm family after farm family giving testimony at the recent Sacramento hearings. The 160-acre parcel limit supposedly designed to help the family farmer will only prove his undoing and that of the consumer at the same time. It is not practical in today's market to profitably farm 160 acres in one ownership.

The reasons further supporting this are many and obvious.

Consider that all land, large and small, must have both rotational crops and land in fallow. The limited volume of a variety of crops because of the limited size of the acreage will make farming in that manner unprofitable.

Also, many families now farm marginally profitable land along with the prime. The hugeness of the machinery and the total volume of the crop makes it profitable. However, should the family be forced to sell some of its surplus land under the Reclamation Act of 1902, it will certainly sell the marginal part first. Much of this land, according to its current owners or leasors, would not be farmed. Thus the total amount of land in production would be diminished and crop production lowered.

Machinery has made farming of large acreages feasible and profitable. It has also lowered the cost of products to the consumer. Many farmers operate on land they own as well as land leased from others, who in previous years farmed their property but now in retirement receive a fair return from the land farmed by others

But the 160-acre limitation would halt this. A provision calls for residing within 25 miles of their land, and this would be an outright hardship for those who have been productive farmers but are now in retirement.

A look at the statistics of leased land shows its high activity.

As an example in the San Luis Water District: 53 percent of the total acreage in the district was leased in 1977 and leases of over 320 acres accounted for 49 percent of district acreage.

If the people now leasing land came back to the land under the residency requirement and the land were split into 160-acre parcels, these problems arise: there must be new rights of way and service roads to the parcels, more land needed for dwellings, machinery sheds, extended sanitation facilities, water, fire, and police protection, and added retail services, all resulting in the loss of about 12 acres per 640 acres, plus adding to vehicular traffic and its attendant problems.

In our opinion, the proponents of the 160-acre parcel and other items in the act—National Land for People, California Rural Legal Assistance, California Campaign for Economic Democracy, Friends of the Earth and other fellow travelers—all would have us believe that we should return to hand making Model T's and forsake the assembly line.

To them, we say that the Model T had its day as well as the one-man, one-mule, and one-acre did in agribusiness yesterday, and to promote that doctrine for today would be a disaster for everyone in California and the consumer in general.

RESOLUTION TO RETAIN THE NAME OF MOUNT McKINLEY

HON. RALPH S. REGULA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. REGULA. Mr. Speaker, today I am introducing a resolution cosponsored by the Ohio delegation which will permanently retain the name of Mount McKinley in Alaska, which is North America's highest peak.

This effort by the delegation is on behalf of the people of Ohio, and those throughout the Nation, who honor the memory of our 25th President, William McKinley. The mountain was named after him in 1896 by the prospector, William Dickey.

McKinley served his country with distinction as a Representative to Congress from my district in Ohio, during which time he was chairman of the Committee on Ways and Means; and as Governor of Ohio, before he rose to the Presidency.

Our effort to preserve his name for Mount McKinley is prompted by the attempt of a small group of people who would like the name changed to an Indian one, Denali. While the mountain has been referred to by various Indian names and others, the name Mount McKinley is the only permanent one. It has been globally recognized as the official name for some 80 years.

Any action to change the name of the mountain would be an affront to the memory of this martyred President and to the people of Ohio who are so proud of his heritage.

William McKinley well deserved the honor bestowed on him with the naming of the peak. As prosecuting attorney for my district, he earned the reputation as a champion of the workingman, when he represented coal miners in their right to strike. It was a quality he carried into the White House. He was a man of integrity and accomplishment from the time he was elected President in 1896, through his second term in 1900.

McKinley's dedication to promoting the welfare of the common workingman produced tangible results: in his first term he won approval of a measure providing arbitration in labor disputes. He was most well known for his initiation of ideas on a new economic world order, engendering a new era of America's recognition as a world power. In 1899, McKinley backed an open door policy with China. He was instrumental in helping China maintain its territorial integrity in the Boxer Rebellion of 1900.

When McKinley ran for a second Presidential term, he could boast fulfilling his original campaign promise: "Good Work, Good Wages, Good Money." His reelection in 1900 marked the most overwhelming majority in 30 years, making his front-porch campaign style history. His assassination in 1901, just 6 months into his second term, was a tremendous loss to the country.

This is the background we are talking about when we speak of Mount McKinley—not a vacuous name, but a selfless leader who dedicated himself to the enrichment of our Nation.

It is in support of these principles that the Ohio Members of the House introduce this resolution, so that we may permanently safeguard the meaning and tradition William McKinley's life provided for our country.

INSTITUTIONAL DISINCENTIVES TO AGRICULTURAL PRODUCTION IN DEVELOPING COUNTRIES

HON. TOM HAGEDORN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 6, 1977

Mr. HAGEDORN. Mr. Speaker, during the 94th Congress, this body approved what was known as the "right to food" resolution. This resolution was intended to "reaffirm the right of every person in this country and throughout the world to food and a nutritionally adequate diet," and to mobilize U.S. foreign and domestic policies in behalf of that goal.

What was not recognized by the resolution, however, was the role played by domestic production disincentives in many developing countries to the food shortages which they constantly suffer. If the United States is to be expected to continue to channel billions of dollars of economic foreign assistance to these nations, there is no reason why we should not also expect domestic production policies likely to insure adequate domestic resources at some point in the future. By exporting a measure of free enterprise, the United States could do a great deal to insure that these nations do not remain forever "developing."

A recent study by two foreign commodity analysts at the Foreign Agricultural Service identified nine agricultural production disincentives commonly found in developing nations, and concludes that—

> It seems reasonable that food production could be substantially increased if these restrictive policies were replaced with incentives for farmers.

At this point, I would like to insert a summary of the results of this extremely informative study:

INSTITUTIONAL DISINCENTIVES TO AGRICULTURAL PRODUCTION IN DEVELOPING COUNTRIES

(By Abdullah A. Saleh and O. Halbert Goolsby)

Institutional disincentives to farmers—in such forms as price and export controls, and restrictions on credit and the domestic movement of agricultural products—have the potential for widespread and serious harm, unless these countries have ample foreign exchange to import food—an unlikely situation. Given the present poor external financial position of many developing nations, agricultural disincentives are all the more serious. For a few petroleum-rich countries there is no problem, of course.

In September 1976, the U.S. Department of Agriculture surveyed 44 countries that had been found in an earlier study [1] to have governmental policies that could directly or indirectly discourage production. In 1975, these 44 nations contained 1.6 billion people—two-fifths of the world's population, or four-fifths of the population in the developing nations. In most of these countries, the bulk of the population is concerned with agriculture, and a large proportion of their national income is derived from the sale of agricultural products.

In the 1976 study, approximately 600 disincentives were identified, although it is difficult to count with precision because of the generic nature of some classifications of commodities reported. Price controls were the most often-used disincentive (106 occurences at the producer level and 112 at the retail level). Export controls were the next most-often used (physical limitations,

---

[1] Results of this study appeared in a supplement to *Foreign Agriculture*, March 1975. The survey covered 50 nations, of which 46 were found to have disincentives to domestic farm production. The current study covers all of these countries, except Spain and Greece. The disincentives reported in the Survey appear in the Appendix, where they are classified by country and commodity.

89 occurrences; and export taxes, 70). Least used were restrictions on internal movements (23 occurrences).

Disincentives were most often used in Peru (54 times), India (46), and Guatemala (32). They are more widely used in South America and Asia than in Africa, in part reflecting the fact that many African economies are still largely on a subsistence basis.

From the viewpoint of commodities, disincentives were applied most often to rice, wheat and flour products, and sugar—obviously because these are staple products in many developing countries. They are, however, applied to a wide variety of foods—from cassava to beef—and even to some nonfood agricultural products (tobacco, jute, and wool). In total, there were over 30 commodities against which disincentives were applied.

With the exception of Spain and Greece in the first survey, no attempt was made in either survey to ascertain disincentives in developed nations. Paradoxically, many of them have policies that often lead to overproduction of certain agricultural products. They also have policies that tend to restrict agriculture production.

As recently as 1973, U.S. Government set-aside payments for feed grain acreage totaled $1.17 billion, and 9.4 million acres of land were withheld from production.[2] Over the past two decades—during which in most years carryover stocks were large, depressing prices and farm income—U.S. agriculture has been the subject of various production adjustment programs to support farm income. Consequently, such programs have generally had as their objective supply reduction rather than supply expansion.

Current programs that act as restrictions on production in the United States are marketing quotas and acreage allotments for extra long staple cotton, peanuts, and most types of tobacco. Also, recent environmental legislation calls attention to social trade-offs between what is conceived of as being a socially desirable environment, and higher production.

There can, of course, be any number of types of disincentives that are general in nature and thus not specifically disincentives for the agricultural sector. These types of disincentives were not included in either survey. The types of disincentives found in the developing nations that more directly influence agricultural production include:

1. Controlling the producer price of agricultural products.
2. Controlling the retail price of agricultural products.
3. Noncompetitive buying (procurement policy).
4. Export controls.
5. Export taxes.
6. Importing for sale at subsidized prices.
7. Foreign exchange rate controls.
8. Restrictions on farm size, land tenure, and credit.
9. Restrictions on domestic movement of agricultural products.

To more fully appreciate the potential and detrimental effects of these practices, a short discussion of their general nature is given below.

IMPACT OF DISINCENTIVES [3]

Price controls. Producers normally try to maximize their profits within (a) the constraints of their technology, (b) the natural resources available to them, and (c) the final demand for the product. The consumer, in turn, tries to maximize satisfaction by demanding at the lowest price possible those products (including goods and services) that directly or indirectly satisfy some need or want. In a market-oriented economy where the forces of supply and demand are more or less free to interact on a competitive basis, both sellers and buyers can on a realistic and sound basis maximize their standards of living.

If a nation lacks foreign exchange to import food commercially and finds that it cannot import on a concessional basis, it must meet any increased requirement for food by stimulating domestic production. One way to accomplish this objective is to free production from artificial constraints, such as prices kept at low levels.

Why then are price controls instituted? In some cases, governments desire to control the price of food for political reasons; for many developing countries food prices comprise the largest component in the consumer price index—the primary indicator of the degree of inflation—and, when these prices rise rapidly, are often considered a mark of failure on the part of the government.

In many cases, however, the objective of price controls is a more equitable distribution of food, especially where there are inadequate domestic supplies and wide dispersion in the level of income. Unfortunately, when brought about by price controls, an improvement in food distribution in the short run may dampen production in subsequent periods. Also, prices set too low discourage farmers from using productive but costly inputs, such as improved seeds, fertilizers, irrigation, and pesticides—all needed to increase production.

Fortunately, the updated survey of September 1976, indicates some shift in government policies from controls on producer prices to support price systems that establish minimum guaranteed prices.

An increase in these minimum prices, for instance, almost certainly stimulated production of rice in Thailand. Previously, the Government was paying farmers a price far below the world price level. With the decline in rice prices since mid-1974, perhaps the minimum guaranteed price should now be lowered. But in any case, the changes in the level of production indicate—if they do not prove—the responsiveness of production to changes in prices.

Procurement policies. Certain procurement policies and forms of noncompetitive buying can be constraints that lead to lower than potential production. Such policies—where a government or a government-sponsored agency is the sole buyer of a product—may have adverse effects on both producers and consumers. Very often these practices are used to secure supplies for consumers at relatively low prices or to secure revenue for the government. However, producers, especially marginal producers, may be deprived of a price that covers total cost, and the consumer eventually may find himself paying more for a smaller output.

Noncompetitive buying is practiced in many developing countries such as India, Pakistan, Sri Lanka, and many Latin American and African countries. Commodities commonly subject to these practices are wheat, rice, and vegetable oils.

In some countries where noncompetitive buying causes a loss to farmers, government subsidies are given to farmers to more or less offset the loss. One effect is a heavy burden on the government's budget since the government must subsidize both consumers and food producers. Practices in Iran and Venezuela typify this arrangement. These two countries are oil-rich OPEC (Organization of Petroleum Exporting Countries) nations and few developing countries can afford to copy their example. Such policies, although they seem plausible, can lead to a lower production level than under a competitive system and perhaps distort the cropping patterns of these countries. This can result from the lag between paying production costs and receiving the subsidy, or from the inequity of subsidies among various types of enterprises.

Export controls and taxes. To domestic producers, export controls limit, sometimes absolutely prohibit, foreign sales—thus shrinking geographically and economically the total marketing area available to them. The supply of agricultural commodities offered for sale within the country exercising export controls, of course, will be increased at least in the short-run. The short-run increase in supply most likely will reduce prices and expand domestic sales. However, the reduced price may be one that produces revenue that is less than cost for marginal producers, thus reducing the incentive to increase, or perhaps even to maintain, production levels.

An export tax will not limit legally the geographic market available to producers, but economically the effect may be somewhat the same. This is the case when the export tax means a higher price to various importing nations—especially if these nations can find alternative sources of supply, or other commodities that will serve as substitutes. If on the other hand, the world market is very competitive and market forces determine prices, the exporting nation must sell at prevailing prices. Since the export tax cannot be added to the price in this case, the tax becomes a tax on producers and the disincentive naturally follows.

In the case of both export controls and taxes, foreign exchange earnings are most likely foregone that may be badly needed to import essential items. Such items may be impossible to obtain domestically or obtained only with the application of a great deal of time, energy, and resources—all of which could be used in other ways to increase standards of living.

Import subsidization. In an effort to control inflation and to provide consumers with an adequate supply of basic food commodities, some governments resort to import subsidization. That is, governments import at one price but sell domestically at a lower price, or perhaps even distribute freely. Unless incomes are so low that the food would not have been purchased in any case, this policy obviously will lower prices and discourage producers within the country from expanding production.

For example, improved seed varieties, around which the "green revolution" was built, require intensive use of fertilizers, irrigation, and pesticides. Unless domestic prices are high enough—or other incentives are available to justify the investment in such costly inputs—producers have no incentive to expand their production.

Exchange rate controls. In general, controls on foreign exchange proceeds of agricultural exports take the form of requirements to surrender the proceeds within a specified time or to surrender the proceeds at a specified minimum price of the item exported. Limiting the time an exporter may hold his proceeds in dollars or other convertible currencies may force him to exchange his proceeds at an undervalued level. By waiting, he might benefit through a devaluation of his native currency, which would allow the exporter to receive more local currencies per dollar surrendered.

Specifying a minimum export price at which foreign exchange proceeds are submitted, may at times remove the flexibility an exporter needs to consummate a sale. Either the exporter foregoes a sale—if the world market price is beneath the specified price—or the exporter may be required to make up the difference between the price he can obtain in the world market and the specified price level at which he must submit foreign exchange proceeds.

---

[2] *Commodity Fact Sheet*, April 1974, ASCS, USDA.

[3] This survey does not deal explicitly with interdependencies among commodities. It is recognized that a disincentive for one commodity may prove to be an incentive for another commodity, or the same commodity in another country.

Restrictions on land tenure and credit. Imposition of these restrictions on farmers constitutes a serious barrier to the expansion of agricultural production in many developing countries. Despite the increased number of farmers owning land because of land reform, many developing countries have subsequently experienced lower output. While land is an important factor of production, other factors must be combined with land to maintain or increase the level of production. During the early stages of adjustment after land reform, new owners are usually farm workers with limited experience in farm management and most likely with little or no liquid funds to cover the variable costs of production. Poor management and the lack of funds result in inefficient use of resources and a decline in output unless these deficiencies are corrected.

Restrictions on land tenure that limit farm size could discourage farmers from investing highly productive inputs, and cause a loss of scale economies. In the Dominican Republic, for example, the land tenure law, which limits rice land ownership to 80 acres, has been one reason that country has needed to import rice over the past several years. The effect of this policy has been further amplified by controls on farm prices.

In another example, after Tunisia eliminated its policy of requiring State-controlled farm organizations in the late 1960's, the country's per capita agricultural production rose by 58 percent from the average level in 1961–65 to 1976. For all developing countries there was only an 8 percent gain.[4]

Rural credit policies that limit the amount of credit given to small farmers have limited the expansion of the agricultural production in many developing countries. For example, the Government of Indonesia, in order to compensate rice producers for low rice prices, offers them subsidized credit. However, since the banking system views small farmers as high-risk borrowers, only the larger farmers benefit from the subsidized financing that facilitates the adoption of new production techniques. Therefore, it is only the larger farmers who have the negative impact of low rice prices partially neutralized through Government-subsidized credit programs. This results in inefficient resource allocation by depriving a large number of small farmers of liquidity to improve their level of production. In many other countries, applications for loans require a land title, which is not generally easy to provide.

Restrictions on domestic movement of agricultural products. Whatever the political justification may be, the prohibition on shipment of farm products from surplus districts to deficit districts within a country obviously discourages farmers in the surplus areas from producing more. Almost certainly the existence of such restrictions in India amplified the impact of food shortages following the 1974 drought and floods in India, where some States, such as West Bengal, were hit harder than others.

Another example is Indonesia, where inter-island shipments of rice are prohibited except under Government auspices.

CONCLUSIONS

While it is beyond the scope of this report to present a quantitative evaluation of the net effect of various policies in different countries, a general indication about each country's need to expand its agricultural output is indicated by Table 1. For two-thirds of the countries included in this study, containing 1.6 billion people, the long-term rate of growth (1952–72) in domestic demand for food exceeded that for food production. Furthermore, the most optimistic food projections indicate that Asian developing nations will continue to be heavy foodgrain importers through 1985. These projections also indicate that India, Pakistan, Bangladesh, and Sri Lanka will continue in most years to be heavy grain importers within this region for the next decade.

The ability of various countries to import food at present is indicated in a general way by the data in Table 2. Many of these countries have current account deficits and a low level of reserves relative to the level of their imports. Those with good financial positions are mainly petroleum-producing countries, or supported by petroleum rich countries.

These data also indicate the ability of various countries to import such additional farm inputs as fertilizers, pesticides, and farm machinery. Recent estimates by the FAO (Food and Agriculture Organization) Emergency Fertilizer Supply Scheme indicate that the four Asian nations mentioned above accounted for nearly 80 percent of the world fertilizer shortfall in 1975.[5]

The nine disincentives discussed here are of course only some of the factors affecting total world food production. But it seems reasonable that food production could be substantially increased if these restrictive policies were replaced with incentives for farmers.

THE 36TH ANNIVERSARY OF PEARL HARBOR

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. MURPHY. of New York. Mr. Speaker, today, December 7, marks the 36th anniversary of the Japanese attack on American forces in Pearl Harbor. This devastating action crippled many of our military units in the Pacific theater, while at the same time thrusting this country into the midst of World War II.

On that Sunday morning in 1941, there were approximately 100 ships docked in Pearl Harbor, one of which was the U.S.S. *St. Louis*. This ship was later nicknamed the *"Lucky Lou"* in recognition of its valiant efforts to get underway and out into the open sea even though many of its crew were on liberty and the ship was partially inoperative. *Lucky Lou* was the only major warship to safely reach open sea during the attack.

The *St. Louis* continued to distinguish itself throughout the war and the rest of its service in the U.S. Navy. In 1951, the ship was taken out of mothballs and sold to the Brazilian Government to bolster the defense of the Western Hemisphere during the Korean war. In 1976, *Lucky Lou*, known to the Brazilians as *Almirante Tamandare*, was decommissioned.

Since that time, the Brazilian Navy has begun to strip the ship and is planning to send the remains to the scrap pile. Spurred by the concerns of those who served aboard the U.S.S. *St. Louis*, a national effort has mobilized in this country to "Save *Lucky Lou.*" Mr. Al Seton, a resident of my congressional district and a member of the ship's company, is heading up this movement. I might also add that one of our distinguished colleagues, JAKE PICKLE, also served on the *Lucky Lou.*

At present, last ditch efforts are being made to retrieve *Lucky Lou* through both formal and informal channels. It is a shame that we may lose this ship which symbolizes so much about the American spirit. It might be prevented by the passage of legislation I have introduced, the National Historic Preservation Policy Act.

This measure would establish a national policy for the preservation of our historic resources and specifically includes a distinctly separate maritime heritage program. The history of this country is rich with the contributions of those who have taken to the seas for both peaceful and wartime purposes. However, there has never been a concerted Federal effort to recognize the importance of our maritime heritage. I believe that my legislation, which has been cosponsored by 13 of my colleagues, will not only perform the much needed task of consolidating our Federal-level preservation efforts, but will provide the necessary direction and support in the area of our unique maritime heritage.

While it may be too late for this measure to be of assistance to the efforts to save *Lucky Lou,* I hope that early in the next session of Congress we can take this legislative action so that future efforts with other ships will not be stymied.

REMARKS ON SOUTH AFRICAN HOMELANDS

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, I include in the RECORD a brief article that appeared in the Washington Post of Tuesday, December 6, 1977. The article recounts the so-called independence celebration of another African "State," Bophuthatswana. Those that read the article will readily see that Bophuthatswana is yet another fiction of the South African Government and a product of its apartheid homeland policy. As my colleagues will recall this homeland policy is an official South African tactic used to separate ethnic elements in the country by forcing them to occupy lands designated for their use. These lands are declared "independent states" and the South African Government feels obliged to call this policy of racial separation democracy.

Members of this body who read this account will, I am safe in saying, conclude that separating people by race and exiling them to land masses that cannot sustain independent state status, even in the most favorable of circumstances, is a hideous illustration of the twisted logic that governs the apartheid system in South Africa. It is safe to conclude that those who think about this homeland policy will reason that a policy of forced racial separation that isolates 70 percent of the total population to 13 percent of the land is not democratic, just, or excusable.

The article follows:

[From the Washington Post, Dec. 6, 1977]

BOPHUTHATSWANA'S "BITS AND PIECES" BECOME INDEPENDENT

(By Caryle Murphy)

Mmabatho, Bophuthatswana, Dec. 5—Under a starry sky and amid the blasts of a 101-gun salute the South African flag was lowered tonight, and a blue and orange flag with the face of a leopard was raised in its place as six unconnected parcels of South African territory became the independent country of Bophuthatswana.

This newest African state whose capital city was a grassy field only eight months ago is the second black homeland to become independent under South Africa's internationally condemned policy of separate development, apartheid.

As with its predecessor Transkei, which became independent in October 1976, Bophuthatswana's declaration of independence is expected to fall on deaf ears in the international community and its new status to be officially recognized only by South Africa and Transkei.

Transkei and Bophuthatswana are the products of the policy of separate development or "ethnic democracy" which the ruling National Party introduced after it came to power in South Africa in 1948.

The intention is to carve from 13 per cent of South Africa's territory independent black states or homelands for each of South Africa's black ethnic groups while maintaining white rule over the remaining 87 per cent. Blacks make up 70 per cent of South Africa's population.

The new homeland is for the 2.1 million members of the Tswana tribe, 1.4 million of whom live outside the territory. As citizens of the new homeland they will lose their South African citizenship and political rights, one of the controversial aspects of the homelands policy.

Like a scattered jigsaw puzzle, Bophuthatswana consists of six separate districts, totaling 16,000 square miles—half the size of Maine—in north central South Africa. Each district is surrounded by "white areas," governed by the white minority government in Pretoria.

Two of Bophuthatswana's districts border on Botswana, with which it shares a common language and culture.

A vital railway line that is the only link with the outside world for landlocked Rhodesia and Botswana passes through one of Bophuthatswana's districts. There has been speculation that Bophuthatswana might block passage of trains through its territory if Botswana refuses to recognize the new state.

In his remarks at the midnight independence celebrations Bophuthatswana's head of state, Chief Lucas Mangope, 53, indicated that his country's unusual geographic arrangement, which he acknowledged provoked ridicule in foreign circles, would continue to plague the "naturally strained relations with our former colonial master South Africa."

Chief Mangope told thousands of celebrating Bophuthatswana citizens that "just as it is born our independence has already fallen into a fatal credibility gap which bears the stamp 'made in Pretoria.' It is not at all surprising, I am afraid, that in overseas capitals they show me a map of the bits and pieces of Bophuthatswana and add the sarcastic remark, 'Did you say independence? Please forgive our mirth. We thought you were joking.' "

The expected international boycott was foreshadowed by the fact that the 120 foreign and national journalists covering the two-day independence celebrations far outnumbered the few official visitors. South African Foreign Minister R. F. (Pik) Botha, Transkei's Chief Kaiser Matanzima and the leaders of two other homelands that are expected to become independent in the future were the main "foreign" dignitaries.

Critics say that the geographic and economic dependence of the homelands on South Africa precludes any true independence. For Bophuthatswana's first year of independence, 71 per cent of the $83 million budget will be grants from South Africa.

South Africa says the newly independent homeland is as economically viable as any other recently independent African state and that its per capital annual income of $268 is double that of Botswana's. That figure includes the incomes of 200,000 Tswanas who work outside the territory.

Bophuthatswana or "where the Tswanas meet" is home for about one-third of South Africa's 2.1 million Tswanas, the second largest black ethnic group in South Africa. The rest of Bophuthatswana's 900,000 citizens have other tribal backgrounds.

Mangope's Bophuthatswana Democratic Party won all but a handful of the country's 96-member legislative assembly seats in elections last September. Only 13 per cent of the eligible 2.1 million Tswanas voted in that election, since most of the 1.4 million Tswanas who live and work in South Africa's cities boycotted the vote to protest homeland independence and separate development.

These Tswanas consider Mangope a "sellout" to the white man's apartheid policy.

Mangope had tried to persuade the South African government to allow the Tswanas a choice between citizenship in Bophuthatswana or South Africa, but Pretoria did not budge.

About 45,000 people filled Independence Stadium on this chilly night to watch the tribal dances and gymnastics exhibitions that preceded the flag ceremony. Among them was Jacobeth, a 25-year-old typist who thought Bophuthatswana's independence was a good thing "so we can know and do what other people know and do."

There were some Tswanas who did not agree. A black newspaper reporter named Steve said he did not accept independence, "because we are South Africans. This land is ours. I don't want to see it broken into bits and pieces that will only turn to islands of poverty."

As the South African flag was lowered to South Africa's national anthem and the Bophuthatswana's flag was hoisted to the new country's anthem, an Afrikaner reporter said, "This is the part I don't like, seeing the flag come down and knowing that it's not yours anymore."

The stadium where the ceremony was held is next to Bophuthatswana's newly constructed Parliament building, the eight-bedroom residence of Mangope and the homes of nine other Cabinet ministers. The $12.5 million complex, built over the last eight months on a dusty field, forms the governmental heart of Bophuthatswana's capital city, Mmabatho, which also will include the black township of Montshiwa just outside the white town of Mafeking.

Before independence, Bophuthatswana signed extradition and labor agreements with South Africa. The two countries also signed a nonagression pact.

Bophuthatswana's new 250-man army was trained by South African army officers, some of whom will remain in the new force as advisers.

CARTER CALLS THE RIGHT MIDEAST PLAY

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. FASCELL. Mr. Speaker, all of us hope that the forthcoming talks among Israel, Egypt, and possibly other parties in the Middle East will produce a breakthrough for peace in that area of the world.

While the United States did not directly initiate this development, we can offer our support and such participation as may be helpful. I am glad to see that President Carter has recognized this, and his handling of the diplomatic situation reflects credit on his skill in the field of international relations.

The Miami Herald published an editorial on December 2. The editorial points out that if events seem to move toward a separate peace—why not?

I am sure our colleagues will be interested in the editorial:

CARTER CALLS THE RIGHT MIDEAST PLAY

President Carter has taken precisely the right stand on Israeli-Egyptian peace talks on behalf of the United States. It is one of less than a doer and more of a watcher and helper.

"Now that progress is being made," he said at his news conference Wednesday, "a proper role for the United States is to support that progress and to give the credit to the strong leadership that's already been exhibited by Prime Minister Begin and President Sadat and to let our nation be used as called upon to expedite the peace process."

This newspaper has said frequently that peace could not be realized by an imposed settlement but rather by face-to-face negotiation.

All the ingredients of that peaceful confrontation are now available save for the participation, or at least the attendance, of the other Arab states. Perhaps the last can be achieved, but we doubt it. Mr. Carter is known to have urged a brief delay in the Cairo talks to cool off and bring in the Arab world as a whole.

Israel and Egypt, the giant of that world, have taken the vow of war no more. Mr. Sadat has welcomed Israel to the Middle East club, which means long-cherished recognition of its right to exist by the most powerful of its neighbors.

It is said that Washington dislikes and even fears a separate peace between Egypt and Israel. Events, however, are moving inexorably in that direction. And why not? There is more of a natural affinity between Israel and Egypt than between Israel and any other Arab state, save perhaps Jordan. They understand one another.

Anwar Sadat surprised everyone, and even possibly himself, by reaction in most of the Western world to this hopeful breakthrough of bitterness and diplomatic bluster. He no longer needs our lead. He should have our support, and President Carter has properly given it.

CORPORATE PROFITS AND INFLATION

HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. STOCKMAN. Mr. Speaker, in recent days the Carter administration has announced its general program on tax reform. While the specifics have yet to be released, the administration will soon send to Congress a $20 to $23 billion tax reduction package spread between individuals and business in a two-thirds—one-third formula. Apparently, reform measures will be sent to Congress later in a separate package.

I applaud the President and his advisers for recognizing the urgent need for a tax cut, but $20 to $23 billion is not enough to fund relief for both individuals and business.

By now everyone is aware that inflation interacts with the progressive tax schedule to drive up the burden on individual taxpayers faster than the rate of inflation. Even if we adopted a $30 to $33 billion tax cut, tax rate increases over the past decade would still equal the rate of inflation.

Few people may be aware that inflation has the same effect on the burden on business activity as it does on individuals. Recent research completed by the Republican Research Committee suggests that business overpaid the Federal Government by $12.6 billion last year because of inflation. Inflation, the study concludes, leads to insufficient depreciation deductions taken against business income and therefore higher taxes.

I place this study in the RECORD to further congressional understanding of how inflation has increased pressure on taxpayers:

CORPORATE PROFITS AND INFLATION

In recent public appearances Federal Reserve Board Chairman Arthur Burns sounded the general alarm on an important issue; low corporate profitability. Present Federal tax policy, by not taking into account the effects of inflation on reported earnings, is largely to blame for today's weak after-tax profits.

CORPORATE PROFITS AND TAX POLICY

The plight of corporations during inflationary periods is similar to that of individual taxpayers. Just as inflation is not taken into account when individuals compute their federal income tax—meaning higher tax brackets and proportionately higher taxes—so corporations pay proportionately higher taxes under inflation. Major corporate expenses are calculated on the basis of old, pre-inflation prices, but corporate revenues are measured in today's prices. When prices are rising, this policy leads to overstatement of corporate profits. The correct policy would be to measure both revenues and expenses using today's prices.

Depreciation deductions taken against income under current unadjusted rules are the most obvious and serious source of corporate overtaxation. Using data recently acquired from the SEC and a July 1977 study by Chase Econometrics it is possible to develop estimates of the underdepreciation problem. This data suggests underdepreciation of $31 billion by American corporations for tax purposes in 1977. Corporations will overpay the Federal Government by $12.8 billion for this reason alone in 1977.

Below are the estimates developed by the Republican Research Committee of the underdepreciation problem and the overtaxation of American corporations in 1977. Of particuar interest today are the figures for utilities and primary metal industries. Utilities are presently paying $2.1 billion more in taxes because of unadjusted depreciation deductions while the primary metal industries are paying $950 million more. In the case of utilities, all these funds could be returned to the public through lower utility rates without altering rates of return set by regulatory authorities. Inflation adjusted depreciation deductions for the primary metals industries would permit the rate of investment in new equipment to increase by 35% at a time when many believe that these industries are losing their ability to compete against modern facilities.

THE PANAMA TREATIES AND THE ABANDONED AMERICANS

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. HANSEN. Mr. Speaker, many questions have been raised concerning the folly of President Carter's proposed Panama Canal Treaties; however, none is more serious than the lack of consideration shown by the administration to the plight of the American citizens who work in the Canal Zone. Most of these 34,000 Zonians are dedicated, patriotic Americans who perform key functions in the direct operation of the canal.

Mr. Speaker, for the benefit of my colleagues, as well as the American public, I offer for the RECORD an appropriate article by Mr. Egon Tausch dealing with this serious matter.

REPORT FROM PANAMA: THE AMERICANS WHO OPERATE AMERICA'S CANAL

(By Egon Tausch)

One factor in the Panama Canal controversy which has been deliberately ignored by both the State Department and the media is the problem of the Canal Zone residents, or "Zonians."

There are about 34,000 U.S. citizens living in the Zone, most of whom are directly connected with Canal operations. It is a remarkably stable population, made up for the most part of children, grandchildren, and great-grandchildren of the original Canal workers. Many have married Panamanians and others are naturalized U.S. citizens themselves. There is no labor-management dissension, unemployment, welfare, race issue, or crime problem in the Zone.

The Zone is not a duty assignment for its residents; it is their home, which they have quite rightly believed would always be part of the United States. For obvious reasons, the State Department would like to forget about them.

Much has been made of the fact that the Canal will be turned over to Panama gradually; the Panamanians will not have full control until the year 2000. This has obscured the fact that the Zone itself, as distinct from the Canal, will be turned over 30 days after the treaty is ratified. The Zonians have lived next door to the Panamanian police state and do not relish the thought of living under it. Their attitudes must be taken into consideration before ratifying the treaties: any timetable for the transition to Panamanian control of the Canal depends entirely upon the willingness of Zonian employees to stay and work after the Zone is under the jurisdiction of the *Guardia Nacional*. If they won't the Canal will close down quickly and disastrously, regardless of any agreements to the contrary that U.S. and Panamanian negotiators might have made.

The Zonians have no intention of being ignored. They were the victims of the 1964 riots, sporadic violent incidents since then, including the bombings of American automobiles in November, 1976, and harassment by the Panamanian *Guardia Nacional* and secret police.

Now they find themselves an embarrassment to the U.S. Embassy in Panama, which has refused to permit the rights of these American citizens to strain relations with the Panamanian dictatorship.

"When we go into Panama to use their airport—we aren't allowed to use our own military field anymore—and get detained by the *Guardia*, we're all alone," says Mrs. James Fulton, president of the Pacific Civic Council in the Zone. Patrolman William Drummond adds, "If we get into any kind of trouble, we now know better than to call on our own Embassy. We call the British. They don't have to pretend we don't exist."

Drummond, president of the Police Union and legislative chairman of the Central Labor Union and Metal Trades Council, had his two automobiles bombed in the terrorist attacks of 1976. The incident was attributed to the G–2, the intelligence arm of the Panamanian secret police. The U.S. Embassy in Panama speculated publicly that Drummond might have bombed his own car to gain sympathy for the plight of the Zonians, a charge proven false when the other bombs went off and the terrorist notes were discovered. The Embassy never apologized to Drummond.

On February 11, 1977, Drummond was arrested by the G–2 at the Panama airport when he was on his way to testify in Washington on union business. He was detained and questioned in downtown Panama City for three hours. His release was obtained only because the arrest was reported by the protocol officer from the Embassy, who had happened to witness it. The Ambassador decided not to make a point of such arrests for fear of endangering the treaties.

Shortly before the negotiators completed the treaties they authorized Gov. H. R. Parfitt of the Canal Zone to release a list of fifteen "assurances" to U.S. citizens in the Zone—points that were to be in any proposed treaty.

Among them was the following assurance concerning criminal justice: "In connection with offenses arising from acts of omission punishable under the laws of the Republic of Panama, United States Citizen employees and their dependents will be entitled to specific charges, cross-examination of witnesses and legal representation of choice."

Also, the State Department announced, a status-of-forces agreement would be included in the treaty, which would permit U.S. civilians to be tried by their own courts as is done by the military in other foreign countries. These assurances were repeated by every level of government and were even incorporated into a Department of Defense directive to the military.

In reality, the State Department negotiators were aware that Panamanian dictator Gen. Omar Torrijos had consistently refused to consider any such assurances. These clauses had already been omitted from the early draft treaty at Torrijos' insistence.

The final treaty gives all authority over criminal justice—procedural and substantive, crimes of commission and crimes of omission—directly to Torrijos, with no safeguards for U.S. citizens, other than the right to serve their sentences in America if Panama agrees at a later date.

In the face of his repeated failure to get Panamanian agreement on these points, Ambassador Bunker continues to push the treaties by promising that a status-of-forces agreement will be forthcoming, somehow.

The residents of the Canal Zone feel a personal sense of betrayal by the U.S. government. They can vote only in presidential general elections, so their interests are centered on one issue—foreign policy. Secretary of State Henry Kissinger was profoundly disliked in the Zone, and the last television debate between Carter and Ford led the Zonians to believe that Dr. Kissinger's policies would be reversed by a Democratic administration. The Zone went solidly for Jimmy Carter. Now the President's representatives encounter only hurt hostility from the residents.

The Zonians have held rallies protesting the proposed treaties. More than 2,600 appeared at the last one before the treaties were signed. If any Zonians favor the treaties, they have yet to speak out. Despite their expert knowledge of Canal operations and of conditions in the Zone, the residents have not been interviewed by the major U.S. news media. The Canal Public Information Office complains that it gives a representative list of Zonians to every reporter who calls on the office, but none bother to visit the Zonians.

Some of the American reporters have resorted to denouncing the Zonians' stilt bungalows and commissaries-without-discounts as "unfair" luxurious living. Unlike other Americans, the Zonians are expected by the press to live a Spartan existence, in return for the privilege of working on the Canal.

In actuality, the architecture and scenery of the Zone differs from that of Panama only in that it is kept clean and in good repair. The attack on Zonians is reflected in *Time's* report of a Canal pilot who "refuses to work for a dictator." The quote is preceded by the magazine's categorical opinion: "The Zonians' basic objections to the treaty range from chauvinistic to sentimental to mercenary."

State Department officials counter Zonian opposition to the treaties by calling the U.S. citizens "colonialists" or "racists," a charge which labor leader Drummond refers to as the last-ditch effort of desperate bureaucrats. He, like many Zonians, is married to a Panamanian national.

Speculation about the evacuation of the Zone continues, without evidence of U.S. concern for keeping the Canal going.

Federal District Clerk Doris McClellan feels protective of her courthouse in the Zone. The daughter of Sen. John McClellan (D-Ark) knows her way around Washington: "What right," she asks, "does the State Department have to abolish or give a federal court over to a foreign jurisdiction? We're under the Justice Department, not Foggy Bottom!" A Southern lady of the traditional mold, she gets angry when she envisions the future of her beloved courthouse under the rule of Gen. Torrijos and his henchmen of the *Guardia*. Indeed, the General will have little use for a court of justice within a governmental system which recognizes no civil rights whatever.

Miss McClellan is taking no chances with the historical honesty of the future occupants of the Zone—she is sending all the deed records, which prove ownership of the land, to the U.S. for safekeeping.

Washington seems in no hurry to appoint a new federal judge for the Canal, making do with visiting judges in an obvious ploy to prepare for the turnover in case the treaties are ratified.

"What do they think they'll do with us? Send us home? Where is our home, if not here?" asks William Benny, a control house operator on the Canal. He and his wife were born in the Zone, and have no ties with other parts of the U.S. Benny will have to make his own plans for his family, and they won't be based on a timetable prepared in Washington.

The Governor of the Canal Zone and President of the Panama Canal Company is an Army general on leave of absence. The Zone Government and the Canal Company both operate under the general supervision of the Secretary of the Army. After completing his term, Gov. Parfitt will return to active duty, with a promotion if he hasn't made waves. He is prevented by his office from voicing Zonian complaints about the State Department or taking any position in regard to the proposed treaties. Nevertheless, his testimony before Congress during earlier hearings must have been unwelcome to those among his superiors who favor a gradual Panamanian takeover of the Canal.

Gov. Parfitt is painfully aware that the Canal must be closed if there are not enough U.S. employees who are willing to remain at a temporary job in a place that is no longer to be their home, under a repressive foreign regime, and with little or no support from their own embassy. The Governor testified that fear of the future was affecting the work force even before the treaty agreement was reached. Since the 1974 Kissinger announcement of the Joint Statement of Principles, resignations have increased by 60 percent.

The Governor said: "Athough the number is not of such magnitude as to cause great concern, what we are concerned about is the trend—the fact that this could snowball and ultimately seriously affect our ability to perform the Canal's mission . . . prospective employees are wary in seeking employment with the Panama Canal when doubt exists as to the future security and tenure of their positions and the conditions which might prevail under a new treaty."

Even if other Americans were paid enough to induce them to move to Panama, they would require extensive training to become familiar with the 1910 technology of the Canal, simple as it is. They would have to be integrated slowly into the regular workforce. If the treaties are ratified, there won't be a regular workforce to ease them in to.

The U.S. Civic Councils, organizations of Canal Zone community representatives, polled 285 U.S. citizens about their plans. 62.8 percent said that they would not consider remaining if the Zone is given to Panama. "Many of our people now tell us that 'the day that the Canal Zone Police go, we go,' and also, more alarmingly, 'when the U.S. workers see the day getting closer that jurisdiction will be handed to Panama, you can expect to see the Canal shut down.' "

The only labor trouble that the Canal ever faced was a "sick-out" in March of 1976, which was a response to rumors of a new Canal treaty. As the Civic Councils reported, "Morale at that time was extremely low; this year we have to say honestly that our people are so demoralized that they are ready to give up and quit—a shutdown of the Canal, if it occurs, will not happen over a labor issue. It will result from apprehensive employees, who in their fear for their physical security, will simply leave their jobsites, go home and pack their suitcases. . ."

"The trouble with the State Department," concludes Pat Fulton of the Pacific Civic Council, "is that they want a new treaty as a 'symbol.' But the Canal is a *thing!*" Ideology and nationalism will not change the fact that if the Americans leave, the Canal will be dependent on Panamanian mechanical skills.

The Canal mechanism is simple, but it requires upkeep. There is no regular maintenance system in Panama. The elaborate daily lake dredging and cleaning and lubricating procedures employed on the Canal are causes of amazement, and sometimes derision, among Panamanian visitors.

For years, the United States has given preference in hiring, training, and promotion to Panamanian nationals. At the present time only two of the ship pilots are Panamanians, and not many other Panamanian nationals have risen above menial jobs. Far fewer than the quota provided for by the programs apply for training; fewer still complete it.

Recently the United States acceded to Panamanian requests and gave up control of Bayano Dam, a source of energy and a necessary control valve on the lake which supplies the locks with water. The daily inspection of the dam ceased immediately after Panama took possession. Within a few months the dam became inoperable. Torrijos could find no Panamanians with the knowledge and skills to repair it, and was forced to fly in a team of Yugoslav engineers and mechanics. Since the repair of the dam, new cracks have appeared.

Panama has never conquered the problems of mechanical and administrative efficiency. The garbage collection system in Panama City is practically non-existent; heaps of refuse rot in the tropical sun. Modern buildings have no hot water systems. Torrijos bought a new fleet of buses from Germany, but made no arrangements for mechanics or replacement parts. A year later, less than one-third of the buses were still running; the others were cannibalized for their parts and the bodies left abandoned along the streets.

The treaty negotiators could not entirely ignore the possibility of Zonian flight and the lack of skilled Panamanians to replace the American employees.

Consequently, the U.S. Embassy in Panama contracted the services of Mr. John L. Jackle to do a study of the impact of a new treaty on Canal Zone residents and how they might be convinced of its benefits. The political branch of the Embassy worked with Mr. Jackle. The final report indicates that the methods of the Panamanian dictatorship are not completely alien to the State Department: "a lot of good press would be essential for success: in this situation we would make good use of the controlled press situation on the Isthmus. If it does not work, no propaganda will sell it. But it can be given at least an initial breath of promise through skillful manipulations of the available media."

Later the report adds, ". . . we would have to work closely with the Government of Panama to insure that their share of the participation would be handled with our goals in mind. We would not want a Government of Panama speaker who is going to rant and rave about how glorious Panama's demands are; we would want someone who could communicate on a low-key level and who would be very reassuring."

Even such sophisticated Madison Avenue techniques might not work with Bill McConaughy, Senior Control House Operator and a highly respected mechanic. McConaughy has worked on the Canal all his adult life, as have his two brothers, their father, their grandfather, and their great-grandfather, who helped build the Canal and whose Theodore Roosevelt Medal the descendants treasure. McConaughy's pride in the Canal is second only to his pride in America for having created it.

"Short of working on the moonshot there's nothing I'd be prouder to do than what I'm doing here," he says. "We all feel that way, and it doesn't wear off with time." After thinking a moment, he adds, slowly, "As long as the Canal is American."

A RAILROADING DERAILMENT

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. LEDERER. Mr. Speaker, there were trying times during the deliberations in the Ways and Means Committee when I feared the Federal employees would be legislatively railroaded into the Social Security System—at the risk of possible derailment of their own pension benefits.

I was one of those who stood steadfast against such dubious machinations which, even had they succeeded, would have been only a temporary prophylactic for the ailing social security fund.

The impetus for change was so strong it appeared, in fact, there was little chance of it being side-tracked. Fortunately, my colleague, ROBERT NIX, in his capacity of Chairman of Post Office and Civil Service, entered the legislative maneuvering. Then, as the following article by Jerry Waldie of the Federal Times describes, what would have been a congressional faux pas was averted. And—I, for one, hope it will be many years before such a dubious and harebrained scheme is again brought to the House floor:

[From the Federal Times, Oct. 31, 1977]

NEW BALLGAME IN TOWN

(By Jerry Waldie)

Not so very long ago, capitol observers would have yawned at the news that the House Post Office and Civil Service Committee intended to take on the powerful Ways and Means Committee. The thought that the lowly PO&CS Committee might be successful in an effort to reverse a decision of the awesome Ways and Means Committee would be too much for anyone familiar with Congress to seriously consider.

But things have changed on Capitol Hill. The PO&CS Committee did exactly that on the issue of mandatory coverage under social security for federal and postal employees.

Ways and Means, over the opposition of its new chairman, Al Ullman of Oregon, and its social security subcommittee chairman. Jim Burke of Massachusetts, mandated such coverage.

Chairman Bob Nix of the PO&CS Committee moved with surprising speed and determination to challenge that action. He shot off a letter to Speaker O'Neill signed by most of the PO&CS members asserting his committee's "sequential jurisdiction" over the issue of social security coverage for these employees. The action of the Ways and Means Committee, Nix told the speaker, "grossly infringes upon a major portion of this committee's jurisdiction."

Speaker O'Neill didn't hesitate. He ordered "sequential referral" in compliance with Nix's strong demand and the old patterns of doing things in the House were delivered a major blow.

Nix followed up this concession to his committee's authority by a superb effort in obtaining support of the members of the PO&CS Committee for an amendment to strike mandatory coverage. Every single member of his committee, both Democrat and Republican, voted to support such an amendment to the Ways and Means Committee bill.

Suddenly casual observers began to understand there was a new ballgame in town. At least where the PO&CS Committee was concerned and probably where the Ways and Means Committee was concerned, too.

What brought about this unprecedented show of strength on the part of the PO&CS Committee as well as the unexpected display of weakness demonstrated by the Ways and Means Committee?

The newly found strength of the PO&CS Committee clearly has as its basis the determination of Nix to reassert the authority of that committee that for too long has languished unused.

Make no mistake—Nix is an aggressive and competent chairman and has worked out a strong working relationship with his ranking minority member, the very capable Ed Derwinski (R. Ill.) on matters affecting committee jurisdiction. Nix and Derwinski, in turn, have effectively persuaded the other members of the committee to act as a unified voice against efforts to weaken and ignore the heretofore lowly esteemed PO&CS Committe.

A new spirit has begun to infuse the entire committee, including its staff. The morale is high and deservedly so.

On the other side of this controversy, certain weaknesses on the part of the Ways and Means Committee have been revealed by this episode.

It would have been inconceivable during Wilbur Mills' era as chairman for the Republican minority to control a critical vote on the Ways and Means Committee. Yet, on this vote, the Republican minority, under the leadership of Barber Conable, their ranking member, voted as a bloc and, together with a minority of committee Democrats, overturned the position of Chairman Ullman.

It is hoped—and expected—that the new chairman, Ullman, will soon receive the support his courteous and open leadership should elicit from committee Democrats. But that point has not yet arrived.

Finally, Speaker O'Neill is a different House Leader than was Speaker Carl Albert. Albert's deference to the major committees in disputes with minor committees was absolute. O'Neill appears to be more open to a resolution of jurisdictional disputes according to the rules rather than according to power personalities.

All this adds up to good news for federal and postal employees. At least in the House, their affairs are in the hands of a very capable committee and staff.

It is too early to make a similar assessment of the Senate's handling of federal and postal matters.

But half a loaf at this time is better than none. "None" is where we were at the begining of this Congress.

THE PRESIDENT'S COMMITMENT

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. YOUNG. Mr. Speaker, in a letter to Chairman LONG of the Appropriations Subcommittee on Foreign Operations during our consideration of this year's foreign aid bill, the President of the United States promised us that he would instruct the U.S. representatives to the International Financial Institutions to oppose and vote against loans to Vietnam, Uganda, Cambodia, Laos, Mozambique, Angola, Cuba, and for the production of palm oil, sugar and citrus crops.

In the CONGRESSIONAL RECORD of November 2, see page 36695. I reported how the first chance the President had to keep this commitment, he did not do it. The Soviet Union introduced and passed a resolution at the United Nations calling for the rebuilding of Vietnam. Despite the strong feeling expressed in the House and despite President Carter's pledge to oppose and vote against assistance to Vietnam, our own representative to the United Nations did not vote against the resolution or even ask for a recorded vote.

Now, when the President has had a second opportunity to keep this commitment, again it slipped away. Despite the President's promise, Assistant Secretary of the Treasury, C. Fred Bergsten, instructed our executive director to the World Bank not to oppose a loan to Indonesia for development of palm oil production. In a lengthy technical attempt to justify this position, Assistant Secretary Bergsten explained that this particular palm oil project might not be used by Indonesia for export which would compete with the United States.

But, even that is doubtful because Assistant Secretary Bergsten admitted on page 3 of that technical document that "the likelihood is strong that most if not all of the production involved in the loan will be for domestic consumption rather than export." Even if we could reliably assume that this particular palm oil project would not be used for export, this additional supply would obviously free up other Indonesian produced palm oil for export and to compete with U.S. industry. In effect, our soybean oil industry helps to subsidize the Indonesian palm oil industry which then competes with the very industry helping to provide the subsidy. I am certainly not against competition, in fact I favor it, but we should not be in a position where we have to finance our competitors.

So again, despite the President's promise, which I as one Member believed he would keep, he has again presented us with another loop hole and has failed to live up to the spirit of his commitment.

Following is a reprint of the President's letter containing the commitments he made. I urge my colleagues to reread this letter for their own reference.

President's letter follows:

THE WHITE HOUSE,
Washington.

Hon. CLARENCE D. LONG,
Chairman, Subcommittee on Foreign Operations, Committee on Appropriations, Washington, D.C.

To Chairman Clarence Long:

Secretary Blumenthal has informed me of your constructive efforts to achieve a successful resolution of the problems posed by the amendments to the foreign aid appropriations bill restricting the use of U.S. contributions to the international development banks.

I deeply appreciate your helpful suggestions and the role you have played thus far in steering this vitally important legislation through the House.

As I stated in our meeting last Friday, I fully agree with you and your colleagues in the House that U.S. assistance through the banks must take full account of the human rights policies of recipient countries. Accordingly, I will shortly sign into law the recently passed authorizing legislation for U.S. participation in the international development banks which require that the U.S representatives to the banks oppose loans to gross violators (except where those loans are directed specifically to programs which serve the basic human needs of citizens of such countries).

Additionally, as we discussed earlier, I shall instruct the U.S. Executive Directors in the banks to oppose and vote against, throughout FY 1978, any loans to the seven countries mentioned in the House amendments. Our representatives will also oppose and vote against loans for the production of the three commodities where such production is for export and could injure producers in the United States. You may be certain that I shall closely watch and review the lending practices of the banks during this fiscal year.

For the longer run, I have directed the Secretary of the Treasury, in consultation with the leadership and appropriate committee of the Congress, to undertake a thorough study of how the whole range of U.S. objectives, including the type envisaged in these amendments, can best be pursued in the banks. I would expect that the results of this appraisal could help guide our efforts for FY 1979 and beyond, in partnership between the Administration and the Congress.

I would hope that these steps would enable the House to avoid adopting any of the restrictive amendments, previously passed, in the final foreign assistance appropriations bill for FY 1978.

I appreciate your support and counsel on these critically important issues confronting our foreign policy.

Sincerely,

JIMMY CARTER

SCIENTIFIC EVIDENCE AGAINST MARIHUANA: PART II

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. McDONALD. Mr. Speaker, medical research over the last 7 years has shown that the active chemical ingredient in marihuana, various compounds of the chemical tetrahydrocannabinol (THC), have a number of markedly deleterious effects on the physical and mental condition of even moderate users who smoke two or three joints a week. The advocates of legalizing marihuana have tried to ignore the scientific evidence, and others who by their backgrounds in medicine or research should be expected to keep on this new information continue to promote marihuana as harmless. The White House adviser on drug abuse and mental health issues, Peter Bourne, M.D., who this year expressed his support for legalization of marihuana and cocaine appears to be in such a category.

Hardin B. Jones, professor of medical physics and physiology at the University of California at Berkeley, a leading researcher into the effects of marihuana, wrote an excellent article for Private Practice magazine in January 1976 which while designed for the family physician is not so technical as to be beyond laymen.

The article follows:

WHAT THE PRACTICING PHYSICIAN SHOULD KNOW ABOUT MARIHUANA

The average marijuana user—the young man who smokes two to three "joints" per week—is adversely and persistently affected by the "weed." But he does not comprehend his situation. Young women are affected in the same way, but they are about half as likely to use the drug and they usually consume somewhat less when they do. Effects on these young people are, of course, less than with daily use of the drug, but young people who smoke marijuana to any degree are likely to be brought to physicians by concerned parents who are worried because of the change in their behavior.

Evidence of the cumulative nature of the effects of marijuana is found throughout the literature of this subject. It was my own initial observation upon interviewing marijuana users. I found that it was necessary to smoke marijuana cigarettes several times to get the first intoxicative "high," and that after that stage was reached (usually after about five cigarettes had been smoked, either all at once or spread out over several weeks), intoxication could be renewed by smoking only a portion of a joint. Because of my observations, I challenged the claims that marijuana has a "reverse tolerance," with the implication that it was, therefore, safe. The notion of safety due to reverse tolerance has remained in the pro-marijuana literature in spite of the proof that the active components of marijuana do indeed accumulate in the body and in the brain.

The fate of the active ingredient of the cannabis drugs, delta-9 tetrahydrocannabinol (THC), has been determined by a number of studies in laboratory animals and in humans by labeling the administered THC with a radioactive isotope (either hydrogen-3 or carbon-14) and tracing it in the body for distribution, retention, transformation to other chemical forms, and excretion. The retention of labeled THC measured in humans is about forty percent at three days, thirty percent at one week; by extrapolation, ten percent at forty-eight days, and one percent at 4.6 months. The high retention of THC is confirmed by studies in which it was administered to laboratory rodents. The retentions is comparable in mice, rats, and humans, except that small animals are more active per unit of size and time of retention is correspondingly reduced. There are also minor species differences in the partial degradation of THC prior to excretion as cannabinol residue. A large fraction of administered THC is converted in the body to 11-hydroxy-THC—a substance that is several times more psychoactive than THC. Both active forms of THC tend to persist in the body for long periods of time.

During the "high" period following the smoking of marijuana, the organ concentrations follow that of the blood. There is a peak of concentration in the brain corresponding to that of the blood which lasts about four to six hours. Although the concentration of THC in the brain is much lower than in the other organs, that fact is not a measure of its effectiveness. The THC taken up by the brain is concentrated largely in the cell membranes, where the local concentration is twice as high as the THC content of the red blood cells membranes.

The disappearance of THC from the blood over the several hours of the "high" is not due to its removal from the body; it merely accumulates in fat tissue, which has a high affinity for THC. Some of the THC is partially degraded, but it remains a cannabinol residue. Cannabinol residues and THC are excreted largely by the bile, but only at a very slow rate. When THC has been administered to laboratory animals on a uniformly repeated schedule, it accumulates in the fatty parts of cells at an essentially constant rate, since the rate of elimination is so slow—about ten percent per month. The implication of this finding for humans is that progressive retention will increase the body burden of THC for many months before reaching equilibrium when the rate of excretion becomes equal to the rate of intake of THC. Based on animal studies the concomitant accumulation in brain cells is such that the result of smoking marijuana every other day for a month is a retention of the same quantity of THC in brain cells as that which causes an acute "high" in the beginning marijuana user. The chronic marijuana smoker increases his brain's burden above this chronic level when he smokes by producing a transitory peak concentration in the blood and brain; but he is never without significant quantities of THC in the brain at a level determined by the brain's equilibrium with the body fat. In the chronic marijuana user, the high brain levels cannot be reduced with out the many months of abstinence necessary to clear THC from the body fat.

The accumulation of THC in the body fat means that the THC becomes involved with lipoproteins and the lipid layers of the cell membranes. The effect of the THC on the cell is not solely the consequence of absorption into the cell surfaces; many substances, including gasoline and kerosene, have equal affinity for fat and are carried into the body readily on inhalation of these vapors. Also, some of the other cannabinoids in marijuana have the same high affinity for cell membranes and body fat. Yet gasoline and kerosene do not cause the problems known to occur with marijuana. One of these cannabinoids is responsible for the alteration of liver function which has been shown to take place independently of the psychic effects of THC. It will be some time before there is comprehensive understanding of the full range of effects of THC and the other cannabinoids once they are absorbed into the body. Among the known effects, THC depresses cell division and synthesis of DNA, suppresses the immune response of the blood lymphocytes, and alters the structure of the brain cell membrane. Alteration of cell structures in lung air passages of marijuana smokers has also been observed in studies made by Dr. Tennant, a pathologist who investigated cannabis-using American soldiers in Germany. Dr. Tennant did bronchial biopsies on thirty soldiers, average age twenty-one, who smoked 25–30 grams of hashish per month for a few months. This is an estimated 80–90 milligrams of THC per day, approximately four times as much as is received by a person smoking one marijuana cigarette (2 percent THC) per day. *Twenty-four of the thirty young men had precancerous lesions* detected in the biopsied specimen. These lesions are seen in tobacco cigarette smokers, but not until much later in life and after about three decades of cigarette smoking. It remains to be seen what fraction of marijuana smokers will develop severe respiratory disease. The frequently observed association of marijuana or hashish smoking with some degree of inflammation of the respiratory system, from sinusitis to bronchitis, suggests that valid results can be obtained from a demographic survey of the problem with a much smaller sample than was required to establish the effects of cigarette smokng. The signs are that emphysema and lung cancer will occur sooner than in the case of cigarette smoking. The effects should shortly become evident in our vital statistics when appreciable numbers of marijuana smokers will have been exposed to the drug for more than fifteen years. That is the interval usually estimated as the latent time for development of lung cancer in humans.

The physician should especially warn patients with existing lung disease against the use of the cannabis drugs. In this regard there is a well-founded claim that marijuana smoking makes breathing easier during the immediate period of exposure to the smoke. The effect seems to be due to drug-induced relaxation of the bronchioles. This observation has led to a claim by some people in the movement to legalize marijuana that the drug offers a benefit to asthmatics. It has been noted just as frequently in the literature, however, that marijuana is likely to bring on an asthmatic attack. These are not contradictory sets of observations; the induction of attacks of asthma seems to be caused by the chronic irritation by the marijuana smoke, an inflammation due to the cytotoxic impact of THC itself. It certainly appears necessary to warn young asthmatics that aggravation is the more likely result of marijuana smoking.

There can be no doubt about the pleasant effects of marijuana smoking, as attested to by several thousands of users I have interviewed. Furthermore, Dr. Robert Heath has been able to show, by direct placement of brain-wave detecting electrodes into the pleasure centers deep in the brain, that the pleasure centers themselves are triggered by marijuana smoking just as though they had been activated by an electrical current or by other stimuli. His extensive work includes neurological observation of humans experiencing sex, various drugs, and other sensory stimuli, and corresponding work with monkeys. In monkeys, activation of the pleasure centers by marijuana smoking produces brain wave discharges, but afterward the normal responsiveness of these centers is impaired up to five days. In exposures equal to those of a heavy marijuana user, the pleasure centers of the monkey become inactive for an indefinitely long period of time. An inaccurate, though widespread, criticism of this aspect of Dr. Heath's work is that the dosage causing semipermanent quiescence of pleasure responses is higher than the usual human range of exposure. Dr. Heath has verified that this is not the case. It may be, of course, that the monkey is somewhat more sensitive to THC than is the case in humans; nevertheless, it is commonly observed that young people who smoke marijuana heavily experience essentially the same effects—quiescence of the sensations of pleasure. I use the term "sensory deprivation" to describe this consequence of marijuana use. The term "depersonalization," as used by Drs. Kolansky and Moore, has a similar implication about these brain changes that evolve slowly with the cumulative effects of marijuana smoking and which on rehabilitative abstinence are the slowest to recover. The ability to feel good or to feel alive results from the normal operation of the pleasure centers and they give such zest as we can know to all the ordinary events of life. Sexuality is merely one facet of these emotional functions. The anatomical structures that control these important functions are first irritated and then impaired by the use of marijuana. The smoker merely observes in his early experiences with marijuana that he feels good or that sex becomes more sensual. He does not observe what became a common, obvious pattern to me as an interviewer of marijuana-smoking students. Their sexuality was heightened only for a short period in early marijuana use; afterward, sexuality diminished steadily. It is common to find absence of sexual activity in marijuana smokers, including absence of sexual dreams and masturbations. Yet the pot smoker does not perceive these changes. Perhaps they are due in part to induced depression of pituitary and gonadal function. The mechanisms are unknown at this time, but the clinical result is well established.

For some persons, smoking the weed once or twice a week may constitute heavy use as judged by its effects. It depends on the individual sensitivity to the drug and the strength of the marijuana used. Certainly all daily smoking of marijuana is heavy use and there are many signs of chronic debilitation. It is common to find that daily users have become unable to cope with ordinary problems. An early sign of such effect is the complaint that he is being "hasseled" by almost any interpersonal contact, an indication that the mental reserves are thin. Daily marijuana users, though heavily affected, have no insight into their condition or recognition of what has happened to them.

A morphological causative factor for their mental state has been observed. In ten consecutive cases of young men who were heavy users, the late Dr. A.M.G. Campbell, professor of radiology at the University of London, and his associates, did air electroencephalography and found enlargement of the ventricles and rounding of the usually sharp and well defined edges of the ventricles—findings that point to severe atrophy of the deepest portion of the cerebral hemispheres. It is noteworthy that the pleasure centers are also in this area of the brain. Clinical findings on heavy marijuana users point to the development of organic brain disease as described by Kolansky and Moore.[1] It appears that irreversible brain changes may be encountered as marijuana use extends beyond three years. Kolansky and Moore [2] note that marked and rapid improvement resulting from abstinence does not begin until several weeks have elapsed and then only if exposure has been of less than about three years' duration. The subjects of the Campbell study had all used marijuana for three years or longer. I have observed improvement in all college students who, after established regular use, have cooperated with me in abstaining for several months. Most of them have become convinced by their personal experience of recovery that marijuana had indeed impaired their minds, and they have continued to abstain. Improved memory, clearer thinking ability, feeling good, and the return or augmentation of sexual functions have usually been noted in my series of cases. In three cases of students who were heavily affected, but not incapacitated, I had opportunity to follow them closely over a period of four years. In each, improvement was evident in a few months. These young men probably gained full recovery and lost all signs of suppressed mental functions. Viewed over the entire period of observation, the improvement was very slow and required a period of three years.

[1] Kolansky & Moore, "Marihuana: Can It Hurt You?" J. Am. Med. Assoc. 222: 923–924 (1975).

The average marijuana user, in between exposures, exhibits a wide range of brain changes:

1. He has shifted from a self-activating, interesting, and interested person to one who is withdrawn and given to disordered thinking. I have observed some degree of change of this kind in every marijuana user. When it becomes clearly noticeable as a change in life style, it is often called the "amotivational syndrome." It is more than just a shift to sedation; thinking is affected in many ways.

2. Thought formation in the marijuana user tends to be less powerful: conclusions are relatively impetuous, and expressed ideas are often non sequiturs. It is as though some of the reference checking in thinking has gone astray. The user has the illusion that his chronic state is simply a mature mellowing.

3. The marijuana user's attention span and ability to concentrate have been reduced. Memory, especially short-term memory, is shortened.

4. The facial circulation reflexes are impaired; blushing is reduced. The skin tends to be pallid and relatively lacking in blood (except during the marijuana "high," when the skin is flushed and the sclera of the eyes are bloodshot). The focusing of the eyes is less precise; eye movements and facial expressions are less pronounced than in nonusers.

5. The conditioned social responses, such as affection for parents and tolerance for their suggestions, are impaired. Throughout the literature, cannabis is known as "the drug of alienation." Perhaps the cause is that pleasure centers for social conditioning have been affected. There is a loss of other conditioned responses; for example, an unkempt appearance is common and a loss of inhibition about urination in inappropriate places. One mother recently complained that her son had urinated in her flour bin, which happened to be open; more often the story is urination on walls of rooms in the vicinity of the toilet. Concern for consequences is reduced, and concern for the rights and well-being of others may be largely absent.

6. The marijuana user does not want to be "hassled." Mild criticism or merely requesting that housekeeping chores be done may be interpreted as hassling. The conflict causes the marijuana user to feel actual pain. He may even threaten his parents or other adults opposing his life style.

7. Marijuana is a hypnotic drug, and the hypnotic spell is long lasting. Thus, the user is likely to be talked into many situations that he would otherwise avoid. He may even engage in work in which there is a follow-the-leader type of spirit. The leader, in this case, is not likely to be outside the circle of persons using marijuana. The hypnotic effects of marijuana are, in my opinion, largely responsible for the acceptance of the hazardous consequences of more powerful drugs, a yielding to homosexual advances, and overly generous compliance with unreasonable requests by friends.

8. The young marijuana user tends to remain thin and to be underdeveloped for his age. The trend is more pronounced with heavy use. The daily marijuana user of several years' duration is likely to appear emaciated. The buttocks are thin; the facial muscles are atrophied. Similar changes in body composition have been well established in the rat.

9. The male is deficient in male hormone. The findings of Kolodny [3] indicate a five percent decline in male hormone production for each marijuana cigarette (one percent THC) smoked per week. This is the relationship in mature males; it is likely that the effect is relatively larger in the adolescent. Since Kolodny finds that the effect is mediated through the pituitary, and both gonadotropic hormones are diminished, it is likely that a similar effect occurs in women.

10. He is likely to have a tendency toward paranoia or schizophrenia, or both. This may be caused by chronic disturbance of the neural mechanisms by which sensations received through two or more organs are synthesized into a composite interpretation of the physical cause. Such a disturbance, which occurs in both psychotic persons and those using marijuana, can lead to completely inaccurate interpretations of the real world.

11. He is likely to have an elevated number of broken chromosomes in cultures of his white blood cells.

12. His white blood cell immune response is lowered. The immune response of skin cells has been shown to be unaffected; the difference is probably a consequence of the high exposure of blood cells to THC, whereas skin cells are less exposed. It is estimated that skin cells receive fifteen percent of the exposure of blood cells.

13. The diurnal cycle of sleep and waking is largely inverted. The marijuana user stays up at night.

14. Sexual functions are often stimulated early in marijuana use, but with regular use, sexuality is suppressed. This is dramatically the case with sexual dreaming, which is usually abolished with the beginning of regular marijuana use.

The average marijuana user will stop using this drug upon being convinced that the life style and effects are not what he seeks. He is not addicted or physically dependent on marijuana; he uses it only about twice a week, while the narcotic addict requires his drug on a regular daily basis. Nevertheless, the average marijuana user is likely to encounter difficulties. His friends are probably users, and the pressure to continue to join in when the "roach" is passed is very great. On the physical side, the marijuana user may have intermittent headaches for the first few months upon abstaining. This is a mild withdrawal symptom. There may also be symptoms of sleeplessness, restlessness, and agitation, which a physician can alleviate in order to help the user withdraw completely from the drug.

As in most forms of drug dependency, whether physical or mental (including alcohol, barbiturates, tobacco, amphetamines, and narcotics), body conditioning through hard physical exercise is helpful in readjusting the brain reflexes tied to the diurnal cycle. Physical exercise is also helpful in reestablishing the normal vigor of the pleasure mechanisms that rule over brain function.

TUITION TAX RELIEF

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. KASTEN. Mr. Speaker, I am pleased to join in cosponsoring the Tuition Tax Credit Act of 1977. This bill is designed to provide relief to financially hard-pressed middle-income families who are finding it increasingly difficult to bear the costs of education.

The Tuition Tax Credit Act would allow taxpayer to subtract one-half of the tuition they pay, up to a maximum of $500 per student, from their Federal income tax bill. Adults could claim the tax credit if they went back to school and parents could claim the credit for their children's education.

The credit would be available for tuition paid to an elemenary or secondary school, a college or university, a vocational or technical school, or an accredited business or trade school. Low-income families whose taxes are less than the credit would also benefit from a refund for the difference between the tax credit and their tax liability.

STRONG PUBLIC SUPPORT

As my colleagues know, the concept of a tuition tax credit is not new. More than 50 tuition-relief bills have been introduced in this Congress. The Senate has passed such legislation in four out of five past Congresses. The House recently voted to provide necessary funds in the fiscal year 1978 Second Concurrent Budget Resolution. There is strong public sentiment in favor of such a credit. The time has come to enact the necessary legislation.

TAX RELIEF—A NECESSITY

The average American taxpayer is fast reaching the end of his rope. In times like these, with the cost of living steadily increasing and the emphasis on the need for education as great as ever, the taxpayers who are financing their own or their children's education deserve relief.

A recent survey by the College Entrance Examination Board indicates that the average cost of a year's education for a student who goes away to a 4-year private institution is $4,811. The average cost at a public institution is $2,906. And of course those figures will continue to escalate.

Often, the victims of these soaring educational costs are middle-income families—those who have insufficient incomes to pay the costs of college or private schools, but are considered too affluent to qualify for federal financial assistance.

Government assistance programs have increased substantially in recent years, but these programs are targeted almost exclusively for lower-income students. For example, as of January, 1975, less than 4 percent of the basic educational opportunity grants, the main Federal college assistance program, went to families earning more than $12,000 per year.

While I support such Federal assistance, I also believe we cannot forget those families who are paying the taxes to finance these programs and are finding themselves unable to educate their own children.

As a New York Times article has said, the difficulty that these parents are having in sending their children to college suggests outright disaster for the vast majority of American middle-class families in the $12,000–$20,000 range who are considered too affluent for Federal or State scholarship aid.

MORE GOVERNMENT AID—NOT A SOLUTION

There can be no doubt that Congress must take action and soon. I do not believe that an expanded system of Federal grant support is the answer. That can only translate into bigger deficits or higher taxes.

America was built on hard work and perseverance. We cannot continue to sap the productive energies of our working people with more Government aid programs. Rather, we should allow them to keep more of what they earn to pay their own bills rather than the Government's.

Instead of helping people by requiring them to fill out detailed forms, baring their personal finances and pleading poverty in order to receive a portion of the money they have already paid in taxes, Congress should allow taxpayers to keep a greater portion of their own income to spend on educational expenses.

That is why I believe the tax credit approach is the best mechanism to providing relief to the middle-income family. It is simple, direct and effective. It will apply to all students at all levels of education. It will not entail a further expansion of an already massive Federal bureaucracy.

While some have questioned the cost of such a program in terms of lost revenues to the Federal Treasury, I believe the revenue impact would be a worthwhile and necessary investment in the future of our country—an investment that would be returned in higher earnings, better job opportunities and consequently, higher Federal tax revenues in the future.

I sincerely hope that next year as Congress considers the broader issue of comprehensive tax reform, it will make provision for a tax credit along the lines of those suggested in the Tuition Tax Relief Act of 1977.

COMPENSATION FOR REGULATORY VICTIMS

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. ASHBROOK. Mr. Speaker, I have long believed that the Federal Government should be more accountable in exercising its regulatory activities. The power to regulate, after all, is the power to destroy.

Those who are regulated can find themselves subject to decisions which cost thousands of dollars. In some cases a governmental ruling may even result in bankruptcy.

In the 94th Congress I sponsored an amendment along with former Senator Buckley to provide a small measure of relief. This amendment gave private parties wronged by decisions of the Consumer Product Safety Commission the opportunity to recover damages. The Commission could not evade its legal responsibility for its tortious acts by hiding behind the cloak of sovereign immunity.

This, however, is just a small beginning. Regulatory victims deserve to be compensated for their financial losses.

S. John Byington, Chairman of the Consumer Product Safety Commission, has stated his support for a broad compensation program. He recently recommended a Government policy on compensation for companies suffering losses as a result of Federal regulations. According to Byington:

> It's time to decide who should foot the bill for economic losses directly or indirectly caused by government regulation . . . Historically, the government's response to those injured by its regulatory action has been to give occasional expressions of sympathy and not much more.

The policy urged by Mr. Byington seems sensible. Businesses suffering huge financial losses as a result of Federal regulatory actions deserve more than sympathy.

Following is an article on Byington's remarks which appeared in the November 30 Washington Star:

New Policy Urged To Aid Regulatory Victims

(By Bailey Morris)

The chairman of the Consumer Product Safety Commission, citing the problems in regulating the flame retardant Tris, today called for a government policy on compensation for companies that suffer losses as a result of federal regulations.

"It's time to decide who should foot the bill for economic losses directly or indirectly caused by governmental regulation," CPSC Chairman S. John Byington told a group of industry and consumer representatives.

Almost any policy would be "fairer" than the present one, Byington told participants in a two-day symposium on hazardous chemicals. Currently, Byington said, only "those with a political clout who get private relief acts through Congress" are able to obtain compensation for financial losses.

The Tris case graphically pointed up the need for a new government policy, Byington said.

In this case, sleepwear manufacturers, most of them small companies, found themselves caught between the need to comply with government flammability standards as well as a ban and recall of Tris-treated sleepwear. The ban was promulgated by the CPSC on grounds that the chemical caused cancer.

"In the Tris case there has been no admission of error by the government . . . nor do I believe that there should be one," Byington said.

But, he added, the losses suffered by responsible companies pose the question of who should bear the financial burden of bankruptcies and losses.

"Historically, the government's response to those injured by its regulatory action has been to give occasional expressions of sympathy and not much more," Byington said.

One case where the government admitted error was the cranberry scare of 1959, Byington said. "It supported compensation of those it had wrongfully harmed," he said.

But in another case, the cyclamate scare of the late 1960s, Congress denied a request for compensation to canners who suffered more than $200 million in losses, Byington said.

"Relief was withheld despite the canners' assertion they had relied on the Food and Drug Administration's placing of cyclamates on a list of products generally recognized as safe," Byington told the group.

It is this kind of uncertainty that must be eliminated, especially now that government surveillance of hazardous substances is more intense and the technology to detect them is more sophisticated, Byington said.

Part of the solution, the chairman said, lies in the creation of "eligibility criteria" that would protect businesses against unforseeable laws while barring compensation for the unscrupulous.

That distinction, though a difficult one to make, might be fashioned by applying "a test of reasonable reliance," Byington said.

Reasonable reliance, he said, should be defined by answering the following question:

"Was the injured party reasonable in his reliance that government would not regulate in such a way as to cause his losses, or were the circumstances such that the party should have been aware of the possible pitfalls?"

Byington's expression of concern for the fate of businessmen comes as the government is expanding its regulation of toxic substances.

After five years of debate and passage of 12 versions of a toxic substances bill, pressure is being put on the federal government to take new and decisive action against harmful chemicals in the environment, a leading regulator told the symposium yesterday.

The Environmental Protection Agency, for example, plans to quadruple the staff of the office dealing with toxic substances—from 100 to 400—over the next two years, according to EPA official Steven Jellinek.

Jellinek said hazardous chemicals are the topic of the moment, just as air and water pollution were spotlighted 5 to 10 years ago.

EXPLANATION OF MISSED VOTES

HON. JOHN CONYERS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. CONYERS. Mr. Speaker, due to my absence as a result of public hearings on unemployment and crime that I am conducting in California with the Subcommittee on Crime of the House Judiciary Committee, I was unable to vote on the conference report on Legal Services Corporation Amendments (H.R. 6666). Had I been present, I would have voted affirmatively for the conference report.

PRESSING THE PRESIDENT ON INNOCENT PRISONERS

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. HANSEN. Mr. Speaker, as the end of another year arrives and the Christmas season is upon us I cannot help but call the attention of this body to a grievous injustice which continues to exist for certain Americans overseas.

I refer to those of our citizens incarcerated in Bolivian prisons who wait month after month, year after year for justice to be done in an antiquated court system even though they may be innocent.

I have personally traveled to Bolivia specifically to help correct this problem and significant progress has been made. However, much remains to be done to correct abuses of human rights, particularly the rights of the innocent.

To this end I have addressed significant effort in every possible area where help might be expected, and particularly at the Presidential level. I am still hopeful that the White House will become more specifically involved to expedite matters to the fullest extent possible and submit the following press release and letters to the President to illustrate the extent of my efforts in this regard:

EXPEDITING RELEASE OF AMERICANS IN BOLIVIAN PRISONS

Specific requests to expedite the release of Americans held in Bolivian prisons were made Tuesday by Congressman George Hansen at a White House sponsored meeting held in the U.S. Capitol Building.

Conducting the meeting at President Carter's request was Ms. Patricia Derian, the President's State Department Coordinator for Human Rights and Humanitarian Affairs, who has personally been to Bolivia to study the prisoner problem.

Hansen, who has also been to Bolivia and who arranged for the meetings on Capitol Hill for the benefit of concerned lawmakers and staff members, made requests designed to expedite the handling of prisoners, particularly those considered innocent. Noting that a constituent, Tom McGinnis of Idaho Falls, has been held for 18 months by Bolivan authorities with no prosecution recommended, Hansen insisted that something must be done to stop this abuse of human rights.

The Idaho lawmaker requested of State Department officials present that they check with Bolivian authorities to see if a prisoner when considered innocent by the prosecutors might not be freed with little or no review by the Courts which are so grievously slow in such cases. He also asked regarding the McGinnis case if it wouldn't be possible to separate the eight prisoners involved who are now considered as a group so that they might proceed individually without suffering the delays that grouping has chronically caused.

"This," he said, "would help move the McGinnis case along much more rapidly which certainly should be a consideration after he has been in prison so long and is considered not guilty."

"A lower court decision on the McGinnis case is expected by December 14," Hansen noted. "However, a Superior Court must then review the lower court decision whether innocent or guilty."

DECEMBER 7, 1977.

DEAR MR. PRESIDENT: I wrote you on October 19 regarding measures necessary to expedite the release of Americans imprisoned in Bolivia. Since that time, I have made several and frequent contacts with the White House and State Department to promote such efforts including an insistence that your personal involvement is necessary to assure maximum possible success.

To date, cooperation has improved measurably in State Department areas including the activities of our new Ambassador to Bolivia. However, efforts at the White House beyond your visit with President Banzer continue to be at a level less than necessary or desired.

Even a brief meeting with you by concerned Members of Congress and a measured effort on your part could be the necessary ingredient to assure success in at least six cases of getting innocent people home for the Christmas holidays.

Surely the spirit of the season should be sufficient motivation to gain this important White House assistance.

Mr. President, the Bolivian prosecutors have now recommended absolution (no prosecution) for six Americans who have been held, even though innocent, for nearly two years. The Lower Court on December 3 has accepted this recommendation for absolution on three Americans and is expected to so rule by the 14th of December on the other three. A Superior Court must then pass final judgment before release can be made which could again be frustratingly time consuming.

I have requested the State Department to ask Bolivian authorities for only a limited or cursory review at the Superior Court level on cases where absolution has been agreed to by both prosecutors and the Lower Court in order to expedite the handling of cases where there is apparently no guilt.

It is here as well as in other key places where your influence could be most effectively felt and possibly productive in bringing the six innocent people home to their families for Christmas.

Will you not intercede with a special request in this noble cause at this most appropriate occasion. Certainly in the cause of human rights, securing justice and humanitarian treatment among the nations of the world is important, but let us not forget "charity begins at home."

I hope for an early and favorable reply.

Sincerely,

GEORGE HANSEN,
Member of Congress.

OCTOBER 19, 1977.

DEAR MR. PRESIDENT: I am writing to you on a matter of urgent humanitarian concern. Two score Americans have been languishing in Bolivian prisons month after month, year after year, unable to even get a determination on innocence or guilt. In the name of civil rights and human decency this is intolerable.

The Bolivian Government is friendly and cooperative and has joined in many ways to assist the United States in solving social and economic problems effecting each of us. I find the leaders and the people themselves in Bolivia genuinely hospitable, friendly and accommodating.

Nevertheless, the time has come for the leadership of both of our nations to put an end to ritualistic procedures and bureaucratic red tape and insensitivity and to do something to relieve the plight of Americans imprisoned in foreign circumstances and their families here at home. I have played the game of international and internal politics to the point of frustration and even anger.

My efforts have taken me as the only Member of Congress or the Senate to visit Bolivia for the sole purpose of solving the prisoner problem and I know whereof I speak. We have witnessed a parade of Americans both private and official to Bolivia to deal with the prisoner situation. The President of that nation has also discussed with you the matter of Americans imprisoned in Bolivia during his recent visit here. Still nothing substantive has been accomplished and very few individuals have found relief in this plight.

I do not pretend to pass judgment on the cases. Obviously they range from not guilty to varying degrees of guilt which must be determined by the Bolivian legal system. However, this is where the problem really lies—the fact that prisoners remain incarcerated whether innocent or guilty for great periods of time while bureaucracy rolls on with relatively little response both here and there.

Everyone deserves the right to plan their life and their families should have some knowledge of the time and extent of their sacrifice. Guilt or innocence, not knowing is the worst part.

I find some families of limited circumstances unable to plan how much money they can send for the upkeep of their loved one because they have no way of knowing how long the incarceration will be, with or without sentence, as related to the resources they have available. Such uncertainty is cruel and inhuman treatment by any standard and must come to an immediate end.

Of course, another sad aspect of a system of prolonged trials and indecision is that innocent people can spend years in jail. This is the case with my own constituent, Tom McGinnis of Idaho Falls, and several friends both American and other nationalities.

The Bolivian prosecutors have agreed that there is not sufficient evidence to make a case and yet six individuals of one group, including Mr. McGinnis, who have already served 16 months in prison must continue to wait month after month pending some pro forma decision of the court which may or may not grant their release.

Since my visit to Bolivia during the August Congressional Recess some accomplishments have materialized which were arranged pursuant to my negotiations with government officials there.

1. A Supreme Court review has been generally abolished which leaves consideration of prisoner cases to the two stages of lower and superior court levels.

2. Prison time served in awaiting sentence may be counted against the sentence and a reduction of sentence for good behavior is also now available. Earlier this year laws were changed reducing sentences from a minimum of eight to ten years to two years which caused some delay in processing cases because of the anticipation of such a change.

3. Agreement was reached to make possible early release of prisoners technically detained who have already served their sentences. Two of these prisoners, both from the State of Texas, came home at approximately the same time as I returned from Bolivia.

4. Additional new judges and prosecutors have been appointed making possible some speedup in review which this past week allowed resolution of the case of Susan Scanlan who has been seriously ill for many months. Miss Scanlan has now been released and two others associated with her have received final sentencing from the superior court. Unfortunately the final court decision added more time for incarceration to the lower court sentences which was deeply disappointing to the prisoners and their families. This is most

difficult to understand for those of us not familiar with such latitudes in court procedures. Certainly the matter of a reveiw court increasing a sentence is distasteful and should be protested bitterly by this government.

5. Bolivian authorities have lived up to the assurance I received in recommending complete absolution (no prosecution) in the case of Tom McGinnis and five of his associates after their reveiw of case facts while I was there. For this I am gratified and am sure the prisoners and their families are also appreciative. Nevertheless the frustrating and ridiculous procedure of holding all related cases together in a single unit and handling review of such in piecemeal fashion from attorney to attorney is absurd, cruel, and intolerable. After sixteen months these people now considered unprosecutable by the Bolivian government continue to be held in circumstances where they have not even completed the lower court review. At this rate a final determination will be so long in coming that they may have just as well been guilty of a serious crime, because they will have served the sentence anyway.

Mr. President, the last point I made regarding long-term incarceration of innocent persons is such a grievous sin against human beings that if there is any semblance of humanity left in this government or its agents, such as yourself and others in high positions, no stone should be left unturned to secure the immediate release of these people. I not only urge your action, but I demand it and stand ready to assist in every way possible. You can be certain that I am making my own plans to do what must be done in this regard even to the point of returning to Bolivia for more strenuous action very shortly as the Congress adjourns.

May these prisoners and their families, myself and all concerned count on you as our President to do what must be done swiftly and effectively to bring the relief so long hoped and prayed for.

Sincerely,

George Hansen,
Member of Congress.

SOUTH BEND TRIBUNE SUMMARIZES WOMEN'S CONFERENCE

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. BRADEMAS. Mr. Speaker, I am pleased to call to the attention of my colleagues a most useful summary, compiled by Jeanne Derbeck, a staff writer for the South Bend Tribune, of the resolutions passed by the National Women's Conference in Houston:

Will Women's Panel Resolutions Be Enforced?

(By Jeanne Derbeck)

Now that the National Women's Conference in Houston is over, what happens next?

The 25 women's rights resolutions passed by the delegates will go to the President and Congress, who may or may not take strong action to enforce the resolutions.

"We have 120 days to submit a report to the President and he has 120 days after that to respond," said Bella Abzug, presiding officer at the conference.

"Of course I expect him to do that (respond). Just as we have operated under the law, I am sure the President also will operate under the law."

Ms. Abzug was referring to the federal law that called for the conference and created the International Women's Year Commission that ran it. But what does "respond" mean? The law says that "the President shall submit to each House of Congress recommendations with respect to matters considered in such report" and he shall do so within 120 days of receipt of the report.

In eight months, then, President Jimmy Carter's recommendations will reach members of Congress, who will surely disagree on some of them.

By law the conference was supposed to "identify the barriers that prevent women from participating fully and equally in all aspects of national life and develop recommendations for means by which such barriers can be removed."

The resolutions passed form a large and costly order. Here is a summary of them:

Arts and humanities: Instructs the President to take steps to assure equal opportunities for women in upper level posts in federally-funded cultural institutions, on grant-awarding boards and in receiving government grants.

Battered women: The President and Congress should declare the elimination of violence in the home a national goal and should establish a clearing house for information and financial assistance for groups providing service for battered women and their children.

Business: Seeks a national policy from the President integrating women into government-wide business-related activities.

Child abuse: Asks funding and support for treatment of abused children and their parents. Child abuse is defined as pornographic exploitation of children, sexual abuse, battering and neglect.

Child care: Calls for the federal government taking a major role in providing child care program.

Credit: Calls for vigorous enforcement of the federal Equal Credit Opportunity Act.

Disabled women: Seeks enforcement of the Vocational Rehabilitation Act of 1973.

Education: Seeks vigorous enforcement of laws prohibiting discrimination at all levels of education, more educational programs for women and bilingual programs.

Elective and appointive office: Calls for more efforts to increase the number of women in office, including judgeships and policy-making positions.

Employment: Seeks a federal policy of full employment so that all women who are willing and able to work may do so.

Equal rights amendment: Calls for ratification of the amendment.

Health: Calls for a national health security program and points to special health needs of women because they bear children.

Homemakers: Says laws relating to marital property, inheritance and domestic relations should be based on the principle that marriage is a partnership in which the contribution of each spouse is of equal importance and value. Seeks coverage of homemakers under social security.

Insurance: Calls for the elimination of insurance discrimination.

International affairs: Urges that many more women participate in all aspects of formulating and executing U.S. foreign policy.

Media: Calls for the media to employ women in all job categories, especially in policy-making positions. Also seeks end to stereotyped portrayal of women's roles.

Minority women: Seeks specific proposals in all programs designed to assist women to also "overcome the double discrimination against minority women."

Offenders: Calls for a review and reform of state laws to eliminate discrimination in the treatment of women in penal facilities.

Older women: Asks federal and state governments and social welfare groups to support efforts to provide social and health services for older women to "live with dignity and security."

Rape: Seeks revised rape laws to provide for graduated degrees of seriousness, to include rape by spouses and to ban the introduction into evidence of the past sexual conduct of the victim.

Reproductive freedom: Supports the Supreme Court ruling that women should have the right to an abortion, and calls for family planning services for teen-agers and others and the reform of laws discriminating against illegitimacy.

Rural women: Calls for a federal rural education policy to meet the special needs of isolation, poverty and underemployment that "characterizes much of rural America."

Sexual preference: Seeks elimination of discrimination against lesbians, including that in child custody cases.

Statistics: Calls for federal collection and analysis of data on the basis of sex.

Welfare: Calls for reform of federal welfare laws, including special training for parents receiving Aid to Families with Dependent Children, and a focus on assisting heads of such families to get off welfare and support themselves and their children.

FARMERS AND LEGIONNAIRES SAY "NO" TO PANAMA TREATIES

HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. HANSEN. Mr. Speaker, an army runs on its stomach and wins by its manpower or force of arms. The United States of America has been blessed with abundant food supplies and a dedicated and resourceful military organization.

Those very same people who have furnished the food and firepower to keep America free and strong now form two strong bulwarks against the threat to the Nation's security posed in the effort to give away the Panama Canal.

Polls show the rural areas of the Nation strongly against the turnover of the canal to Panama and there is good reason. The Nation's farmers and ranchers stand to lose a great deal if the proposed Panama Canal treaties are ratified.

Little attention has been given to a report entitled "The Panama Canal and U.S. Farm Trade" published by the Foreign Agricultural Service of the U.S. Department of Agriculture.

An article regarding this report published in the December 4 edition of the Washington Post raises staggering implications which certainly merit the attention of every Member of Congress. The proposed treaties would not only prove disastrous to America's agricultural industry, but also very damaging to the interests of every American consumer.

Additionally, Mr. Speaker, the men who have fought and sacrificed for our freedom and security have strong opinions against any transfer of the Panama Canal from American control. Mr. Robert C. Smith, national commander of the American Legion, speaks forthrightly concerning the Legion's posture toward the proposed treaties and raises many points in the commander's message in the December 1977 issue of the American Legion Magazine which strongly question the merits of giving up U.S. control of an area so vital to our economic and military security.

The articles follow:

[From the Washington Post, Dec. 4, 1977]

FOR THE RECORD

From "The Panama Canal and U.S. Farm Trade," published by the Foreign Agricultural Service.

While its role in total U.S. trade has declined in recent years, the 51-mile-long Panama Canal continues to be a key East-West link for U.S. farm trade. . . .

During 1976, about one in every five tons of U.S. farm-product exports moved through the canal. . . . During fiscal year 1976 grains and soybeans accounted for 16.3 per cent of all traffic through the canal—their share being exceeded only by the 18.7 per cent for petroleum and petroleum products. In calendar 1976, roughly 18 per cent of the 44.3 million-ton U.S. corn export, 26 per cent of the 15.3 million-ton soybean export, and 45 per cent of the 5.1 million-ton grain sorghum export moved through the canal. These three products, combined, earned $9.1 billion in foreign exchange for the United States during 1976 out of the $23 billion in total U.S. farm exports.

The canal handled 70 per cent of all U.S. farm-commodity exports to 15 markets in East, Southeast and South Asia and Oceania. The Asian market as a whole now means $8.5 billion to U.S. farmers and ranks alongside Western Europe as the leading outlet for U.S. agricultural products. . . .

. . . the canal is a much more economical means of shipping bulk products than any other alternative now available. Rerouting grain shipments around South America might almost double transportation costs, according to USDA analyses. And transit time would be increased considerably. . . . Cross-country land-sea transportation—including the minibridge system with surface carriers now used extensively for container shipping—also would be prohibitively expensive for grains and soybeans. . . .

[From the American Legion Magazine, December 1977]

WE HAVE AGAIN STUDIED THE TREATY; WE STILL SAY "NO"

Why is the American Legion so vehement in its opposition to the Panama Canal Treaty? Does it want to alienate all of Latin America? Does it want to invite sabotage against the canal? Does it really believe the canal is still vital to U.S. security?

The questions have dogged me in my first months as your national commander. I believe I should use this forum to reply so every American Legion member understands our position before Senate debate.

First, our opposition is directed at the treaty, not at the people of Panama. The American Legion has consistently supported fair and equitable payments to Panama for the canal, generous social and material assistance for its people and constant modernization of the canal for the economic and military well-being of the entire Western Hemisphere.

Debaters avoid these economic and security factors.

Isn't it disturbing that although this treaty has been negotiated by four U.S. administrations, the text was not made public until the eve of the gala signing ceremony at the White House? We were treated to a spectacle in which virtually every hemisphere chief of state signed a protocol for a treaty they had not read!

Subsequently, it became apparent that Washington and Panama City did not even agree what the text meant. Worse, the controversy has centered on circumstances under which the United States could exercise its military might to protect the canal and the hemisphere. President Carter and President Torrijos finally met and announced that they agreed on the interpretation of the treaty's vague language—but they did not clarify the language in the treaty.

An "understanding" between two heads of state is fine, but it lacks the force of law. What happens when Mr. Carter and/or Gen. Torrijos have left office? The American Legion does not believe such questions should rest on a reed called "understanding."

In 1975 alone, 14,000 ships transited the canal. Forty-five per cent of these voyages originated in the United States. These ships were loaded with the agricultural and manufactured exports vital to our balance of trade and payments. Any increase in tolls by Panama could have devastating effect on the world market position of the American farmer, laborer, businessman. The Mississippi Valley, Plains States and the east coast are vulnerable.

Should the canal ever be closed to U.S. ships, the Commerce Department estimates a $932 million jump in the price of U.S. exports, a $583 million jump in the price of imports. The impact would be chaotic.

On military issues there have been honest differences of opinion between highly qualified men who have debated the importance of the canal, but none has denied that loss of the canal in a time of emergency could be disastrous. Yet the very provisions of the treaty that are supposed to guarantee our right of intervention are those that cause anguish among left-wing Panamanians.

It's true that our biggest aircraft carriers cannot transit the canal. But 95 percent of U.S. fighting ships can, including powerfull nuclear forces. There's a lot more to the Navy than its giant flattops.

And what about Panama, this government headed by Gen. Torrijos?

His friendship for Castro is disquieting. His henchmen and propagandists have flayed the United States for years with phoney "colonialism" charges. Yet who has advertised the human rights survey of Panama by the respected Freedom House? That survey ranks Panama as the most dictatorial regime in the Hemisphere.

When Torrijos seized power in Panama in 1968, the country had a debt of $167 million. Today is owes over $1.5 billion and there has been precious little improvement in the lot of the average Panamanian. Under the treaty, the United States—in addition to huge annual payments to Panama—would encourage banks to loan Torrijos another $300 million.

Faced with all this, we are asked to endorse:

1. Surrender of control over a vital waterway built by American ingenuity and American money on land fairly purchased by the United States.

2. Surrender of all defense rights within 22 years, sooner should Panama exercise full sovereignty.

3. Surrender of U.S. sovereignty over the canal and the Canal Zone and the exposure of the human rights of U.S. citizens to Torrijos' law.

4. Granting veto power to Panama over any potential U.S. plan to build another Atlantic-Pacific canal anywhere in Central America.

5. Acceptance of nebulous language—backed by imprecise personal agreements—that U.S. warships would have priority use of the canal during an emergency.

The American Legion cannot endorse such a treaty. We pray that the Senate shares our years.

HOUSE OF REPRESENTATIVES—*Thursday, December 8, 1977*

The House met at 10 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Let the peace of God rule in your hearts.—Colossians 3: 15.

Eternal Spirit, as we continue our way through the Advent season we open our hearts unto Thee who art the Way, the Truth, and the Life—the way to life, the truth about life, and the life itself. Strengthen us and all who work on Capitol Hill. Hold us steady amid the noise and bustle of a busy time. Give to us the spirit of wisdom and understanding and the determination to plan and to proceed together for the good of our country. May the light of Christmas add to our joy, the love of Christmas multiply our service to humanity, and the life of Christmas increase the opportunities for peace in our world.

In the spirit of the Prince of Peace we offer this our morning prayer. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries, who also informed the House that on December 2, 1977, the President approved and signed a bill of the House of the following title:

H.R. 7345. An act to amend title 38 of the United States Code to increase the rates of disability and death pension and to increase the rates of dependency and indemnity compensation for parents, and for other purposes.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the amendments of the House to the amendments of the Senate numbered 1 and 3 to a bill of the House of the following title:

H.R. 7738. An act with respect to the powers of the President in time of war or national emergency.

The message also announced that the Senate agrees to the amendments of the

House to the amendments of the Senate to a bill and joint resolution of the House of the following titles:

H.R. 3313. An act for the relief of Mark Charles Mieir and Liane Maria Mieir;

H.J. Res. 662. Joint resolution making further continuing appropriations for the fiscal year 1978, and for other purposes.

Senate concurring in House amendment to Senate amendment numbered 2.

TRIBUTE TO HON. GEORGE MAHON ON HIS PROSPECTIVE RETIREMENT

(Mr. CARTER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CARTER. Mr. Speaker, the dean of the House has served in this body for 43 years. It is my understanding that George Mahon means to bring his illustrious career in the House to a close next year. I feel it fitting and proper that we give credit where credit is due to this intelligent and powerful, yet humble, man.

If with pleasure you are viewing
Any work a man is doing
And you like him, or you love him, say it now!
Don't withhold your approbation
Till the person makes oration
And he lies with snowy lilies o'er his brow.
For no matter how you shout it
He won't really care about it
He won't know how many teardrops you have shed.
If you think some praise is due him
Now's the time to hand it to him.
For he cannot read his tombstone when he's dead!

More than fame and more than money
Is the comment, kind and sunny
And the hearty warm approval of a friend;
Oh! it gives to life a savor
And strengthens those who waver
And gives one heart and courage to the end.
If one earns your praise—bestow it!
If you like him—let him know it!
Let the words of true encouragement be said!
Let's not wait 'till life is over,
And he lives beneath the clover
For he cannot read his tombstone when he's dead!

RESPONSE TO HON. TIM LEE CARTER

(Mr. MAHON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MAHON. Mr. Speaker, I want to thank the distinguished gentleman from Kentucky (Mr. Carter) for his kind words.

Frequently, as we pass in the corridors or meet on the floor, we exchange quotes from literature which we have treasured through the years.

It is a delight to be praised by a friend who is a scholar, a physician, and a statesman. Thank you Tim Lee.

HOPE FOR THE BEGINNING OF PEACE IN THE MIDDLE EAST

(Mrs. HECKLER asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. HECKLER. Mr. Speaker, as one Member of Congress I would like to express for the record my sense of hope that the Cairo Conference between President Sadat of Egypt and President Begin of Israel will be the beginning of peace in the Mideast.

It is regrettable that the American press refers to this conference as one which "only" involves Egypt and Israel. Certainly, wide Arab participation would be desirable. However, it is most impressive to me that finally Egypt and Israel—the two nations that have borne the brunt of war in the Middle East in human terms for the past decade are now on the verge of making a sincere effort to discuss peace. This, in itself, is a remarkable achievement.

I applaud President Sadat's bold initiative which has reshaped the pattern of diplomacy in the Middle East. The warm acceptance of his overtures by Prime Minister Begin and the Jewish people augers well for the fruitful negotiations in Cairo.

Thus I send a message of great hope and support, as well as a message of prayer from the people of my district to those two world leaders who potentially could end the massive threat of war which has clouded their portion of the globe and the security of people everywhere. It is immaterial that this conference is being held in Cairo and not initially in Geneva as had been proposed by the United States.

Geneva is not a portion of Heaven, divinely endowed with properties which produce lasting agreements among warring countries. It is the spirit and leadership of the negotiators alone which could produce that desired result.

Cairo will serve as well as a setting for this historic meeting. It is my hope that this session will produce a meaningful understanding between these two leading nations of the world. It is my hope, as well, that other responsible Arab leaders will ultimately become supportive of this effort so that a comprehensive settlement can be achieved. Failing that, a true understanding between Israel and Egypt, which have both been so devastated by war, will be in itself worthy of world acclaim.

The American role should not be to intervene between the parties directly involved, but to be supportive of the negotiating process and to wish them Godspeed in their important mission.

Mr. MAZZOLI. Mr. Speaker, will the gentlewoman yield?

Mrs. HECKLER. I am happy to yield to the gentleman from Kentucky.

Mr. MAZZOLI. Mr. Speaker, I would just like to commend and compliment the gentlewoman from Massachusetts (Mrs. Heckler) for the statement she has just made, and to express my support in her statement. I believe the gentlewoman has touched upon a very important point. I too have been somewhat less than happy with the response of the American Government with regard to the Cairo conference. I believe that the conference has great promise.

Again I congratulate the gentlewoman for the statement she has just made.

Mr. RHODES. Mr. Speaker, will the gentlewoman yield?

Mrs. HECKLER. I yield to our distinguished minority leader, the gentleman from Arizona (Mr. Rhodes).

Mr. RHODES. Mr. Speaker, I thank the gentlewoman from Massachusetts (Mrs. Heckler) for yielding to me. I also want to associate myself with the remarks the gentlewoman has just made, and to compliment her on a very fine statement.

REQUEST FOR PERMISSION TO HAVE UNTIL MIDNIGHT FRIDAY, DECEMBER 9, 1977, TO FILE CONFERENCE REPORT ON H.R. 9346, SOCIAL SECURITY FINANCING AMENDMENTS OF 1977

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent that the managers may have until midnight Friday December 9, 1977, to file a conference report on the bill H.R. 9346, the Social Security Financing Amendments of 1977, and, further, that it be in order to consider the conference report on Wednesday, December 14, 1977.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

Mr. RHODES. Mr. Speaker, reserving the right to object, can the chairman of the Committee on Ways and Means, the gentleman from Oregon (Mr. Ullman), assure the House that the conference has practically concluded and that there actually will be a conference report on the social security bill?

Mr. ULLMAN. Mr. Speaker, if the gentleman will yield, the chairman of the Committee on Ways and Means can only say that, although the conference is not concluded, that all matters in contest have been gone over very thoroughly with the Members in the other body. We have every assurance and every reason to believe that the conference will be concluded this week.

Mr. RHODES. Mr. Speaker, further reserving the right to object, may I also ask the distinguished chairman of the Committee on Ways and Means if it is imperative that this matter be disposed of on next Wednesday? We get all sorts of rumors which I have not been able to corroborate about the possibility that the House will be back after the 19th of December. I also hear that perhaps the new Congress will reconvene in session on the 19th of January, and also that we may reconvene on the 3d of January, and if all of those things, or any of them are actually to happen, I see no reason why it would be necessary to call the conference report up next Wednesday. Practically every Member of the House has, I think, had some assurances that there will not be sessions of import during this next week and have made plans accordingly. Is it absolutely necessary that this matter be brought up next week?

Mr. ULLMAN. If the gentleman will yield, of course the chairman of the Committee on Ways and Means is not in a position to respond to the general programing comments made by the distinguished minority leader, but the chairman of the committee will say that he thinks it is exceedingly important that this legislation be disposed of next week. I have no knowledge at all as to when we are going to come back, but it would seem to me that with a conference report of this magnitude ready to go, it would be a grave error to have it passed by the House. So I would strongly urge my friend to allow this orderly procedure to go forward so that we can dispose of this very important matter.

Mr. RHODES. If I thought it were an orderly procedure, I would allow it to go forward. I do not. It would be my intention to object to the unanimous-consent request that the gentleman has made insofar as it refers to the calling up of the conference report on Wednesday. I would not object to the unanimous-consent request the gentleman made to file a report before midnight tonight.

Mr. KETCHUM. Mr. Speaker, will the gentleman yield to me?

Mr. RHODES. I yield to the gentleman from California.

Mr. KETCHUM. I thank the distinguished minority leader for yielding.

As a member of the conference, I think it only fair to inform the Members that that conference, which we were in such a great hurry to have, met for precisely 5 hours on Thursday last. The House was not in session Friday. We did not meet for some reason unknown to me. On Monday we met again for a total of 2 hours. I would say to the gentleman that other than a cursory examination of the items in disagreement, there has been practically no discussion as to the major contents of that bill. There are six welfare amendments to that conference report, and unless some deal has been cut that I do not know anything about, I think the Members should know that. We have done nothing in that conference of any consequence whatsoever. As a member of that conference committee, I stand ready to go to conference today, tomorrow, Saturday, or Sunday, but such has not been the case. I think perhaps the President should understand that Russell Long is running this country.

Mr. RHODES. Mr. Speaker, I object to the unanimous-consent request.

THE SPEAKER. Does the gentleman appreciate the fact that his objection would only delay the Congress for 1 day, since the conferees would report under normal procedure and the House would take up the report on Thursday?

Mr. RHODES. I think the Speaker should realize that the Members of the House, including this Member, are becoming a little bit irked with the on-again, off-again plans of this body. Until we have some resolution as to when we will adjourn sine die and when the second session will begin, and whether or not we will be here on the 19th of December, I will object.

The SPEAKER. Objection is heard.

Mr. ULLMAN. Mr. Speaker, I withdraw my unanimous consent request.

PERMISSION TO HAVE UNTIL MIDNIGHT FRIDAY, DECEMBER 9, 1977, TO FILE CONFERENCE REPORT ON H.R. 9346, SOCIAL SECURITY FINANCING AMENDMENTS OF 1977

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent that the managers may have until midnight Friday, December 9, 1977, to file a conference report on the bill H.R. 9346, Social Security Financing Amendments of 1977.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

There was no objection.

PROVIDING FOR ADJOURNMENT TO MONDAY, DECEMBER 12, 1977, AT NOON, AND THEN TO WEDNESDAY, DECEMBER 14, 1977, AT NOON

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next, December 12, 1977, at noon, and, Mr. Speaker, I ask unanimous consent that when the House adjourns on Monday, December 12, 1977, it stand adjourned until Wednesday, December 14, 1977, at noon.

Mr. RHODES. Mr. Speaker, reserving the right to object, is the distinguished acting majority leader in a position to inform the House as to the probable program for Wednesday next?

Mr. BRADEMAS. Will the distinguished minority leader yield?

Mr. RHODES. I yield for that purpose.

Mr. BRADEMAS. Mr. Speaker, the bill that will be scheduled on that day is the one that was the subject of the colloquy between the minority leader and the gentleman from Oregon, the conference report on H.R. 9346, the Social Security Financing Amendments of 1977.

Mr. RHODES. Will there be other business on that day?

Mr. BRADEMAS. There will not be.

I might say to the minority leader, so I am not in a position of responding categorically, that we do not anticipate there will be any other business.

Mr. BRADEMAS. The chairman of the committee with jurisdiction over that legislation has just a moment ago advised me that at this point he does not intend to bring the water pollution conference report up next week, and it was in the light of that advice to me, may I say to the minority leader, that I gave the response I gave to him.

Mr. RHODES. I thank the gentleman from Indiana.

Under the circumstances, of course, I do not object to the gentleman's unanimous-consent request.

I would like to renew, however, my request that at the earliest possible moment the majority leadership inform the House as to what the plans are not only for December but also for January. I think it is time that we be let in on the secret.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

AUTHORIZING CLERK TO RECEIVE MESSAGES FROM SENATE AND SPEAKER TO SIGN ENROLLED MEASURES DULY PASSED AND TRULY ENROLLED, NOTWITHSTANDING ADJOURNMENT

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that notwithstanding the adjournment of the House until Monday, December 12, 1977, the Clerk be authorized to receive messages from the Senate, and the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

Mr. KETCHUM. Mr. Speaker, reserving the right to object, I reserve this right merely to ask the distinguished majority whip, when is the social security conference going to conference? I hear we are going to file the report on Friday and this member of the committee has been informed of nothing but a sort of "probably" or "maybe" or "I guess." I wonder if we might have some positive information on that? There are many of us trying to get airplane reservations and I have had so many airplane reservations that they will not take any more.

Mr. ULLMAN. Mr. Speaker, if the gentleman would yield, let me say it is the intention of the chairman of the Ways and Means Committee to send out a meeting notice very soon. This decision has only just been arrived at. We will send out the notice that this conference will meet at 10 o'clock tomorrow morning.

Mr. KETCHUM. I thank the gentleman. That is wonderful news.

Mr. CEDERBERG. Mr. Speaker, further reserving the right to object, when will the conference report be printed, because we have Members who have left and who will not be back until Monday or Tuesday, so we will come to a conference and we will not have had an opportunity to know what is in it?

Mr. ULLMAN. Mr. Speaker, if the gentleman will yield, if we can reach agreement in the conference the conference report will be filed at midnight Friday night and will be available as soon as the mechanics allow it to be available.

Mr. CEDERBERG. When will those mechanics make it available?

Mr. ULLMAN. I presume on Monday morning we will have the printed material.

Mr. CEDERBERG. That is strange.

Mr. RHODES. Mr. Speaker, will the gentleman yield?

Mr. CEDERBERG. I yield to the minority leader.

Mr. RHODES. Mr. Speaker, I would like to address my friend, the gentleman from Oregon, and ask: Will it be fatal to the Republic if the matter of the social security conference report were to go over until January 3? It is my understanding that at the present time it may be necessary or desirable to call the House and Senate into session on January 3 for the purpose of trying to deal with a conference report on energy. If that is to be the situation, would it not be possible also to deal with a conference report on social security at the same time?

Mr. BRADEMAS. Mr. Speaker, if the gentleman will yield, the distinguished chairman of the Subcommittee on Social Security, the gentleman from Massachusetts, would like to respond.

Mr. BURKE of Massachusetts. Mr. Speaker, if the gentleman will yield, I would like to inform the minority leader that it would be the height of irresponsibility for this Congress to adjourn this year without acting on the social security legislation before the end of the year. Two years ago when we should have taken action it was held up because it was an election year. Next year will be an election year and we will have more trouble than we have had this year. I think if we are not going to do anything about the disability funds which are in dire trouble, they would run out in 1978 and create one of the most chaotic conditions in the country, forcing people off the disability payments and onto welfare. That is the kind of thing that would greatly increase the cost of government to every State in the Union.

We have to act on the social security bill this year and make sure that the disability funds do not run out in 1978. I think that is incumbent upon us and where that responsibility lies will develop during the next few days.

I think it is important that the conferees meet tomorrow, that we work out our differences and that this Congress, irrespective of plane rides or plane schedules, pass the social security bill in 1977.

Mr. CEDERBERG. Mr. Speaker, further reserving the right to object, I think the height of irresponsibility is that we have not had the conference report here now. The House passed this bill months ago. I understand they have only had it 8 or 10 hours. They have not met on conference all week. They only met on Monday. Now suddenly some Members do not know you will have a conference and then you wrap it up just like that. I think that is the height of irresponsibility.

Mr. BURKE of Massachusetts. Mr. Speaker, if the gentleman will yield further, I pleaded with the House yesterday to contact all the conferees to urge that the bill be brought out by the end of 1977.

Mr. CEDERBERG. The gentleman is just about 2 months too late.

Mr. BURKE of Massachusetts. There is not a Member of this House that does not know that the social security bill is pending and every one of us should be willing to wait and vote on the thing and not raise these spurious questions about plane rides and all.

We had 14 votes on abortion and that thing went back and forth about 14 times. If we can spend that much time on abortion, we can give the social security problem a little bit of attention.

Mr. CEDERBERG. We should give it a little attention.

Mr. BURKE of Massachusetts. We asked that we go ahead with the conference.

Mr. CEDERBERG. It is all going to be done tomorrow?

Mr. BRADEMAS. Mr. Speaker, will the gentleman yield?

Mr. CEDERBERG. I yield to the gentleman from Indiana.

Mr. BRADEMAS. Mr. Speaker, I would simply observe that the fact of the matter is that we apparently do have a social security conference agreement about ready and, therefore, we can vote on it; whereas, the gentleman knows, the energy conference is not yet ready and no person can say with assurance when it will be.

Further, I would say to the gentleman from Michigan that the House cannot vote on the energy conference until the other body will have voted on it, anyway.

Mr. CEDERBERG. Mr. Speaker, further reserving the right to object, can the gentleman enlighten us any more on a supplemental appropriations; what can we expect on that?

Mr. BRADEMAS. That is in the hands of the other body, I will say to the gentleman from Michigan.

Mr. ANDREWS of North Dakota. Mr. Speaker, will the gentleman yield?

Mr. CEDERBERG. I yield to the gentleman from North Dakota.

Mr. ANDREWS of North Dakota. Mr. Speaker, back on the farm we say, "If it looks like a duck and quacks like a duck, probably it is a duck."

The reason we are coming back is because the White House is inviting everyone in Congress to a Christmas party which will cost $200 to each Member just to come back. That is going to be the most expensive Christmas party in the history of the Republic.

Mr. KETCHUM. Mr. Speaker, will the gentleman yield?

Mr. CEDERBERG. I yield to the gentleman from California.

Mr. KETCHUM. Mr. Speaker, this raises a very interesting question. I do not know, based on past experience, how we are going to solve this conference in 1 day, unless a deal has been cut. I do not know anything about that, but I am stating that there are six very significant welfare amendments to this bill, all of which are contained in H.R. 7200, that has been in the Senate since last June and could have come over for conference. We have significant differences on the earnings limitation between the Senate and the House.

I just simply cannot understand how we are going to resolve it in 1 day. I am perfectly willing to go tomorrow and Saturday and Sunday, whatever it takes to get it done: but I would inform the gentleman that I find it amazing that someone can tell me that this can be resolved in 1 day, when all we did in 7 hours was to read through the bill.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. CEDERBERG. I yield to the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Speaker, reference was made to the supplemental appropriations bill conference report. This matter is in the Senate. It would seem very unlikely in the very near future that this conference report could be filed in the House and be brought back to the House for further consideration. Certainly it is unlikely that we can get a conference report ready before this week or next.

Mr. CEDERBERG. Would it be correct to say that there is really not that much urgency in the supplemental that it could not lay over until, say, next year?

Mr. MAHON. There are some matters that are somewhat urgent, but it may be that it would go over until next year.

Mr. MAZZOLI. Mr. Speaker, will the gentleman yield?

Mr. CEDERBERG. I yield to the gentleman from Kentucky.

Mr. MAZZOLI. Mr. Speaker, I have been sitting here all morning listening to this interesting debate about when to bring up the social security bill. If the gentleman could inform me, am I not correct in saying that one Member of the minority side on the conference, his refusal to permit the appointment of conferees did in fact delay the entire consideration by the conferees of the social security bill?

Mr. CEDERBERG. I am not familiar with that, but I know the conference has been going on for at least 2 weeks, and they have only been meeting sporadically during that 2 weeks. That is all I know.

There was some problem between the conferees, and as I say, some deal has probably been cut. Maybe they can get away with it, but there are going to be Members here who cannot read the conference report and who do not know anything that is in it. I think that is a bad way to legislate.

Mr. BRADEMAS. Mr. Speaker, I renew my request that notwithstanding the adjournment of the House until Monday, December 12, 1977, the Clerk be authorized to receive messages from the Senate, and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent to dispense with business in order under the Calendar Wednesday rule on Wednesday next.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in connection with the colloquy just concluded.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. RHODES. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in connection with the colloquy just concluded.

The SPEAKER. Is there objection to the request of the gentleman from Arizona?

There was no objection.

REPORT OF COMMODITY CREDIT CORPORATION FOR FISCAL YEAR ENDED JUNE 30, 1976, AND TRANSITION QUARTER ENDED SEPTEMBER 30, 1976—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Agriculture:

To the Congress of the United States:

In accordance with the provisions of Section 13, Public Law 806, 80th Congress, I transmit herewith for the information of the Congress the report of the Commodity Credit Corporation for the fiscal year ended June 30, 1976 and the transition quarter ended September 30, 1976. This Report covers events prior to the beginning of my Administration.

JIMMY CARTER.

THE WHITE HOUSE, *December 8, 1977.*

SOCIAL SECURITY FINANCING

The SPEAKER. Under a previous order of the House, the gentleman from Massachusetts (Mr. BURKE) is recognized for 5 minutes.

Mr. BURKE of Massachusetts. Mr. Speaker, as we proceed with legislation concerning the financing of the social security program, it is essential that we keep in mind the basic principles that underlie the system. We are fortunate to have available the expertise of one of the founders of social security, J. Douglas Brown.

Dr. Brown is uniquely qualified to discuss these principles because he was a member of a small group that developed them in 1934–35. He was chairman of the Advisory Council that refined and restated these principles in 1937–38, and he has served on several succeeding social security advisory councils.

In his recent book entitled, "Essays on Social Security," Dr. Brown includes a chapter on general revenue financing for social security. This chapter, which I am inserting in the RECORD at this time, emphasizes the intention of the founders of social security to use general revenues for one-third of the cost of the social security system.

The chapter follows:

IV. THE CONCEPT OF GOVERNMENT CONTRIBUTIONS

In discussing the ways the concept of mutual responsibility is reflected in the philosophical framework of the OASDI program, we referred to the recommendations of the Advisory Council on Social Security of 1937–38 that called for financial participation by the federal government in support of the program. The Council recommended an eventual sharing of the cost of the program by employers, employees, and the government by means of approximately equal contributions. The significant word "eventual" was inserted in recognition of the "funnel" program in the early years of the system when payroll taxes would be more than sufficient to provide for the relatively small but steadily increasing costs of benefits. There was no justification for government appropriations to the old-age insurance trust fund in the early years when it was already much larger than that needed for a contingency reserve.

The old-age staff of the Committee on Economic Security had proposed that the system be financed by payroll taxes for the first 25 years. By that time, they estimated the reserve would be approximately $11 billion. The rate of payroll taxes then in effect, 2½ percent each on employers and employees, should not be further increased. Instead, the government should be called upon to contribute sufficient funds each year to maintain an $11-billion contingency reserve. It is interesting to note that the staff estimated that they assumed that, after the govern- would be needed in 1962. Although they did not recommend any precise limit on government contributions after 1962, it is probable that they assumed that, after the government contribution had come to equal a third of the costs of the system, any further needs would be met by increasing the contributions of employers, employees, and the government by approximately equal amounts.

The fate of the concept of government contributions to the OASDI system demonstrates the difficulty of maintaining the vitality of an idea that cannot be implemented until many years in the future. The interest span of Americans for ideas, as such, is exceptionally short. An idea or concept becomes interesting when it can be put to work to secure tangible results. If government contributions would not be needed for a quarter of a century, why worry about what should be done until then? In this, the Congress understood the thinking of the people better than did the planners of the system.

The natural tendency of the Congress to wait and see when governmental contributions would be needed was encouraged by the unexpected willingness of the workers of America, or even of employers, to contribute to OASDI. The flow of income from payroll taxes rose from $600 million in 1940, to $2.1 billion in 1950 and to $10.8 billion in 1960. Only in 1960, was it necessary to raise the rate of employer and employee contributions above that of 2.5 percent each proposed by the staff. The honeymoon period of depending on payroll taxes had lasted for so long that any theoretical marriage vows had long been forgotten. Meanwhile, for workers, the psychological impact of OASDI contributions had become blurred and softened by the ingenious operations of payroll accountants and the increasing significance of the expression "take-home pay." Not until the sixties were discussions renewed concerning an upper limit, such as 5 percent each, on the rates of payroll taxes. By 1971, the rate had reached 4.6 percent each for OASDI with 0.6 percent added for Medicare. The Rubicon of 5 percent each had been crossed.

One can marshal various reasons why workers and employers exerted little pressure for resurrection of the concept of government contributions to OASDI as contribution rates came to approximate double those recommended by the staff, and much more than the eventual 3 percent each established by Congress in the 1935 Act. An underlying reason is the rise of earnings over the period and the increasing availability of funds to both workers and employers for "fringe benefits" as distinguished from day-to-day expenditures for immediate requirements. At the same time, stimulated by the OASDI program itself, there came to be a greater interest on the part of both workers and employers in protection against the contingencies of old age, death, and disability. With increasing income, the span of interest in future needs is extended, and one has more to lose if one ceases to be self-sufficient. Employers needed a means of retiring older workers in a time of rapid technological change. National unions in larger and more prosperous industries had moved into the field of supplementary benefits apart from wages and working conditions and thereby indicated their belief that security was worth the price paid in bargaining power or deductions. Meanwhile, the benefits under contributory social insurance were improving in both level and scope, including the introduction of Medicare in 1965.

But the question remains: were the planners of the OASDI program in 1934–35 and 1937–38 wrong in their conviction that there should be governmental contributions to the system at some future time? It may be helpful to analyze their reasons for this conviction, to consider how far time has sustained or negated their reasons and to suggest steps that might be taken in the light of current political and economic realities to return to the concept of governmental contributions.

The reasoning of the old-age staff of the Committee on Economic Security was summarized in my testimony before the House Ways and Means Committee on January 25, 1935, pp. 242–43, as follows:

1. The final security of any social insurance plan is the guarantee of the Government. To buttress the guarantee of security there must be the financial strength and the taxing power of the Government.

2. There are limits to the reasonable use of employment and earnings taxes when used for the benefit of the public as a whole. The payment of annuities larger than can be earned in the earlier years of the plan may well be considered a public benefit and has been so considered in practically every important foreign plan. (The old age insurance plan would reduce the costs of old age assistance wholly financed by the public.)

3. To avoid large reserves. If contribution rates are raised sharply in the early years, huge reserves accumulate. . . . If the contribution rates are raised sharply in the later years, the worker then contributing may receive on retirement scarcely more than a return of own contributions. (Government contributions in the later years assume the function of a vast reserve without the serious economic and fiscal repercussions of accumulating an ever increasing funded reserve.)

4. The shifting of the incidence of the employment tax to the consumer, which may take place, . . . may become in time a regressive tax that may well be supplemented by the use of funds drawn from a progressive income tax. (If the tax on the employer is not shifted, it may encourage the displacement of labor by machines.)

In general the staff recognized that the old-age insurance plan would shift resources from the better-paid worker to the lower-paid worker and also, over time, from the contributors of the future to those receiving higher benefits than "paid for" in the earlier years. It believed that both kinds of social redistribution justified the balancing effect of government contributions, when needed, equal to one-third of the long-range cost of the system. With the steadily increasing proportion of older people in the country, the costs of assuring their security were bound to increase no matter what means were used. Old-age insurance would afford a real sense of security with two-thirds of the cost met from payroll taxes. Steadily increasing old-age assistance costs would need be met entirely by government and would still but mitigate insecurity through needs-test relief with its unfortunate by-products in a democratic nation.

The Advisory Council of 1937–38 emphasized, in supporting government contributions, that dependent old age had become a national problem for several reasons. The steadily rising proportion of the aged, technological change, mobility, and urban life combined to create a condition that could not be effectively met by state governments alone. The nation as a whole would benefit materially and socially by a national program of old-age insurance. The costs of relief and old-age assistance would be reduced. The Council cited the policies of other countries and warned that there were definite limits upon the proper use of payroll taxes. An analysis of the incidence of such taxes led to the conviction that they should be supplemented by general taxes.

The argument that government contributions following 1962 were a means of avoiding the need for a large reserve in earlier years has obviously lost its significance. Reserves larger than those needed as a contingency fund were accumulated but no longer exist. The system is now operating on a current-flow basis with less than optimum contingency reserves. This makes it all the more obvious, however, that the current old-age beneficiaries are being heavily supported by current contributors. This is truly a social redistribution in time resulting from the lower contributions in the earlier years. Should not the public, which in the earlier years benefited by the social effects of accelerating the impact of adequate old-age insurance benefits, as opposed of old-age assistance, relief, or insecurity among the aged share in the cost of such acceleration rather than imposing the cost entirely on current payroll taxes? Should not the people as a whole bear a part of the cost of the accrued liability assumed by the system in substituting contributory insurance for public assistance? It is interesting that the special benefit introduced in 1966 for persons 72 and over not eligible for OASDI or other governmental pensions or assistance is financed from general funds.

The argument still holds that the public, rather than payroll taxes, should bear the cost of providing larger relative benefits to those of lower earnings than to those of higher earnings. The minimum benefit and the amount paid to workers with a low average of covered earnings absorbs a very considerable flow of funds. While the person with higher earnings receives a lower proportion of his earnings in benefit under the graduated schedule, it is true that he and his employer are contributing to the cost of the lower benefits. There is no question that social insurance benefit schedules should favor those of lower average earnings. The question is, should not this cost be shared by the general taxpayer rather than loaded upon payroll taxes alone?

The concern of the staff and the Advisory Council of 1937–38 that there was a limit beyond which payroll taxes should not increase has not lost justification after a honeymoon period of 40 years, even though the steady rise in productivity and earnings has shifted the attention of Congress and the general public from such concern. The steady upward adjustment of benefits by Congress and, more recently, the automatic cost-of-living increases have made OASDI benefits appear, for the present, a good buy, even for the higher-paid beneficiaries. This is especially true because benefits are exempt from income taxes. For the typical employer, payroll taxes for OASDI, since they are uniform throughout the country, appear to be just another cost of doing business, incorporated in the prices of goods sold or services rendered. It is, as always, difficult to determine whether and how far such taxes have encouraged the steady shift to labor-saving machinery and methods. It can be argued, however, that, merged into the total costs of employing people rather than using substitute means of production, payroll taxes have helped to retard the absorption of our growing labor force.

Rather than the slow and hidden effects of rising payroll taxes on consumer prices and employment, it will be the reaction of workers and especially the self-employed to increasing social security taxes that will hasten the resurrection of the concept of government contributions to the OASDI program. In 1977, an employee earning the maximum amount covered by OASDI and Medicare, $16,500, will pay $965.25 in taxes. A self-employed worker will pay $1,293.50. Even submerged in the detailed statements of deductions that now accompany salary checks, the amounts taken out for OASDI are becoming noticeable, especially for persons of higher salary. For the self-employed, they become even more evident when their income tax is computed. No one can anticipate when pressure will become articulate if either ceilings or tax rates continue to increase. The treats of termination of coverage under OASDI by state and municipal employees suggest that the time is not far off. Such employees and their employers, with the opportunity to bail out, may not feel obligated to help meet the "accrued liability" involved in protecting the current aged, which should be met by the federal government with its far wider tax base.

The recent decline in OASDI reserves will also raise again the issue of government contributions to the OASDI program. Alternative methods of increasing the inflow into the reserves (either raising the ceiling on earnings covered or raising the rate of contribution for all, or both) have definite disadvantages. A higher ceiling increases future costs, since those receiving higher earnings through life must eventually be paid higher benefits. The higher the ceiling is raised, the further a payroll tax levied on a proportionate basis and without deductions such as for dependents, heavy medical expenses, or mortgage interest invades the zone of income left free for private initiative in assuring security, whether by savings, investments, insurance, home ownership, company annuity plans, or trade union benefit programs.

In contrast to raising the ceiling on OASDI contributions, further increases in the rate of the employee-employer payroll tax would more seriously affect workers of lower average earnings. Not only the impact on the net earnings of the less skilled workers must be considered but also the effect of higher payroll taxes on their employers in encouraging the introduction of labor-saving methods of production or service.

In anticipating the effects of increases in OASDI contributions, it is necessary to keep in mind that contribution rates for Medicare, Part A, will have to be raised, especially with the sharp increases in hospital costs. If any form of general health insurance is introduced, a heavy share of the cost will probably be met by payroll taxes. Already, one-half of the cost of Part B of Medicare is met by government and one-half by the beneficiary deducted from this benefit. If, as has been strongly recommended, the beneficiary's share of the cost of Part B of Medicare is shifted to payroll taxes paid throughout working life, there will be a further burden on workers of all levels.

The present-day opponents of government contributions to the OASDI program raises the fear that such contributions will change the character of the system. They argue that, once government funds are available, there will be increasing pressure to raise benefit levels and to extend the scope of the system more rapidly than the country can afford. Some foresee that the costs of the system might become so great that a needs test will need to be introduced since benefits could no longer be paid as a matter of right. Just how the government could refuse benefits after years of contributions is not visualized. Nor is it likely that a long-established payroll tax for a specific individual benefit will be diverted into public assistance payments.

The major shortcoming of those who argue that government contributions to the OASDI program would change its character is that they have not studied the history of contributory social insurance either in America or abroad nor understand the degree to which it is a response to the fundamental desire of working people for security with self-reliant dignity. It is not just an American gadget invented in 1935. Our people have the common sense to know that one does not gain security with dignity for nothing. A return to the needs-test relief does not appeal to the great majority. Over the past 40 years, they have developed a great stake in the OASDI system and a firm conviction that they are providing for themselves a level of security for which one must and should pay. They are not sure, nor is anyone, just what part of their eventual benefit is financed by their own contributions, those of their employers, or the contribution of other workers and employers as time passes. They do know that their current contributions to the system are a considerable factor in their available income and that the contribution has been increasing steadily.

It is important to weigh in the balance of the arguments for and against government contributions that such contributions are not intended to reduce the burden of payroll taxes that are now being paid, but rather are meant to prevent future increases in the rate of those taxes as the system approaches maturity. This was precisely the expectation of the old-age staff of the Committee on Economic Security in 1934–35 and the Advisory Council on Social Security in 1937–38. Government contributions to the OASDI system are not a new idea but an idea whose time is approaching. The planners of the system never assumed that contributions by employers and employees of one-half the current cost each involved a distinctly different philosophy of contributory social insurance than contributions by employers, employees, and the government of a third each. To them, it was a matter of timing, not philosophy; of conditions, not a theory. It is believed that the American people will see it the same way. If the costs of the system are increasing because of an accrued liability incurred by paying adequate benefits for those retiring in the past, then the time has come for the government to help meet that liability. The people will continue to pay their share—a dollar amount that will still be clearly evident when deducted from their earnings.

In the determination of policy for a government or any other enterprise it is well to decide upon a carefully reasoned framework of principles within which a policy should operate, and then consider realistically the conditions that should or will affect the implementation of the particular policy. The difference between democratic governments and private enterprises in this respect is only one of degree. Both must deal with response, whether from citizens, customers, or employees. Applied to policies concerning the financing of contributory social insurance programs, as a basic principle, a three-way, equal sharing of costs by employers, employees, and the government is logical, practical, and sound. The conditions that should and will affect the implementation of this policy are no longer prospective or uncertain. They have become definite and measurable, at least to those immediately concerned in planning the future of the OASDI and Medicare programs. The remaining task is the difficult one of gaining public understanding of the principle and why the time has come to implement it.

It is also a sound principle of leadership that changes of policy that affect many people should not be made suddenly. The more complex the change, the longer the period required for preparatory discussion and gradual implementation of the policy. In the introduction of a policy of three-way sharing of contributory social insurance costs under OASDI and Medicare this means that the time for discussion is now and that the implementation of the policy should be planned on a step-by-step basis. Since OASDI and Medicare, Part A, contributions are now grouped together in their impact upon the employers and employees of the country, the gradual steps taken can be initiated in respect to the combined payroll taxes.

The inevitable shift to three-way financing of the national social insurance in the United States should begin with Medicare. Every reason presented for government contributions to OASDI is even stronger for such contributions to Medicare. In its haste to counter the American Medical Association's objections to the inclusion of doctors' fees under the same system as hospital charges, Congress in 1965 divided Medicare into Parts A and B. Contributions to Part A were added to the joint payroll taxes, but the financing of Part B was sanctified in some mysterious way by placing one-half the burden on the government and one-half upon old-age beneficiaries when they could least afford to pay the premiums. The inclusion of the government as a participant in meeting costs was far wiser than appreciated at the time. It followed, unwittingly, sound principles of social insurance. The burdening of old-age beneficiaries with one-half the cost was an inconsistent and unreasonable impairment of the effectiveness of the total program to protect older people through contributory social insurance. Medicare Part B remains an unfortunate hybrid, neither true social insurance nor private insurance operated with heavy government subsidies.

The Advisory Council on Social Security of 1971, after careful study, recommended that Part A and B of Medicare be merged and become true social insurance, financed by a three-way, equal sharing of costs by employees, employers, and the government. Premiums charged to old-age beneficiaries should be eliminated. The Council estimated that the government's share in the combined A and B programs would rise from one-fifth to one-third, thus lowering the payroll taxes for Medicare to offset needed increases in payroll taxes for OASDI. The recommendations of 1971 were sound and farsighted. It is unfortunate that they were not implemented. The effect on payroll taxes would have been gradual and relatively minor, but more important, the change would have established Medicare as a program consistent with sound social insurance principles, both in structure and in financing.

The precept that policies should first fall within a framework of principles and, second, be implemented with a realistic consideration of conditions was overlooked by the Advisory Council of 1975 in its recommendation on the financing of Medicare. In need of a greater flow of funds to finance OASDI in future years, and with but limited consideration, it proposed that, step-by-step, the government should assume the *total* cost of Medicare, not one-third. The argument of the majority of the Council was that the amount of benefits for an individual under Medicare bears no relationship to his wages or those of anyone else. This seemed to the majority of the Council to be sufficient justification, as time passed, to swing from excessive dependence upon contributions from employers and workers under Part A to dependence upon government contributions alone. To the student of the long history of contributory social insurance, this appears to be jumping from the frying pan into the fire. Instead of moving to a long-tested policy of equal contributions by employers, workers, and the government in establishing earned rights in the avoidance of insecurity, the Council, concerned with problems of finance, would substitute a system of publicly financed health care. It is difficult to see how the final stage of the transition proposed would justify the designation of contributory social insurance. Instead, it would take on the many political, economic and social problems of a free public service.

It has become increasingly evident that the future costs of the OASDI system cannot be met by diverting payroll contributions from the Medicare program. The recommendation of the Advisory Council of 1971 for combining Parts A and B of Medicare into a single program financed in equal shares by employers, workers, and the government is sound in principle but the savings are incidental. The basic solution is to introduce government contributions to both OASDI and an integrated Medicare in gradually increasing amounts until a one-third share is reached. Once this has been achieved, all three sources should share any additional costs. The time is past when the bugaboo that this would change the essential character of the system should be taken seriously by responsible planners. Payroll taxes cannot continue to assume burdens that should properly be borne by progressive income taxes. The honeymoon period is over. The steadily increasing cost of providing a decent, self-reliant life for the aged, for survivors, and for the disabled is truly a burden in which the public should share. In the words of the Advisory Council of 1937–38, the nation as a whole, independent of the beneficiaries of the system, derives a benefit from the program. It is a condition that America faces, not a theory; but sound policies based on tested principles will help it adjust to new conditions.

CHICAGO SUN-TIMES, BRUCE INGERSOLL SERIES ON HAZARDS OF NUCLEAR MATERIALS DISPOSAL AND TRANSPORTATION

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, the Chicago Sun-Times and one of its reporters, Bruce Ingersoll, recently did a series of stories revealing the serious problems and hazards in storing and transporting radioactive materials. Mr. Ingersoll's outstanding work not only educated the public on critical issues involving nuclear materials, but it has led to an order by President Carter to investigate the hazards of shipping weapons-grade uranium through O'Hare Airport and to legislation introduced in Congress to prohibit the shipment of such materials through civilian airports. In addition, Mr. Ingersoll's revelations of the problems of radioactive waste disposal in Illinois prompted the Illinois attorney general to call for a full public hearing.

Although a major focus of Mr. Ingersoll's series was on the problems that have arisen in Illinois, the implications of his exceptional reporting go far beyond the borders of one State. They are both national and international in scope, and demand the serious examination of policymakers in Washington as well as concerned citizens everywhere.

Mr. Speaker, the Chicago Sun-Times and Bruce Ingersoll are to be commended for providing an extraordinary public service through the series on nuclear waste and related problems. It is a clear example of excellence in journalism, and at this time I would like to share Mr. Ingersoll's series with my colleagues:

N-Plant "Crud" Is a $1 Billion Mess

(By Bruce Ingersoll)

The nation's nuclear power industry is facing a billion-dollar cleaning bill for flushing tons of highly radioactive "crud" out of the cooling systems of 65 nuclear reactors.

Commonwealth Edison Co., the pioneer of the industry, is the first utility to confront what nuclear engineers call the crud problem—metal oxides becoming radioactive in the cooling water and accumulating on the insides of reactor piping like rust on ordinary iron pipes.

At a cost of $36 million, Edison will begin cleansing Dresden reactor No. 1 near Morris, Ill., in November, 1978. Dresden, the nation's oldest commercial reactor, has been generating electricity since 1960.

For other utilities, the cost of cleaning out their contaminated reactors will come due over the next 20 years as each reactor grows older and its cooling system becomes crud-encrusted. Ultimately, the consumers will pay the price for decontamination. It is an operating expense never foreseen by the utilities when they began touting the economic advantages of nuclear power over coal and oil.

"To the best of my knowledge," George B. Kistiakowsky, science adviser to President Dwight D. Eisenhower from 1957 to 1961, said in an interview last week, "the economics of (reactor) decontamination and the disposal of radio-active wastes wasn't even considered important enough to worry about."

Now, 17 years after the dawn of commercial nuclear power, Gordon Corey, vice chairman of Chicago's Commonwealth Edison, has estimated the cost of cleaning out just one reactor at $20 million. And he was calculating the cost in 1976 dollars; his estimate does not account for inflation.

If the $20-million-per-reactor estimate were applied nationwide, the total bill for 65 reactors would hit $1.3 billion.

A reactor engineer in the U.S. Energy Department's Chicago office said this price tag "sounds reasonable." On the other hand, Paul J. Pettit, manager of the department's decontamination research in Washington, expressed confidence that the industry will find ways to economize.

Unless a reactor is cleansed by the time it reaches "middle age"—approximately the 20th year in its anticipated operating life of 40 years—the build-up of crud causes radiation levels to rise drastically inside a nuclear plant.

If workers spend too much time in certain areas of a plant, they run the risk of a radiation overdose. As a result, major repairs and even routine chores require extra manpower and take inordinate amounts of time. With a reactor out of service, this "down time" can cost a utility millions of dollars in lost kilowatt output.

The $36-million "demonstration" project to decontaminate Dresden will cost more than half as much as the $51-million plant itself. With a "miracle" cleaning solvent developed by a Dow Chemical subsidiary, Edison hopes to dissolve most of the crud in the plant's maze of piping. Work already has begun on a radioactive-waste facility to handle the flushed-out crud. The Energy Department is contributing $8.2 million.

"Our concern is to provide continued safe working conditions for the people in the plant," said J. Stanley Graves, project manager. "We see this as a first. We recognize that the entire industry is going to be faced with the same situation. Nuclear plants, as they get older, do get 'hotter' (more radioactive). Our objective is to develop a technique for handling this problem on a routine basis."

From sources in the Energy Department and Nuclear Regulatory Commission, it was learned that besides the Dresden reactor 12 reactors are already candidates for decontamination:

Yankee Atomic Electric's Yankee Nuclear reactor (started up in 1960), Rowe, Mass.

Consolidated Edison's Indian Point reactor 1 (1962), Indian Point, N.Y.

Pacific Gas & Electric's Humboldt Bay reactor (1963), Eureka, Calif.

San Onofre reactor 1 (1967), San Clemente, Calif., owned by Southern California Edison and San Diego Gas & Electric.

Connecticut Yankee Atomic Power's Haddam Neck reactor (1967), Haddam Neck, Conn.

Niagara Mohawk Power's Nine Mile Point reactor (1969), Scriba, N.Y.

Rochester Gas & Electric's Robert Emmett Ginna reactor (1969), Ontario, N.Y.

Consumers Power's Palisades reactor (1971), South Haven, Mich.

Virginia Electric Power's Surry reactors 1 (1972) and 2 (1973), Gravel Neck, Va.

Florida Power & Light's Turkey Point reactors 3 (1972) and 4 (1973), Florida City, Fla.

The disparity in reactor ages indicates that the crud accumulates at widely varying rates, depending on the design of the reactor, the skill of its operators, the efficiency of its cooling-water filters and other factors. Therefore, "middle age" by the 20th year is a less-than-perfect rule of thumb.

It looks as if Florida's Turkey Point and Virginia's Surry reactors skipped their youth altogether. They are special cases, however. So much crud accumulated on tubes in their steam generators that it caused serious dents.

Possible techniques for crud removal include remote-control scouring with brushes, high-velocity jets of water and high-frequency sound vibration to shake the layers of metal oxides loose. Graves, project manager at Dresden, is convinced that chemical cleansing will be the safest and most practical.

A year from now, the reactor's uranium fuel will be removed and 85,000 gallons of solvent will be added to the cooling water, he said. It will be pumped through five miles of piping.

The solvent—its ingredients are the trade secret of Dow Nuclear Services of Midland, Mich.—"must be potent enough to dissolve the crud but not potent enough to weaken the pipes," he said.

The dissolved crud will be funneled into the radioactive waste facility for treatment. The cooling water will be evaporated, leaving 1,000 pounds of radioactive "sludge." It then will be solidified and shipped to low-level radioactive waste-disposal grounds for burial.

If the experiment works, Graves said, Dresden reactors 2 and 3 will be cleansed in the same fashion, probably in the mid-1980s.

Wallace B. Behnke, executive vice president of Edison, said the cost of decontaminating Dresden 1 is covered in the plant's high depreciation rate allowing for all sorts of unforeseeable contingencies.

As for the $20-million-per-reactor estimate, Behnke said, "It may be too low or it may be too high." Whatever the case, decontamination will not appreciably affect nuclear power's edge over coal, he maintained. It will still be cheaper—1.4 cents per kilowatt hour vs. 1.7 cents.

The Energy Department's Pettit believes two neighboring utilities may be able to save money by sharing a radioactive waste facility. Or a utility may be able to hire a waste-handling contractor.

However, he cautioned, in shipping dissolved crud over the highways, utilities may run into a roadblock—state restrictions on the transportation of radioactive wastes.

UNWANTED "ORPHANS" OF ATOMIC AGE

(By Bruce Ingersoll)

Scattered across the desolate expanses of Nevada, Idaho and Washington are the "orphans" of the atomic age—nuclear-powered rockets from a scuttled space probe, experimental reactors left dormant, outmoded buildings, even atomic-bomb factories from the Manhattan Project.

They are lepers, really. To varying degrees, they are contaminated with radioactivity. Many are so dangerously "hot" they are untouchable.

"We're responsible for all these orphans," said Robert Ramsey, assistant director of nuclear programs for the Energy Department. "Nobody has any interest in them or any use for them. Sitting out there in the tumbleweed, they aren't jeopardizing anybody's health, but ultimately we are going to have to dismantle them."

Somehow, the government must find graves for all the dead reactors and derelict rockets in federal orphanages. And eventually the operators of hundreds of civilian reactors will have to accept the same responsibility. The total cost will amount to billions.

The government acknowledges it hasn't yet finished going over at least 300 radioactive relics and deciding how to dispose of them safely. For years, heaps of Rover rocket parts were left to the rattlesnakes on the Nevada Test Site. They are now sitting in railroad cars on a siding of the Jackass & Western R.R., destined soon for safe burial. At the Hanford Nuclear Reservation at Richland, Wash., laboratories are locked tight; huge reactors and fuel-reprocessing plants sit inert. Many more obsolete and contaminated facilities are in government custody at Oak Ridge, Tenn.; Los Alamos, N.M., and Idaho Falls, Ida. They afford not only a glance back at our atomic past, but also a glimpse of our future.

Within the next 20 to 30 years, the nuclear power industry will have as many as 65 worn and embrittled reactors on its hands. And, just as the government cannot abandon all the relics of its weapons and space programs, so the electric utilities won't be able to padlock their reactors and walk away.

In the course of their 30-to 40-year operating lives, reactors become highly radioactive. Impurities in their stainless steel innards are transformed into deadly radio-isotopes, some of which will keep on emitting radioactivity for thousands of years.

The government and the industry have some experience in "decommissioning" small reactors. But neither has ever attempted to deal with the long-lingering hazards of huge dead reactors. As they see it, there are three ways to decommission a reactor:

Mothballing. Remove the fuel and radioactive wastes; keep the reactor under 24-hour guard and monitor for radioactive leaks indefinitely.

Entombment. Remove fuel and radioactive wastes; encase the reactor innards in concrete; install electronic alarms to detect any intruders.

Dismantling. Remove fuel and radioactive wastes; cut up the reactor and other hardware; demolish the concrete walls and foundations; dismantle the reactor building, and ship every bit of contaminated scrap and rubble to a waste-disposal site.

Neither entombment nor dismantling is cheap and easy. Much of the work must be done by remote control because of the risk of radiation overdoses. The General Accounting Office, investigative arm of Congress, calls it a "multibillion-dollar problem."

The Energy Department's Ramsey agrees. "The ultimate solution is total dismantling and removal of all radioactive materials to a proper disposal area," he said.

So far, only one commercial reactor has been torn down and trucked away—the Elk River (Minn.) reactor near Minneapolis, built by the government and operated by the United Power Assn. A tea kettle next to the big reactors of today, it cost $6 million to build in the late 1950s and $6.2 million to dismantle in the early 1970s.

"We built prototype tools and tested them on a mockup at the Oak Ridge Lab," said Joseph F. Nemec, then assistant superintendent of the Elk River job.

The reactor was filled with water and then its internal steel was cut up with remote-control torches. Explosives were used to blast apart the 9-foot-thick walls of concrete. About 95 percent of the rubble was shipped to a Sheffield (Ill.) burial ground for low-level radioactive wastes.

William J. Manion and Thomas S. LaGuardia, consulting engineers from Danbury, Conn., have studied the costs of decommissioning big reactors for the Atomic Industrial Forum, an industry group. Their estimates, calculated in 1975 dollars, were astounding:

It would cost $2.3 million to mothball a reactor, not counting the additional annual expense of $167,000 for guarding it and monitoring for environmental contamination. Entombment would cost $7.4 million, plus $58,000 a year for intrusion alarms and monitoring or $167,000 for guards and monitoring. Complete dismantling would cost $27 million to $29 million, depending on the type of reactor.

A fourth option—favored by many utilities, according to LaGuardia—would be entombing the reactor for 100 years or so to let cobalt 60 and other fairly short-lived radioisotopes "decay" (lose their radioactivity), then dismantling it. Combined cost: $25 million. If every utility in the nation were to opt for this combination, the total cost for 65 reactors now licensed would exceed $1.6 billion.

"I don't know what that figure tells you," LaGuardia said. "It isn't really a real-world number. It doesn't take into account inflation or interest on the money."

Ramsey believes the expense of decommissioning never was anticipated by the utilities in their postwar haste to harness the "peaceful" atom. "They didn't look at those issues in those days," he asserted. "They were looking at nuclear energy as a developing program."

Unforeseen or not, the cost is "insignificant," even at $25 million per reactor, maintained LaGuardia. In 1975 dollars, it amounts to only 2.5 per cent of a typical billion-dollar reactor. The industry's critics are not so persuaded. Whatever the final tally, they say, it will be passed routinely on to the consumers in most states.

Yet to be answered are two questions: How should the bill for decommissioning be paid? when should it be paid?

"It's entirely possible that the children and grandchildren of today's electric rate-payers are going to have to pay for dismantling Commonwealth Edison's Zion reactors," said Richard E. Morgan, staff member of the Environmental Action Fund and author of "Nuclear Power: The Bargain We Cannot Afford."

Several public-interest groups have asked the Nuclear Regulatory Commission to require every utility to post bonds so as to ensure "proper isolation" of dangerous radioactive materials from retired reactors. And Rep. John Drinan (D-Mass.) has berated the commission for failing "to bite the bullet" on this financing issue.

To a certain extent, the government and industry have confronted the problem of decommissioning. Small "demonstration" reactors at Hallam, Neb.; Piqua, Ohio, and Rincon, Puerto Rico, were entombed in the late 1960s after outliving their usefulness. At least four more have been mothballed—Northern States Power's Pathfinder reactor at Sioux Falls, S.D.; Fermi reactor No. 1 outside Detroit; Philadelphia Electric's Peach Bottom 1, and a Parr (S.C.) reactor operated by a combine of utilities.

In trying to tend to its orphans, the government has dismantled several reactors that were tested as auxiliary power sources for spacecraft. It entombed an experimental reactor at the Argonne National Laboratory and dismantled others elsewhere.

"We're not spending billions of bucks but we are spending a few million to keep the hazards within bounds " Ramsey said. "We're now planning major programs to clean up these reactor remains."

Atomics International, a division of Rockwell International Corp., has been hired to dismantle by remote control a small reactor in the Santa Susana Mountains of Southern California. As happened at Elk River, the workers ran a dress-rehearsal on a mock-up before undertaking the tedious task.

Joe Nemec, the Elk River veteran, is working for United Nuclear Industries, Richland, Wash. His assignment: Plan the government's decommissioning of eight plutonium-production reactors at Hanford.

The problem, however, doesn't stop there. During President Dwight D. Eisenhower's Atoms for Peace program, nuclear reactors "suddenly came in vogue," Ramsey said. "Every major university and laboratory had to have one." Of 63 reactors started up on campuses throughout the country 54 are still operating. Dozens of other research reactors also were put into operation in the 1950s and '60s. All eventually will have to be "pacified," he said.

Moreover, even though the industry has stagnated in recent years, 300 more commercial reactors are still projected by the year 2000. Said Monte Canfield, GAO director of energy and minerals: "I think that every year that the (nuclear) genie gets out of the bottle we are in worse shape."

He shares the sense of urgency felt by Cornell University physicist Robert O. Pohl and Marvin Resnikoff, physicist at State University of New York at Buffalo. Independently, they have turned up evidence indicating that, contrary to the industry's thinking, radioactivity levels after 100 to 200 years of entombment still will be too high for dismantling without remote controls.

The nickel 59 won't decay for 1.5 million years, Resnikoff found. And two other radioisotopes, according to Pohl, will remain highly radioactive for thousands of years necessitating not only remote controls but also disposal in special repositories, not in low-level radioactive waste burial grounds.

NUCLEAR WASTE—TWO OPPOSING VIEWS

(By Bruce Ingersoll)

SHEFFIELD, ILL.—He jokes about someday transforming one of the nation's largest nuclear waste-burial grounds into an "atomic golf course."

She tells of "living in fear."

He is president of Nuclear Engineering Co., guiding visitors on a tour of his company's radioactive waste-disposal facility four miles southwest of this town of 1,000.

She is a farm wife, helping her husband bring in the corn crop.

James Neel, 50, charters a plane to fly up here from Louisville just for a fast-paced afternoon of business.

Mrs. Linda Flint, 41, drives a chugging tractor all day long.

As Neel stands on the brink of a blocklong, 30-foot-deep trench, watching a crane operator stow away drums of waste, he wonders why the local populace has such misgivings about his company's tightly regulated operation. "We want you to know that safety is our most important product," he declares.

As Mrs. Flint hauls load after load of sun-ripe corn out of the fields, she catches herself brooding about all the radio-active material being buried. "They don't know enough about this stuff to dump it in the ground," she says.

Neel, a former Atomic Energy Commission attorney and onetime director of Kentucky's nuclear program, appears supremely confident in himself and the talented technocrats he has recruited for the company he calls NECO.

He disarms you with his urbane Southern manner, his charm and his jokes. Pointing to a grassy mound of clay covering a filled-in trench, he says: "We're thinking about making this place a golf course. "It'll be the first atomic golf course in the world."

He impresses you with his conviction that NECO is performing a public service.

Mrs. Flint, helpmate of Irvin Flint, seems reluctant at first to confide her vacillating feelings of vague unease and keen anxiety. Then it comes out: "I'm living in fear. It's fear of what's to be. This nuclear waste is dangerous."

She looks to her husband and vows: "What's the use of living if you don't fight? We're going to fight to the end." She and her neighbors are determined to keep the company they call Nuclear from expanding its activities. Better yet, they hope to see Nuclear forced out of Illinois altogether. She wins you over with her pluck. You say goodby, touched by her dread of the future.

The Flints farm right up to Nuclear's boundaries. Linda Flint, nonetheless, has never seen what goes on there. She knows nothing of the company's precautions against radioactive spills, safeguards against environmental contamination. She only picks up tales of strange goings-on.

One rumor has it that a worker was drenched in radioactive liquid when a canister broke open. His fate, she said, has yet to be learned. Another has it that some workers died from an overdose of radiation.

Irv Flint, 43, puts no credence in such wild talk. He does believe, however, there is a connection between Nuclear's operation and the deaths of his cattle.

"I lost a cow in November, 1976, and a bull last March," he said. "Before she died, the cow had her tongue hanging out of the left side of her mouth; her left ear was hanging down; and she was blind in the left eye. . . . The vet said he'd never seen anything like it.

"The bull was diagnosed as having stomach cancer," he said. "I lost some other cows but they were too far gone for testing."

Then there was the time muddy Crappie Lake "turned bloody, rusty red," he said. And last spring there was a fish kill in Barbwire Lake. He is inclined to think drainage from Nuclear's chemical waste-disposal area was to blame.

His wife remains especially troubled about the cancerous appearance of a half-dead fish that a Nuclear Regulatory Commission inspector found in a creek flowing from Nuclear's disposal area. "It was a bullhead," she said. "It's tail was decayed away and it had white blotches on its skin."

Their hired hand, Buddy Carlson, 36, cannot understand why the government permits a nuclear graveyard in well-populated Bureau County. "They have all that desert out West with a lot less water and a lot fewer people. Why can't they bury it there?"

James Blackburn, manager of radioactive waste disposal from the Illinois Department of Public Health, thinks Jim Neel conducts a safe operation.

"Otherwise, I wouldn't allow it to continue," he said.

Federal officials have been inspecting NECO's site at least once a year and auditing its books ever since the first trench was dug in 1967.

The commission did cite NECO for three infractions in 1974 and five this year. The "items of noncompliance," he said, included failing to take daily air samples for radioactivity and allowing employes to start working before they completed a radiation-safety course. In one instance, the radiation level alongside a trench was found to be twice the safe limit.

The Sheffield site has yet to attain the notoriety of NECO disposal areas at Maxey Flats, Ky., and Beatty, Nev. Kentucky was in an uproar last year after inspectors discovered radioactive wastes "migrating" from trenches. Workers at Beatty were caught peddling radioactive plywood, steel tanks and surplus Navy compasses with radium dials that they had scavenged. NECO has a fourth site at Richland, Wash.

Of the four, Sheffield handles the biggest volume. Shipments of radioactive waste are trucked in from nuclear power plants, laboratories, pharmaceutical houses, hospitals and industries throughout the Midwest. If the waste is liquid, NECO workers convert it into a solid before burying it.

The State of Illinois owns the 20-acre disposal area and leases it to NECO. In return, the company has been paying the state a nickel fee for every cubic foot of waste buried. (This year, the fee was raised to a dime in order to accumulate a fund for "perpetual waste care.")

By the end of 1976, more than 2.4 million cubic feet had been disposed of—enough to fill 13 trenches. These trenches are now grave-like mounds of clay, designed to drain off rain or melt water. Beneath them are containers of contaminated tools, clothing and mops, boxes of animal carcasses from experiments, hospital syringes and needles, drums of radioactive chemicals, bins of sludge from nuclear power plants.

"A complete inventory is maintained on what's gone into each trench," Jim Neel assured. "Well over 90 per cent of the radioactive material will have 'decayed' (lost its radioactivity) within 100 years."

In the interim, he said, impermeable clay in the ground will prevent any radioactivity from seeping into the watertable.

With the 20 acres already two-thirds full, Neel is trying to win county approval to start slicing another 166 acres into trenches. "Those 186 acres should be able to accommodate the Middle Western United States for 30 years."

Linda Flint is having none of it. Neither is the Bureau County board.

Neel sees his firm, NECO, as vital to the nation's supply of energy: "Nuclear reactors have a waste-storage capacity of 72 hours to two weeks. If they don't move the stuff, they'll have to shut down."

She keeps thinking of Sadie Cauwels; her friend and neighbor. "Sadie just passed away this spring. She had cancer all through her."

FIND "5-BOMB" A-JUNK CACHE

(By Bruce Ingersoll)

SPRINGFIELD, ILL.—Nearly 34 pounds of plutonium and 70.8 pounds of enriched uranium—theoretically, enough to manufacture five atomic bombs—are buried in a northwestern Illinois graveyard for nuclear waste.

The highly radioactive materials are enclosed in 55-gallon drums or special casks and entombed in trenches at Nuclear Engineering Co.'s Sheffield (Ill.) nuclear waste-disposal facility, a search for Illinois Public Health Department records revealed.

Most of the plutonium was stowed in five trenches and covered with earth between late 1968 and early 1974, according to state records. Shipments of Uranium 235 were buried as recently as August.

Plutonium, one of the most deadly elements, remains radioactive for more than 24,000 years.

Princeton University physicist Theodore B. Taylor, onetime designer of nuclear weapons for the Atomic Energy Commission, said the Sheffield facility harbors enough plutonium for three homemade bombs and enough Uranium 235 for two bombs. However, Taylor agreed with state officials that the materials would have to be fairly well concentrated for weapons use.

"Plutonium, if dispersed in small concentrations in a lot of radioactive junk, would be very hard to retrieve," Taylor said Monday in a telephone interview.

James Neel, president of Louisville-based Nuclear Engineering, said each container of plutonium or Uranium 235 holds only a small amount. The containers, in turn, are scattered among hundreds of other radioactive waste bins, boxes and casks.

"The real question is whether that stuff can leak out," Taylor emphasized. "If it got spread around, it could cause a lot of environmental damage."

Neel said there is no chance of plutonium or any other radioactive waste escaping from the Sheffield trenches. The 20-acre burial ground consists of impermeable clay that prevents any seepage into the underlying water table.

James Keppler, regional director of the Nuclear Regulatory Commission, was surprised Monday to learn of the plutonium and Uranium 235 at Sheffield. The facility is licensed by both the state and the commission.

Federal officials have been auditing the company's books and inspecting its Sheffield operation since the first of 21 trenches was excavated in 1967. Keppler said it was his understanding that the NRC license permitted the burial of "special nuclear materials"—plutonium and Uranium 235—so long as the concentrations were low.

Officials in Public Health's division of nuclear safety here, however, indicated that the NRC changed the license last January and set such a stringent limit on plutonium burial.

James Blackburn, state manager of radioactive waste disposal, said he does not know exactly where the plutonium and Uranium 235 came from.

Taylor said he believes the materials may be residue from the cleansing of uranium-enrichment plants and nuclear fuel-fabrication facilities. Some of the materials may be equipment too contaminated to use any longer.

* * * * *

Neel was reticent about explaining the origins of the plutonium and Uranium 235, but he said that some contaminated pieces of equipment are buried at Sheffield.

The facility, hidden in the hills four miles southwest of Sheffield, is one of four Nuclear Engineering sites. The others are at Maxey Flats, Ky.; Beatty, Nev. and Richland, Wash.

Of the four, Sheffield handles the biggest volume—475,963 cubic feet of waste last year and a projected 600,000 cubic feet this year. More than 2.4 million cubic feet have been buried in the trenches, some of which are as long as a football field, 50 feet wide and 30 feet deep.

Taylor said excavating containers of plutonium and Uranium 235 would be a "dirty and messy job." Blackburn said "nothing's impossible but it would take a large team of men working under cover of dark to dig the stuff up."

Such an attempt would be foolhardy, he added, unless the thieves obtained beforehand state of Nuclear Engineering records that would pinpoint where the plutonium or Uranium 235 is buried.

NUCLEAR WASTE FIRM PERMITLESS 9 YEARS

(By Bruce Ingersoll)

For the last nine years, Nuclear Engineering Co. has been burying tons of nuclear waste near Sheffield, Ill., with an expired waste-disposal license.

The company applied for a license renewal in 1968, but the Atomic Energy Commission and its successor, the Nuclear Regulatory Commission, never got around to its application.

Jan Strasma, an NRC spokesman, was at a loss Wednesday to explain why federal officials have been sitting on the application since it expired Aug. 31, 1968.

"I don't have a ready-made excuse," he said. "In effect, they (Nuclear Engineering) have been floating in regulatory limbo for nine years."

In investigating the company's radioactive waste-burial ground four miles southwest of Sheffield, The Sun-Times also discovered that the federal government has been lax in other respects:

Federal officials did not bother to inspect Nuclear Engineering's operation for a period of 2 years 11 months in the early 1970s, the very period when burial of plutonium and uranium-235 wastes peaked at Sheffield.

Not until 1975 did federal inspections begin visiting the burial grounds twice a year to measure radiation levels, check for any environmental contamination and audit the company's books.

It has been business as usual for Louisville-based Nuclear Engineering, in limbo or not. On the legal strength of its "timely application," the company has been handling more and more shipments of nuclear wastes from nuclear power plants, laboratories, pharmaceutical houses and hospitals throughout the Midwest.

The accumulation of waste in earth-covered trenches has grown from 185,000 cubic feet in 1968 to nearly 3 million today, making Sheffield the nation's third-largest graveyard for low-level radioactive waste.

Nearly 34 pounds of deadly plutonium, which remains radioactive for more than 24,000 years, and 70.8 pounds of uranium-235 are buried there, according to state records.

These "special nuclear materials" can be used to make atomic bombs, but nuclear safety officials in the Illinois Department of Public Health say the concentrations of plutonium and Uranium 235 are too small and too widely dispersed in the Sheffield trenches to be dug up for weapons use.

In 1974, the AEC was considering what would have amounted to a ban on plutonium burial at Sheffield and similar sites. James Neel, president of Nuclear Engineering, said his company did not wait for the government to act. Instead, it voluntarily stopped burying plutonium at Sheffield in June, 1975.

Neel, a former AEC attorney, declined to speculate why first the AEC and then the NRC sat on his company's renewal application. Timely as it once was, the application has become so out of date that it is out of step with environmental policies adopted since 1968.

The NRC required the company in early 1976 to study the environmental impact of its Sheffield operation and its plans for expansion. And once again the company has filed an application, this time for an entirely new license.

Michael Bell, chief of the NRC's low-level waste branch, said one reason for federal inaction was indecision in Washington on whether to impose a prohibitive limit on plutonium burial. (In Sheffield's case, the decision didn't come until last January.)

"Changes in licensing policy take longer than anybody anticipates," Bell said. "There was no great urgency in renewing the (Sheffield) license because the site has been operated very well."

He and Strasma pointed out that the State of Illinois is Nuclear Engineering's landlord. It leases the 20-acre site to the company for a nominal fee. Public health officials periodically inspect the site.

Strasma said the NRC did not step up field inspections until after Nuclear Engineering workers had been caught scavenging radioactive plywood and Navy compasses at another burial ground at Beatty, Nev., in 1976.

ILLINOIS: HEIR TO A-WASTE FOREVER

(By Bruce Ingersoll)

As a result of a little noticed state law adopted in 1963, the citizens of Illinois are heirs to a radioactive junkyard that the state will have to baby-sit for thousands of years.

Ever since 1967, this legacy of nuclear waste has been accumulating on state land leased to Nuclear Engineering Co., a subsidiary of the huge Los Angeles conglomerate Teledyne Inc.

Nearly 3 million cubic feet of radioactive waste already has been buried in deep trenches as long as football fields in the hills southwest of Sheffield, Ill.

Much of the waste was trucked in from other states, including Arkansas and Pennsylvania. Some of it is plutonium, a potentially deadly waste that remains radioactive for more than 24,000 years and requires what the Illinois Department of Public Health terms "perpetual care."

The 1963 law empowered the department to acquire a site for nuclear-waste disposal, lease it to a private company and collect burial fees. From 1967 to 1976, the department collected a nickel for every cubic foot of waste buried by Nuclear Engineering of Louisville. The total revenue amounted to $114,000, according to state records. But not a penny was set aside for taking care of this nuclear graveyard, even though the Radioactive Waste Act of 1963 gave the state "perpetual responsibility" for its safekeeping.

"The people possess these wastes just the way they do the Capitol building," said Leroy Stratton, associate director of environmental health.

The legislatures of Kentucky, South Carolina, Nevada and Washington all set up perpetual-care funds for similar privately operated waste sites, but the Illinois General Assembly failed to do so in 1963.

As a result, all the burial fees from Nuclear Engineering's operation went into the state's general revenue fund, never to be saved for safeguarding wastes.

"There was a general reluctance on the part of the General Assembly to earmark funds," said Illinois Appellate Court Justice Thomas A. McGloon, former state senator and onetime member of the Joint Legislative Commission on Atomic Energy. "When you earmark funds, you have millions of dollars sitting around that are not being used."

Stratton also recalled that the Legislature was "very hesitant" about dedicating funds for special purposes, even taking care of potentially dangerous wastes. The flaw in the 1963 law was not corrected until last fall when the Legislature set up a special fund for Sheffield's care when Nuclear Engineering someday moves on to another state.

Last January, Public Health Department officials increased the burial fee to 10 cents from 5 cents per cubic foot. Even so, the fee is considerably less than what Nuclear Engineering is paying Nevada and what its sole rival, Chem-Nuclear Systems Inc., is paying South Carolina.

"We realize that 10 cents was not sufficient but it was a start," said James Blackburn, manager of radiocative-waste disposal for the Public Health Department. "We are already negotiating (with Nuclear Engineering) for another substantial fee increase to cover the cost of inflation and to bring the perpetual-care fund more in line with the eventual costs of monitoring the site."

Interest accrued from the fund will be used to inspect the 20-acre burial site for environmental contamination and possible threats to public health and safety.

Last year, 31 per cent of the wastes buried at Sheffield came from out-of-state hospitals, laboratories, pharmaceutical houses and nuclear power plants, Blackburn said. In the first half of 1977, more than 50 per cent was imported from 20 states.

The increase in out-of-state wastes can be attributed in part to a 10-cent-a pound tax that the Kentucky Legislature imposed on waste buried at Nuclear Engineering's Maxey Flats (Ky.) burial ground. This tax made burial so costly that many shipments were diverted to Sheffield and Chem-Nuclear's Barnwell(S.C.) site.

Sheffield, with 3 million cubic feet of waste, is the third-largest graveyard for low-level radioactive waste in the country, trailing Maxey Flats (4.8 million) and Barnwell (an estimated 4 million).

The fund for Sheffield, however, amounts to only $56,000 today, compared with $500,000 in South Carolina's fund for Barnwell and $250,000 in Kentucky's fund for Maxey Flats.

In 1967, when Illinois was charging Nuclear Engineering only 5 cents per cubic foot, the state authorized the company to charge its customers 75 cents per cubic foot. In 1976, when the burial fee was still 5 cents, the company could charge $1.36 per cubic foot and assess surcharges for handling extra-heavy or highly radioactive containers of waste.

A year ago the Public Health Department stopped regulating the company's prices, Blackburn said. The burial charge since has risen to $2 per cubic foot. Over the years, the company has steadfastly refused to disclose its profits, he added.

Scott Urges State to Cancel A-Waste Pact With GE

(By Bruce Ingersoll)

Atty. Gen. William J. Scott urged the Illinois Department of Public Health Tuesday to cancel a contract that requires the state to take "perpetual care" of General Electric's nuclear waste-storage facility at Morris, 50 miles southwest of Chicago.

The contract was signed by the department and GE in 1967 when the company was planning to reprocess used nuclear fuel from nuclear power plants. The state was to have received a $250 royalty for every metric ton of "spent fuel" recycled by GE.

The money was to have gone into a state fund for cleaning up radioactive parts of the reprocessing plant and safeguarding it after it had outlived its usefulness.

"The plant has simply never worked and the state has never received a penny under this contract," Scott said. "GE has itself a $64-million white elephant."

The company, in trying to recoup part of its investment, turned the plant into the nation's largest commercial storage depot for spent fuel. It has a Nuclear Regulatory Commission permit to store 750 metric tons and it is seeking permission to store up to 1,850 tons.

At last count, 300 tons, including shipments from Wisconsin, California and Connecticut, were stored underwater at Morris.

"The state is set to be a patsy for taking care of this high-level nuclear waste," Scott said.

The federal government should take responsibility for the spent fuel and put it in a remote repository in a sparsely populated area of the West, he said.

Under the terms of the contract, Scott said, either the state or GE could terminate if reprocessing did not begin by Dec. 31, 1972.

A state Public Health Department official, who declined to be named, had a different interpretation of the state's responsibility for perpetual care.

"It wasn't a case where we were going to take care of high-level waste (spent fuel)," the official said. "We were going to take care of the reprocessing plant after GE had decontaminated it.

"We saw no need to formally terminate the contract because the plant is a defunct facility."

The contract had provided for a $750,000 fund—$500,000 for decontaminating the plant and $250,000 for safeguarding it.

"The plant itself does not require decontamination," the health official added. "No radioactive spent fuel was ever used in the trial runs."

It is unclear, however, whether the state or GE will eventually be responsible for the storage pools at Morris, he acknowledged.

Scott Sues To Halt Burial of A-Waste at Sheffield

(By Bruce Ingersoll)

Atty. Gen. William J. Scott filed suit Thursday against the Nuclear Regulatory Commission and a major waste-disposal company, seeking an immediate halt to the burial of radioactive wastes near Sheffield, Ill.

Scott accused the NRC of allowing the Louisville-based Nuclear Engineering Co. to operate the Sheffield burial ground with an expired license.

He filed the lawsuit here in U.S. District Court after The Sun-Times revealed that the NRC and its predecessor, the Atomic Energy Commission, have neglected for nine years to act on the company's application for a license renewal.

Such bureaucratic inaction is "unlawful," the suit contended.

"By sitting on the application for nine years, they have prevented any public participation in the license-renewal process," Scott asserted in an interview.

The suit also charged the company and the NRC with deliberately evading a federal requirement for an environmental-impact study of the hazards of burying radioactive-waste containers in trenches. This "chicanery," Scott said, constitutes a violation of the National Environmental Policy Act of 1970.

James Neel, president of Nuclear Engineering, said the Sheffield operation performs a "national service." Nuclear power plants, hospitals, laboratories and industries rely on it for the disposal of myriad "low-level" radioactive wastes, including contaminated lab garments, medical radioisotopes and sludge filtered from the cooling water of nuclear reactors.

If the court were to close the burial ground, the repercussions would be felt in at least 10 states besides Illinois, Neel warned. He identified them as Pennsylvania, Ohio, Michigan, Indiana, Wisconsin, Minnesota, Iowa, Missouri, Nebraska and Arkansas.

The license expired Aug. 31, 1968, approximately one year after truckloads of nuclear waste began rolling into the 20-acre disposal area 4 miles southwest of Sheffield and 100 miles west of the Chicago area.

The accumulation of waste has grown from 185,000 cubic feet in 1968 to nearly 3 million today, making Sheffield the nation's third largest graveyard for low-level radioactive waste.

In examining state records, The Sun-Times discovered that 33.9 pounds of plutonium and 7.8 pounds of uranium-235 are buried there. These "special nuclear materials" are in such low concentrations, however, that experts do not believe they could ever be retrieved for the clandestine manufacture of atomic bombs.

The NRC and Nuclear Engineering, a subsidiary of the Teledyne Inc. conglomerate, contend that the original license was automatically extended when the company made a "timely application" for renewal. Scott refused to accept this argument, however.

"While the NRC sits on the application, radioactive wastes from all over the country are being brought day after day to a dumping site in Illinois located less than 100 miles from 8 million men, women and children," he said.

Jan Strasma, an NRC spokesman, said last week that he had no "ready-made excuse" for the government's failure to act on renewing the license. "In effect, they (Nuclear Engineering) have been floating in regulatory limbo for nine years," Strasma said.

In 1975, Strasma said, the NRC directed the company to submit an environmental report on its operation and update its license application. The company wants to expand its disposal area from 20 acres to 188 adjoining acres. The NRC has begun preparing an environmental-impact statement on the basis of the company's report.

Neel emphasized that state and NRC inspectors have detected no signs of radioactive leaks from the 21 trenches that already have been filled and capped with clay.

"If I could meet with Mr. Scott and explain the role of this site in the nuclear-energy industry, he'd probably change his position," he said. "If the site were shut down, it would have a drastic effect on the generation of electricity. Nuclear reactors have a waste-storage capacity of 72 hours to 2 weeks. If they don't move the stuff, they'll have to shut down."

Freeway Fallout? Odds Assessed

(By Bruce Ingersoll)

They are a breed apart from your typical over-the-road truck-driving man. The cargoes they carry are packaged with such care you would think they were hauling a Mona Lisa or a King Tut. Yet their loads are sometimes so heavy they have to obtain overweight permits before they can roll.

The enormous rigs they drive all bear placards saying one thing: Radioactive.

They haul everything from faintly contaminated clothing to deadly plutonium, but the few drivers who would talk seemed almost blithe about their jobs or given to gallows humor. Said one off-duty driver in a Sheffield (Ill.) bar, "I'm still living, ain't I."

Any common carrier can haul radioactive materials but only a dozen U.S. trucking companies specialize in bulk transport of nuclear wastes. Even fewer carry "special nuclear materials"—plutonium and enriched uranium, which are the makings for atomic bombs. So far, the companies have rolled up an admirable safety record.

"We don't try to make health physicists out of our drivers but we do give them basic training about what they should do in case of an accident or radioactive spill," said Charles Mayer, a vice president of Tri-State Motor Transit of Joplin, Mo., the nation's largest nuclear carrier.

"Oh, we've had accidents, other carriers have had accidents, but in 30 years there has never been a single serious injury or death from overexposure to radiation.

"We stay on the interstate highways," Mayer said. "They're the safest by far."

I–80, stretching from San Francisco Bay to the Hudson River, is a true transcontinental. It is, by all accounts, the route most heavily used by the nuclear truckers, primarily because it is rapidly becoming the nation's nuclear alley.

Within 25 miles of I–80, 10 nuclear power reactors are generating electricity and 14 more are under construction or planned. (Only the Sacramento Municipal Power District's Rancho Seco reactor is not shown on the accompanying map.) In addition, the government has three small research reactors at Argonne National Laboratory.

Only a few miles to the south of I–80 are the destinations for much of the nuclear waste moving in interstate commerce—General Electric's Morris (Ill.) storage facility and Nuclear Engineering's Sheffield burial ground.

From California and Connecticut come huge truckloads of "high-level" waste, so named because it is so highly radioactive. This waste is actually used fuel shipped from reactors to Morris for safekeeping.

From a 20-state region encompassing the Midwest and parts of the East and West come flatbed trucks bearing all sorts of "high-level" waste for entombment at Sheffield. This is the radioactive junk that no power company, no hospital, no pharmaceutical firm would send to the town dump.

I–80 has only one rival as a nuclear corridor—I–95. There are 14 reactors in operation, another 12 in the offing within 25 miles of the Maine-to-Florida route.

On portions of interstates and numerous other highways, uranium is being hauled from mills in the West to conversion plants, thence to government-owned uranium-enrichment plants in Kentucky, Tennessee and Ohio and finally to fuel-fabrication plants operated by Westinghouse, General Electric and other reactor manufacturers. Ultimately, the fresh fuel is trucked to the nation's 65 licensed reactors. And, of course, wastes from each link in this industrial chain are transported to disposal areas.

"We're probably the most nuclear state in the nation," said Illinois State Police Cpl. Harold Diveley. He is the hazardous materials co-ordinator for the Department of Law Enforcement.

His best estimate is that the volume of radioactive shipments has been growing 10 per cent a year in Illinois. Ninety-five per cent of the shipments are radioactive pharmaceuticals used in medical diagnosis and cancer treatment. Many are small packages picked up or delivered at O'Hare Airport, he said.

As for the remaining 5 per cent, he sees no cause for extreme concern. "I'm not hung up on radioactive waste," he said. "The companies' safety record is darned hard to beat."

Many citizens and some local governments are not so persuaded. Mrs. Marilyn Shineflug of the DeKalb County League of Women Voters frets about radioactive—placarded trucks rumbling through the city of DeKalb. She can envision a catastrophic train-truck collision in the heart of DeKalb's business district.

She inquired at the city hall about the chances of banning such shipments, but the city attorney rendered the opinion that Washington has preempted this regulatory realm. New York City, however, didn't see it that way. It outlawed nuclear waste shipments through its boroughs in January, 1976. In response to a bid to lift the ban, a city health official warned Friday that a spill of highly radioactive wastes could cause 10,000 immediate deaths and more than a million latent cancers.

Catherine Quigg, the leader of a Palatine-gased group known as PEP (Pollution & Environmental Problems), is convinced that a serious accident could occur on I–80 and any other Chicago area interstate highway. She draws her conviction from two close calls:

On Sept. 27, a tractor-trailer rig overturned on a southeastern Colorado highway, spilling at least 15,000 pounds of uranium oxide over a 5,000-square-foot area.

The powdery material and contaminated soil were cleaned up by a crew wearing protective clothing and respirators. The Nuclear Regulatory Commission said the low-level radioactive material posed no health hazard, but Mrs. Quigg keeps wondering "What if it happened in Denver?"

On a foggy December morning in 1973, a truck carrying highly radioactive cobalt was involved in a chain-reaction pileup with five other trucks and two cars on icy I–80 near Stroudsburg, Pa. One car burst into flames not far from a tank truck loaded with flammable lacquer. Fortunately, she said, the fire did not spread and the two cobalt casks did not rupture.

Cpl. Diveley is neither an apologist nor a self-appointed spokesman for Tri-State and the other nuclear truckers. After learning all he could about hazardous materials, he has concluded there is no justification for fears about fallout on the freeway.

Truckers, he said, voluntarily notify him whenever crossing the state line with a load of used ("spent") fuel or special nuclear materials. The drivers, blithe as some may seem, abide by the laws.

Spent fuel travels in stainless-steel casks weighing 20 tons or more, he said. Their insides are lined with lead to contain the fuel's intense radioactivity. Their prototypes were tested by fire (1,475 degrees for 30 minutes), dropped from 30 feet up, smashed against a 6-inch steel spike and immersed in water for 24 hours. Bigger casks have been put to similar tests, even smashed against a concrete wall at 81 m.p.h. None has been punctured, Diveley said. None has spewed radioactivity.

"Those spent-fuel packages are tough packages, real tough," he said. "I don't regard the transportation of nuclear wastes as nearly as hazardous as flammables and corrosives."

Prof. Robert Blanks, a Michigan State University chemical engineer, can conceive of an accident that could result in a cask rupture—a collision between a spent-fuel truck and a tanker carrying propane, benzene, heptane or several other frequently transported flammables.

If it occurred in a tunnel or underpass, these flammables could reach temperatures ranging from 3,820 to 4,275 degrees, far hotter than the melting point of lead or steel, he said. Blanks readily concedes the odds of such a catastrophe are small, but "they are not zero."

On Jan. 1, 1971, a gasoline truck crashed in an underpass on I–75 near Flint, Mich., and burst into flames, he said. The heat was so intense it melted parts of the cab and engine. What's more, the overhead steel girders began to sag in the fire.

Said Cpl. Diveley: "You never can answer all the 'what if' questions."

O'Hare the Hub for Radioactive Cargo

(By Bruce Ingersoll)

Chicago has become the nation's shipping point for radioactive cargo that New York City banned from its streets as a hazard to public safety.

The cargo—always shipped by armored truck, always escorted by at least one carload of heavily armed guards—is weapons-grade uranium. It is so highly enriched that it would be ideal for any terrorist group bent on making atomic bombs or extorting a ransom.

The uranium once was trucked to New York's Kennedy International Airport for shipment abroad on commercial cargo flights. It now is hauled, instead, to Chicago's O'Hare Airport via the Dan Ryan and Kennedy expressways or the Tri-State Tollway.

Large quantities of uranium began passing through O'Hare in August, 1975, only a few weeks after Leonard R. Solon, a New York health official, took a stand against armored trucks using New York routes to reach Kennedy Airport.

"Highly enriched uranium, in a clean form, is not an enormous health hazard, but it is an important ingredient for making nuclear weapons," said Solon, director of radiation control for the New York Health Department.

Explaining why his department imposed a virtual ban in January, 1976, he said, "We were concerned about accidents, sabotage and terrorist attacks. We did not want to increase the number of targets of opportunity for terrorists and crazies in our city."

During a weeklong investigation, The Sun-Times discovered that:

O'Hare has supplanted Kennedy as the No. 1 funnel for the bulk of the highly enriched uranium being exported to West Germany, France, Italy and Canada for use in nuclear research reactors. Much of the uranium flown to West Germany was converted to reactor fuel and shipped on to The Netherlands, Sweden, Denmark, Austria, France, Japan and Canada for research purposes, according to Nuclear Regulatory Commission records.

O'Hare also funnels French-owned uranium into this country for additional enrichment.

Twenty-two of 24 uranium shipments exported from the United States or imported since mid-1975 have gone through O'Hare, NRC records show. One shipment went out of Washington's Dulles International Airport and another out of the Columbus (Ohio) airport.

Altogether, the uranium airlift at O'Hare has amounted to 1,097 kilograms (4,613 pounds, or more than two tons). The Uranium-235 content of the shipments ranged from 49 per cent to 93 per cent. Anything greater than 20 per cent is regarded as highly enriched. (In contrast, fuel used in nuclear-power reactors is enriched to only 3 per cent.)

This much uranium would be enough for a nuclear arsenal of 50 to 100 homemade bombs, according to Theodore Taylor, a Princeton University physicist and onetime designer of nuclear weaponry for the Atomic Energy Commission. "It is much easier to make bombs with U-235 than plutonium, particularly the amateur type," Taylor said.

Tempting as they might be to saboteurs and terrorists, these shipments through Chicago bear safeguarding for yet another reason. The prevailing price for highly enriched uranium is $15,000 a kilogram. The total value of the O'Hare shipments to date exceeds $20 million, according to one NRC estimate.

Chicago officials said they had no inkling that such valuable and potentially dangerous cargo was being picked up and delivered at O'Hare.

"Remember, we have other agencies taking care of things like that," said Aviation Comr. J. P. (Pat) Dunne. "We, as the airport operator, do not go into the cargo area and open up shipments. We have no educated people to do that."

Said Dr. Murray C. Brown, commissioner of health: "I don't have a radiological health man on my staff. I just don't know if it's a real hazard. Enriched uranium isn't all that hot (radioactive). . . . Why don't you talk to H. W. Poston. He's the commissioner of environmental control."

H. Wallace Poston said: "I don't know what I can tell you. I'm going to look into it."

Most of the shipments originated at Goodyear Atomic Corp.'s uranium-enrichment plant at Piketon, Ohio, south of Columbus. Some came from the government's enrichment facility at Oak Ridge, Tenn. All the French imports were destined for Goodyear Atomic. Each shipment was licensed by the NRC and inspected by NRC security and radiation-safety specialists at O'Hare.

"We used to go to J.F.K. (Kennedy Airport) with all these shipments," said Charles Mayer, a vice president of Tri-State Motor Transit, of Joplin, Mo., the nation's largest nuclear-trucking firm. "Then they banned the transportation of radioactive materials (except for radiopharmaceuticals) and we got shut out of New York."

Ralph G. Page, deputy director of safeguards for the NRC, surmised that, with Kennedy out of the picture, O'Hare became the most "cost-effective" way to go, probably because of the frequency of its overseas flights.

Solon, the New York health official, is a bit apologetic about the rerouting of enriched uranium. "I was doing my job," he said. "I had no intention of diverting these kinds of things to our good neighbors in Illinois."

There is growing debate over the risks of trucking so-called special nuclear materials—Uranium-235 and plutonium—around the country, particularly into densely populated areas.

Taylor, the Princeton physicist and the first scientist to speak up about the perils of nuclear theft and blackmail, said the shipments are "certainly vulnerable to terrorist attack." He acknowledged that safeguards have been bolstered in recent years but said, "I would still call them inadequate to stop a highly professional, strongly motivated effort to hijack one of these shipments."

Page said he is convinced the armored truckloads are impregnable. Under NRC rules, each truck must be accompanied by one escort vehicle and protected by five guards during the day and two escort vehicles and seven guards at night. The guards carry sidearms, shotguns and, in some instances, semiautomatic weapons, he said.

Between Piketon and O'Hare, the guards are required to make radio-telephone contact with the Tri-State dispatcher's office once every two hours. "We do stipulate that they should stay on main thoroughfares," Page said. "They must preplan the route, and they must avoid any areas of natural disaster—such as floods or hurricanes—and they must avoid any riot areas."

Said Tri-State's Mayer: "We stay on the interstates; we do vary our route from trip to trip. That way, nobody can determine any pattern. It makes it harder for anybody to ambush a truck."

Upon entering the Chicago area, the trucks take I–294 (Tri-State Tollway) through the western suburbs or I–94 (Dan Ryan) and the Kennedy Expressway through the city to O'Hare, Mayer said. The NRC notifies the Federal Bureau of Investigation, U.S. Customs Service, Illinois Public Health Department, airport officials and the Chicago police detachment at O'Hare whenever a shipment is due.

Physicist Taylor said all these precautions still are insufficient. "My main concern isn't so much with the number of guards as with the transport vehicle itself," he said. "I've been pressing for a truck that would be so heavy and so massive that it would be impossible to get into.

"The question is: What would happen if a couple of hand grenades were thrown under the truck, or even high explosives?"

If ambushed, the guards would be shielded by armor plate and bulletproof glass, Page said. They could fire on their attackers from the truck's gunports. "I imagine a charge of dynamite would disable the vehicle, but I don't think it would kill the men inside," he said.

"In 30 years of transportation, there has never been an attack on a transport vehicle or a hijacking attempt."

Enriched uranium travels in steel cylinders that are cushioned in plastic foam-lined drums. Taylor contends that the containers themselves should be so enormously heavy that, even if the guards were wiped out and the truck disabled, they could not be hijacked without a heavy-duty crane.

Haunting this debate over the security of nuclear shipments are all the bombings and jet hijackings of recent years, most notably the bombing of New York's La Guardia Airport that killed 11 and injured 75 on Dec. 29, 1975. This wave of violence pushes one question to the fore: What would happen if O'Hare were the scene of a hijacking attempt?

A typical shipment of enriched uranium reaches O'Hare in the late afternoon and is unloaded in the cargo area of either Air France or Lufthansa German Airlines. Four Pinkerton men stand guard until the shipment is put aboard a cargo plane and the flight takes off, usually early the next day. It is during this time that the shipment is most vulnerable to theft.

NRC inspectors detected two security infractions last Feb. 8 when the largest shipment ever to go through O'Hare—807 kilograms (about 1,775 pounds)—was sitting on the ground, awaiting a Lufthansa flight to Frankfurt.

At the time, a NRC official admitted a well-armed gang could have captured at least part of the shipment. This raises yet another question: What are the odds of bystanders being killed or hurt in a gunfight between guards and terrorists or in a police chase through O'Hare, the world's busiest airport?

RISKY CARGO AT O'HARE

It is the stuff that dreams are made of—the dreams sometimes called nightmares.

It is the stuff that bombs are made of—nuclear bombs. It is weapons-grade uranium.

And O'Hare Airport, smack on the Northwest Side of Chicago, is the nation's main shipping point for this stuff, as reporter Bruce Ingersoll reveals in today's Sun-Times.

The shipments get to O'Hare in armored trucks under heavy guard—amid traffic on the Dan Ryan and Kennedy expressways and the Tri-State Tollway. And many careful critics fear the possibility of terrorist diversion of the material on such road trips or at airport transfers and layovers.

Ingersoll uncovered a planeload of facts about weapons-grade uranium cargo here and he raised some serious questions:

The amount shipped through O'Hare so far —more than two tons—would be enough to make a terrorist arsenal of 50 to 100 homemade A-bombs, according to one expert who also questions the sturdiness of the highway transport vehicles. Don't those factors make O'Hare shipments a needless risk?

New York City officials aren't taking such a chance. Fearing "accidents, sabotage and terrorist attacks," they have virtually banned such shipments there. Why hasn't Chicago demanded similar precautions?

Because officials here are oblivious? Asked about the shipments, the city aviation commissioner tossed the ball to the health commissioner, who threw it to the environmental control commissioner, who said, "I'm going to look into it." He should, indeed.

So should a congressional subcommittee visiting Illinois early next month to investigate some of Ingersoll's other recent disclosures about nuclear issues here.

A House Government Operations subcommittee headed by Rep. Leo J. Ryan (D-Calif.) is to hold hearings on nuclear storage problems Dec. 8 and 9 downstate and in Chicago. In light of Ingersoll's new reports, the panel should add shipments to its agenda.

Why, for example, couldn't these cargoes be sent from Chanute Air Force Base at downstate Rantoul (if they must go through Illinois at all)?

City and state officials should join Ryan's panel in demanding answers—and action.

JANE'S EDITOR SAYS B–1 DECISION MAY DOOM THE WEST

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, for the last 8 years the House of Representatives has been joined by the Senate in funding the development of a manned penetrating bomber, the B–1. This aircraft was designed to modernize and maintain the viability of the third leg of our triad of strategic defense to insure that our adversaries would never chance a global war. Two days ago, we in the House voted to continue the development of the B–1. An article in today's New York Times quotes the world aviation expert, John W. R. Taylor, editor of "Jane's All the World's Aircraft," on the consequences of the decision of the other body to stop development of the B–1. In order that these consequences can be clearly understood, I submit the article for reprinting in the CONGRESSIONAL RECORD:

JANE'S EDITOR SAYS B–1 DECISION MAY DOOM THE WEST

LONDON, December 7.—President Carter's decision to scrap the B–1 strategic bomber may help bring about a Western defeat if a general nuclear war breaks out, according to the editor of "Jane's All the World's Aircraft" in a preface to the 1977–78 edition.

The editor, John W. R. Taylor, writes in the authoritative annual that rejection of the bomber, which Mr. Carter considered too costly, may endanger the military balance that has prevented war between the two major powers for a generation. The new 900-page edition, is being published tomorrow by Jane's Yearbooks of London.

The Soviet leaders "must be surprised beyond belief that the U.S. President has disposed of the B–1 bomber without asking any Soviet concession in return," Mr. Taylor wrote. "If our planet is subjected one day to the unimaginable horrors of a third world war, 1977 might be recorded as the year in which the seeds of defeat for the Western powers were sown."

President Carter decided earlier this year to cancel the B–1 program, after four test planes had been built. He said that the

United States armed forces should rely on the older B-52 bomber and the new cruise missile. The Senate then voted to cut off funds for new B-1's, but the House voted yesterday to appropriate money for two more test planes. The Senate must now vote again on the issue.

CITES MISSILES' LIMITED ABILITY

Mr. Taylor said that cruise missiles, which travel slower than the speed of sound, were incapable of jamming enemy defense radar and were intended primarily for use against undefended targets.

Only one military leader in history, Adolf Hitler, has put his confidence in such a weapon, wrote Mr. Taylor, who is a world aviation authority. And that device, the V-1 missile that was known as the "buzz bomb," caused Britain little difficulty in World War II, he said. Mr. Taylor suggested that Mr. Carter's unilateral action probably was the reason the Soviet Union did not stage its usual display of air power at celebrations in October marking the 60th anniversary of the Russian revolution.

Mr. Taylor said that perhaps only West Europeans, living within range of two powerful Soviet aircraft, the Tupelev bomber, known in the West as the Backfire, and the Sukhol Su-19 attack plane, felt strongly apprehensive when their own aircraft were ranged alongside the Soviet arsenal. That force includes about 1,400 intercontinental ballistic missiles, 600 intermediate- and medium-range missiles, 950 submarine-launched missiles and 200 older long-range bombers, "each capable of annihilating a city in a second of time," he wrote.

DEFENDS LIMITED B-1 PRODUCTION

Mr. Taylor said the United States did not need to base its B-1 decision on a previously estimated full fleet of 244, with an initial cost of $28 billion. "Every 100 B-1's would have compelled the Soviet Union to expend huge sums of money and immense effort on developing, producing and maintaining defenses against air attack," he wrote.

The editor warned that the United States also was delaying replacement of its interceptors and other aircraft, while the Soviet Union had given its squadrons a 500 percent increase in both radius of action and weapon load within a decade. "At the same time," he said, "the amount of advance warning of an impending attack that NATO units can expect, even on the basis of highly efficient monitoring, has diminished from an estimated 30 days to four or five days."

ELEMENTS OF NATIONAL GUARD READINESS

(Mr. SIKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SIKES. Mr. Speaker, when the Volunteer Force was first conceived, the Department of Defense and the Congress agreed that incentives for enlistment and retention of people in the active services were essential if manpower requirements were to be met. The National Guard Association of the United States and Guard and Reserve leaders pointed out at the time that these incentives were equally essential for Guard and Reserve units. This point has been made many times since. Bonuses and educational assistance have been provided only for active service personnel.

Although the Guard and Reserve are critically short of personnel, DOD spokesmen never miss an opportunity to proclaim the success of the Volunteer Force.

Since the fiscal year 1978 Defense Budget includes $183 million for educational assistance and bonuses for the active forces, it is obvious that both DOD and the Congress are convinced that these incentives work.

No one thinks that the Volunteer Force could succeed for the Active Forces without these incentives. Yet DOD has denied these incentives to the Guard and Reserve.

In the 2-year period from August 1974 to April 1977, National Guard and Reserve units have suffered a net loss of almost 100,000 members or over 11 percent of their force.

In the Volunteer Force/zero draft environment, the decision was made to pay bonuses and provide other benefits as recruiting and retention incentives for active service, although similar incentives, other than low-cost insurance, were not provided to Guard/Reserve personnel.

Special pay, in the form of enlistment/reenlistment bonuses, has proven to be effective in the Active Forces and the need to extend these to the National Guard and other Reserve components is generally recognized.

Special pay proposals for Guard/Reserve Forces are economically sound and effective, in that the cost of reenlistment bonuses should more than offset costs which would be required for newly-enlisted, nonprior service personnel.

The Congress has authorized a limited test of reenlistment bonuses for the Guard/Reserve in the fiscal year 1978 authorization act.

The Congress has also appropriated funding for a limited reenlistment bonus test for the Guard/Reserve.

It has become obvious that the Volunteer Force policy cannot support the total force policy unless bonuses are offered to all Guard/Reserve reenlistees.

When you consider incentives, you cannot overlook educational incentives.

Authority has been granted in the fiscal year 1978 authorization act in the 95th Congress to provide tuition assistance for members of the National Guard and of the Selected Reserve of the Ready Reserve.

This legislation if funded by the Appropriations Committee would increase the personnel strength and readiness in the National Guard, and improve the educational level of the National Guard, our States and our Nation.

The DOD Appropriation Authorization Act, 1978 conference report, dated June 21, 1977, includes the following language:

> The conferees agreed to support authority for a test educational assistance and reenlistment bonus program in the Selected Reserve. At the present time and until sufficient evidence is available to determine the effectiveness of these programs in assisting recruiting and retention in the Selected Reserve, the authority provided shall be used for a test program to assemble the necessary data. This program shall be limited to an expenditure of $5 million. The results of the test shall be reported to the Congress on a quarterly basis with the first report due December 31, 1977.
>
> If reserve recruiting continues to decline, authority contained in this legislation could be used in a broader program only after advising the committees on Armed Services and through existing procedures.
>
> The conferees agreed that the authority to offer further incentives contained in sections 402 and 403 of the House bill shall expire for personnel enlisting or reenlisting after September 30, 1978. This expiration date is included to insure that the Department of Defense develops and submits a complete program to address the problems in maintaining reserve strengths in its fiscal year 1979 budget submission. The DOD will have had ample time to address this problem by them, and the conferees expect to see a comprehensive program in the fiscal year 1979 budget submission.

The only report the committees can expect on December 31 is that the test has at long last been designed and will be started in January 1978 in 19 States.

In the meantime, Army National Guard strength has continued to fall, as has the strength of other Reserve components. At end October 1977, the paid drill strength of the ARNG was 354,354—down 10,040 from last February. The ARNG is now short 77,600 from its wartime requirement.

Sixty percent of the combat power of the U.S. Army, measured in battalions, is in the Army National Guard.

The total force policy dictates that Army National Guard early deploying units must arrive in overseas theaters with Active Force units, not afterwards as reinforcements.

Many Army National Guard units are not deployable today because strength objectives are not being met.

This situation may continue if the Army National Guard is not supported with programs designed to allow the Army National Guard to maintain the strength necessary for NATO deployment.

The savings generated in fiscal year 1978 because of the continued decline of Guard and Reserve manpower levels would fund a full expansion of the incentives program authorized by the Congress. Yet, if the DOD budget analysts follow their normal pattern they can be expected to reduce the fiscal year 1978 Guard and Reserve manpower levels in the fiscal year 1979 budget submission, rather than to request expansion of the incentives program.

While I am speaking about incentives and strength problems, let me mention another tangible incentive that must be corrected for the Guard and Reserve.

Under current law a member or former member of a Reserve component who has completed 20 or more years of qualifying service under chapter 67 of title 10, United States Code, is not entitled to retired pay unless he attains age 60.

The dependents of such a member or former member are not entitled to benefits under the survivor benefits plan unless he was entitled to retired pay at the time of his death.

H.R. 97, 95th Congress, introduced by Representative SONNY MONTGOMERY of Mississippi, would correct this inequity by authorizing survivor's benefits for dependents of members otherwise qualified for retired pay under chapter 67 of title 10, United States Code, who die before attaining age 60.

This is an inequity that the Congress recognized, so let us rectify it.

My final point will address unionization of the military.

When the Senate Committee on Armed Services reported out S. 274 which would forbid members of the Armed Forces belonging to military unions, it included a section that categorized technicians who also are members of the Reserve components as members of the Armed Forces for the purposes of the union ban, thus forbidding them to belong to technician, as well as military, unions.

Congress clearly determined the military character of the technician function when it revised section 709, title 32, in 1968. It made military membership in their units mandatory for all technicians except a handful of clerical workers. It established a direct correlation, in law, between an individual's technician position and his military grade and assignment. It provided that loss of military membership means automatic loss of technician employment. In almost all instances, the technicians' full-time duties are substantially the same as, or identical to, his or her duties in their military assignment.

The technician force performs military functions in sole furtherance of military purposes, so Congress gave it a military character. To accommodate that unusual status, Congress also provided that Guard technicians would be categorized as "excepted," rather than competitive, civil service workers.

The technician function essentially is military in nature. Technicians perform tasks that are directly related to producing combat readiness. They also serve in such crucial, on-going national defense operations as the Strategic Air Command alert—Air Guard refueling forces—and the 24-hour air defense alert—Air Guard fighter-interceptors.

Although unionization of the Armed Forces has been denied by Congress, there are efforts to bring about a partiona unionization by organizing technicians. This could be an entering wedge toward full unionization and it is a matter to be considered very carefully when additional legislation is enacted.

I have been discussing three elements impacting on the readiness of the National Guard, or in other words, the ability of the Guard to meet their commitments in defending the Nation. These elements rarely receive the exposure they deserve in the national tabloids, however, they are vital to our security. I urge fullest consideration of them and favorable action by the Congress.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. Abdnor) to revise and extend their remarks and include extraneous material:)

Mr. Burgener, for 5 minutes, today.

(The following Members (at the request of Mr. Kildee) to revise and extend their remarks and include extraneous material:)

Mr. Annunzio, for 5 minutes, today.

Mr. Gonzalez, for 5 minutes, today.

Mr. Burke of Massachusetts, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. Mikva, notwithstanding the fact that it exceeds two pages of the Congressional Record and is estimated by the Public Printer to cost $2,012.

(The following Members (at the request of Mr. Abdnor) and to include extraneous matter:)

Mr. Derwinski.

Mr. Whalen.

Mr. Gilman.

Mr. Burgener.

Mr. Dornan in two instances.

Mr. Ashbrook in two instances.

(The following Members (at the request of Mr. Kildee) and to include extraneous matter:)

Mr. Gonzalez in three instances.

Mr. Anderson of California in three instances.

Mr. Richmond.

Mr. Jenrette.

Mr. Moorhead of Pennsylvania.

Mr. Studds.

Mr. Biaggi in 10 instances.

Mr. Mazzoli.

Mr. Ford of Michigan in two instances.

Mr. Burke of Massachusetts.

Mr. Danielson.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 305. An act to amend the Securities Exchange Act of 1934 to make it unlawful for an issuer of securities registered pursuant to section 12 of such Act or an issuer required to file reports pursuant to section 15(d) of such Act to make certain payments to foreign officials and other foreign persons, to require such issuers to maintain accurate records, and for other purposes.

ENROLLED BILLS JOINT RESOLUTION SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 3722. An act to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978;

H.R. 9418. An act to amend the conditions for schools receiving capitation grants under section 770 of such Act, and for other purposes; and

H.J. Res. 662. Joint resolution making further continuing appropriations for the fiscal year 1978, and for other purposes.

ADJOURNMENT

Mr. KILDEE. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 10 o'clock and 31 minutes a.m.), under its previous order, the House adjourned until Monday, December 12, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2805. A letter from the Secretary of Agriculture, transmitting a draft of proposed legislation to amend the act of July 2, 1962, to authorize intrastate quarantines under extraordinary emergency conditions, to authorize U.S. Marshals to serve warrants under the act, and for other purposes; to the Committee on Agriculture.

2806. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–106, to provide additional compensation for the Chairman of the District of Columbia Board of Elections and Ethics, and for other purposes, pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2807. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2–110, to order the closing the a north-south public alley in square 2558, bounded by Champlain Street, 18th Street, California Street, Kalorama Road, and Florida Avenue, NW., pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

2808. A letter from the Chairman, National Market Advisory Board, transmitting a report on next steps to be taken to facilitate the establishment of a National Market System, pursuant to section 11A(d) of the Securities Exchange Act of 1934, as amended; to the Committee on Interstate and Foreign Commerce.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BROWN of California (for himself, Mr. Bonker, Ms. Chisholm, Mr. Del Clawson, Mr. Dellums, Mr. Downey, Mr. Edgar, Mr. Eilberg, Mr. Flowers, Mr. Gore, Mr. Guyer, Mr. Harrington, Mr. Miller of California, Mr. Mineta, Mrs. Pettis, Mr. Preyer, Mr. Pursell, Mrs. Schroeder, Mr. Thone, Mr. Traxler, and Mr. Walgren):

H.R. 10281. A bill to amend the Internal Revenue Code of 1954 to provide that advertising of alcoholic beverages is not a deductible expense; to the Committee on Ways and Means.

By Mr. FRASER (for himself, Mrs. Collins of Illinois, Mr. Frey, Mr. Oberstar, Mr. Richmond, and Mr. Vento):

H.R. 10282. A bill to establish a comprehensive program of long-term care services for aged individuals, and to provide for the creation of community long-term care centers and State long-term care agencies as part of a new administrative structure for the organization and delivery of such services; jointly; to the Committees on Agriculture, Education and Labor, Interstate and Foreign Commerce, the Judiciary, and Ways and Means.

By Mr. ROYBAL (for himself and Mr. PATTISON of New York):

H.R. 10283. A bill to provide for payment by the United States for certain medical services and treatment provided to U.S. citizens and permanent residents suffering from physical injuries attributable to the atomic bomb explosions on Hiroshima and Nagasaki, Japan, in August 1945; to the Committee on the Judiciary.

By Mr. GILMAN:

H. Con. Res. 440. Concurrent resolution urging a continuing Presidential commitment to improving Federal regulation making; to the Committee on Government Operations.

By Mr. PEPPER:

H. Con. Res. 441. Concurrent resolution providing for the printing of the report "New Perspectives in Health Care for Older Americans; to the Committee on House Administration.

H. Res. 932. Resolution providing for the printing of the report "Mandatory Retirement: The Social and Human Cost of Enforced Idleness"; to the Committee on House Administration.

H. Res. 933. Resolution providing for the printing of the report "Senior Transportation: Ticket to Dignity"; to the Committee on House Administration.

H. Res. 934. Resolution providing for the printing of the Committee Print "Federal Responsibility to the Elderly"; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. BONKER introduced a bill (H.R. 10284) for the relief of Chitra Schlotterbeck; which was referred to the Committee on the Judiciary.

SENATE—*Thursday, December 8, 1977*

The Senate met at 1 p.m. and was called to order by Hon. SAM NUNN, a Senator from the State of Georgia.

PRAYER

The PRESIDING OFFICER. In the absence of the Chaplain, we will have a minute of silent prayer.

[Pause.]

Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., December 8, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable SAM NUNN, a Senator from the State of Georgia, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. NUNN thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF THE LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of yesterday, Wednesday, December 7, 1977, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I have no need for my time.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

THE B-1 BOMBER

Mr. BAKER. Mr. President, an article that appeared in this morning's edition of the New York Times concerning the President's decision to terminate the B–1 development program reflects the concerns that many of my colleagues on both sides of the aisle in this Chamber and in the House share.

Considering only the traditional strategic doctrine of the United States, the President's decision on the B–1 was, at best, in my view ill advised. The strategic defense of the United States has for two decades depended for its credibility on the triad of strategic bombers, submarine-launched ballistic missiles (SLBM's), and intercontinental ballistic missiles (ICBM's). Unless the effectiveness of each force is credible, the strategic posture of the United States is severely threatened and it was only the credibility of the triad concept and its components that allowed us to accept the unequal limitations imposed by SALT I.

The B–1 bomber, to replace the aging and obsolescent B–52's, was designed to maintain that credibility. That consideration alone should have been sufficient to justify the President's continuation of the program in my opinion. But there is another consideration potentially more important, and that is the President's reliance on the development of air launched cruise missiles as the justification for the termination of the B–1.

Notwithstanding the criticisms of the cruise missile program contained in the New York Times article, I believe the cruise missile concept to be an important and valuable breakthrough in the defensive systems of the United States. However accurate the description of the inherent limitations of that cruise missible program contained in the Times article may be, the Carter administration is also in the process of developing artificial limitation, I believe, in the SALT II negotiations that make even less sense, considering the B–1 decision. If the reports are accurate, and I believe they are, the Carter administration is willing to impose limits on the range of the cruise missiles and our development of alternative delivery systems.

In my mind the combination of the decision on the B–1 program and the apparent intent to negotiate severe limits on the program touted as justification for that decision raises severe and significant questions concerning this administration's will and determination to maintain an unchallengeable strategic defensive posture.

The New York Times article, referencing this year's edition of "Jane's," further underscores this concern; and I ask Mr. President, that it be printed in its entirety at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Dec. 8, 1977]

JANE'S EDITOR SAYS B–1 DECISION MAY DOOM THE WEST

LONDON, December 7.—President Carter's decision to scrap the B–1 strategic bomber may help bring about a Western defeat if a general nuclear war breaks out, according to the editor of "Jane's All the World's Aircraft" in a preface to the 1977–78 edition.

The editor, John W. R. Taylor, writes in the authoritative annual that rejection of the bomber, which Mr. Carter considered too costly, may endanger the military balance that has prevented war between the two major powers for a generation. The new 900-page edition, is being published tomorrow by Jane's Yearbooks of London.

The Soviet leaders "must be surprised beyond belief that the U.S. President has disposed of the B–1 without asking any Soviet concession in return," Mr. Taylor wrote. "If our planet is subjected one day to the unimaginable horrors of a third world war, 1977 might be recorded as the year in which the seeds of defeat for the Western powers were sown."

President Carter decided earlier this year to cancel the B–1 program, after four test planes had been built. He said that the United States armed forces should rely on the older B–52 bomber and the new cruise missile. The Senate then voted to cut off funds for new B–1's, but the House voted yesterday to appropriate money for two more test planes. The Senate must now vote again on the issue.

CITES MISSILES' LIMITED ABILITY

Mr. Taylor said that cruise missiles, which travel slower than the speed of sound, were incapable of jamming enemy defense radar and were intended primarily for use against undefended targets.

Only one military leader in history, Adolf Hitler, has put his confidence in such a weapon, wrote Mr. Taylor, who is a world aviation authority. And that device, the V–1 missile that was known as the "buzz bomb," caused Britain little difficulty in World War II, he said. Mr. Taylor suggested that Mr. Carter's unilateral action probably was the reason the Soviet Union did not stage its usual display of air power at celebrations in October marking the 60th anniversary of the Russian revolution.

Mr. Taylor said that perhaps only West Europeans, living within range of two powerful Soviet aircraft, the Tupolev bomber, known in the West as the Backfire, and the Sukhoi Su-19 attack plane, felt strongly apprehensive when their own aircraft were ranged alongside the Soviet arsenal. That force includes about 1,400 intercontinental ballistic missiles, 600 intermediate- and medium-range missiles, 950 submarine-launched missiles and 200 older long-range bombers, "each capable of annihilating a city in a second of time," he wrote.

DEFENDS LIMITED B–1 PRODUCTION

Mr. Taylor said the United States did not need to base its B–1 decision on a previously estimated full fleet of 244, with an initial cost of $28 billion. "Even 100 B-1's would have compelled the Soviet Union to expend huge sums of money and immense effort on developing, producing and maintaining defenses against air attack," he wrote.

The editor warned that the United States also was delaying replacement of its interceptors and other aircraft, while the Soviet Union had given its squadrons a 500 percent increase in both radius of action and weapon load within a decade. "At the same time," he said, "the amount of advance warning of an impending attack that NATO units can expect, even on the basis of highly efficient monitoring, has diminished from an estimated 30 days to four or five days."

Mr. BAKER. Mr. President, I have no further need for my time under the standing order, and I yield it back.

REPORT OF THE COMMODITY CREDIT CORPORATION—MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT—PM 134

Under authority of the order of December 7, 1977, the Secretary of the Senate, on December 8, 1977, received the following message fom the President of the United States, which, with the accompanying report, was referred to the Committee on Agriculture, Nutrition, and Forestry:

To the Congress of the United States:

In accordance with the provisions of Section 13, Public Law 806, 80th Congress, I transmit herewith for the information of the Congress the report of the Commodity Credit Corporation for the fiscal year ended June 30, 1976 and the transition quarter ended September 30, 1976. This Report covers events prior to the beginning of my Administration.

JIMMY CARTER.

THE WHITE HOUSE, *December 8, 1977.*

MESSAGES FROM THE HOUSE RECEIVED DURING ADJOURNMENT

ENROLLED BILLS AND JOINT RESOLUTION SIGNED

Under authority of the order of December 7, 1977, the Secretary of the Senate, on December 8, 1977, received a message from the House of Representatives, which announced that the Speaker had signed the following enrolled bills and joint resolution:

S. 305. An act to amend the Securities Exchange Act of 1934 to make it lawful for an issuer of securities registered pursuant to section 12 of such act or an issuer required to file reports pursuant to section 15(d) of such act to make certain payments to foreign officials and other foreign persons, to require such issuers to maintain accurate records, and for other purposes.

H.R. 3722. An act to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978.

H.R. 9418. An act to amend the conditions for schools receiving capitation grants under section 770 of such act, and for other purposes.

H.J. Res. 662. A joint resolution making further continuing appropriations for the fiscal year 1978, and for other purposes.

The enrolled bills and joint resolution were subsequently signed by the Acting President pro tempore (Mr. METCALF).

Under authority of the order of December 7, 1977, the Secretary of the Senate, on December 8, 1977, received a message from the House of Representatives:

The message announced that the House has passed the bill (S. 1340) to authorize appropriations to the Energy Research and Development Administration for energy research, development, demonstration, and related programs in accordance with section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, as amended, and for other purposes, with amendments, in which it requests the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message also announced that the Speaker has signed the following enrolled bills:

H.R. 3313. An act for the relief of Mark Charles Mieir and Liane Maria Mieir.

H.R. 7738. An act with respect to the powers of the President in time of war or national emergency.

H.R. 9378. An act to amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for 2 years, the date on which the corporation first begins paying benefits under terminated multiemployer plans.

The enrolled bills were subsequently signed by the Acting President pro tempore (Mr. NUNN).

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, December 8, 1977, he presented to the President of the United States the enrolled bill (S. 305) to amend the Securities Exchange Act of 1934 to make it unlawful for an issuer of securities registered pursuant to section 12 of such act or an issuer required to file reports pursuant to section 15(d) of such act to make certain payments to foreign officials and other foreign persons, to require such issuers to maintain accurate records, and for other purposes.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. BUMPERS:

S. 2351. A bill to name the new Veterans' Administration Hospital in Little Rock, Ark., the John L. McClellan Hospital; to the Committee on Veterans' Affairs.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. BUMPERS:

S. 2351. A bill to name the new Veterans' Administration Hospital in Little Rock, Ark., the John L. McClellan Hospital; to the Committee on Veterans' Affairs.

JOHN L. M'CLELLAN HOSPITAL

Mr. BUMPERS. Mr. President, I am introducing today a bill to name a new Veterans' Administration Hospital to be constructed in Little Rock, Ark., after my late distinguished senior colleague, John L. McClellan.

Mr. President, one of John McClellan's lifelong interests was the provision of adequate health care for our citizens. Much of his time and energy in the last few years was spent in an effort to make this dream a reality by securing the construction in Little Rock of a modern replacement veterans hospital. This hospital, to be located adjacent to the University of Arkansas Medical Center, would replace older facilities operated for many years on Roosevelt Road.

The right to decent and competent health care is perhaps the first of all human rights, and Senator McClellan labored tirelessly and effectively to make that right a reality for veterans and their dependents in Arkansas. Largely through his efforts, funds have been appropriated for the construction of the new hospital, and the Veterans' Administration and the State government are cooperating actively in the planning process that must precede construction.

This project was dear to Senator McClellan's heart for another reason. As a veteran himself, he was always mindful of Lincoln's injunction that the United States has an obligation "to care for him who shall have borne the battle, and for his widow, and for his orphan." There could be no finer memorial to Senator McClellan than the attachment of his name to this fine new facility when it is completed and dedicated. I urge my colleagues to pass the bill expeditiously, in the hope that it will be promptly acted on by the House and the President.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2351

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Veterans Administration replacement hospital to be constructed adjacent to the University of Arkansas Medical Center in Little Rock, Arkansas, for which funds have heretofore been appropriated by the Congress, is hereby designated as the "John L. McClellan Hospital." Any reference in any law, regulation, document, record, map, or other paper of the United States to such building shall be considered to be a reference to the John L. McClellan Hospital.

REPORTS OF COMMITTEES RECEIVED DURING ADJOURNMENT

Under authority of the order of December 7, 1977, the following reports of committees were received on December 8, 1977:

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs, with amendments, and with a preamble:

H.J. Res. 386. A joint resolution to provide for the striking of a national medal to be issued annually in commemoration of the bicentennials of outstanding historic events and personalities from 1777 to 1789 (Rept. No. 95-611).

ADDITIONAL STATEMENTS

A TRIBUTE TO SCOTTY

Mr. PACKWOOD. Mr. President, it is with sadness I join with my colleagues in paying tribute to one of our finest friends, Arthur E. Scott, better known as simply Scotty to most of us. His death is our loss. Scotty was a photographer for the Senate Republicans for 20 years, and I am sure there are few among us who do not have pictures he has taken on our office walls.

But Scotty did not limit his photography or his work to the U.S. Senate. In all, he spent more than 40 years in Washington as a political photographer on Capitol Hill chronicling the rise and fall of many administrations and the surge of bright young lawmakers who constantly flow into the Nation's Capital. When anything important happened, Scotty was there by our sides with a click of the shutter recording the moment for posterity.

He began his own career with the old Washington Times and was first assigned to Capitol Hill in 1935. He also worked for the old International News Service before it was merged with United Press International. He also served as Senate photo historian, was a past president of the White House Press Photographers Association, a regional director of the National Press Photographers organization, and a member of the Royal Photographic Society of Great Britain.

His talent was great, his awards and honors many, and our appreciation for this man, his work, and his friendship will go with us through history.

IN MEMORY OF DR. LAURENCE WOODWORTH

Mr. NELSON. Mr. President, yesterday the Nation suffered the immeasurable loss of one of its most respected and talented public servants, Dr. Laurence N. Woodworth, Assistant Secretary of the Treasury for Tax Policy. Throughout his illustrious career exceeding 30 years of service to this Nation, Larry Woodworth truly epitomized the selfless and dedicated civil servant. As a member of the Finance Committee, I had the privilege of working closely with Larry on many occasions and often relied on his expert counsel and guidance to decipher even the most complex tax legislation.

We are all deeply saddened by his sudden and tragic death. I join my colleagues in expressing our profound sorrow and extending our sympathy to Larry's wife, Margaret, and their family.

TOKAMAK FUSION TEST REACTOR

Mr. CASE. Mr. President, for many years I have been a strong supporter of this Nation's fusion energy program.

Fusion energy offers the extraordinary promise of being both a major source of new energy and a safe and environmentally sound source of new energy.

Last year's report by the House Appropriations Committee noted that the principal fuel for fusion energy is seawater and, in theory, the fusion of deuterium nuclei in a gallon of water could produce the energy equivalent of 300 gallons of gasoline. The report said:

> The controlled fusion process has certain unique characteristics which make it extremely attractive from the safety and environmental points of view. Thus, controlled thermonuclear fusion could well be a key answer to mankind's long-range energy problems.

Since 1951, the Princeton University Plasma Physics Laboratory, with support from ERDA and now the Department of Energy, has been pursuing the goal of sustained production of fusion energy.

The Department of Energy and the Plasma Physics Laboratory have joined Ebasco Services, the Grumman Aerospace Corp., the Lawrence Berkeley/Lawrence Livermore Laboratories, and Giffels Associates to construct a device known as the Tokamak fusion test reactor which will be the first magnetic fusion system in the country to produce significant quantities of energy.

While we in the Senate were working on the energy bill late in October, groundbreaking ceremonies were being held for the Tokamak fusion test reactor at Princeton, N.J.

In a statement in connection with those groundbreaking ceremonies, President Carter said:

> Our hope for the future rests largely on the continued availability of energy. Fusion is the last energy source available and presents the highest challenge for this nation's capability to put science to work for the benefit of all mankind. We must move ahead dramatically in fusion research during the next few years to gain the insights we need to make wise choices among our few long-term energy options.

Mr. President, at this time I want to extend my congratulations to all the men and women involved in the important work going on at the Princeton Laboratory and especially to Dr. Melvin Gottlieb, the current director of the laboratory, and Dr. Lyman Spitzer, the first director of the laboratory.

I ask unanimous consent that the text of the President's message for the ground-breaking ceremonies, the text of a speech given by Dr. Robert D. Thorne, Acting Assistant Secretary of Energy Technology for DOE, and the text of my own message to those at the ceremony be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, D.C., October 27, 1977.

I extend my best wishes to all those attending the groundbreaking ceremony for the Tokamak Fusion Test Reactor.

The initiation of this project is symbolic of our growing success in the development of fusion energy. It has the scientific objective of producing, for the first time in history, significant quantities of controlled thermonuclear energy.

Achievement of fusion power will have a profound effect on all nations. Our hopes for the future rest largely on the continued availability of energy. Fusion is the last energy source available and presents the highest challenge for this nation's capability to put science to work for the benefit of all mankind.

We must move ahead dramatically in fusion research during the next few years to gain the insights we need to make wise choices among our few long-term energy options.

Fusion development is a national objective that will require the best of our academic, industrial and laboratory talent. It is also a world objective, and sustained cooperation among all nations in fusion research is more important than ever. In this respect, I also welcome the opportunity to congratulate our European friends—many of whom are present on this occasion—on agreeing this week to proceed with the Joint European Torus, a complementary facility to the Princeton test reactor. The United States looks forward to working in close partnership with other nations in an endeavor that is so crucial for all of us.

May the spirit of cooperation that is so much in evidence on this occasion characterize our on-going achievements in fusion energy development.

JIMMY CARTER.

SPEECH BY ROBERT D. THORNE

Governor Byrne, President Bowen, Dr. Spitzer, Dr. Gottlieb, ladies and gentlemen.

It is a particular pleasure for me, personally to have an opportunity to participate with you in this historic groundbreaking, not only because it represents a significant milestone on the way toward a major scientific and practical objective, but also because, in a very special way, it reaffirms and gives evidence to a long-held belief of mine about the place of science and technology in our lives, the life of our Nation, and, most importantly, in all our futures.

I think it is time that all of the citizens of our Nation finally recognize that we live in a scientific and technological world. Our national life has been dominated for many years by what are clearly scientific and technological crises, crusades and inventions. The energy crisis is technological as are many of the discrete threats to the environment.

Our new drive toward infinite energy technologies—as typified by this fusion effort—is, like the space program a decade ago, a scientific and technological crusade. And if we need evidence of domination by technological invention, we need look no further than either television or the electronic computer revolution of the past 25 years or so, to see how a single technological development can permeate and deeply change almost every aspect of our lives. So we are a scientific and technological society, whether we like it or not. And the problem is that some people don't like it.

There are too many people who see only the ills and problems caused by the imperfections or abuses of our present technology. They see the pollution of the environment as purely a product of technology rather than of a historic cultural pattern of neglect or a childlike faith in the infinite renewability of the environment. They see what they perceive as an unhealthy life style and an erosion of what they call basic human values as an outgrowth of our scientific and technological society. Indeed, they lay most of the ills of the world at the feet of science and technology. In other words, they see only the negative aspects.

I think it's time for a change in attitude toward science and technology. I think it's time that we began to recognize not only the incredible bounty of benefits that have accrued to us from our past scientific and technological efforts, but also the immense hope for the future that our current and future efforts promise. We need to recognize that science and technology are tools for use for good or evil. As tools, they are capable of being abused or misused and then they will produce problems. But when they are used properly, with discretion, wisdom and a sense of proportion, they can produce great good for all mankind. They can produce almost limitless hope for a future beyond our fondest expectations. And that hope, I believe, would be justified, for history already has demonstrated how science and technology have repeatedly exceeded early hopeful predictions for the future. Thus the dominant theme in our attitude toward science and technology should be, not a negative anticipation of new and greater problems nor a bemoaning of technology-related difficulties, but a positive emotion of great hope—hope for solutions to our problems, hope for unimagined benefits, hope for a better life for all mankind. And I can think of no better example than the promise of fusion.

Fusion, in fact, is one of the few energy technologies we have, in which the general public perception is dominated by a sense of hope, untainted by fears of new problems or ills flowing from it. It is no exaggeration to say that the entire world awaits hopefully for the successful completion and operation of this project. Our National Energy Plan recognizes that our hopes for the long-term beyond the year 2000 rest largely on renewable and inexhaustible sources of energy. The Plan is based on the principle that the use of such inexhaustible sources will be vigorously expanded, while on the shorter term we conserve our diminishing supplies of conventional fuels and bring more mature energy technologies into the marketplace. Thus we have to make it clear to our public that fusion represents a long-term hope, and is not immediately around the corner.

This is another typical characteristic of science and technology. It takes time, dedication, resources and talent to come to fruition. And that's another concept that is sometimes difficult to understand for certain segments of the public. I am reminded of a quotation from an unknown 17th Century historian who wrote in part:

"It is strange that we are not able to inculcate into the minds of many men, the necessity of that distinction of my Lord Bacon, that there ought to be Experiments of Light, as well as Fruit. It is their usual words, What solid good will come from thence? But they are to know that in so large and so various an Art of Experiments, there are many degrees of usefulness: Some may serve for real and plain benefit, without much delight; some for teaching without apparent profit; some for light now, and for use thereafter; some only for ornament and curiosity. If they will persist in condemning all experiments, except those which bring them immediate gain and a present harvest, they may as well cavil at the Providence of God, that He has not made all the seasons of the year to be times of mowing, reaping and vintage."

One might be tempted to speculate that this unknown writer back in the 17th Century had some vision of what we are about today. We have been on this road to fusion—this hopeful road—for some 26 years or more. It was back in 1951 that Dr. Lyman Spitzer pioneered the research in the physics of fusion plasmas, and founded the Princeton Plasma Physics Laboratory. In 1961, still 16 years ago, Dr. Melvin Gottlieb took up the reins as director of this laboratory and helped guide it toward its present pre-eminent position as the world's largest fusion research laboratory and a recognized leader in its field.

During these past 26 years, we have been working at a deliberate pace, carefully uncovering the fundamental principles of fusion plasma physics. One might say that these have been experiments "for light now and for use thereafter," to quote my 17th Century friend.

I am aware that there are many in the fusion community who believe that we now have reached a new plateau, that we are preparing to go beyond pure experiments of "light and teaching without apparent profit", that recent advances in plasma heating and confinement have virtually assured us of a future season of "mowing, reaping and vintage." I hope so! If that is the case, then it gives even greater significance to our TFTR experiments, because they will constitute the first definitive demonstration of the basis for our hope.

Such a demonstration, such an achievement, however, should not be taken as a signal for us to relax our efforts, to slow down, to feel that we have made it over the hump. On the contrary, it should be a signal for renewed effort, renewed urgency, for renewed dedication to our goal. That goal will not be an easy one to achieve. It will take all of the intellect, resources, patience—and luck—that we can muster.

And even in that distant future when we have finally achieved our current goals, our work will still not be done. That too is typical of this business of science and technology.

I remember in my own life an earlier time of great and untroubled hope for another technology. We called it atomic energy then. I began working in atomic energy back in 1952. We all were so full of hope then. This was the time of Atoms for Peace, of a hundred or a thousand benefits from this new young technology and source of energy. Atomic energy was to be the bountiful and unblemished cornucopia for the world of the future.

Today, 25 years hence, we have realized many of the goals and objectives of our research program then. We have gained many of the hoped-for benefits of atomic energy that we perceived then and quite a few that we never even suspected. But 25 years also have brought with them some sophistication, a new perspective, an understanding that some of the goals we hoped for then are not really very practical, a realization that some of the other goals are going to be far more difficult to achieve than we first expected, and also finally, a comprehension that there are few unmixed blessings in science and technology, that there are costs and penalties and problems remaining to be solved. That is the sobering and maturing aspect of scientific and technological effort.

I do not, by this, wish to imply that I see all kinds of problems and difficulties emerging from the successful achievement of practical fusion. I don't. But I would not be surprised if there are not a few unsuspected problems ahead in our work on fusion. It would be unusual if there were not.

My point is, however, that if and when these problems do emerge, we should not be dismayed; we should not be discouraged; we should not lose our faith or our hope. Rather we should know that this is the way of science and technology. It comes with the territory. But problems can be solved. Solutions can be found. There is always new hope over the horizon.

To me, this is the true significance of this joyous occasion. Again, as pioneers of the past always have been, at the beginning of a venture, we are filled with great hopes, and that is the source of our joy and our buoyancy of spirit. Although the practical fruits of our fusion project still remain years ahead of us, we are today tasting that sweet and never-ending spiritual fruit of all science and technology—a virtually limitless hope for the future.

Thank you.

Message From Senator Case

I deeply regret that I am unable to be with you today for the groundbreaking ceremony for the TFTR experimental complex.

As you may have guessed, the reason that I am unable to be with you is that the Senate is currently considering the energy tax bill. The appropriate focus of this legislation, which is part of the administration's national energy plan, is on the period between the present and 1985. Actions are urgently needed during that time to adjust the patterns of U.S. energy supply and demand to avoid world conflicts over scarce oil supplies.

But the critical need for action to deal with our short-term problems should not be allowed to obscure the equally great need to deal now with the energy needs of this country beyond 1985. Unless we act now it will be too late to develop the extremely promising energy resources we will need in the future.

It is for this reason that I have, for many years, been a strong supporter of this Nation's fusion energy research program. The ceremony you are holding today marks a very important milestone and I very much would like to be with you to observe the occasion. Please be assured of my best wishes for continued success in the future. Certainly you can be sure of my continued support for efforts to make fusion energy, with all of its promise, a reality in the shortest possible time.

TRIBUTE TO AMBASSADOR DAVID K. E. BRUCE

Mr. PELL. Mr. President, it was with a profound sense of personal loss that I heard of David Bruce's death. I admired him greatly as a man of tremendous intellect, dedication, and practicality. I also had a deep affection for him personally as a warm and engaging human being whose thoughtfulness and consideration of others knew no bounds.

When I was a young diplomat in our Foreign Service, David Bruce was my model as the quintessential diplomat and public servant. This career as a public servant, both in diplomacy and, early on, in politics had a real effect on my own career decisions. At one time or another he held all of our most important diplomatic posts, and I cannot imagine anyone who better epitomizes the qualities of the truly professional practitioner of diplomacy. A true gentleman and Renaissance man, David Bruce brought immense cultivation, insight and tact to each of his important assignments.

David Bruce was an adviser to many Presidents and participated in shaping some of the most important events in our history. His wise counsel, steadiness of judgment and charm will be sorely missed by all of us who have had the privilege to call him our friend and mentor.

Mr. President, I ask unanimous consent that editorial tributes to Ambassador Bruce by the New York Times and Washington Post be printed in the Record.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the New York Times, Dec. 7, 1977]

David Bruce, American and European

David Kirkpatrick Este Bruce was proof that American foreign policy could be bipartisan and that the amateur—selected for ability, not campaign contributions—could equal the professional in diplomacy. A lifelong Democrat, he served as ambassador for six Presidents, three of them Republicans. President Eisenhower appointed him Ambassador to Bonn despite his campaign contribution and much-sought advice in 1956 to the Democratic Party. His political affiliation was never concealed; his Republican appointments, which he did not seek, were resigned before Presidential campaigns. But in international affairs, he saw only a continuum of national interest in the American search for a peaceful world.

The son of a lawyer and Pulitzer-Prize biographer who became a United States Senator, David Bruce himself had been a lawyer, author, twice-elected state legislator, banker, soldier, gentleman farmer, wine connoisseur, World War II O.S.S. spymaster and Marshall Plan administrator when President Truman named him Ambassador to France in 1949. Before he finished his ambassadorial functions more than a quarter-century later, he had served in Bonn, London, Peking and at NATO headquarters in Brussels, a record unique in variety and duration as well as distinction. He served Dean Acheson as Under Secretary of State and, in Peking, headed America's first liaison mission to Communist China. Yet his most important task was one of his earliest and one in which he—and the United States—failed. Theodore White called it "Ambassador to a Dream"—the dream of a United States of Europe. Together with Jean Monnet in France, John J. McCloy in Bonn and Dwight Eisenhower, Mr. Bruce sought to catalyze the political union of Western Europe. The instrument was the abortive European Defense Community treaty. Six nations signed, but France, after a four-year debate, refused to ratify despite Mr. Bruce's vigorous efforts as special American representative.

Military and political union remain on West Europe's future agenda, but what has been achieved as a result of that effort in the early 1950's is an economic community of nine nations, known as the Common Market. It has helped to keep the democratic way vitally alive in Europe. In the history of our era, his service to the European idea will always qualify David Bruce not only as a distinguished American but as an eminent European.

[From the Washington Post, Dec. 7, 1977]

David Kirkpatrick Este Bruce

"Each honest calling, each walk of life," James Bryant Conant once wrote, "has its own elite, its own aristocracy, based on excellence of performance." In the calling of diplomacy, David Bruce, who died Monday morning at the age of 79, was very nearly the embodiment of that aristocracy. He was, as Trollope said of Plantagenet Palliser, "a perfect gentleman." That is to say that he was, in the strict dictionary sense, "a man of good breeding, education and manners . . . civilized . . . sensitive . . . a man of independent income who does not work for a living." But that's only to begin with; it doesn't really describe the man, and still less his extraordinary career of public service. It is true that David Bruce did not need to work for a living. And so, while he was from time to time a lawyer, a tobacco farmer, a banker and a business broker with electric interests (sugar plantations, race tracks, newspapers, parachute-manufacture, oil and a project for de-nicotinizing cigarettes), he worked almost all of his life for his country.

It began the day he left Princeton in 1917 as a sophomore at 19 to enlist as a private in the U.S. Army in World War I, and it ended last year when he resigned from his post as American ambassador to the North Atlantic Treaty Organization—at the age of 78. And in between? There is no way to convey a sense of David Bruce's service in those intervening years without at least some brief résumé: Chief of the Office of Strategic Services in Europe in World War II, Assistant Secretary of Commerce, administrator of the Marshall Plan for France, ambassador to France, Undersecretary of State, ambassador to West Germany, ambassador to Great Britain, and the head of the first U.S. liaison office in Peking in 1973. And that's not complete: It doesn't for example, take into account elective office: Mr. Bruce was a member at different times during his career of both the Maryland and Virginia House of Delegates.

The defeats and disappointments can be dealt with quickly—the triumphs take longer. There was the unrewarding 16-month tour as the U.S. representative to the Vietnam peace talks in Paris, beginning in 1970, when there was not much disposition on either side to compromise. And there was the shattering of a cherished dream when the French refused to ratify the European Defense Community for which he had labored hard as the American "observer" on an interim committee set up to advance this critical move toward European unity. For such unity as the Europeans have achieved, however, David Bruce deserves large credit. "It was Bruce who first singled out the Schuman Plan—the first realization of European unity—as a vital new idea, and mobilized American diplomacy to support it," wrote Theodore H. White in 1954.

As for the other triumphs, they were mostly quiet and difficult to measure, for they took the form of nothing more spectacular than the consistently effective, professional practice of diplomacy. David Bruce was not an ideologue. He was more often the engineer than the inventor of policy—he made things work. "Diplomacy is the management of international relations by negotiation," he once said. "It is not a system of moral philosophy." For him, the key to it was "the application of intelligence and tact," which he possessed in abundance. Most who knew him would add uncommon charm, intellectual curiosity, cultivation, consideration, patience—and toughness of mind.

In "A Thousand Days," Arthur M. Schlesinger Jr. speaks of the "great confidence" that President Kennedy had in David Bruce's "steadiness of judgment." That's what it came down to, with six Presidents of both parties, over a span of more than 30 years. And that is why his country is so heavily in his debt.

RETIREMENT OF MAJ. GEN. RUPERT H. BURRIS

Mr. BAKER. Mr. President, I ask unanimous consent that a statement by the Senator from Arizona (Mr. Goldwater) relating to the retirement of Maj. Gen. Rupert H. Burris, be printed in the Record.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Statement by Senator Goldwater

A few weeks ago, it was my privilege and honor to participate by telephone in a ceremony held by the Harry S. Truman Chapter of the Air Force Association in Kansas City, Missouri. The occasion was a retirement dinner for Major General Rupert H. Burris, one of this nation's most skilled communications experts.

Before his retirement, General Burris commanded the Air Force Communication Service with headquarters at Richards-Gebaur Air Force Base in Missouri. The AFCS mission includes engineering, installing, operating, and maintaining communications-electronics-meteorological facilities for all Air Force commands. AFCS is also responsible for operating long-haul intercontinental and local base communications, air traffic control, and navigational aid facilities and services for the Air Force and selected government and civilian agencies.

The first non-rated officer ever to head an Air Force major command, General Burris was born in Whelen Springs, Ark., on Sept. 24, 1925. He graduated from high school in 1943 in El Dorado, Ark. He received a bachelor of arts degree in business administration from Jackson College, Honolulu, Hawaii, 1958. He attended Squadron Officers School at Maxwell Air Force Base, Ala., in December 1950; the Armed Forces Staff College, Norfolk, Va., in August 1963; and Air War College, Maxwell Air Force Base, Ala., in August 1966.

During World War II, he enlisted in the U.S. Army Air Forces in October 1943. He served as a B–17 aircraft armorer/gunner in the European Theater of Operations and completed 30 combat missions over Germany and France. He was discharged from the Army in December 1946.

General Burris enlisted in the U.S. Air Force in March 1947 and served as an administrative clerk until July 1948 when he entered officer candidate school at Lackland Air Force Base, Tex., where he received his commission as second lieutenant in December 1948. He was then sent to Keesler Air Force Base, Miss., where he completed the Aircraft Warning Officers Course in June 1950.

In December 1950, General Burris was assigned to the aircraft control and warning squadron at McGhee Tyson Airport, Tenn., that had responsibility for protecting Oak Ridge.

After attending Squadron Officers School he served with the 1st Radar Calibration Squadron at Griffis Air Force Base, N.Y., from June 1952 to December 1954, where he helped the Air Force modify radar calibration procedures into what is now known as radar evaluation.

In December 1954, General Burris went overseas to Headquarters Far East Air Forces at Tokyo, Japan, where he served as a ground electronics officer. He was transferred to Headquarters Pacific Air Forces in Hawaii, in December 1956, as Chief, Aircraft Control and Warning Branch, in the Electronic Systems Division.

He returned to the mainland in December 1958 and served first as senior evaluation officer and later as Chief of the Radar Evaluation Branch, in the Communications-Electronics Directorate at Headquarters Air Defense Command, Ent Air Force Base, Colo.

Following Armed Forces Staff College, General Burris was transferred to Headquarters European-African-Middle Eastern Communications Area, Wiesbaden, Germany, in February 1964. There he served successively as Chief, Aircraft Control and Warning Division; Director of Electronics; Director of Communications Systems Management; and Deputy Chief of Staff for Electronics.

General Burris was transferred to the Republic of Vietnam in August 1967 as Director of Communications-Electronics for the U.S. Air Force Advisory Group, Military Assistance Command Vietnam (MACV). He joined Headquarters Pacific Communications Area at Hickman Air Force Base, Hawaii, as Deputy Chief of Staff for Electronics in August 1968 and later as Deputy Chief of Staff Plans and Programs. In January 1971 he became Director of Communications-Electronics for the Aerospace Defense Command at Ent Air Force Base, Colo.

He became commander of AFCS' Southern Communications Area, Oklahoma City Air Force Station, Okla., in April 1972, and assumed command of the Northern Communications Area, Griffiss Air Force Base, N.Y., in July 1974. He became AFCS Vice Commander on July 1, 1975, and Commander on August 25, 1975.

His military decorations and awards include the Legion of Merit with cluster; Bronze Star Medal; Meritorious Service Medal; Air Medal with four Oak Leaf Clusters; Air Force Commendation Medal with two Oak Leaf Clusters; Air Force Outstanding Unit Award Ribbon; Army Good Conduct Medal; Vietnamese Honor Medal, First Class; Republic of Vietnam Cross of Gallantry with Palm; and the Republic of China Meritorious Service Medal, Class A, Second Degree.

General Burris is married to the former Julia Jo Hastings of El Dorado, Ark. Their son, John Charles, was killed in action in Vietnam. They have two daughters, Mrs. Julie Shank and Mrs. Clarice Long.

He was promoted to the grade of major general effective February 6, 1976, with date of rank June 5, 1973.

CONGRESSIONAL ACTION ON PROPOSALS FOR OLDER AMERICANS

Mr. CHURCH. Mr. President, the 1st session of the 95th Congress has produced important and potentially far-reaching legislative actions for aged and aging Americans.

Several of these measures, I am pleased to say, have been advanced by members of the Committee on Aging, including:

Raising the mandatory retirement age to 70.

The Domenici amendment to provide a $75 tax credit to provide relief from rising energy costs for low- and moderate-income elderly households.

Authorization for the Civil Aeronautics Board to grant reduced air fares on a space-available basis for older Americans.

Expansion of the volunteer income tax assistance program to provide tax counseling assistance to an additional 240,000 taxpayers, including 100,000 older persons.

Protection for disaster victims from having their supplemental security income payments either reduced or terminated.

Major expansion of the title IX senior community service employment program.

Allowing persons 65 or older the option of claiming for taxable year 1976 the former retirement income credit or the new elderly credit, whichever is greater.

The Committee on Aging staff recently prepared a summary describing these proposals and other developments affecting older Americans in greater detail.

Mr. President, I ask unanimous consent that this legislative summary be printed at this point in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL ACTIONS ON SENATE COMMITTEE ON AGING PROPOSALS FOR OLDER AMERICANS

EMPLOYMENT

Committee on Aging Action	*Status*
1. Senator Church wrote Secretary of Labor F. Ray Marshall on February 4, urging a $150 million funding level for the Older American Community Service Employment program for fiscal 1977 and $200 million for fiscal 1978. (The Title IX program had a $55.9 million funding level, effective from July 1, 1976, to June 30, 1977. This amount was scheduled to rise to $90.6 million on July 1, 1977.)	The Economic Stimulus Appropriations Act (Public Law 95–29) provides $150 million (available from July 1, 1977 to June 30, 1978) for the Older American Community Service Employment program. Public Law 95–29 would increase the number of jobs for older workers (age 55 or older) from 15,000 to 37,400. The Fiscal 1978 Labor-HEW Appropriations Act (conference agreement on H.R. 7555 provides $190.4 million (available from July 1, 1978 to June 30, 1979) for the Older American Community Service Employment program. This funding level would support 47,500 jobs for older workers.
2. S. 481 (Domenici and Church)—removes the age-65 ceiling for application of the Age Discrimination in Employment Act.	The Subcommittee on Labor of the Human Resources Committee held hearings on July 26 and 27 on legislation to amend the Age Discrimination in Employment Act. Senators Church and Domenici testified.
3. S. 1784 (Church Cosponsorship with Senator Williams)—(a) raises the upper age limit of the Age Discrimination in Employment Act from 65 to 70 in three stages, (b) authorizes a study by the Secretary of Labor to determine the feasibility or raising the age limit above 70, and (c) prohibits employee benefit plans from mandatorily retiring workers prior to the upper age limit of the Age Discrimination in Employment Act.	The Senate passed the Age Discrimination in Employment Act Amendments of 1977 (H.R. 5383) on October 19. The Senate-passed bill would (a) raise the upper age limit of the Age Discrimination in Employment Act from 65 to 70 (effective January 1979), (b) authorize a study by the Secretary of Labor to determine the feasibility of raising the age limit above 70, and (c) prohibit employee benefits plans from mandatorily retiring workers prior to the upper age limit of the Age Discrimination in Employment Act.
4. S. 2058 (Church)—extends the notice of intent to sue requirement from 180 days to 22 months for most cases under the Age Discrimination in Employment Act.	Provision incorporated in Senate-passed version of the Age Discrimination in Employment Amendments of 1977 (H.R. 5383).
5. Domenici Amendment to H.R. 5383 (Age Discrimination in Employment Act Amendments of 1977)—places a two-year limitation on the period during which the statute of limitations is tolled while the Department of Labor is engaging in conciliation activities under the Age Discrimination in Employment Act.	Senate adopted amendment on October 19.

ENERGY

Committee on Aging Action	*Status*
1. Senator Muskie chaired hearings before the Government Operations Committee on hardships suffered by low-income individuals as a result of abnormally high heating bills from the winter of 1976–1977. Senator Muskie also advanced an amendment to provide $200 million for emergency payment of fuel bills for the low income, elderly, and handicapped.	Amendment included in the Fiscal 1977 Supplemental Appropriations Act which became law (Public Law 95–26) on May 4. Senator Muskie was also successful in winning Senate approval of a $200 million funding level to help low-income families in energy emergencies, as a part of H.R. 9375 (the Fiscal 1978 Supplemental Appropriations Act).
2. Amendment (Domenici, Church, Chiles, Brooke, and DeConcini) to Energy Production and Conservation Tax Incentive Act (H.R. 5263)—provides a $75 refundable tax credit to households headed by persons 65 or older and having an adjusted gross income up to $7,500. The credit is reduced by 1.5 percent of the amount by which the adjusted gross income exceeds $7,500, resulting in a full phase-out at $12,500. The credit is available for taxable years 1978–85, and will provide older Americans with about $1 billion in annual tax relief to help defray rising energy costs.	The Senate adopted the amendment by a vote of 88–2 on October 27.
3. Amendment (Church, Domenici, Chiles, DeConcini, and Brooke) to National Energy and Conservation Policy Act (S. 2057)—provides (a) the new Department of Energy (DOE) weatherization program for low-income persons should have the same eligibility guidelines, (125 percent of poverty) and material cost limits ($800) as the current Community Services Administration (CSA) program; (b) the CSA will have some input into shaping the new DOE program; (c) Title IX Older American Community Service employees may participate in Federal weatherization efforts; (d) an annual evaluation of Federal weatherization programs shall be submitted to the Congress; and (e) a $25 million authorization to weatherize public housing projects, including Section 202 projects, facing financial difficulty because of high energy costs.	The Senate passed S. 2057 on September 9. Conferees adopted all the Committee on Aging amendments.

Congressional Actions on Senate Committee on Aging Proposals for Older Americans—Continued

HEALTH

Committee on Aging Action	*Status*
1. Chiles Amendment to Fiscal 1977 Supplemental Appropriations Act (H.R. 4877)—provides $2 million for the Center for Studies of Mental Health of the Aging to support research concerning mental health diseases of the elderly.	Senate Appropriations Committee adopted the Chiles Amendment. President Carter signed the Fiscal 1977 Supplemental Appropriations Act, including the Chiles Amendment, into law (Public Law 95-26) on May 4.
2. Muskie Amendment to H.R. 4975—extends the Committee on Mental Health and Illness of the Elderly to September 30, 1977. The purpose is to enable the Committee to share its recommendations with the recently established Presidential Commission on Mental Health.	Included in Public Law 95-83.
3. Church Amendment to H.R. 4975—(a) authorizes $8 million for the home health expansion and development demonstration grant program and (b) authorizes $4 million to train professional and paraprofessional personnel.	Included in Public Law 95-83.
4. S. 708 (cosponsored by Senators Church and DeConcini)—to authorize Medicare reimbursement for physician extenders and nurse practitioners in rural health clinics. Senator Church testified in favor of S. 708 before Finance Committee.	S. 708 was incorporated in H.R. 422 (aircraft engine duties), which the Senate passed on September 16. Similar measure, H.R. 8422, passed the House on October 17. House and Senate conferees have reached agreement on H.R. 8422.
5. Senators Church and Domenici submitted a summary of evidence relating to kickbacks among Medicaid providers at joint hearings conducted by the House Ways and Means Committee and the House Interstate and Foreign Commerce Committee in March 1977. Senators Church and Domenici recommended that Medicaid fraud be elevated from a misdemeanor to a felony.	The Medicare-Medicaid Anti-Fraud and Abuse Amendment to H.R. 31 classifies most fraudulent acts under Medicare and Medicaid as felonies. President Carter signed H.R. 3 into law (Public Law 95-142) on October 25.
6. Senators Church and Domenici also suggested Federal funding to help the States establish investigative units to identify Medicaid fraud and prosecute lawbreakers.	Public Law 95-142 authorizes 90 percent Federal Funding to assist states is establishing fraud investigative units.
7. The Senate Committee on Aging and the House Ways and Means Committee conducted home health hearings in March which focused on problems relating to the choice of Medicare intermediaries. The common practice was for the provider to choose an intermediary from a list submitted by HEW. If dissatisfied a provider could change intermediaries simply by giving notice to HEW. As a result, many intermediaries have been reticent to question providers or to conduct vigorous audits for fear of losing accounts.	Public Law 95-142 authorizes the Secretary of HEW to assign and reassign fiscal intermediaries. The Secretary is also authorized to designate regional intermediaries or national intermediaries with respect to a class of providers.
8. Hearings by the Senate Committee on Aging and an audit by the General Accounting Office revealed that some nursing homes required family members to offer a donation or to supplement Medicaid payments in order to have their relatives admitted to a nursing home. Representative Pepper made reference to the work of the Senate Committee on Aging when he succeeded in adding an amendment to H.R. 3 to prohibit this practice.	The amendment was accepted in conference and became part of Public Law 95-142.

NURSING HOMES

Committee on Aging Action	*Status*
1. On August 31, 1976, Senator Moss released a General Accounting Office audit which pointed to shortcomings in Federal regulations with respect to the $25 monthly personal needs allowance for patients in Medicaid institutions. GAO examined nursing homes in five States and found abuses of patient funds in each State. Senators Church and Domenici transmitted the GAO audit in March 1977 to the Ways and Means Committee, the Interstate and Foreign Commerce Committee, and the Senate Finance Committee.	Senator Moss introduced a bill (S. 1572) in the last Congress to protect patient funds, requiring that full records and vouchers be kept. S. 1572 also prohibited the comingling of funds. The Senate Finance Committee added a provision to the Medicare-Medicaid Anti-Fraud and Abuse Amendments to require Medicare and Medicaid facilities to maintain a system to assure proper accounting of patient funds. This measure was incorporated in Public Law 95-142.

NUTRITION

Committee on Aging Action	*Status*
1. S. 1272 (National Food Stamp Reform Act for the Elderly (Church and Melcher)—(a) eliminates the purchase requirement for food stamp recipients, (b) permits Supplemental Security Income and Social Security beneficiaries to apply for and be certified for food stamps at a local Social Security office, and (c) authorizes certification on an annual basis for SSI and Social Security beneficiaries.	Similar provisions included in S. 275 (Food and Agricultural Act of 1977). President Carter signed S. 275 into law (Public Law 95-113) on September 29.

OLDER AMERICANS ACT

Committee on Aging Action	*Status*
1. Senators Church and Domenici wrote the Secretary of Health, Education, and Welfare on June 7 to emphasize that Congress intended the Title V multipurpose senior centers program to permit funding for limited expansion of senior centers.	The Department of HEW approved final regulations on June 24, permiting Title V funds to be used for limited expansion of senior centers.
2. H.R. 7555 (Fiscal 1978 Labor-HEW Appropriations Act)—includes $508.75 million for the Older Americans Act; Area planning and social services, $153 million; model projects, $15 million; administration, $19 million; training, $17 million; research, $8.5 million; gerontology centers, $3.8 million; senior centers, $40 million; nutrition, $250 million; National Information and Resource Clearing House, $2 million; and Federal Council on the Aging, $450,000. Senators Chiles, DeConcini, and Brooke are members of the Appropriations Committee. The Senate Committee on Aging staff worked closely with the Appropriations Committee staff to provide information to justify funding for the Older Americans Act.	The House and Senate approved H.J. Res. 662 on December 7 to continue funding for Labor-HEW programs through fiscal 1978. Programs under the Older Americans Act would be continued at the conference agreement levels for H.R. 7555 (Fiscal 1978 Labor-HEW Appropriations Act).

CONGRESSIONAL ACTIONS ON SENATE COMMITTEE ON AGING PROPOSALS FOR OLDER AMERICANS—Continued

SENATE REORGANIZATION

Committee on Aging Action	*Status*
1. Amendment (Church, Brooke, Chiles, DeConcini, Domenici, Melcher, Muskie, Percy, and 43 other Senators) to S. Res. 4—continues the Committee on Aging as a permanent committee.	Senate adopted amendment on February 1 by a vote of 90 to 4.

SOCIAL SECURITY

Committee on Aging Action	*Status*
1. Amendment (Church, Domenici, Chiles, Melcher, DeConcini, Brooke, and Percy) to Social Security Financing Amendments of 1977 (H.R. 9346)—authorizes Social Security cost-of-living adjustments—in January and July—provided the consumer price index increases by at least 4 percent semi-annually from February to August (for the January adjustment) and from February to August (for the July adjustment).	The Senate adopted the amendment on November 4 by a vote of 50 to 21.
2. Church Amendment to Social Security Financing Amendments of 1977 (H.R. 9346)—repeals the earnings limitation for beneficiaries aged 70 or older, effective in 1982.	The Senate adopted the amendment on November 4 by a vote of 59 to 28.
3. Chiles Amendment to Social Security Financing Amendments of 1977 (H.R. 9346)—eliminates the monthly aspect of the retirement test for Social Security beneficiaries.	The Senate adopted the amendment on November 4.
4. DeConcini Amendment to Social Security Financing Amendments of 1977 (H.R. 9346)—(a) allows blind persons to qualify for disability benefits if they have six quarters of coverage and (b) removes the earnings limitations for blind persons.	The Senate adopted the amendment on November 4.

SUPPLEMENTAL SECURITY INCOME

Committee on Aging Action	*Status*
1. S. 1915 (Church)—(a) exempts disaster assistance as a countable resource for nine months after SSI beneficiaries receive these payments because of a Presidentially-declared disaster (the Secretary of HEW would have authority to provide an extension of time for good cause), (b) excludes as countable income any interest earned on disaster compensation payments for nine months (the Secretary would have authority to provide an extension for good cause), (c) makes permanent a measure to exempt disaster assistance from being included as countable income for SSI purposes, and (d) makes permanent the authority to allow SSI recipients to continue to receive their full benefits for 18 months if they are forced to move into the household of another because of a Presidentially declared disaster.	The Senate adopted S. 1915 as an amendment to H.R. 3387 on October 17. House agreed to Church Amendment on October 25. President Carter approved this legislation (Public Law 95-171) on November 12.

TAXATION

Committee on Aging Action	*Status*
1. Amendment (Church, Domenici, Chiles, Glenn, Melcher, DeConcini, Brooke, and Percy) to Tax Reduction and Simplification Act (H.R. 3477)—gives persons 65 or older the option of claiming for taxable year 1976 the former retirement income credit or the new elderly credit, whichever is greater. Nearly 165,000 older taxpayers will receive refunds, averaging about $182, under this amendment.	Senate approved the amendment by 97 to 1 on April 26. The amendment became law (Public Law 95-30) on May 23.
2. Church-Chiles amendment to Fiscal 1978 Treasury-Postal Service Appropriations Act (H.R. 7552)—increases funding from $500,000 to $800,000 for the Volunteer Income Tax Assistance program. This measure would provide tax counseling assistance to an additional 240,000 taxpayers, including 100,000 older persons.	Passed the Senate on June 20. The amendment became law (Public Law 95-81) on July 31.

TRANSPORTATION

Committee on Aging Action	*Status*
1. S. 459 (Church and Melcher)—authorizes reduced airline fares on a space-available basis for individuals (a) 21 years of age or younger or (b) 65 years of age or older.	The House passed (February 22) H.R. 27, which would permit the Civil Aeronautics Board to approve reduced air fares on a standby basis for persons who are (a) 60 years or older and retired, (b) 65 years or older, or (c) handicapped. The House later incorporated this measure in H.R. 6010. House and Senate conferees agreed to this provision. The Senate (on October 28) and the House (on November 2) agreed to the conference report on H.R. 6010. President Carter signed H.R. 6010 into law (Public Law 95-163) on November 9.

WORLD ASSEMBLY ON AGING

Committee on Aging Action	*Status*
1. S. Res. 238 (Church, Chiles, Brooke, DeConcini, Percy and Glenn)—requests the President to instruct the United States delegation to the United Nations to work with delegations of other nations to call for a World Assembly on Aging and a World Year on Aging not later than 1982.	The Senate passed S. Res. 238 on October 5. The House of Representatives passed a companion resolution (H. Res. 736) on October 31.

IN DEFENSE OF IDENTITY CARDS

Mr. PACKWOOD. Mr. President, last year, at my urging, the Select Committee on Small Business performed a field study and held hearings on possible legislation to bar illegal aliens, or as they are sometimes called, "undocumented workers," from taking American jobs. On September 29 this year, I placed the results of that study and hearings in the RECORD.

One of the study's major conclusions—and one that I incorporated in my proposed Alien Employment Act, S. 993, is that we develop an identity-checking system that gives every U.S. employer a concrete method to establish the identity of any job applicant. In short, we must have a foolproof "right-to-employment" card, such as the social security card, to be shown at the time of employment.

The creation of a national identity card has raised vital questions whether this is an intolerable infringement on our civil liberties or an outright assault on the American right to privacy. In defense, I argue that it is neither. As William F. Buckley recently pointed out in the Washington Star, the abuse is not in the card, but in the uses to which it is put. I recommend a reading of Mr. Buckley's defense to my colleagues and I ask that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Nov. 1, 1977]

IN DEFENSE OF IDENTITY CARDS

(By William F. Buckley, Jr.)

I am associated, in one of my lives, with what the professionals call a "little magazine." It is a journal of conservative thought and opinion, a small chapel filled with jeweled objects on which the season's light refract through stained glass windows wonderfully, variously, inexhaustibly, illuminating the truths we live and die for. The tabletkeepers of that magazine received an afflatus recently, causing us to come out in favor of a national identity card, and we woke the next day to find ourselves surrounded by the faithful, hurling objects at us, charging that we had profaned the very foundations of our church. It is un-American to have an I.D.

That is, in my judgment, a venture in ideological mystification. What is un-American is the invasion of privacy. The documentation of individual Americans is not in itself a violation of privacy. What is done with that documentation is what matters.

Before we had a federal social security act, we did not need federal social security numbers. It would be chaotic to attempt to do without social security numbers; and, so far as one can judge, Americans nowadays accept not only social security, but social security numbers; and there has been no abuse. Before the age of passports, there were no passport numbers; but there is no rational resentment of passports nowadays, if it is conceded that the identification of the individual is important.

Which brings us to the critical question. Much having been written on the problem of immigration, the subject of an identity card arises. It appears that there is available a technology for the manufacture of an identity card that is virtually proof against forgery. By definition, anything produced by craft can be reproduced by craft: so that although it is unsafe to say that the contemplated identity card will be absolute proof of the identity of its holder, experts assure us it would take the resources of a superpower to duplicate it.

What have we got, if we have an identity card? A means not of damming the tide of immigrants coming in over the Mexican border (primarily); but a means of greatly reducing their number. The population problem in Mexico is as severe as anywhere in the world. I was a student in Mexico when the population of the country was 22 million. The woman was born in 1975 (I quote a Mexican authority) who will become the mother of the 100-millionth living Mexican.

The barometric differences in the economy of the American sunbelt, and of the north country of Mexico, is of the kind that causes tidal waves. If it is true that there are already seven or more million illegals in the United States today, then they are already inundating us: but the floods lie ahead.

An identity card is not the solution, it is merely one device to aid in the regulation of one problem. The presumptive philosophical objections to it ought to be analyzed. If we believe that a country has the right to regulate citizenship by a rhythm suitable to its own priorities, then it follows that a country has the right to seek the means of distinguishing between those people within its frontiers who are citizens, and those who are not.

An identity card is, of course, the kind of thing one associates with totalitarian regimes like Russia's and China's, and despotic regimes like South Africa's used for the purpose of doing things no state should ever be permitted to do. But that is a contamination not of the card, but of the uses to which it is put.

This distinction—as we move cautiously into the question of what to do about the illegals—we ought to keep clearly in mind. It would have the effect of causing the armies beleaguering our little magazine to pack up, and go home.

JUSTICE FRANK ROWE KENISON RETIRES WITH "THE RESPECT OF THE ENTIRE JUDICIARY"

Mr. McINTYRE. Mr. President, on November 2, 1977, Frank Rowe Kenison retired as chief justice of the New Hampshire Supreme Court, thus closing a 25-year career of judicial leadership marked by dedication and outstanding service to the State of New Hampshire, to the United States of America, and to justice. I would like to take this opportunity to share with my colleagues the inspiration of this fine man's life and to offer a personal tribute to him.

Frank Kenison, born and brought up in a small town in his native State, has devoted his entire life to the cause of law and justice in New Hampshire. After admission to the New Hampshire bar in 1932, he joined his father's law practice, but was soon elected to the office of county solicitor. In 1937, he became the State assistant attorney general and continued his rising career in public law with two terms as New Hampshire's attorney general from 1940 to 1942 and again in 1945 and 1946, serving in our country's Armed Forces in the interim. In 1946, Justice Kenison was named to the New Hampshire Supreme Court, the leadership of which he assumed in 1952.

During his distinguished tenure on the supreme court, he made substantial progress toward improving the State legal system, bringing it to the fore among the courts of this Nation. As a firm believer in the crucial importance of the judiciary within the framework of our democratic system of government, he strove, always, to apply the principle of the law with a fair and even hand.

A hallmark of the Kenison court, one from which all of us might take good counsel, was the clear and concise language of the chief justice. He believes that the ordinary citizen ought to be able to read and understand the decisions of the judiciary. This conviction is a direct extension of the judge's down-to-earth personality, once demonstrated by his acceptance, as a young lawyer, of a moose head for payment of a legal fee.

Chief Justice Kenison always maintained a strict standard of judicial responsibility, one which has kept the court removed from the tangles of politics and contributed greatly to respect for the integrity of its decisions.

The accomplishments of this man are too numerous and varied for individual citation. But prominent among his many achievements was consolidation and unification of the body of New Hampshire law and its administration.

Although Chief Justice Kenison no longer will participate in the decisions of the New Hampshire Supreme Court, his legacy of considered, able, and nonpartisan judicature will continue to influence and instruct the American, as well as the New Hampshire, judiciary process.

I was delighted to learn that Judge Kenison now plans to teach at the Franklin Pierce Law Center in Concord, N.H., for this new role will extend his remarkable and wholly positive impact upon the practice of law and the judicial process.

The late U.S. Chief Justice Earl Warren once said of Frank Rowe Kenison:

> He is one of the small galaxy of Supreme Court Justices who are spending their summers and all of their unoccupied time with trying to teach methods and means for advancing the cause of justice—and he has the respect of the entire judiciary of this entire nation.

Mr. President, as I salute the character and the career accomplishments of this most excellent of men, I ask unanimous consent to have printed in the RECORD a sampling of the press tributes that appeared in New Hampshire publications at the time of his retirement.

Specifically these are: an editorial that appeared in the Concord Monitor of October 29, a front page article by Cynthia Kyle in the October 31 issue of the Concord Monitor, and the pertinent passage of an editorial in The Valley News November 1.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Concord (N.H.) Monitor, Oct. 29, 1977]

JUSTICE KENISON'S TENURE EXPIRES

Chief Justice Frank R. Kenison of the New Hampshire Supreme Court reaches the mandatory retirement age of 70 on Tuesday. He leaves the state's highest tribunal a legacy of fairness, integrity and compassion that it will have to struggle to maintain.

Justice Kenison is a compact man with an easy smile and a perpetual twinkle in his eye. His friendly demeanor masks an intellectual toughness and determination that have guided the Court to the zenith of national respect.

He was named to the Court 31 years ago and has presided over it as chief justice for the past 26 years. His departure marks the end of an era and the begining of an uncertain one for the Supreme Court. The naming of his successor is locked in political turmoil.

Though it's doubtful he would acknowledge it, that must disturb him. For if one thing has characterized the Supreme Court under Justice Kenison's leadership, it has been the absence of political considerations and the anticeptic independence of the state's judiciary from influence by the executive or legislative branches.

He thus has become known, not only in New Hampshire, but throughout the nation, as the giant of New Hampshire's judiciary. Twice he was suggested for appointment to the U.S. Supreme Court. But because those appointments are made with a finger in the political wind, he never was nominated. New Hampshire is simply too small.

Justice Kenison came to Concord in 1937 from his home town of Conway where he practiced law briefly with his father and became the Carroll County solicitor.

He was named as an assistant attorney general—the only one—and three years later was appointed attorney general, at $4,000 a year.

Despite serving as chief justice longer than anyone else in the state's history, he never lost his folksy touch. One of his pet peeves always has been the stiff formality of legal language. Thus his opinions have been sprinkled with "street talk" that any citizen could understand.

He also has been noted for finding imaginative ways of dispensing justice within the framework of bad law. He has sought to sustain principles rather than adhering slavishly to the letter of an ill-conceived statute.

He has been a defender of the rights of the individual caught in the web of a burgeoning government. And we know first-hand he has been an activist in promoting the need for the public better to understand the judicial system.

Justice Kenison has fought quietly—for that is his way—for the unification of the court system over which he has exercised administrative control. He has sought to do away with local court "fiefdoms" to the end that all of the state's courts will be unified "so the left hand of one knows what the right hand of the other is doing," as he once said.

Progress has been significant, but slow. The recommendations of a $200,000 court system study even now are being put into practice, but it will be up to the legislature to finish the job.

His national stature is attested by the fact he has been given five honorary degrees; he was on the faculty of the Appellate Judges' Seminar at New York University Law School for 13 years and has taught at the University of Chicago Law School and at Boston University Law School, from which he graduated in 1932.

Has also has, or had, his share of idiosyncracies. He considers fiddle head greens—the tops of young ferns—a gourmet's delight. And he used to smoke Havana cigars, until they became unavailable, to the distress of his wife Loretta, who used to boot him out of the house when he lighted up.

Said a neighbor who witnessed this episode: "He looked like the engine of a Concord-Claremont railroad train, walking down the street."

The New Hampshire judiciary is losing its leader and the state is losing the services of a man who has brought us honor, pride and a toehold on integrity we hope never will be dislodged.

[From the Concord (N.H.) Monitor, Oct. 31, 1977]

Chief Justice Retires

(By Cynthia Kyle)

Frank Rowe Kenison is 70 years old today. He is celebrating by retiring as chief justice of the N.H. Supreme Court.

Kenison will change his daily routine from ruling on laws to advising and teaching about his progressive opinions which have been praised for cutting clearly and concisely to the heart of legal disputes.

"Protecting the public from unconstitutional government action is one of the judicial system's noblest functions," says Kenison who has taken much of that responsibility during the past 31 years.

Top state officials from both political parties, as well as the state's congressional delegation, twice tried unsuccessfully, in 1969 and 1970, to persuade then-President Richard Nixon to nominate Kenison to a U.S. Supreme Court seat.

Former U.S. Supreme Court Justice Earl Warren called Kenison "one of the small galaxy of Supreme Court justices who are spending their summers and all of their unoccupied time with trying to teach methods and means for advancing the cause of justice."

The key, Kenison says, is not to let personal opinion get in the way of the law. You shouldn't give any consideration to whether the decision will be popular or unpopular. You've got to keep yourself out of it."

"The law has to move," says Kenison, who shies from calling himself a strict constitutionalist, but admits that the more than 200-year-old document is his first reference for cases.

"The law can't stay static forever."

The son of an Ossipee Superior Court clerk who practiced law, Kenison originally aspired to the pulpit, not the bench. By the time he entered Brewster Academy, a legal interest had replaced the religious one.

From there he graduated to Dartmouth College in Hanover and Boston University Law School. His climb up the legal ladder started at the bottom: he went from Carroll County Solicitor in 1935 to assistant attorney general in 1937 and attorney general in 1940.

The Conway native who once accepted a moose head in lieu of a fee has come a long way to the carpeted halls and plush offices of the state's highest court.

During that time, he says an increasing number of citizens have sought the courts for protection from a burgeoning government and predicts that trend will continue.

"Government is getting so big and so bureaucratic. We have to have a break somewhere," he says.

The courts are also facing disputes once settled without their intervention.

"So many cases today get into the courts that never got there before. I think citizens today are more concerned about their rights I think they're getting that redress."

[From the Valley News, Nov. 1, 1977]

Frank R. Kenison

Frank R. Kenison was born Nov. 1, 1907. That makes him 70 years old today, the mandatory retirement age for state Supreme Court justices in New Hampshire.

His retirement as chief justice has been effective since Saturday, the end of one era and the uncertain beginning of a new era for the Supreme Court.

It is ironic that one of the chief hallmarks of the Kenison court, its sturdy independence and freedom from political pressure, should be one of its qualities first threatened at his retirement.

Mr. Chief Justice Kenison, a 1929 Dartmouth graduate, received his law degree from Boston University and practiced in his home town of Conway. He served as Carroll County solicitor, state assistant attorney general and attorney general before his appointment as associate justice in 1946. He had been chief justice since April 29, 1952.

In the past quarter century, he has brought the court closer to the average person by encouraging plain talk and less "legalese" in judicial decisions, by promoting public understanding of the judicial system and by upholding broad legal principles rather than niggling technicalities.

"Legalistic prose, if pursued to its logical extreme, is an invitation of the devil. We get our thoughts frozen into cramped confined cabins," he once commented.

Among other things, he will be known for the way he elevated the stature of the state Supreme Court to national prominence, for the unification of the court system, and for his studied indifference to political influences even while ruling on volatile, partisan legislation.

Associate Justice John W. King of the New Hampshire Superior Court, while governor, wrote in the Boston University Law Review dedicated to Chief Justice Kenison:

"The tone of the judicial-legislative-executive relations in New Hampshire has in great part been molded by Judge Kenison. He has taken a strong position in matters of importance to the judicial branch while disassociating himself from the issues and squabbles and arguments inevitably involved in partisan legislative proposals. The result has been a respectful isolation of the judiciary from partisan politics, and a bipartisan support for matters advocated by the Chief Justice."

TOKAMAK FUSION TEST CENTER

Mr. CASE. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from New Jersey (Mr. WILLIAMS) relating to the recent groundbreaking for the Tokamak Fusion Test Reactor, together with an attachment thereto.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Statement by Senator Williams

My warmest congratulations are extended to the men and women of the Princeton Plasma Physics Laboratory on the recent groundbreaking for the Tokamak Fusion Test Reactor. The experimental effort in fusion energy is of utmost importance to the Nation and, indeed, the world. Successful demonstration of sustained fusion energy production could dramatically alter our Nation's energy policies, and that is why those of us in Congress who support magnetic fusion development will work to maintain the high priority of this project. My best wishes to Melvin Gottlieb, Director of the Laboratory, to Lyman Spitzer, whose vision initiated the effort. My congratulations also to the subcontractors Grumman Aerospace Corporation, Ebasco Services, Lawrence Berkley/Lawrence Livermore Laboratories, and Giffels Associates.

As President William Bowen of Princeton noted in his remarks at the TFTR groundbreaking, "Without the support of the Congress, and without the foresight of the U.S. Department of Energy, as well as of its predecessor agency, this collaboration of scientists, of the University, government, and industry would not have occurred. This Laboratory is surely a visible testimonial to such interactions." He also noted the gratitude that all of us feel to those "whose basic research in science and mathematics, extending over many decades, prepared the way for work that is now before us . . . that will occupy many very talented people for additional decades, and that may itself take us in directions no one envisions fully now."

As Chairman of the Committee with responsibility for the National Science Foundation, which supports basic research in the sciences, I join with President Bowen in paying tribute to those many scientists here and abroad whose perhaps unheralded discoveries in the past have led to this exciting and important point in energy research and development. Fusion energy holds enormous potential for the future and promises important benefits for all the world. Mr. President, I include the text of President Bowen's remarks.

The attachment ordered to be printed in the RECORD is as follows:

REMARKS AT TFTR GROUNDBREAKING FORRESTAL CENTER

It is a great privilege for me, on behalf of the Trustees of the University, to welcome all of you to the Plasma Physics Laboratory this afternoon. I am delighted that so many representatives from government, the academic community, the national and international scientific communities, and business and labor are able to be here today to celebrate a very proud moment in the history of this laboratory and a significant event in the United States fusion energy research and development program.

In the most immediate sense we are of course gathered to witness the groundbreaking for particular experimental device—the Tokamak Fusion Test Reactor. It is your good fortune—and mine—that I am not called upon to explain to you recent developments in fusion research—or to discuss such equally "easy" subjects as the economics and politics of energy in the world today or the mysteries of the federal legislative process.

Perhaps I can be allowed, however, to suggest that in a larger sense we are here to celebrate something still more important than even this extraordinary device: a continuing confidence, a continuing faith, in what the human mind can achieve if given the opportunity. I can never think of this Laboratory without recalling how all of this began. Local legend has it that our great friend and colleague, Lyman Spitzer, was skiing in Aspen one marvelously bright and sunny day when he made the mental connection between his knowledge of astro-magnetic confinement and the prospects for fusion on earth. It would be enough to make one want to go skiing—indeed to make us want everyone to go skiing—if only the rest of us could claim even a fraction of Lyman's creativity, not to mention his knowledge of astrophysics.

It is in the nature of great ideas that they occur at odd times and that they surprise us. And in participating in this groundbreaking ceremony today, I hope all of us will feel a renewed debt of gratitude to those whose basic research in science and mathematics, extending over many decades, prepared the way for the work that is now before us—that will occupy many very talented people for additional decades, and that may itself take us in directions no one envisions fully now.

A distinguished alumnus of ours in a very different field—Lewis Thomas, President of the Memorial Sloan-Kettering Cancer Center—has made my point much more eloquently than I ever could. In a beautifully written article on the history of medicine, he demonstrates that the most powerful, practically beneficial, tools of modern medicine—antibiotics, for example—were possible only after scientists had devoted decades of work to understanding the underlying mechanisms. Thus, he notes, "Without the long, painstaking research on the tubercle bacillus, we would still be thinking that tuberculosis was due to night air, and we would still be trying to cure it by sunlight."

In a society characterized all too often by an unwillingness to look ahead, a reluctance to take risks, and an impatience, a commitment to immediate "solutions," that sometimes borders on the pathological, it is encouraging to be reminded today that the speculations of a skier can lead to a program of research that offers the hope of some astounding practical possibilities.

I am meant only to greet you—and that means get out of the way for the speakers—so I shall resist the temptation to use this occasion to talk about another important subject: productive interactions among industry, government, and the academy. Without the support of the Congress, and without the foresight of the U.S. Department of Energy, as well as of its predecessor agency, this collaboration of scientists and technicians, of the University, government, and industry, would not have occurred. This Laboratory is, surely, a visible testimonial to such interactions and, as such, speaks for itself. I hope we shall remember its message, and apply it in other areas. There is so much to be accomplished, without as well as within the natural sciences.

To return more specifically to the Plasma Physics Laboratory, we should recognize that managing these collaborations, giving direction to our efforts, is no easy task. We simply would not be here today were it not for the extraordinary talent—and faith—and determination—of the person who has directed this Laboratory since 1961. It is with the strongest sense of parochial pride that I ask you to join me in recognizing the achievements of Dr. Melvin Gottlieb, Professor of Astrophysics and Director of the Plasma Physics Laboratory.

It remains only for me to say again how pleased I am to be with you this afternoon and to have a small part in this ceremony.

ACCIDENTAL HYPOTHERMIA

Mr. CHURCH. Mr. President, Dr. Robert N. Butler, Director of the National Institute on Aging, and Dr. Richard W. Besdinc, assistant physician in medicine, Beth Israel Hospital, Harvard Medical School, held a press conference on December 6 explaining the details of hypothermia and the elderly's susceptibility to the disease. Persons affected by hypothermia have abnormally low body temperature. It affects many older persons when they are exposed to cold winter temperatures. Hypothermia can be fatal.

Doctors Butler's and Besdine's statements are an excellent warning to all of us, but especially to our older citizens. As we prepare to face what appears to be another extremely cold winter, I think their warnings are most timely. I ask unanimous consent that the statement of Dr. Butler be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ROBERT N. BUTLER, M.D., DIRECTOR, NATIONAL INSTITUTE ON AGING

Winter and cold weather bring many health hazards, ranging from broken bones to frostbite. But for the elderly, even mild cold can trigger a potentially fatal drop in deep body temperature, known as accidental hypothermia.

In general, we Americans overheat our houses. Many of us would be better off with lower indoor temperatures. However, people have different heat requirements depending on their age and health. The old are particularly vulnerable: indoor temperatures of even 65°F may pose hazards for some older people who have diseases of the veins and arteries or are taking certain types of drugs (phenothiazines, commonly used to treat anxiety, agitation, and nausea), or those whose body temperature regulation is defective.

Accidental hypothermia is not new, but recognition of it is recent. Most health care practitioners are not trained in geriatric medicine and do not recognize the signs and symptoms of diseases and other conditions common in old age.

Not only are most health professionals unaware of the hazard of accidental hypothermia, they do not know that rapid rewarming of an elderly hypothermia victim could lead to death, although a younger person might survive. This lack of special training is complicated by the fact that low-reading clinical thermometers, essential to a correct diagnosis of accidental hypothermia, are not readily available in the United States.

Tragically, the victims of accidental hypothermia are not most often the very old, the poor elderly unable to afford adequate heating, and those whose bodies do not respond to cold normally. Dr. Besdine will describe the signs and symptoms of accidental hypothermia in further detail and explain how to recognize the condition and what to do if it occurs.

Obviously, the best solution to accidental hypothermia is prevention. A national energy plan, which would assure adequate supplies of energy for heat and other purposes in years to come, would be a major step toward protecting persons vulnerable to accidental hypothermia. We must also educate both the public and physicians on what is currently known about accidental hypothermia, for their role in prevention is clear.

We hope research will further our understanding of the causes of accidental hypothermia. This knowledge will help physicians identify susceptible individuals and improve the quality of their care.

DEVELOPMENT ASSISTANCE

Mr. HUMPHREY. Mr. President, the Senate Foreign Assistance Subcommittee, of which I have the privilege of being chairman, intends to undertake a major effort over the next few months to review the role of foreign assistance as an important part of our overall U.S. foreign policy toward developing countries. I have felt for some time that we needed new foreign assistance legislation to replace the Foreign Assistance Act of 1961. I continue to feel this is a necessary undertaking.

The President has initiated a vigorous and thorough review of our foreign assistance efforts, and a number of studies have been commissioned to assist in that review. Most of these efforts have now been virtually completed. However, I am somewhat concerned that some of the steam has gone out of this review and that the recommendations we will get from the executive branch may not fully reflect the breadth and scope I think is necessary to place foreign assistance on a sound footing. In fact, we may get little more than a cleanup act, rather than one which really deals with the changes that have taken place in the world since 1961.

The global changes have been extensive. Some have been dramatic and have had a powerful impact on American life—the oil embargo and the 400-percent increase in oil prices dating from 1973 are the most far-reaching. Other changes have been equally dramatic, but have been spread over time—such as the change from colonial territories to independent status for most developing countries. And we are still feeling our way in dealing with the implications of this vast change. Some 80 of the 114 developing countries are newly independent sovereignties.

We tend to overlook some of the less dramatic, but very significant changes in the developing countries over recent years.

A major improvement has taken place in health. This is reflected in the increase in life expectancy in the developing countries, from an average of 32 years just before World War II, to 49 years in the latter part of the 1960's. There has also been some decline in birth rates in the last 15 years—from 40 to 35 per thousand—although not enough of a drop to curtail the population explosion we are witnessing. Illiteracy has also fallen in developing countries from 44 percent of the adult population in 1950 to 34 percent in 1970.

For all their problems, these countries are far more capable of handling their internal affairs and planning their own development than they were 15 to 20 years ago.

These changes were accompanied by a highly favorable growth in GNP per capita in the developing countries. Their average growth rate was 3.4 percent from 1950 to 1975, faster than either the developing countries or industrialized nations have grown in any comparable period before 1950. This growth rate reached a remarkable 6.6 percent per annum in the first 3 years of the 1970s before oil price increases and the world recession slowed their economic growth.

But this major progress tends to mask very serious problems. The poorest developing countries grew much more slowly than the middle income developing countries. The large, poor countries of South Asia and most of Africa, with a total population of over 1 billion, grew at less than 2 percent on a per capital basis between 1950 and 1975. Even in the middle income developing nations there are large groups of very poor people who have had few, if any, of the benefits of rapid GNP growth. It is this large group that is the special target of our bilateral aid program, primarily as a result of the new directions focus legislated by Congress in 1973. The new directions mandate emphasizes the development needs of the poor primarily on improving food production and nutrition; health and population planning; and manpower training and education. We recognize that programs in these areas are less easy to devise and administer than are capital intensive projects. But the poor majority require special attention because they have been bypassed by much of the growth in developing countries.

We are fortunate that there is a considerable body of recent thought in writing on the subject of development and the appropriate U.S. role. Some of this has been stimulated by the President's review of foreign assistance and the concern of Congress with our growing interdependence with developing countries. I intend to share some of this material with my colleagues in the hope that this will stimulate their thinking prior to Foreign Assistance Subcommittee hearings next year on foreign aid legislation.

There are a large number of issues which must be considered in the process of rationalizing our foreign assistance efforts. At the outset, it is important to understand the problems and prospects of the Third World. Only when we understand something of the totality of our economic relations with the Third World will we be able to see clearly the particular role of foreign assistance, which is only one of many aspects of our overall foreign and economic policy.

This will be the first of a number of such reports to my colleagues on this issue, beginning with the general issues and going on to more specific topics, such as food, population, technology, security assistance, human rights, and arms sales to developing countries.

An excellent overview of U.S. relations with the developing countries was recently published by the Atlantic Council Working Group on the United States and the Developing Countries. The Working Group was chaired by Ambassador Edwin Martin. The first chapter, which deals with U.S. interests in the developing countries, is a very helpful introduction to the subject.

Mr. President, I ask unanimous consent that this material be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE U.S. INTEREST IN DEVELOPING COUNTRIES

WHO ARE THE DEVELOPING COUNTRIES?

The developing countries are 114 sovereign countries, all members of the United Nations and most of its specialized agencies. They are rather closely united in a group called "the 77" from the number of its members when first organized in 1964. The 77 represent around 2 billion people, over 50 percent of the world's population—two-thirds if one includes the People's Republic of China, which although not a formal member of the group usually supports them in U.N. forums. Although demographic forecasting is a hazardous occupation, by the year 2000 the countries now belonging to the 77 will probably represent around 5 billion of the 6.5 billion people then on earth, as their population is growing about three times as fast as that of the developed countries (see figuro 1).

It is true that most GNP measures tend to exaggerate differences in income levels, but they do correlate rather well with such other basic criteria of modernization as literacy and health. In these terms, most of the people in developing countries live in conditions of severe poverty. Preliminary estimates for 1975 for 100 countries, all members of the World Bank, illustrate this fact as well as the diversity in the economic levels attained by developing countries. Despite continuing inflation in dollar terms, twenty-eight countries were still below $200 GNP per capita—including India, Bangladesh, Pakistan, and Indonesia. 1.2 billion people lived in these twenty-eight countries, 60 percent of those of the developing world (excluding China).

Eight of these countries had not even reached $100 GNP per capita: six in Africa south of the Sahara and two in Asia. At the other extreme, the countries with over $1,000 GNP per capita (which used to be considered before inflation and the oil price rises as the really wealthy LDCs) numbered thirty-one in 1975, with thirteen exceeding $2,000 GNP per capita. Most of the latter group were oil exporters. But even in the thirty-one richer countries a substantial portion of the population lived in absolute poverty.

The differences in incomes per capita among countries also translate into major differences in income and welfare levels among regions. In 1973 the per capita income in the Middle East was over five times, and that of Latin America over four times that of Asia. Africa was ahead of Asia by around 40 percent.

The range of population size is even greater going from several tens of thousands to nearly 500 million in India.

With one-country, one-vote rule that prevails in most U.N. agencies, the developing countries can pass any resolution they can agree on by a two-thirds majority or better. And they do agree rather often. By their numbers they thus have the potential to block reform of U.N. voting procedures as well as any attempt that might be launched to replace the United Nations with a new set of global institutions in which their voting power would be substantially weakened.

WHAT ARE THEIR GOALS?

To most newcomers to the task of dealing with developing countries, the salient negotiating problem is not their numbers but their relative unity, especially in international forums, when facing the industrialized world. The forces that unite these 114 countries can best be described in terms of common goals and common problems. Those goals and problems must be understood if responses to the varying proposals being made by the LDCs are to be chosen wisely. Some of the bases for their unity are more profound than others, and the unity is stronger on some issues than on others, but it is nonetheless a remarkable factor on the international scene. The depth of feeling that lies behind this unity was revealed by its persistence despite the strains of the 1973 oil price increase, impoverishing all but a handful of LDCs and making a few OPEC members enormously rich.

In attempting to explore what their goals are, it must be understood that outsiders operate at a handicap in interpreting their beliefs and ambitions and that any brief description of goals must gloss over many differences in emphasis among the countries involved. Nevertheless, the following represents a set of widespread and important beliefs of which we in the developed world must take some account in choosing our policies.

We may take it as a tribute to the developed nations, perhaps unintended, that all developing countries, having achieved their first aim of political independence, as a matter of national policy are committed to "modernization" in a "Western" but nonideological sense. They translate modernization largely into improving their material well-being and enlarging their power, prestige, and the sovereign independence of their nation. Which comes first will vary from country to country and over time, though we are often puzzled by how frequently they give political goals priority despite their poverty. However, the two objectives are generally considered as mutually supportive. Ideologies, both political and economic, tend to be chosen because of their expected contribution to this modernization process rather than for their specific content. Commitment to a larger or smaller public role in the economy, to greater or lesser equality in incomes, and to more or less authoritarian governments, becomes a secondary issue in the face of these two objectives. Hence the relative ease with which governments with sharply different outlooks on issues collaborate in the 77.

WHAT ARE THEIR COMMON PROBLEMS?

Developing country unity has been forged from not only common goals but also common problems. There has been a widespread sharing of colonial rule in the past and, even more importantly, a common belief that their present poverty and national weaknesses, as well as their difficulties in achieving their current goals, are primarily due to the actions and attitudes of the "all-powerful" richer countries.

This is an obvious oversimplification. Poverty and dependence have many causes, with each country afflicted by its package of handicaps, even though some of them are rather widespread. The following presentation must be judged leniently, therefore, as not applicable with precision to any one country but rather a broad-brush picture of an evolving situation.

1. Being located for the most part in tropical or subtropical zones has given the developing nations extremes of rainfall. Where heat and no frost are combined with high humidity, people, animals, and plants are attacked by their enemies with a virulence seldom experienced in temperate zones. It has been suggested, with considerable justification, that we should refer not to the North-South but to the temperate-tropical dialogue.

2. Their cultural heritage is also often a serious handicap to development in the GNP terms by which it is commonly defined. The values and attitudes required to operate a modern industrial society are quite special and specific. Our relative success in the West is the result of a complex process of indoctrination and selection over many generations. The societies of developing countries have their own value systems, of course, often more ancient than ours and often expressed in complicated institutions and patterns of required behavior. But they often stress different virtues than those required to operate a modern industrial society, due largely to the absence of opportunities to benefit from any others. It is the interaction between these local value systems and alien ideas, manners, and outlooks introduced by the pervasive international communication media which have produced the serious cultural conflicts seen in most of the developing countries in pursuit of modernization. These conflicts are at the origin of many of the mistakes and contradictions that we are prone to criticize. They are to be regretted—although we have to be careful about who can cast the first stone—but they are also a sign of change. All change may not be constructive but without it there would be no hope of progress.

3. Most of the developing countries have become active seekers of wealth and power on the world stage only after World War II. For the majority of them, the independence they achieved in the postwar period was a necessary prerequisite for progress. This has meant that they are all trying to make a place for themselves in a world system dominated for centuries by the present industrial countries. This results in handicaps of three basic kinds:

(a) Their military and economic power enabled the developed countries to colonize much of the world and use its resources as they saw fit. Even after most colonies became independent and developed countries were outnumbered by the developing world at both the country and population level, they managed to maintain essential control over global political and economic relationships. Changes have taken place mainly because we chose to make them, not because we were forced to do so. The rise to positions of power of the Communist countries may have weakened our global political position but not our economic one.

We defend the principles of current world economic arrangements against a New International Economic Order on the grounds that the former have worked and stood the test of time. If one could give an Indian landless laborer an idea of how an average family lived in an average developed country, might he not consider that the system had worked better for some than for others, including himself? Or if one were to explain to a Pakistani textile worker the operating principles of the so-called voluntary textile agreement, might he not conclude that its quotas on his country's exports were fixed less in accordance with an international order based on the principles of free market competition than on the basis of interference with the market by a few developed countries to protect the profits and jobs of their textile industries at the expense of their consumers?

Or take the question of migration. During the last century, the developed countries were able to relieve the pressure of a growing population on job opportunities, a pressure far less than that faced today by nearly all developing countries, by emigration to any place in the world, including North and South America, Australia, and New Zealand. Now all of these countries face the overpopulated developing ones with various kinds of barriers to emigration from them. Who will be admitted is usually dictated wholly by the needs of the developed, not the developing countries.

It was our long-standing confidence in our ability to dictate the rules of the game that made the OPEC oil price escalation and then the OPEC embargo such a profound shock to us, with implications going well beyond oil. So far this is a rather isolated breakthrough. In general, whether it is a question of aid or trade or private investment or price structure or immigration or financial arrangements, the developing countries feel with some justification that they remain the recipients of favors within bounds set rather rigidly by the developed countries.

(b) A far more serious handicap than these overt pressures has been the unintended example our existence and success has set for them. Desire for wealth or power or both seems to be almost a universal trait. The consequences for the developing countries have been an almost instinctive desire to copy Western societies, broadly and even in some detail. They are seldom able to put together an accurate picture of what we are or of the path by which we got here. Nevertheless, our visible success in achieving the mutually desired goals makes it mandatory for them to copy us as best they can. The effort to do so has created serious problems for them because our current ways of doing things are often inappropriate to their needs and opportunities. Moreover, our societies clearly cannot be copied as they now exist without enormous distortions. There are necessary sequences by which progress in one area is made possible only by progress in others.

We, of course, share some of the blame for we seldom understood the historical irrelevance to the LDCs of some of our current institutions and practices, though often it was a case of our having nothing else to offer. For example, one of the fundamental aspects of our societies which they have sought to copy has been our capital-intensive, high-technology system for producing and distributing goods and services. Whether they looked at market-oriented or centrally-planned economies the approach was the same. The wealth produced by these means was many times that enjoyed by any society in previous world history. The desire to enjoy similar abundance was irresistible and generated the often described "revolution of rising expectations."

However, there was obviously a serious timing problem. They not unnaturally wanted quickly what we had achieved by centuries of slow accumulation of capital and technology.

To create in a few decades an advanced industrial economy has been enormously difficult, given the poverty which most developing countries suffer. From this situation derives the constant pressure for greater transfers of resources from developed to developing countries by any means in order to supplement domestically generated savings and nationally earned foreign exchange, even if the burden of accumulated debt grows to levels that threaten to become unmanageable. In general, our economists—not our businessmen—were the first to see that developing countries were usually short of capital and had a surplus of labor, while our situation was the reverse. The least costly technology for them—economically and socially—seemed, therefore, to be a labor-intensive one. But developing countries often changed that we did not want them to enjoy the benefits of our high technology and were actually trying to limit their export potential by urging on them outmodel ways of doing things.

While most leaders of developing countries still object to what they regard as second-best answers to their needs, a few have been attracted by the independence that the People's Republic of China has achieved by its stress on small-scale and labor-intensive technology and a high degree of national self-sufficiency. Whether China's cultural background, its large area and population, and its autocratic political system make its approach unique and not easily transferable to other countries, as some of its leaders have been suggested, remains to be tested. In theory, at least, the prognosis for easy copying of the Chinese approach must remain poor, especially in view of increasing evidence that the Chinese themselves are finding it's necessary to modify their policy of full self-sufficiency.

Another example of out-of-phase development is the population explosion which threatens the progress of most of the developing countries as well as everyone's future well-being. Reflecting our humanitarian instincts, the health experts of the developed countries undertook in the postwar period a major and successful attack on several of the more serious endemic diseases. The result of this effort, coupled with modestly rising income levels, was a drastic fall in death rates coming long before economic growth and education had created substantial motivation for the parental planning for the future that is basic to reduced fertility. In the Western world the fall in death rates occurred only in the last half of the nineteenth century, by which time education and income growth had established the necessary conditions for voluntary limitation of family size.

Another example is the effort many have made, mostly unsuccessfully, to copy our democratic forms of government, again with our active encouragement. This has been done despite the slow spread of democracy among Western countries in the centuries since modernization began, and a number of cases of serious backsliding, even in this century. Its successful operation is far from easy. The universal suffrage on which democracy is based was again a phenomenon largely of the latter part of the nineteenth century, when long historical tradition had given the people of most states a strong sense of national loyalty. In addition, primary education was almost universal and the economic situation of the bulk of the population was reasonably satisfactory, or at least constantly improving, under a widely supported economic system, based mainly on private enterprise. Almost nowhere have the developing countries achieved these favorable conditions for the operation of the fairest but most difficult system of government.

To add to their problems of political organization, most developing countries have had to face intense internal and external pressures to choose between capitalist-libertarian and Marxist-authoritarian politico-economic systems. This is a dilemma which the industralized countries did not have to confront in their formative period.

When these factors are all brought into focus, current tendencies to write off developing countries or to disparage aid because of their political or other difficulties, are obviously both unhistorical and unjustified.

(c) Finally, we have taught the world by our example that the symbol and substance of national power lies in military strength. A first fruit of nationhood is an army. Progress in status is often measured by the move from tanks to jet aircraft to guided missiles. Whether we had or have legitimate justification for our enormous expenditures on defense is debatable, although they come out of fat and not out of life itself. But the example is inescapably powerful for others, whether or not they have enemies, external or internal. In fact, the defense budget tends by its weight to create both.

The most conspicuous recent example is the use by several OPEC members of a large part of their increased income from oil exports to add military strength to their economic power though fortunately not at the nuclear level so far. What legitimate national interests, other than a concept of prestige that the West has sanctified, justify such a huge diversion of resources to a nonproductive purpose is hard for a foreigner to perceive.

The result has also been that often the military establishment becomes the first well-trained and well-organized national institution which, coupled with the physical power at its command, makes the military the controlling factor in national political life—whether or not it occupies the formal seat of power.

The military have made useful and often strongly modernizing contributions in many countries, but their profession does not normally equip military officers with the political skills required for responsive as well as efficient government. Moreover, the diversion of scarce resources to purchase their equipment should be regretted, even by those whose exports have benefited so much from it.

HOW MUCH PROGRESS SO FAR?

The nations of the world have been collaborating on the development task for a quarter of a century, yet public confrontation on development issues is sharper now in many respects than in the beginning and most developing countries are still poor and unable to mount an effective attack on their poverty. It is customary in some developed country circles to take as given that the development effort, particularly as promoted by aid transfers, has failed. The developing countries have tended to confirm this negative conclusion by stressing, sometimes stridently and publicly, their lack of success in reducing their poverty.

Is progress as absent as this suggests? There is no simple answer to this question. In the first place, here as in most human endeavors, success must be measured against some standard of achievement. How rapidly the developing countries should have become developed is really the basic issue. What is involved is not a mechanical process of spending so many dollars to raise output by so much. It is in most cases the transformation of a well-rooted society, its institutions, its attitudes, its values, and its human skills.

In this context, it is essential to remember that it has taken the industrialized world four to five centuries, helped by the borrowing of wisdom and experience from the earlier Jewish, Greek, and Roman cultures and of science and technology from the early Chinese and Arab societies, to arrive at the relatively advanced position it occupies in the world of today. In many ways, this heritage was summarized in the Protestant ethical standards formulated in the sixteenth and seventeenth centuries. We should be aware—better than anyone in a developing country could be—of the long struggles, the mistakes and suffering that have produced our present societies. We should also keep in mind that Western civilization has experienced, in our lifetime, the two bloodiest wars in history. The developing countries' not knowing or understanding all this, and our forgetting it, is a major cause of the failure to achieve a common outlook on the present or the future.

On the other hand, the developing countries in their national policies and priorities, and in their individual efforts, have not always been single-minded in their devotion to development. Moreover, they have made mistakes, often against our advice, and have wasted vast resources, some of which we had provided in aid. But if we remember well our own history, we will realize that man is an imperfect animal, that mistakes are a seemingly necessary part of the learning process, including our own as well as theirs with respect to development policies, and that waste, whether on wars or the preparation for wars or simply in conspicuous consumption, still goes on everywhere.

A fair judgment must, therefore, reflect a considerable degree of historical perspective and a willingness to judge others no more harshly than we judge ourselves. But this does not absolve anyone from pressing to improve the effectiveness of the use of resources to meet human needs so long as resources are scarce and so long as so many people must exist deprived of the minimum essentials of life. If we do find the will to continue to help generously with our human and material resources, the progress made in the last twenty-five years by many developing countries would seem to indicate that, despite the difficulties just noted, a truly cooperative effort can achieve worthwhile results in decades rather than in the centuries we needed.

However, it is essential to distinguish *the many* from the rest of the developing countries. The variety of experiences among the 114 countries making up the developing world and the complex of elements that constitute development require that any evaluation of progress give consideration to different measures of development.

The most dramatic success story thus far has undoubtedly been the improvement in health. The evidence is in the great increase in life expectancy, going from a thirty-two-year average in the developing countries just before World War II, to forty-nine years in the last half of the sixties, a rise of over 50 percent. Here, in declining death rates, lies the cause of the population explosion, for birth rates have also been falling but not nearly as rapidly, going from forty to thirty-five per thousand in the last fifteen years.

In the field of education there has also been steady progress in nearly all developing countries. Although much that has been taught in schools has not been as relevant as it should have been to the urgent needs of the developing societies—perhaps partly because it copied too closely our educational system—and women and the rural population have been neglected, a substantial educated class has been created in most countries. The number of people able to read and write has increased greatly, though population growth has prevented an equivalent reduction in the number of illiterates. Nearly everywhere a significant professional group has already been formed, even in countries in which twenty years ago a university graduate was a rarity.

Some 80 of the 114 are newly independent countries. They have organized governments, all of which have already learned to walk and some to run. This is no mean achievement, for the operation of a government is a complicated task, often more complex in a poor country than a rich one, and certainly far more so now than when the United States first began to run its own affairs. Colonial regimes left some helpful institutions and some trained nationals behind, yet both were more often than not ill-suited to perform the tasks of an independent government, committed to development and to playing a role on the world stage. That collapse and chaos have not often occurred is more significant than that many of the new countries are still struggling with bureaucratic inefficiency and corruption. What developed country can claim immunity from these afflictions?

These three factors—health, education, and government leadership—are basic to all else and have thus been dealt with first. Without progress in them, other development goals become almost out of reach. With them, and in a number of cases helped by the possession of valuable natural resources, many developing countries have made great progress in that more easily measurable index of development, GNP growth; in fact enough did so that over the decade of the 1960s, developing countries as a group averaged a 5.5 percent increase per year in GNP in real terms, and in the first three years of the seventies the increase even reached 6.6 percent, substantially better records than the developed world could boast for the same prosperous periods. It represents a remarkable economic achievement.

Nevertheless an outstanding feature of economic change in the developing world since 1960 has also been in unevenness, with the poorest countries, needing growth the most, increasing their GNPs the least. According to the World Bank estimates in the fairly long span of 1960–73, nineteen of the ninety-one developing countries with populations in excess of 1 million people (excluding centrally planned economies, except Yugoslavia) experienced average annual per capita GNP growth of 1 percent or less; nine had absolute declines. As one would expect, none of the nineteen so far possess discovered mineral or oil deposits of importance. At the other end of the income scale, thirty-five countries or nearly 40 percent of the total, have managed to register an average per capita growth rate of over 3 percent per year, ten of them in excess of 5 percent. With population increases ranging from 2 to 3 percent, or even more in a few cases, these are outstanding records. With a population growth rate of only 1.2 percent a year, the U.S. GNP growth rate was 3.1 percent during the same period.

These data underline the important point that not all nations have been helpless before the economic domination or exploitation of the developed world. This is especially reflected in the fact that seven of the ten achieved their outstanding record largely by exports of manufactures to developed countries rather than by the possession of rich mineral resources. In fact, during the sixties exports of manufactures by the developing countries increased at an average rate of 15 per year. As a result, manufactures were 9 percent of their total exports in 1955 and 21 percent in 1973.

The successful 35 countries had an estimated mid-1973 population of 613 million while the lagging 19 counted only 260 million. As might be expected, both the Middle Eastern-North African and Latin American areas are well represented in the successful group—eight and six countries respectively—and less in the second group of relative economic stagnation, one and two respectively. In Asia and Africa south of the Sahara the division of countries is, on the other hand, fairly even.

Particularly significant for future policy is the fact that nineteen of the thirty-five success stories had 1973 per capita incomes of $500 or over and only five had incomes of under $200. On the other hand, of the nineteen states with poor GNP records almost all were under the $200 per capita GNP figures in 1973 (seventeen) and twelve did not even reach $100 per capita that year. Of the nine with negative growth, all but Uruguay and Senegal had per capita GNP in 1975 of less than $150.

Thus over the 1960–73 period the general pattern has been for the middle-income countries to get richer while the poorest countries could improve their GNP per capita only modestly if at all. As a result, the income spread within the developing country group, already wide, has increased greatly in recent years. The joint effort to speed up development everywhere has clearly been vigorous or more successful, or both, in some countries than in others.

The overall success of the LDCs in the 1960–73 period, therefore, must not be permitted to conceal the failure thus far to achieve very much for the 12 percent of the total developing country population who live in these nineteen poorest countries. Clearly we should try harder than in the past to tailor measures to the special economic needs and potentialities of this increasingly disparate group of countries, with special attention to those who are having the greatest difficulty making economic progress. This will become a major point in the discussion of U.S. policy in chapter 3.

Finally a cause for concern, though one not as capable of precise statistical description, has been the persistence of the gap between the rich and poor within nearly all developing countries, regardless of their GNP growth rates. Here too the world community, acting of course through its members, has a challenge which it has not yet met successfully.

The positive results described above have been made possible for the LDCs not only by their own actions but by help from the already industrialized countries. For we have made many positive contributions in addition to the negative effects of our colonial presence cited above. For example:

1. In the postwar period, a substantial volume of financial and technical flow has taken place from developed to developing countries through private and public channels.

In 1973, total public and private transfers from developed to developing countries, net of repayments of principal, were some $33 billion, of which $12.4 was from public funds. Total net transfers from DAC countries added nearly one-fourth to the total export earnings of the developing countries, representing an important increase in their foreign exchange availabilities. For the oil-importing developing countries alone, they were much more significant, adding nearly two-thirds to their export earnings.

DAC transfers also made an important addition to the savings available for investment, especially in the case of the poorer developing countries where savings ratio to GNP necessarily tend to be low. Public bilateral and multilateral net flows were 4 percent of the GNP of the countries with less than $200 per capita incomes in 1973. Savings of these countries average less than 15 percent of their GNP, and public savings are only a portion of this total. Hence the receipt of net public funds from abroad amounting to 4 percent of their GNP is of substantial help to their investment programs. Moreover, the 4 percent figure measures the contribution in purely financial terms, taking no account of the technology and experience transferred with that money. Developed-country aid clearly has played a large and helpful role in providing these poorer countries with the necessary foundation for more substantial progress.

2. The contribution of economic growth in the developed countries to that in developing countries is reflected directly in the growth of the exports of the latter to the former. In the period of unusual prosperity for most of the industrial world from 1960 to 1973, these exports increased nearly fourfold, from $196 billion in 1960 to $750 billion in 1973. Covering the period before the quadrupling of oil prices, only a fraction of this growth can be attributed to price increases. But just as the concessional aid contribution was of greatest importance to the poorer countries, so access to export markets is of particular value to the middle-income states.

For developing countries that do not export oil, export receipts represented $148 per capita for countries in the $500 to $1,000 group but only $15 to the under $300 countries. In 1973 this trade was by far the biggest contribution to developing-country foreign exchange resources, total net receipts as capital or similar transfers amounting to less than half that, $35 billion.

3. Despite the excesses of militarism and the rivalries and bickering among countries that should be cooperating for survival, national loyalties have also had beneficial effects. Given their circumstances, especially those of the countries only achieving independence in the post-World War II period, it has taken and will continue to take large doses of nationalistic fervor to unite populations in a common effort to better their situation through a vigorous development program involving current sacrifices for future gains.

4. The colonial experience, despite many distorting elements and some complete failures in this respect, has given many countries their only trained leadership and a bureaucratic structure without which a national government could not have functioned at the time of its independence. A considerable amount of infrastructure investment was also left behind as well as some productive skills, although usually at rather low levels.

5. Much of the production technology of developed countries has been useful and has saved a great deal of time and effort for the developing countries. Where it would not meet their needs, our scientists, using our analytical procedures and technical equipment, and increasingly supplemented by their own professionals trained in our universities and laboratories, have often been able to produce technology which did.

The novelty of a strong country trying to help a weak one in a relationship which raises enormously complicated economic, social and political issues has required a learning process in which mistakes, as well as successes, have their role to play. Much has been learned, as we have seen, but even in this learning period progress has been far from negligible. In the future we ought to be able to stimulate more development with fewer assistance dollars.

WHY SHOULD THE UNITED STATES HELP?

This is the fundamental question. For all of recorded history up to the past quarter of a century, the usual political relationship between a rich and powerful country and a poor, weak nation was one of domination. This was often accompanied by tribute or, later on, by a colonial connection in which, whatever the balance of economic advantage, undisputed political control was in the hands of the more powerful government.

In the postwar period several factors have contributed to a fundamental change. Without relinquishing significantly their basic position of control, the strong powers have moved on many fronts to help weaker nations become stronger, both politically and economically.

The colonial powers, shaken by World War II and pressed by new forces in their colonies and by anticolonial attitudes in many of the developed countries, were not able to resist the widening demands for political independence. In many cases, it seemed prudent to retire gracefully from the political burdens of governing in order to retain a favorable economic position in the developing countries.

Once the former colonies became independent, long-established cultural and economic ties led public opinion in the former colonial powers to support economic aid and other concessions to the new countries. In addition, there was often a hope that such help could maintain spheres of political and economic influence that would compensate in part for the loss of empire and of global prestige brought by the independence movement. This remains an important though probably diminishing element in policymaking in several of the European countries.

At the same time, the United States and to some extent other rich countries were concerned that the Soviet bloc, and later the People's Republic of China, might take advantage of the poverty, inexperience, and antipathy toward their "capitalist exploiters" of some Third World countries and establish close political ties with them, perhaps even install Marxist governments. In the cold war context of the fifties and sixties, this was seen as a serious problem. It became a major motivation for the benevolent policies of some Western countries toward developing ones.

Although the cold war support for economic favors has not wholly disappeared in the United States and from a long-term standpoint should not do so, it seems to be playing a declining role, reflected in falling amounts of aid in the absence of other justifications that have been persuasive to our political leaders. Partly this may be traced to the spirit of detente, producing less concern about conflicting ideologies, but probably of more importance has been the repeated failure of the USSR or the United States to achieve solid power positions in the developing countries through aid programs. Chastened by the examples of Indonesia and the United Arab Republic, the USSR seems to have recognized the weakness of aid as a tool for this purpose and is concentrating her relatively modest aid effort outside Communist countries on Turkey and Afghanistan. We in the United States also have lost some but not all of our illusions about the ability of our aid programs to influence domestic political ideologies directly and in the short term.

Nevertheless, there remains a deep concern shared by thoughtful people in the developed countries that as long as large blocs of people exist in absolute poverty alongside prospering population groups in their own country or elsewhere, there will be a growing risk of political upheavals that could lead to regimes antagonistic to the societal values to which we in the West attach the most importance. That concern is eminently justified. Such regimes would represent a threat to us regardless of the labels they might give themselves or with what countries they might align themselves.

A related argument for positive policies toward particular developing countries, especially in the United States has been that it is useful to secure influence in settling local disputes, sometimes disputes with important implications for big-power rivalry, such as in the Middle East. Somewhat similar has been the use of aid to try to "buy" favorable attitudes of particular countries on controversial international issues in the United Nations or elsewhere. In neither case has experience so far been encouraging, factors other than short-term economic gains or losses being nearly always more important to decisions affecting national interests than aid flows.

In some cases it may even be counterproductive, for the appearance of changing votes as a result of aid pressures, even when the change is due to the logic of the facts of the case, is sure to produce accusations of sellout from both domestic opponents of the developing government and many of its 77 colleagues, thus making more difficult the very change in position that was sought. Yet the temptation continues, again especially in the United States with adverse effects on the efficiency with which aid is used and hence on public support for aid budgets.

Throughout the postwar period, a growing concern for social welfare and equity in the developed countries has been reflected in greater emphasis on social justice and humanitarian needs in justifying aid appropriations. Undoubtedly improved travel apportunities and more vivid media coverage have also created an awareness of and concern about distant suffering that could never have existed previously. Popular response is most dramatic at times of great natural disasters, such as famines, but it is a permanent factor of varying degrees of importance in most developed countries.

Converting this credible concern for poverty and suffering into more favorable donor policies has often been made difficult by the apparent lack of an equal concern for impoverished groups on the part of the governments of many of the developing countries. They will appear to believe that the fruits of increased productivity will be adequately distributed by the "trickle-down" process. There has been limited though growing pressure from donor countries on the leaders of the developing world to redirect aid programs to help poorer people more directly, whether through rural development, basic education, paramedical free health clinics, special nutrition projects, or the substitution of labor-intensive for capital-intensive technologies in various sectors. Sometimes there have been fewer sound project proposals of this sort presented by developing countries than donors were prepared to finance. This lack of developing country support for domestic policies aimed directly at reducing absolute poverty is reflected also in the emphasis given generally in the North-South dialogue by the 77 to national contrasts in wealth and power between the two groups of countries rather than to individual poverty. We can hardly fault them for this set of attitudes as we were much wealthier than they before we paid very much attention to greater equality in income distribution as a national problem.

What rights can legitimately be expected to flow from our role as aid-giver is a difficult question. However, it cannot be denied that the half-truth that foreign aid "taxes the poor to give to the rich" has substantially hurt the support for foreign aid in the United States. Concern for social justice is the major argument for foreign aid today in only a few smaller European countries but they happen to be those doing the most for developing countries. Such concern could provide a more powerful rationale in the United States if it could be given a more prominent place by all parties to the international development effort.

Looking to the future, and having in mind the United States particularly, the most important justification of our concern with what happens in developing countries lies in the growing importance of global economic interdependence and common policies and actions to deal with a number of problems, both political and economic, which affect all of us. This list is a familiar one, but a few comments on each point may be useful.

1. Industrial countries' exports to developing areas amounted to $21 billion in 1960. By 1973, the figure had more than tripled to $69.5 billion, about one-eighth of their total exports. Price increases over that period accounted for only a modest proportion of that rise. For the United States, the corresponding figures were $7.1 billion of exports in 1960, rising to $20.6 billion in 1973 or to nearly 30 percent of total exports. This represents an important increase for U.S. industry and agriculture in profits and jobs, one that can only go on growing if developing-country economics continue to grow.

There was a similar growth in imports from developing countries so that they were by 1973 a similar percentage of total imports of the industrialized countries, reflecting our need for minerals, fuels, agricultural commodities, and manufactured goods produced in developing countries. Without these imports our consumers would have to pay higher prices for a considerably narrower range of goods. Their value to us is especially critical in the case of certain nonrenewable resources on which both our economy and our security depend. This is not a static situation; quite the contrary. For example, despite our low rate of population growth, the United States is now expected to have 50 million more people in 2000 than there are now.

This factor plus rising incomes will increase substantially our dependence for growth, and perhaps even security, on an expanding flow of raw materials from developing countries. Unless their economies are functioning well and their political situation is reasonably stable and friendly, we cannot count on these supplies.

Related to the trade benefits to us which flow from their economic health is the opportunity they offer to our business and financial community to invest capital and skills to the benefit of millions of stock and bond holders and bank depositors, also taxpayers.

2. The external public debt of eighty-six larger developing countries at the end of 1974, owed to various donor countries and international agencies, was $151 billion, of which nearly one-third was undisbursed. In addition to this, and to a considerable volume of private debt, DAC countries at the end of 1973 had made direct private investments in developing countries of just under $60 billion, rising by some 10 percent a year. Our governments, some of our financial institutions, and some of our people would be poorer if economic conditions or political attitudes were to cause any significant proportion of these debts to be canceled or expected income from them to be withheld.

3. Equally critical for the health of the world financial systems is the handling of the huge external reserves being accumulated by the OPEC members. Effective international monetary arrangements depend increasingly on their cooperation in managing these reserves wisely in the global interest.

4. The environment in which we live—air, land, and water—is threatened by man's actions. Cooperation from developing countries in controlling pollution and other damage to the environment will become more and more important as the years go by. This can only be expected if the developing nations not only perceive the threat in time but also see a future for themselves worth protecting. The pressures of present poverty tend to limit their interest in working sacrifices now to protect the future.

5. As the world scientific community makes further progress, whether in the use of space or the ocean depths, in laser rays or cell fusion, in weather modification or biological warfare, a more effective international system of control will be imperative. This can be based only on the desire of the vast majority of states and people to control the spread and use of such technologies in the interest of a common future. We must share a common interest in that future.

6. Improved technologies of transport and destruction make the whole world more vulnerable to violence from private terrorists with real or imaginary grievances. The difficulties of coping with increasing energy costs and potential petroleum shortages are encouraging the spread of nuclear power plants. Almost inevitably those plants carry with them some potential for the production of nuclear weaponry. Whether nuclear materials are captured by private groups or fall into the hands of irresponsible governments, all mankind is threatened. War of any kind and anywhere is, in fact, a threat to peace for all of us, given present world tensions.

Control of these threats will be difficult at best, but will be possible only if all governments, acting with wide public support, really see it as in their own, as well as in the global interest, to prevent violence and nuclear disaster. Developing country governments and peoples must have, and believe they have, something to lose. The stakes are high for everyone.

7. There is a wide consensus that a liveable world for everyone—economically, environmentally, and politically—depends directly on keeping the size of the world's population within reasonable bounds. Over the next twenty-five years, 80 percent of the increase will occur in developing countries as their population growth rate is currently nearly three times that of the developed world. Only they as nations and their people as parents can reduce that figure. Only a realistic possibility of a better future for them and their children can motivate them to try. The help of developed countries has made an important contribution to a better future but needs to do so even more effectively in the years to come. Planning, family or other, must feed on this hope that the future can be better.

8. Looking to the longer-term future, the world may have to face constraints of one kind or another on the availability of nonrenewable resources, or those like productive land and fresh water which are expansible, if at all, only at sharply rising costs. There may also be ultimate constraints on environmental absorptive capacity, of which the most plausible would limit the amount of waste heat released to the atmosphere for fear of engendering a calamitous change in the earth's climate. The timing and seriousness of such constraints will be affected by how long and to what degree man continues to look primarily to the possession of more material objects not just for survival—food, clothing, and shelter—but as the prime resources of happiness in general. A modest shift toward spending a larger proportion of incomes on services than on things is already taking place in the most developed countries. It may need encouragement.

The most likely candidates for serious scarcities seem to involve arable land and fresh water, fossil fuel energy supplies (especially as petroleum or natural gas), and certain minerals with specialized uses (uranium, chrome, platinum, etc.). The constraints may take the form of physical shortages at any acceptable price or increased costs of maintaining an adequate supply due to the need for larger investment of scarce capital or human skills. To prevent the resultant constraints from putting greater limits than necessary on growth in individual well-being, and especially to avoid reductions in it, active programs along various lines are necessary, some of which will be induced by price changes but others will require greater or lesser degrees of collaboration by the global community. By far the most effective way of avoiding intolerable pressures on land, water, and food is to restrict the growth of global population, which also accelerates development and the escape from poverty. For other resources, however, rates of usage depend more heavily on the rate and nature of economic development—especially in secondary industry—than on population numbers. Research on ways to discover new resources more readily, to make the use of them more efficient, to locate substitutes, and to facilitate re-use, can make major contributions altough one can never be sure when needed breakthroughs will become available. Research results cannot be produced on a schedule.

But if difficult situations should arise despite these and other measures that may be thought of in future decades, it might become desirable to guide reductions in the use of the more vital scarce goods in ways that would reflect the marginal costs of deprivation to the consumer rather than relative market purchasing power. Thus a reduction in food supplies should fall less heavily on a person eating the minimum for survival than one who is eating more than is really good for him because he can afford it.

A start should be made now to develop common programs to avoid or postpone scarcities and to think through what the global reaction should be if they nevertheless arise. Doing so and establishing a successful history of solving other global problems together, like those of development, within a respected institutional framework would help to reduce the danger that such constraints will lead to violence between rich and poor, among and within nations.

These elements in the present and future world order describe what *interdependence* among the world's nations means. They offer the main reasons why we must make an extraordinary effort to put substantial content into what word for all peoples by giving them a future to care about and a willingness to share with us the tasks of guarding that future against the many perils which threaten it. Such a program has no ideological bias between a capitalist or socialistic economic system, only a prejudice in favor of that equality of opportunity for all humans necessary to enable them to make the most of their capacities within the limits set by the need for all to share whatever opportunities there are.

Of course there can be no guarantee that greater cooperation from the developed countries in the efforts of the developing countries to improve the well-being of their peoples can achieve significant results, given the far more important role that must be played by the latter's governments and peoples. Nor can we be sure that improved future prospects, economic and other, will persuade developing nations to cooperate in solving the problems of global interdependence in which we have such an important stake.

Ideologies have a long record in history of disrupting long-established and constructive economic relationships. Yet no credible alternative to a joint effort to improve individual well-being in all its aspects seems available for trying to overcome these divisive loyalties, as we must if mankind is to be able to share an improving future.

The one alternative sometimes suggested is that the United States—with a large area behind wide oceans, high technology, relatively abundant natural resources, great military power, and great economic strength—need be less concerned about these issues than most other countries and need not, therefore, take the lead with the risks this might involve. These points may have some validity but the term *less concerned* is in this case a long way from not being concerned at all. Our highly organized economy is particularly susceptible to disruption from external factors. We are finding it almost impossible to keep out illegal immigrants or narcotic drugs. We can avoid terrorist attacks from abroad and dangers of various sorts to Americans who travel abroad only at the very high cost of hermetically sealed borders, a condition hard to achieve under current technological conditions. And wherever political troubles start, whether isolated acts of terror or nuclear attacks, the United States will be a prime target, not because of what we have done so much as for what we stand for in terms of wealth and power. Nor can we close our borders to some forms of air and water pollution.

If a serious deterioration were to occur in international arrangements to deal effectively with the major areas of economic interdependence, the impacts on the U.S. economy would be serious. In fact, significant readjustments in U.S. political structures might be required to maintain internal order and our own security. The tendency would probably be toward an enhancement of government jurisdiction and power to a degree which most Americans would deplore.

Nor could we avoid moral damage to ourselves if we had to watch economic disaster with all its fatal consequences spread around the world. Without an effective international framework there would be little one could do to avoid it and nothing to do but watch it if it came. Emergency relief efforts can never replace continuing joint programs to move the more than 1 billion very poor people in developing countries steadily farther away from the brink of famine.

Against these gloomy possibilities, the fact that economically we might get along better in a disorganized world than our European or Japanese friends is relatively unimportant, for their fate will have a considerable impact on our prospects. The alternative of a "fortress America" is almost too frightening to contemplate. In fact, if we should decide not to make a really vigorous effort to work with the developing world, we would certainly need as many as possible of the OECD countries in our camp, a choice that might not be made as readily by a number of them as we would like to believe. But for those which did, their greater vulnerability would call for further sacrifices from us to help them adjust to a serious failure of the world economic system, and thus make U.S. problems more acute.

It should be noted here that, as a result of long years of imposed or chosen economic isolation, the USSR and her allies and the People's Republic of China, even without new relations with some of the developing countries, might fare better relatively speaking than the U.S. in such circumstances. In a chaotic world situation, closer relations with the Communist countries might in fact prove to be attractive alternatives to some of our present friends among the developed countries.

The issue thus comes back to what the United States and its friends should do, both by what specific means and in terms of how big an effort.

If this analysis is correct, it is in the interest of the United States to play an active intellectual and material role among the developed countries in seeking a basis for cooperation among all countries that will enable a common effort to deal with critical global issues listed earlier, and do so in ways that will permit all peoples, including Americans, to look forward to a steadily improving quality of life. That common effort must encompass the measures necessary to convince the governments and peoples of developing countries that if they cooperate there will be a better future for them, not only in terms of physical well-being but, just as important, of personal and national dignity and independence, with a full sharing in decision making that affects their future. If this requires some remaking of the present international economic order, then we will need the cooperation of all to do it wisely and effectively.

Whenever international arrangements, policies, and programs may be needed to meet these requirements, it is essential also that no nation, developed or developing, forget that in nearly every case successful performance depends upon national and, in turn, individual actions. To set up the right international institutions, to vote the right U.N. resolutions, even to turn over substantial sums of money to international bodies, will solve no problem in the absence of national will to act within each country to carry out the appropriate measures.

DAVID K. E. BRUCE—IN MEMORIAM

Mr. JAVITS, Mr. President, the Nation and the world have lost a great diplomat, a gracious and highly intelligent American, and, for many of us, a dear friend.

Our hearts go out to Evangeline Bruce, who has been Ambassador Bruce's partner these many years.

The obituary on Ambassador Bruce tells the story in his case. The facts are themselves a legend. The Nation may truly mourn its loss.

The obituary from the New York Times, Tuesday, December 6, 1977:

I ask unanimous consent to print the New York Times article in the Record.

There being no objection, the obituary was ordered to be printed in the Record, as follows:

David K. E. Bruce, Diplomat, Dies

(By Albin Krebs)

David K. E. Bruce, one of the nation's most gifted and seasoned diplomats, died early yesterday at Georgetown Medical Center in Washington.

Mr. Bruce, who was 79 years old, suffered a heart attack Sunday at his home and was admitted to the hospital at 10 P.M. He had been retired since early 1976 after having served 16 months as chief United States delegate to the North Atlantic Treaty Organization.

Upon his retirement, he was awarded the Medal of Freedom.

Secretary of State Cyrus R. Vance said in a statement yesterday that Mr. Bruce had "served the United States with great distinction" and "was among the most eminent diplomats of his generation."

Mr. Bruce was a man of great charm, wit and sympathy, whose easy skills at cooling sometimes heated situations led him to a distinguished career that included heading three of his country's premier embassies, those in London, Paris and Bonn.

He was highly regarded in all those capitals, particularly in London, where he was Ambassador for eight years, the longest that anyone ever held that post. He also served in less glamorous and more vexing diplomatic assignments, such as the job he took on in 1970—head of the American delegation at the stalemated Paris peace talks to end the war in Vietnam. In addition, he was the first head of the U.S. liaison office set up in Peking in 1973.

After serving as Ambassador to France from 1949 to 1952, Mr. Bruce returned to Washington to become Under Secretary of State, and in 1953, he was made the special United States observer at the European Defense Commission and later was appointed representative to the European High Authority for Coal and Steel.

In the two latter posts, Mr. Bruce strove to achieve a united Europe, an undertaking that was only a partial success. He later regarded the breakdown of attempts to completely unify Europe as "a great failure for the United States as well as a great personal failure."

SERVED SIX PRESIDENTS

Mr. Bruce was a Democrat, but in his diplomatic roles he was strictly nonpartisan. He took on assignments from Presidents Harry S. Truman, Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson, Richard M. Nixon, and Gerald R. Ford.

Upon his first "retirement" from the State Department, in 1969, when he left his post in London because of health problems, Mr. Bruce said "The cardinal rule for an ambassador in a foreign country is to cherish no antipathies or attachments for particular domestic political parties or programs. This, fortunately, does not forbid him to contract friendships regardless of parties, or love the country of his residence dispassionately."

Mr. Bruce was called out of retirement a year later for the Paris Vietnam talks, then the Peking post, and in 1974 he became the American representative to the North Atlantic Treaty Organization in Brussels. He was then 76 years old.

Mr. Bruce was a descendant of old and distinguished Maryland families. His father, William Cabell Bruce, was a United States Senator from Maryland and was noted as a lawyer and an author (his biography, "Benjamin Franklin, Self-Revealed," won the Pulitzer Prize in 1918). Mr. Bruce's mother was the former Louise Este Fisher, a member of one of Baltimore's first families. His older brother, James, was to become Ambassador to Argentina in the 1940's. Born in Baltimore on Feb. 12, 1898 David Kirkpatrick Este Bruce had a comfortable upbringing, attending private schools and moving in the best circles. He entered Princeton in 1915, but left in 1917, in his sophomore year, to enlist in the Army. While serving in the artillery in France, he received a battlefield commission and was discharged as a first lieutenant.

DELIVERING A PIANO

After the war Mr. Bruce served briefly as a diplomatic courier in Europe, quitting in disgust after being assigned to deliver a baby grand piano to a Y.M.C.A. in Istanbul. He attended the law schools of the University of Virginia and the University of Maryland, and after being admitted to the Maryland bar in 1921 set up practice in Baltimore. In 1924 he was elected to the Maryland House of Delegates.

He joined the Foreign Service the following year and was assigned to Rome as a vice consul, with the primary duty of screening would-be emigrants to the United States. While in that job Mr. Bruce met Benito Mussolini and told him, undiplomatically: "I've been here for six months and my luggage is still being held by your Customs." Hours later the luggage was delivered to his apartment.

During the 1930's Mr. Bruce, who had established residence in Virginia, bought it a 500-acre tobacco plantation and worked it as a gentleman farmer. He also invested in a plant that manufactured parachutes in Virginia. In 1939 he was elected to that state's House of Delegates

His tenure was short-lived, however. By the following year war had erupted in Europe, and Mr. Bruce, he recalled years later, "knew instinctively that within months we would be deeply involved." He sought and won appointment as the chief representative of the American Red Cross in London. Even before the official entry of United States into the war late in 1941, Mr. Bruce had been recruited by Maj. Gen. William J. Donovan to be the general's right-hand man in the formation of the Office of Strategic Services, the intelligence-gathering organization that was to evolve into the postwar Central Intelligence Agency. From 1943 until 1945 at the height of World War II, Mr. Bruce commanded the O.S.S. in the European Theater of Operations.

WED MELLON'S DAUGHTER

Mr. Bruce came from a moderately well-to-do family, and never had to do without. He did not become a rich man, however, until after he married his first wife. She was Ailsa Mellon, the only daughter of Andrew W. Mellon, the multimillionaire industrialist who was Secretary of the Treasury at the time of his daughter's marriage to Mr. Bruce in 1926.

The following year, Mr. Bruce left the Foreign Service and moved with his wife to New York, where, for the next several years, he was active in the management of the Mellon business interests and in the firm of W. A. Harriman & Co. (At one point he was a director of some two dozen corporations.) While acquiring the base for a fortune, Mr. Bruce became the close friend of W. Averell Harriman, who was later to have a hand in getting him back into diplomatic channels.

David and Ailsa Mellon Bruce were divorced in 1945. Their only child was lost with her busband, Stephen R. Currier, in a 1967 airplane crash in the Caribbean.

Later in 1945 Mr. Bruce married Evangeline Bell, daughter of a career Foreign Service officer, and they had three children, Alexandra, David and Nicholas. Their daughter died in 1975.

Evangeline Bruce, a woman noted for her taste and beauty, loved her husband's assignments abroad, but managed at the same time to preside over the couple's three permanent households, a red brick house in the Georgetown area of Washington, a Gothic-style mansion on the old tobacco plantation in Virginia and an apartment in London.

In 1947, at Mr. Harriman's urging, Mr. Bruce served as Assistant Secretary of Commerce and the following year became chief of the European Cooperation Administration Mission to France, a job in which he channeled Marshall Plan aid into France's postwar recovery. In 1949 he became Ambassador to Paris and remained there until 1952 and his return to Washington to be Under Secretary of State.

In 1957 President Eisenhower ignored the protests of his fellow Republicans over Mr. Bruce's $1,000 campaign contribution to the 1956 Democratic campaign and appointed him Ambassador to West Germany. President Kennedy sent him to London in 1961.

The Bruces were admired and loved by the British, who appreciated their knack for seeming down-to-earth, taking their children to a pub for traditional steak and kidney pie washed down with a pint of bitter. (Mr. Bruce was also a gourmet of great sophistication and kept impressively stocked wine cellars in his homes.) The embassy in London entertained all sorts of people—writers and artists, long-haired dropouts, the socially, prominent and the politically powerful.

As Prime Minister Harold Wilson told Mr. Bruce, "Your ambassadorial epitaph will never contain the phrase 'United States Ambassador to the Establishment.' "

Mr. Bruce was a man of singular grace who seemed able to perform any task, whether diplomatic, social or financial, with a refreshing admixture of charm, toughness, amiability, slyness, wit and an aura of offhanded expertise. He had a reputation as a man of reason, capable of being polite and quietly analytical on the most agitated of subjects. When a diplomatic bargaining discussion turned uncomfortably overheated, he was apt to cool matters with generous pourings of Dom Perignon.

He moved in a richly embossed world, one in which he could keenly discuss the most esoteric of books and speak learnedly on such subjects as fine silver and furniture. An avid and knowledgeable art collector, he at one time served as president of the National Gallery of Art in Washington. Mr. Bruce's knowledge of the arts stood him in good stead in discoursing on diplomatic problems. "In political affairs," he once told a news conference in Bonn, "the inability of nations to compose their differences constitutes a disharmony that would be insufferable to any art-loving audience."

A raconteur of considerable repute, Mr. Bruce liked to regale his friends and audiences with anecdotes about an assortment of relatives, his favorite being a 102-year-old grandmother. He once told a delighted audience about "the old lady, who had long abandoned any effort to communicate with relatives, addressing them only in French, a language none of them understood." "She loathed Baltimore," he said, "although she acknowledged the excellence of its shellfish." When fire swept the city, he said, his centenarian progenitor perched on her roof. "There goes the national bank!" She had made joyous exclamations such as, her bonds in that bank, Mr. Bruce said, but she later explained she had always detested its architecture.

Despite his smoothness and calm demeanor, however, Mr. Bruce could on occasion be blunt. At one point, during the frustrating Vietnam negotiations in Paris, he became incensed afer Xuan Thuy, the North Vietnamese representative, began an intemperate, personal attack on President Nixon.

Mr. Bruce told him coldly: "Your choice of words and your attitude . . . with regard to President Nixon [are] shameful and completely inadmissible. At least one should be courteous if one cannot be quiet." He added testily that "there have never been any true negotiations."

Mr. Bruce's role in the Paris talks ended in frustration and deadlock on July 29, 1971, but later it was revealed that with his help, Secretary of State Kissinger had had secret talks with the Communists side that eventually helped break the deadlock.

A GRACEFUL SPEAKER

Mr. Bruce, who walked with a slight limp because of a wartime injury or gout (none of his friends was able to determine the exact cause), was well over 6 feet tall. He spoke fluent French, but found it rough going in Bonn because he knew little German. He was a graceful extemporaneous speaker with a trace of a Tidewater accent. He dressed excellently and unflashily.

A man of exceptional warmth and generosity, he never hesitated to spend his own money in carrying out his diplomatic assignments. For example, when he was Ambassador to France, he used nearly the entire annual entertainment expense allowance furnished by the State Department just for the traditional Fourth of July party for the American colony in Paris. He thus assumed responsibility for the payment of all other debts in connection with embassy receptions and entertainments for the rest of the year.

Discussing the role of an ambassador, Mr. Bruce once said: "The dictionary definition of diplomacy is the simplest and most accurate of all—diplomacy is the management of international relations by negotiation. It is not a system of moral philosophy, it is rather the application of intelligence and tact to the conduct of official relations between the governments of independent states."

Funeral services for Mr. Bruce will be held at 2:30 P.M. Friday at St. John's Church on Lafayette Square in Washington.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Mack Burton, of Arkansas, to be U.S marshal for the western district of Arkansas for the term of 4 years vice Lee R. Owen.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Thursday, December 15, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

RECOGNITION OF THE LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

PROGRAM FOR MONDAY, DECEMBER 12, 1977

Mr. ROBERT C. BYRD. Mr. President, the Senate will shortly go out until next Monday at 11 a.m. The 11 a.m. Monday morning session will be strictly pro forma. The Chair will convene the Senate. Immediately the Senate will go out. There will be no business transacted. There will be no statements included in the Record of that day, no bills or resolutions introduced, and following that pro forma session the Senate will go over until next Thursday, a week from today.

PROGRAM FOR THURSDAY, DECEMBER 15, 1977

The Senate will convene at 11 a.m. on Thursday, December 15. Hopefully on Thursday the Senate will be able to take up the social security conference report if the House of Representatives acts thereon.

It is my understanding that the House of Representatives will convene at 10 a.m. on Thursday. The Senate will convene at 11 a.m.

The Senate hopefully will also be able to dispose of the legal services conference report.

The matter involving the B–1 bomber will likely be taken up on Thursday. Mr. Stennis, the chairman of the conferees on that matter, will be prepared to take up the issue.

So Senators will be well advised, I think, to anticipate possible rollcall votes on Thursday, a week from today, on any one or more of those three items.

There may be other items ready for action by that time, and I speak with reference to conference reports. I do not foresee any rollcall votes on nominations. But in any event I urge Senators to be prepared for possible rollcall votes a week from today.

Mr. BAKER. Mr. President, will the majority leader yield?

Mr. ROBERT C. BYRD. I yield.

Mr. BAKER. Mr. President, I understand the statement of the majority leader to be that Thursday the 15th of December then will be a business day for all practical purposes.

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. I had hoped, and a number of Members on this side of the aisle had indicated their preference, that these things might be grouped together to deal with on the 19th of December instead of the 15th. Do I gather from the majority leader's remarks that that is not a practical alternative in his view?

Mr. ROBERT C. BYRD. I would like to have seen the 9th as the day for action on social security financing rather than the 15th, but the House will be in on the 15th, and I discussed the matter with the Speaker earlier today. It was his feeling that the House might dispose of the conference report on the morning of next Thursday. That being the case, I feel that the Senate should be prepared to take it up once the papers reach the Chamber; otherwise, if the Senate waited until Tuesday, in the event that there were disagreement between the two Houses and the papers had to go back to the other body, it might very well be that the other body would have problems with attendance the following week.

It is conceivably an eventuality that some problem would be encountered with social security financing even on next Thursday. But just so that we might be prepared, I think that the Senate should be ready on Thursday to handle the conference report if it comes over from the other body.

May I say again that I, too, would have preferred waiting until the Tuesday after, which would mean the 20th of December, but because the House is going to take up the conference report next Thursday, I believe that the Senate should be here and be ready to follow through with action on that day, if indeed the House does send over the conference report.

Mr. BAKER. Mr. President, I thank the majority leader.

I am also concerned about the material dealing with the B–1 bomber. I know there are Members on this side who think it is urgently important for them to be here. I think many of them would prefer that that matter be taken up the week of the 19th. Is there any possibility that that item might be deferred then until the 19th or 20th to the satisfaction of the majority leader?

Mr. ROBERT C. BYRD. I would not rule out that possibility. I did get word from Mr. Stennis this morning to the effect that he would hope that we could take up that matter next Thursday. If Mr. Stennis and Mr. Young should work it out between themselves that it should be taken up the following Tuesday, then that could be arranged. However, as of this moment at least, my information from Mr. Stennis is that he would like to proceed next Thursday inasmuch as we will be here and possibly dispose of the matter on that date.

Mr. BAKER. Mr. President, I thank the majority leader, and I might just say for the record that we have an expression of strong preference from Senator Young, who, of course, is the ranking minority member on the Appropriations Committee, to do it the week of the 19th, and I will contact Senator Young and ask him to be in touch with his counterpart, Senator Stennis, to see if they can work that matter out to their satisfaction. But I would like to note now that on this side we would express a preference for the 19th in order to take account of the requirements of Senator Young as he has in mind.

Mr. President, may I ask the majority leader one other question?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. I wonder if he can give us any idea now about the possibility of further recesses of the Senate or even of sine die adjournment for this session?

Mr. ROBERT C. BYRD. I think that there will have to be a sine die adjournment before January 3, or as of noon January 3, the Constitution requiring the two Houses to meet once each year, unless that date is changed by law. So as to when there will be sine die adjournment, I am just in no position at the moment to venture a conjecture.

The conferees continue to work on the energy bills, and I believe that some progress is being made, and I would hope for continuing progress. I would hope that the conferees could complete their work before Christmas. It will take a week or 10 days after the conferees reach agreement for the papers to be prepared and the report to be written, and this would mean that, if the conferees were able to finish their work before Christmas, we would probably have to come back in January to act on the conference reports.

I would prefer to see the Senate do its work on those conference reports before the second session formally begins.

I would rather not carry over the energy legislation into the second session or into February, I will put it that way.

And so if the conferees complete their work and we can do the Senate floor work on the conference in early January, then I would hope that we would proceed accordingly so as to dispose of the energy legislation as soon as possible and get it down to the President.

Mr. BAKER. Mr. President, I thank my friend, the majority leader, and it will be a surprise to no one to know that he and I have discussed this matter in an informal way before we held the colloquy and the information he imparts to me then not totally surprising.

I wish to say, Mr. President, that it would be extremely difficult for many Members, possibly all Members, on this side of the aisle to readjust their schedules for the time after Christmas and before the projected reconvening date of January 19.

And I hope there may be an opportunity to consider this matter further and to discuss it in greater detail with the majority leader. Since we talked earlier, I find there are very, very strong objections on this side to trying to rearrange that schedule as we have previously announced.

I understand the difficulties of his position and the importance of trying to finish this legislation, and I know he understands because I have said many times from this place that I, too, want to see an energy bill passed. I in no way want to stop this. I committed to that earlier this year with the foreknowledge that I probably was not going to like what came out in terms of the final legislative product. But I feel an obligation to pass an energy bill. So I do understand the position of the majority leader, but I would hope that we might consider this matter a little further because I have very, very strong expressions of objection to changing that brief time between sine die adjournment and reconvening in terms of plans that have long been made and become more important because we have been in so long this year.

Mr. ROBERT C. BYRD. I regret that this discussion took place in a way because I am afraid that it may leave the impression that the outlook for energy legislation is rather gloomy. I do not want to leave that impression. I think the conferees are making progress, and I think there is a good likelihood that the conferees may complete action on the legislation in conference before Christmas. As to what happens thereafter is conjectural.

I think we always have to think in terms of the other body. We have to give consideration to the feelings and the advice certainly and counsel of the managers of the conference reports and the ranking minority members.

So my reaction to the able minority leader's question really is off the top of my head. It may very well be that once the conference reports have been signed, the managers of the bills and the ranking minority members would prefer to wait until the 19th of January.

Certainly, my scheduling will be finalized once I have advised with them, once I have advised with the minority leader, and we can I think always find a reasonable, feasible, and workable approach to the floor scheduling of those matters.

I have voiced the hope that we could complete the action on the floor in the event all other things were equal before we started into the next session in a formal way.

There is nothing final about what I have said at this point, but I do not want to leave anything on the record that anyone could interpret as any sign of pessimism on my part, and I appreciate the questions that have been asked by the distinguished minority leader. He expresses the concern that has been evidenced to him. But I hope we could just leave the record stand that insofar as the floor work on the conference reports is concerned, we will schedule that after due consultations among us, and it will be scheduled in consideration of those who manage the conference reports, in consideration of the problems of the other body, and in consideration of our own respective viewpoints.

Mr. BAKER. Mr. President, I thank——

Mr. MATSUNAGA. Mr. President, will the distinguished majority leader yield?

Mr. ROBERT C. BYRD. Could I yield to the minority leader first?

Mr. BAKER. I thank the Senator from Hawaii for letting me interrupt for a moment only to say that I thank the majority leader for that additional information and insight, and I am fully sensitive to the difficulties that he always has in trying to arrange the business of the Senate. And I always want to be helpful in that respect.

Mr. ROBERT C. BYRD. The Senator is always helpful.

Mr. BAKER. And I want to pass on to him today the difficulties that I find on this side of the aisle about readjusting schedules and to tell him that I appreciate his reassurance of his willingness to consider this matter and to discuss it with those of us in the minority. I would join him, however, in one other thing, and that is nothing is meant by this colloquy to indicate that either of us, I believe, have any doubt or lessening of commitment to the passage of an energy package. We have disagreed on the details, but we are long past that point, and I am not expressing any view except that I wish to accommodate the scheduling requirements of Members of the Senate on this side of the aisle for whom I am responsible, and it has nothing to do with the probability of the outcome of the conference.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader.

Mr. BAKER. I thank the majority leader.

Mr. MATSUNAGA. I thank the majority leader for yielding.

In listening, I thought as a member of the energy conference committee I might strike an optimistic note here.

Mr. ROBERT C. BYRD. Good.

Mr. MATSUNAGA. We did pass a resolution amongst the Senate conferees this morning that we had determined to come out with an energy package and this might confirm the views of the majority leader and the hope of the minority leader that the conferees will come out with something. I think we now have an attitude—and I might say that the vote was 15 to 3—we have determined to come out with some energy package.

Mr. BAKER. Which side of the aisle were the three on?

Mr. MATSUNAGA. The three were on our side. They had their own personal reasons.

Mr. BAKER. I just wanted to be exonerated.

Mr. MATSUNAGA. With a vote of 15 to 3 they did pass the resolution to come out with some energy package.

Mr. ROBERT C. BYRD. I am delighted. I think it is entirely conceivable that we could see some action on conference reports before Christmas. That is not outside the realm of possibility, and so may I reassure the distinguished minority leader that I think the important thing is for the conferees to get their work done and to get the conference reports signed, and then we will all get our heads in a huddle and we will work out the scheduling for the debate on the conference reports on the floor.

Mr. BAKER. I thank the majority leader.

The ACTING PRESIDENT pro tempore, All time of the leadership has expired.

Mr. ROBERT C. BYRD. Mr. President, there can be no business before the Senate. I think all has been said.

ADJOURNMENT UNTIL MONDAY, DECEMBER 12, 1977, AT 11 A.M.

Mr. ROBERT C. BYRD. Mr. President, I shall move that the Senate stand in adjournment, under the order previously entered, with thanks to the very distinguished Presiding Officer, the junior Senator from Georgia, who does such a superb job in all the work he does, not only in presiding over the Senate, but in his work on committees. May I say in that regard that when he speaks I listen. And so I move that the Senate stand in adjournment until the hour of 11 a.m., Monday, December 12, 1977.

The motion was agreed to, and, at 1:25 p.m., the Senate adjourned until Monday, December 12, 1977, at 11 a.m.

EXTENSIONS OF REMARKS

GOOD NEWS—PAPERWORK IS REDUCED AT DOD

HON. DAVID C. TREEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. TREEN. Mr. Speaker, Members of Congress frequently find it easy to criticize the bureaucracy as inefficient, wasteful, and lethargic. In recent years, the Defense Department has been particularly subjected to such easy criticism.

On this occasion it gives me real pleasure to call to my colleague's attention a recent news account which addresses the particular accomplishments of Mr. Bob Kelley, a DOD Management Analyst. Mr. Kelley has demonstrated unusual zeal and ability in reducing paperwork, avoiding costly and unnecessary data collection, and convincing many well meaning DOD employees that the surveys, studies, or reports they sought were not needed or already existed somewhere else.

In fiscal years 1975 and 1976, this dedicated public servant is credited with saving the Defense Department (and the taxpayers) $40 million.

The following article spells out the details of Mr. Kelley's accomplishments. I wish to publicly commend him for his outstanding work. He has set a fine example for others and has proven that the

Defense Department is working hard to assure efficient use of the taxpayers' money.

DR. BAD NEWS SENDS GOOD NEWS TO PUBLIC

There exists in Washington, D.C., a federal employee whose job is to eliminate wasted effort.

Unbelievable, you say? Even more so when you learn that this courageous soul, this upstream swimmer, toils in the (gasp) Pentagon, otherwise known as the land of the mimeo and the home of the waste.

Robert F. Kelley knows he is not the most popular Pentagoner ever to get lost in the E Ring. Do they call you Dr. Bad News? "I guess that's a fair assessment," he replies.

But oh, the results.

In fiscal years '75 and '76, Kelley's hounding and dogging produced $40 million in savings for the Defense Department—paper that was never bureaucratized upon; information that was never sought because it already existed; surveys, studies and reports that were never started because the results were already known.

No, they didn't give Kelley a bonus. No, they didn't slip extra tidbits into those green paychecks with the holes in them. But yes, last month, they did honor Kelley at a Defense Department luncheon. And yes, cynics, the honor was a citation—on a piece of paper.

Still it was parchment well spent. For no one has ever before saved the feds that much money in that little time, according to several long-serving and long-suffering government spokesmen. Meanwhile, Lord knows, many have spent and overspent $40 million, and more.

It takes the patience of a priest, the legs of an Olympic distance star, the sense of direction of a homing pigeon and the clearance of Someone Important to reach Bob Kelley's office in the DOD comptroller's wing. But it is worth it.

Not only is the office as uncluttered as a monastery (unsurprising), but the occupant is passionate about conservation and its necessity (very surprising).

"Under every president," Kelley said, "we've had periodic evangelistic reduction programs. These always yield significant savings. But then it slips back.

"One reason it does is that the traditionalists say: 'What the hell's wrong with the way we're doing it today?' "

Another reason, according to Kelley, is that when in doubt, every government employee who values his scalp will pack too much information into a written document, not too little.

"We had a control emphasis before, but it was applied only after the majority of information systems had begun," Kelley said. "So in 1972, we said, 'Hey, you've got to reduce it in the first place.' "

That was called "management by objectives." It took more than three years to get all the approvals. But what it has meant in practice is this:

If the Air Force, for example, wanted to know how many of its people had deformed big left toes, they would first have to come see Kelley, or see if the information already lay in a memory bank somewhere else in the government.

If it turned out that, say, the U.S. Public Health Service had already done such a survey, Kelley would be in a position both to know that and to obtain the data the Air Force wanted.

Thus, not just paper and ink would be saved, but also huge gobs of costly man-hours. In fiscal '75 and '76, according to Pentagon records, about 2,000 such projects were rendered unnecessary because Kelley headed them off at the pass. The total savings is well worth repeating—$40 million.

Of course, bureaucrats do not take kindly to the suggestion that what they plan and seek and want is unnecessary. "So it's been kind of an uphill battle," said Kelley. "It's kind of a never-ending process." It is also fraught with enough tension to end, occasionally, "just short of fist fights."

Kelley remembers one man who grew increasingly redder as he listened to the non-duplication pitch. When it ended, he accused Kelley of being after his job.

"He was shouting: 'You can't do this! That's 90 per cent of my job description!' " Kelley recalled. "But he came in to see me a few months later. Said he was retiring. He said, 'You were right all along. I just wasn't ready to go yet.' "

Indeed, rightness has never been the problem. Clout has.

Jimmy Carter's declaration of war on paperwork during the 1976 Presidential campaign—and his election—"made all this tremendously easier," Kelley said.

"Unless you have that kind of clout, this program is not going anywhere. You have to hammer every time there's a changing of the guard."

Despite his success, Kelley is no babe in the woods. He knows Defense still "enjoys" a reputation as the most overfed, overhungry child in the federal household. All the more reason then, he argues, why bringing efficiency to Defense is necessary. Success could beam the message that anything is possible all the brighter to other agencies.

"You strike a nerve whenever you put the ax to any information system," says Kelley, 47, a management analyst who has spent 10 years at Defense and who lives in Vienna, Va. "But I'm willing to let the chips fall where they may."

Kelley insists that his performance during '75 and '76 "wasn't a one-man show. We had a lot of things that fell in place for us."

He wishes "garbage control," as he calls it, were a more "sexy or glamorous job," because, "admittedly, there's still an awful lot to do."

Amen to that last one. But hosannas that someone is poised to do it.

MANHATTAN—AN AGRICULTURAL CENTER?

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. BIAGGI. Mr. Speaker, picture if you can Manhattan with "huge aboriginal trees, weeds that were strawberries, catnip and blackberries; wild geese, turkeys, pigeons, and ducks; rivers filled with fish." Imagine further, Greenwich Village as farmland complete with grazing cattle. This is not imagination on my part but rather historical reality as recounted in a fascinating article which appeared in the December 7 New York Times.

The article written by Edith Evans Asbury focuses on the little known fact that black slaves imported by the Dutch West India Co. were emancipated and became the farm owners during the mid-17th century. Farming was then as it is today a rigorous occupation, and many in the early days of Manhattan lacked the desire and stamina to be farm owners and operators.

Unfortunately the emancipation of the black slaves was short lived. By the 1670's Britain had instituted chattel slavery into New York severely restricting freed blacks including a prohibition against owning property.

I submit this article for the historical edification of my colleagues. As we look to the roots of Manhattan we discover that then as now, it is the people that make her great.

The article follows:

FREED BLACK FARMERS TILLED MANHATTAN'S SOIL IN THE 1600'S

(By Edith Evans Asbury)

Before it was Chatham Square, before it was Astor Place, before it was Greenwich Village and before it was Herald Square, the crowded Manhattan land now designated by those names was farmland, and in the 1640's, while it was controlled by the Dutch, much of it came into the hands of freed black slaves. Blacks caught up in the surging interest in genealogy aroused by the book and television film "Roots," may find their American ancestry goes back much further than they thought if they check the minutes of the Dutch Burgumasters and Schepens—the New Amsterdam Town Council—or other yellowing documents in the city's new Department of Archives, libraries and historical societies.

It was a casual remark by a history buff, Paul O'Dwyer, the City Council President, that there were black farmers here in the time of the Dutch that set a reporter on the trail of further information about the little-known fact. And along that trail, even professional historians were encountered who had never heard of the 17th-century black farmers in Manhattan.

ELEVEN BLACK MEN ARRIVE

Shortly after Peter Minuit bought the Manhattan Island from the Manhattan Indians in 1626, 11 black men arrived.

They came on a ship owned by the Dutch West India Company, which had sent Minuit to be Governor of Nieuw Netherlands, a trading post to which the company had sent 30 families with horses and cattle in 1623.

Manhattan land was rich and fruitful then. There were huge, aboriginal trees, weeds that were strawberries, catnip and blackberries; wild geese, turkeys, wild pigeons and ducks. The rivers were full of perch, sturgeon, bass, herring, mackerel, weakfish, stonebeam and eel. Oysters were so large that "one must cut them in two or three pieces," an enthusiastic Dutch settler wrote to a friend in the Netherlands. There were large quantities of oyster shells to burn for lime. Timber was abundant and so were quarrystones, and the day was of fair quality for bricks and tile.

Eighteen years after Minuit purchased Manhattan, in 1644, 11 black slaves, petitioned the Dutch West India Company for their freedem and, possibly to their own astonishment, got it.

All of the 11 freed slaves may not have been the same 11 who came to New Amsterdam in 1626, but at least four of them were. These four, whose names probably indicate their country of origin, were Paulo d'Angola, Simon Congo, Antony Portuguese and John Francisco.

REWARD FOR SERVICE

The others freed in 1644 were Big Manuel, Little Manuel, Manuel de Gerrit de Rens, Peter Santome, Little Anthony and John Fort Orange.

The slaves were granted their freedom, and land in Manhattan on which to farm, as a reward for 18 or 19 years of service to the Dutch West India Company, according to records of that time. An examination of other contemporary records of events and circumstances of 1644 and preceding years indicates that the company was probably acting in its own interest as well.

Farm produce was desperately needed in New Amsterdam. The white settlers, now numbering 400 to 500 and including men speaking 18 different languages, were not interested in farming. There was more money to be made trading with the Indians for food, and for beaver skins to send by the thousands to the Netherlands.

WINDMILLS AND BREWERIES

In the thriving town, with its windmills and its breweries producing—beer as good as any Dutch beer—for sale in its many taphouses, families lived in reed-thatched houses with orchards and gardens, huge fireplaces bordered with blue and white tiles, and cozy sitting-room kitchens. Ships were loaded and unloaded in the harbor by scows, small boats and canoes, carried tobacco from Maryland and Virginia, beaver pelts from Fort Orange which is now Albany, and they brought wine, linen, pewter and silverware to New Amsterdam from the Netherlands.

Outside the town of New Amsterdam, Indians were burning houses, cattle, barns and crops, and killing and capturing farmers and their families when the Dutch began granting farmland to freed blacks. In the swamps of what is now Greenwich Village, where many of the blacks' farms were, cattle sank down over their backs but being "strong and well in flesh" finally got through, goaded by a woman through the marsh, a writer reported in August 1643, not noting the color of the woman, nor how she managed to keep from sinking to her death in the marsh.

SOME WHITES SHIPPED HOME

A Jesuit missionary who visited New Amsterdam in 1643 wrote that three large ships had come there from the West Indies to load wheat, but only two could be loaded because the Indians had burned so many barns full of wheat.

Some of the whites who came and wouldn't work were shipped home "as useless ballast," a Dutch Reformed minister wrote from New Amsterdam in 1628. In 1646, there was a great deal more to overcome than laziness to persuade a fellow New Netherlander to go to the country and farm.

Blacks had already farmed in that area for two years when the Governor of New Netherlands began granting them farmland in 1643. Emancipated slaves of the Dutch West India Company received these grants from 1643 to 1647 centered around the Fresh Water and Public Wagon Road which is west of the present Bowery, between Canal Street and Astor Place. Earlier, the company's blacks had lived in a house at what is now 31-34 William Street.

ADDITIONAL GRANTS MADE

During 1659 and 1660, several additional grants were made to blacks—this time by Peter Stuyvesant, who had become the New Netherlands governor.

The average size of all of the grants was 12 acres, but Simon Congo received 45 acres.

The largest number of grants to blacks lay in the area bounded on the north and south by 23d and Franklin Streets—along what are now Broome, Spring, Houston, Bleecker, West Third and West Fourth Streets. On the east and west the farms were between Fourth and Sixth Avenues, along Fifth Avenue, Broadway and University Place.

Farthersouth, blacks were given land in a rough square now bounded by Bayard and Centre Streets, Park Row and Chatham Square.

Fifteen acres east of the old Bloomingdale Road (later a part of Broadway) between what are now 31st and 35th Streets and Broadway and Fifth Avenue was the most northerly grant to any black farmer.

LITTLE KNOWN OF EARLY FARMERS

Little is known of these early black farmers except for their names, and more than one name seems to have been applied to some of them.

Peter Santome's six acres went, on his death, to his sons, Lucas and Solomon, concerning whom it is recorded that Lucas was a physician and Solomon was the first patentee of another large farm.

Anna D'Angola and Marycke, who were granted six acres each in 1647 and 1643 respectively, are described as widows.

Other grantees include Domingo Anthony, Catelina Anthony, Paulo d'Angola, Peter van-Campen, Big Manuel, Gratia d'Angola, Cleyn Antonio, Cleyn Manuel, Antony Portugese, Mannuel de Ros, Bastiaen Elles, Antony Congo, AnManuel DeSpangie.

The English Governor who captured New Netherlands from the Dutch and renamed it New York confirmed the blacks' ownership of their land in 1667.

However, not long afterward, the British introduced chattel slavery into New York and imposed severe restriction against owning property. Old deeds show that most of their lands became part of large farms owned later by Brevoor, LeLancey, Dyckman, Van Cortlandt, Bleeker and the Trinity Church.

A SENIOR CITIZEN'S GUARDIAN ANGEL

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. PEPPER. Mr. Speaker, you know I was delighted to receive several days ago a clipping from a local Florida newspaper describing the activities of Mrs. Lilla Kinman, an 83-year-old retired nurse from Atlantic Beach, Fla.

I do believe this article expresses so eloquently the rewards and sense of satisfaction which can be gained through volunteerism in later life. I am convinced that advancing age need not diminish one's ability to continue contributing to one's community and fellow man. Therefore, I would like to share with my colleagues this article and encourage them to urge senior citizens in their districts to consider the value of such volunteer service in their community. I insert this article in its entirety at this point in the RECORD:

AT 83, SHE IS SENIOR CITIZEN'S GUARDIAN ANGEL

(By Tilly Teller)

Twenty years ago Mrs. Lilla Kinman, a retired nurse, founded the Merry Service Club, a group dedicated to bringing joy into the lives of patients in nursing homes. Many of these aged and ill people have neither friends nor family who care about them and sometimes the attendants who are supposed to look after them don't care either. Lilla, who is 83 and has suffered a series of heart attacks, still refuses to give up her mission, now shared by 30 other kind hearted women in the club. They bring gifts of lap robes, little pillows, punch, homemade cookies and, best of all, concern.

Having been a nurse, Lilla knows where to look and what to look for to determine whether these helpless oldsters are getting the attention they deserve. In the past she has reported bad conditions in some nursing homes and force revisions to be made. Among the newer members of the club is Mrs. Virginia Russell, who has worked as recreation supervisor in several nursing homes. Now, with the other club members and the unsinkable Lilla, she makes the rounds of all the nursing homes, and uses her own observation on behalf of these fragile senior citizens. The club's good deeds are year-round, of course, but all holidays call for extra effort. For Easter the visit was made to Arlington Manor and one who got her gifts, including a bunny basket, was Mrs. Gertrude Ruth, 72, who is confined to a wheelchair and has no relatives at all.

Lilla Told Tilly, "There are some nice people who take the patients for a ride, maybe stop and have a bite to eat. But a lot more are needed and if you will call the nursing home nearest you and ask to do this you can be sure that you have made some old lady or gentleman happy. I don't care how nice the place may be, cabin fever is an awful thing. Just to get out and look around a bit is a godsend."

THE DEATH OF STEPHEN BIKO

HON. ELIZABETH HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Ms. HOLTZMAN. Mr. Speaker, in a decision which is belied by the evidence, a South African magistrate absolved the security police of any responsibility for the death of Steven Biko, the young leader of the "Black Consciousness" movement. This decision demonstrated clearly that even the judicial system of South Africa will not provide any check on outrageous government abuses against those who question that country's oppressive racial policies.

Sydney Kentridge, who served as counsel for the Biko family, argued forcefully that the facts of the case required a finding that the security police were guilty of criminal assault. His dramatic summation, portions of which were reprinted in the New York Times, lays out the stark facts. I think my colleagues will agree that, as Mr. Kentridge says, "It is difficult to comment on these facts in measured terms."

The text follows:

[From the New York Times, Dec. 7, 1977]

STEPHEN BIKO'S DEATH ON A PRISON FLOOR

(By Sydney W. Kentridge)

The undisputed facts concerning the treatment of Mr. Biko.

Mr. Biko was detained on the 18th August, 1977, whilst in good health. He died 26 days later. What the security police themselves admit they subjected him to during this period is more than a matter for comment. The admitted assaults on his dignity under the direction of Colonel [Pieter J.] Goosen [chief of the Port Elizabeth unit of the security police are evidence of a callous disregard for his legal and human rights and are highly relevant in assessing the evidence of those who abused him:

(A) He was left in solitary confinement from the 19th of August to the 6th of September. Whilst at Walmer police station before his interrogation he was deprived even of the negligible rights he had as a Section 6 detainee [Section 6 of the Terrorism Act].

His clothes were removed and he was left naked in his cell, he was not taken out for the minimum period of exercise in the open air, he was not allowed to purchase any food, he was not allowed proper washing facilities. His complaints to the magistrate on the 2nd September were a dead letter. The complaints did not even come to the notice of those against whom they were made.

(B) He was brought to the interrogation

room on the morning of the 6th September, 1977. At night he was handcuffed and shackled by leg irons placed on his feet which in turn were locked on to walls. This was the position that he was expected to sleep in.

(C) He remained so shackled even after Colonel Goosen, according to his own evidence, suspected that he had suffered a stroke and was trying to get Dr. [Ivor] Lang [district surgeon in Port Elizabeth] as a matter of urgency during the morning of the 7th.

(D) He remained so shackled even after his hands, feet and ankles were swollen and cut.

(E) He remained shackled on the mat on the floor, after he was seen by Dr. Lang, for the whole day of the 7th and during the night of the 7th/8th, despite sufficient concern about his health to arouse Lieutenant Wilken to call Major Fisher [officers of Colonel Goosen's unit], who in turn called Colonel Goosen.

(F) He remained shackled during the morning of the 8th. Security policemen say that he had not made use of toilet facilities offered, but the fact is that he was found in urine-wet trousers and blankets, on a wet mat.

(G) The two medical practitioners who saw him during their lunch hour on the 8th were sufficiently concerned to seek the assistance of a specialist physician. However, Mr. Bilko was still left there, shackled, in wet trousers and a wet bed until he was removed to the prison hospital at about 2100 [hours].

(H) No attempt was made to get another physician when it was known that Dr. Hersh would not be available until late. Mr. Biko was left shackled on the mat.

(I) Although Mr. Biko was shown some kindness by prison warders (who alone seem to have shown some appreciation that Mr. Biko was a sick man) no channels of communication were established to report his condition to the doctors.

(J) His obviously confused behavior in trying to have a bath with all his clothes on or sitting in an empty bath, although reported to the doctors and Colonel Goosen, produced no change in their attitude to him.

(K) For contradictory and inadequate reasons he was moved from the prison hospital and placed in a cell, ostensibly to make it easier for Dr. Lang to see him regularly. In fact, this meant that he was removed from the semi-skilled care of the prison, removed from a bed to a mat, and again left naked in an ordinary cell.

(L) He had not been back in the police station above a few hours when he was found in a state of collapse on the floor by Sgt. [Paul Janse] Van Vuuren [a warder]. The senior officers and Dr. [Benjamin] Tucker [chief district surgeon in Port Elizabeth] were again hurriedly called in. Again there was insistence on only a prison hospital, even if it was 1,200 [kilometers—750 miles] away and even if only a van was available as transport.

(M) He was transported approximately 750 miles lying naked in the back of a Land-Rover without any medically qualified person to attend to him and with nothing more than a bottle of water by way of equipment.

(N) No medical reports were furnished by the doctors of Port Elizabeth nor were they asked for by the security policemen who took Mr. Biko to Pretoria.

(O) Although Mr. Biko had to be carried into prison by four men using a mat as a stretcher a further attempt was made by the security policemen from Port Elizabeth to persuade the officials at the Pretoria prison that the obviously sick man might be feigning illness and that he was on a hunger strike.

(P) He was sent all the way to Pretoria prison because there, according to Colonel Goosen, there was "outstanding medical facilities." For Biko these facilities proved to be a mat in the corner of the cell, the attendance of a newly-qualified general practioner six hours after his arrival at the prison, a diagnosis based on false reports of a hunger strike and that other doctors had found nothing wrong with him, a drip and vitamin injection and nothing more.

(Q) At no time was any member of Biko's family or any friend informed of his condition. He died a miserable and lonely death on a mat on a stone floor in a prison cell.

It is difficult to comment on these facts in measured terms.

Conclusion—

The doctors—for whatever precise reason—felt themselves beholden to the security police. Upon being called in, Dr. Lang gave a patently false certificate. Neither he, nor his superior, Dr. Tucker, made any inquiry of their patient as to the origin of even the lip injury which, at least, they admit seeing. They did not even direct any inquiry to the police.

This studied lack of curiosity can only be explained either by their active collaboration with the police or a deliberate election not to embarrass the police, nor indeed themselves, by asking questions to which the answers were obvious.

They—no doubt in common with the police—did not fear initially for Mr. Biko's life. On the contrary, it must have seemed that the course of time would heal Mr. Biko without their medical intervention which would have had to be given in concert with officials of hospitals who would no doubt be more curious than they were.

And as time passed, one falsehood was compounded by another: Dr. Lang's false report . . . that nothing wrong was found and Dr. Tucker's claim that the dying man was in a satisfactory condition on his removal to Pretoria.

The police felt confident they could rely upon the doctors to support them. And their confidence was justified. Perhaps strengthened thereby they, with gross impertinence, presented to this court a totally implausible account of Mr. Biko's death, starting with a fanciful description of a struggle violent in the extreme in which no blow was struck, a bizarre account of an alleged shamming when to any candid observer a man's progress to his death was being seen and described and all the while the refusal to acknowledge the head injury.

A court—including an inquest court—is the brake upon the abuse of power. It must be made known by this court that the penalty for falsehood contemptuously fabricated is not merely rebuke or reprimand but a firm finding adverse to the fabricators; if you create a tissue of lies it can only be that you dare not speak the truth.

Accordingly the verdict which we submit is the only one reasonably open to this court is one finding that the death of Mr. Biko was due to a criminal assault upon him by one or more of the eight members of the security police in whose custody he was at on the 6th or 7th September, 1977.

This inquest has exposed grave irregularity and misconduct in the treatment of a single detainee. It has incidentally revealed the dangers to life and liberty involved in the system or holding detainees incommunicado.

A firm and clear verdict may help to prevent further abuse of the system. In the light of further disquieting evidence before this court, any verdict which can be seen as an exoneration of the Port Elizabeth security police will unfortunately be interpreted as a license to abuse helpless people with impunity. This court cannot allow that to happen.

OSHA LAUDED FOR TRIMMING REGULATIONS

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. WHALEN. Mr. Speaker, I believe in giving credit where credit is due. So, I take this opportunity to laud Eula Bingham, Administrator of the Occupational Safety and Health Administration (OSHA) and her superiors at the Department of Labor.

Earlier this week, the Labor Department announced that it was dropping over 1,000 of the rules administered by OSHA. All of these regulations were trivial in nature and not significant to the agency's mission of protecting American workers against injury from industrial safety or health hazards.

For the most part, the regulations in question have not been enforced or else have been considered as "de minimis" violations only. Nonetheless, their removal from the books makes the OSHA rules that much shorter and easier to grasp. The Labor Department's action allows employers and OSHA both to focus more attention and effort on important health and safety issues and less on minor details that are of nuisance value only.

Mr. Speaker, I do think that the role assigned to OSHA, to help make the workplace a safer environment, is an important one. The policy change announced recently by the Labor Department represents a substantive step toward more effective fulfillment of its role, while at the same time minimizing the irritation felt by some employers toward OSHA regulations.

Earlier this year, I joined Congressmen SARASIN and STEIGER in an effort to expand the consultative services offered by OSHA. Our goal was to make it easier for concerned employers to obtain advice, in a nonadversary fashion, from Government experts who could tell them how to go about improving the safety of their workplaces. In late April, OSHA did dramatically increase its support for State-run consultative services, such as those offered in my home State of Ohio.

In the CONGRESSIONAL RECORD of May 3 I applauded OSHA for its responsiveness to our congressional initative. Now, I am acknowledging their very positive response to businessmen's desire for a pruning of the thicket of OSHA regulations. This is a change in policy that I am sure will be welcomed throughout the business community. And I think that most laborers will also appreciate the added focus on key problems in the occupational safety and health area.

At this point in the RECORD, I wish to insert the full text of an article that appeared recently in the Washington Post.

[From the Washington Post, Dec. 6, 1977]

1,100 RULES DITCHED BY OSHA AS "NITPICKING" AND NEEDLESS

(By Helen Dewar)

The Labor Department announced yesterday that it will stop enforcing 1,100 "nitpicking" job safety rules ranging from design specifications for toilet seats to the permissible size of knotholes in the siderails of stepladders.

Asserting that the safety of American workers is not threatened by the "shape of a toilet seat," Labor Secretary Ray Marshall told a press conference he is moving to junk such rules which have made the job safety program a laughingstock in the past.

"Thousands of working people suffer serious accidents and illnesses each year," said Marshall. "Yet to the best of our knowledge none of these accidents or illnesses has been caused by the shape of a toilet seat or because a fire extinguisher was two inches too low. That is why we are taking steps today to prune some of the underbrush that stands between OSHA (the Occupational Safety and Health Administration and intelligently focused enforcement."

Most of the 1,100 doomed rules—roughly one-tenth of OSHA's entire roster of health and safety regulations—were adopted without change from industry-devised guidelines when the agency was created in the early 1970s.

They quickly became potent weapons in the hands of OSHA critics seeking to ridicule the agency to death.

One of the critics' favorites was the requirement for "open-front type" seats on toilets installed after June 4, 1973. Another was a rule that fire extinguishers can be no more than 3½ feet off the floor in some cases and 5 feet in others. Few critics failed to mention the 12 pages of fine print on the design of ladders or the provision, dating back to the 1930s, that ice cut from ponds could not be used in watercoolers.

Marshall and OSHA Administrator Eula Bingham vowed to get rid of such rules when they took office last winter, but it has taken 10 people until now to accumulate the hit list, which will take 250 or more pages of a special edition of the Federal Register to explain.

The 1,100 rules cannot be dropped officially until after a review period of about five months, but Bingham said that in the meantime they will not be enforced by written notices or penalties.

A similar "de minimis" procedure—the government's way of saying that a silly, misdirected or outmoded rule will not be enforced to the letter—will also be followed in dealing with cases where technical violations of OSHA rules do not actually threaten the health or safety of workers, Bingham said.

"Employers will not be cited for minute differences in implementing the standard, as long as the intent of the standard is carried out," she explained.

Bingham and others said most of the 1,100 rules targeted for extinction were technologically obsolete or designed primarily to protect machinery. Some were simply aimed at improving comfort rather than promoting safety, they said.

Others were virtually indecipherable. Some were written in Latin, said John Proctor, deputy director of OSHA safety standards, and "our people don't read Latin."

While some inspectors "winked" at the more ridiculous rules, Proctor said, regulations on the height of fire extinguishers turned up on OSHA's list of its 100 most violated rules.

Bingham said further streamlining efforts will be made in the future, including proposed revisions over the next few months in general industry standards covering walking and working surfaces, fire protection and machine guarding.

OUTSTANDING ACCOMPLISHMENTS OF RUTH M. SENIOR

HON. CLAIR W. BURGENER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. BURGENER. Mr. Speaker, we are so involved in authorizing and spending millions and hundreds of millions and even billions of dollars that we sometimes forget the impact of some of these programs. I was effectively reminded of this recently when one of my constituents, Ruth M. Senior of Rancho Bernardo, reported to me on her work in Paraguay as a volunteer, with her travel, lodgings, meals, and clothing care paid for largely out of Agency for International Development funds.

Ms. Senior is a trained economist, and back in the 1940's she headed research projects at the University of Puerto Rico, Rio Piedras, and at Columbia University, New York City. In 1952 she worked with David Rockefeller in organizing Morningside Heights Housing Corp., and served 17 years as vice president of Association for Middle Income Housing, New York City. Since she retired in 1970, she has spent part of her time on various co-op housing assignments in Chile, Jamaica, and Lesotho.

Early this year an agency of the Paraguay Government, Instituto Paraguayo de Vivienda y Urbanismo, asked the Organization of American States for help in planning that nation's first housing co-op. OAS was at the time unable to fund such assistance and turned to an organization created 7 years ago by U.S. cooperatives, Volunteer Development Corps., to provide the help IPVU had requested. VDC asked Ms. Senior if she would volunteer her services to help the Paraguay Government, and she said she would.

Thanks to Ms. Senior, the project is taking shape. One of the first things she did was to get IPVU, which knows much about housing and nothing about cooperatives, to consult with Paraguay's director general of cooperatives, who knows much cooperatives and nothing about housing.

You may ask, Mr. Speaker, why someone should fly 5,500 miles to get two agencies of the same government to meet, to consult, and to share their combined expertise in a single project. I do not know the answer, but Ms. Senior was told it had never happened before. And I dare say we might find the same situation within our own Government.

The two Paraguay agencies have now identified a low- and middle-income suburb of Asuncion where they will organize this pilot project in cooperative housing. They have also chosen a sponsoring organization for the project, a step which we in the United States have found extremely valuable. The directors of this organization, a large community-based credit cooperative, are now considering what their sponsorship would involve, what responsibilities they would have as sponsor, what risks they run.

Ms. Senior recommended that the sponsor hire IPVU to supervise its architect, bring together various pieces of private land, negotiate with a lender, contract for construction, recruit members of the co-op, and handle their down payments. It would, in the language of U.S. housing co-ops, serve as the technical service organization.

Ms. Senior helped the agencies locate a potential lender, Banco Nacional de Ahorro y Prestamos para la Vivienda. As a government agency, IPVU couldn't borrow from Banco Nacional, but the private sponsoring organization, acting in the name of the housing co-op, could.

Having helped the two agencies develop a long-range plan and agree on the immediate steps, Ms. Senior returned home. As the agencies work this plan, they will undoubtedly hit snags or feel hesitant about proceeding further without more advice. Both OAS and VDC are poised to receive further requests for technical help and are ready to provide it.

VDC has received $300,000 in fiscal 1977 funds from AID, and the Agency plans to provide $415,000 in fiscal 1978. This covers travel, lodging, meals, and clothing care of VDC's volunteers—$7,742 per project this year. It also pays most of the salaries of VDC's five-member staff. The rest of VDC's funds come from its five sponsoring organizations—Agricultural Cooperative Development International, American Institute of Cooperation, National Council of Farmer Cooperatives, National Rural Electric Cooperative Association, and World Council of Credit Unions.

However, as VDC emphasizes, its most vital, most important resource is not money. It is the volunteered services of persons like Ms. Senior. I am told that these services, if valued at $150 a day represent more than half VDC's total resources.

It seems to me my constituent, Ms. Senior, epitomizes the kind of help the American people wholeheartedly support overseas. It offers technical help—not money, but know-how. It offers this help to groups of people who want it, who ask for it, who are willing to commit some of their own resources to a joint effort with the United States, who want to help themselves. Such a program is private, organization to organization. With relatively small amounts of AID funds, such a program is able to marshal modest contributions from United States cooperatives and the volunteer services of highly skilled, well-qualified men and women. I commend to you, Mr. Speaker, this fine piece of work by my constituent.

TRIBUTE TO LATE HON. CARLETON J. KING

HON. JAMES M. HANLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 1, 1977

Mr. HANLEY. Mr. Speaker, I would like to add my voice to those paying tribute to our former colleague, Representative Carleton J. King of Saratoga Springs, N.Y.

Congressman King enjoyed a long political career on both the State and National levels, entering public service in 1936 as acting city judge for Saratoga Springs. He was first elected to the House of Representatives in 1960, when he resigned as Saratoga County district attorney.

Carleton King represented the 29th District of New York for 14 years, and he represented the people of his district in the true sense of the word, voting to reflect what he perceived were the wishes of his constituents.

Certainly, Carleton King and I differed on some of the issues, but no one can deny he was an exemplary public servant who earned and deserved the respect of his constituents, his friends and his colleagues.

We will miss Carleton King, and our heartfelt prayers go out to Mrs. Constance King and her entire family.

A LIFESAVING FACTOR

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. DERWINSKI. Mr. Speaker, when the Congress passed the 55-mile-per-hour speed limit, I, like most Members, voted for it as an energy saving device. Since then, I have been especially impressed with the lifesaving factor of the reduced speed limit, in addition to the number of accidents and injuries that have substantially subsided. For that reason, I concur with the editorial appearing in the Chicago Daily News of December 5, which I insert at this point:

FIFTY-FIVE-MILE-PER-HOUR LIMIT: MAY IT LIVE AGAIN

Remember the 55 m.p.h. speed limit? Most Illinoisans apparently do not. Highway traffic surveys brand this state as one of 22 in which 60 per cent or more drivers exceed the limit. We are not the worst example; Connecticut and Wyoming are, with violation rates of 77 per cent. The best record was set by Virginia—30.5 per cent, nothing to be proud of in a nation of laws.

President Carter has telegraphed his concern to the governors of the 22 states with the worst records. And well he might. The speed limit was enacted in 1974 as an energy conservation measure. But the nation got a substantial bonus when traffic deaths and injuries fell off sharply as highway speeds were reduced. Last year, however, the traffic toll resumed its rise as more and more drivers began to scoff at the law and enforcement grew lax. At the same time, the gasoline and diesel fuel that the speed limit was supposed to save has been going up in smoke.

Transportation Sec. Brock Adams has proposed—and Carter has approved—that pressure be applied on the states to enforce the law. Under Adams' plan, the states would get federal funds and technical assistance to monitor highway traffic, and to work toward a compliance rate of 85 per cent by 1982. States that don't measure up to the new standards would, presumably, be penalized. The Transportation Department is considering a reduction in federal highway fund allotments of as much as 10 per cent for the states with the highest proportion of scofflaws.

Congress would have to enact whatever plan emerges from the Transportation Department, and we hope there will be little resistance. The fuel saved by driving at 55 m.p.h. is substantial, which ought to be important in a country that's now importing nearly half its oil, and paying through the nose for it. And the minutes saved by cheating the law do not compensate for the lives lost.

CITIZENS FALSELY ACCUSED OF A CRIME BY THE GOVERNMENT AND THE COURT COSTS INCURRED

HON. JOHN W. JENRETTE, JR.

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. JENRETTE. Mr. Speaker, it is well known that our Constitution guarantees the right of counsel to anyone accused of a crime who is "indigent."

However, it is not so well known that a long criminal trial can destroy the savings of a middle-income person who is wrongly accused of committing a crime. Such a trial can have the same effect as a catastrophic illness has on the average American family.

I believe that my colleagues would be interested in a communication which I recently received from one of my constituents, Mr. Mordecai C. Johnson, an attorney in Florence, S.C.

He makes the excellent argument that citizens falsely accused of a crime by the Government should not have to bear the exorbitant cost of defending themselves. In short, he says that only the guilty should pay.

I hope that our colleagues will give Mr. Johnson's statement the consideration it deserves. It reads as follows:

FLORENCE, S.C., *November 21, 1977.*

Hon. JOHN W. JENRETTE, Jr.,
Cannon House Office Building,
Washington, D.C.

DEAR JOHN: Thank you for your letter to me of November 12, 1977 responding to my earlier letter proposal that provisions be made in the Federal Criminal Code for compensation, including attorney fees, to persons accused, but not convicted, of crimes.

I was certainly gratified to know that you supported and favor compensation—up to $50,000, I believe—for victims of crimes.

You indicated that you incline toward believing that my proposal could not pass—essentially because of its expense—but that you would take it up with your Congressional colleagues.

I would like to briefly state here the proponent case, and to urge you to pass on to your colleagues these considerations along with whatever you would like to add along those lines.

First, the Constitution, as you know, guarantees to persons accused of crime the right to counsel. The Supreme Court has held that the Constitutional right to the assistance of counsel means the effective assistance of counsel. The Congress has made the judgement, expressed in the Criminal Justice Act, that the right to the effective assistance of counsel requires Government paid counsel and other defense expenses, at least where the Defendant is indigent or cannot afford to pay for his defense. And these defense expenses are payable by the Government for those who can't afford it, even though the Defendant is quilty of a crime against the people of the United States.

My proposal, unlike that compensating victims of crimes, is founded squarely on the Constitution; not sympathy, not largess with the public's funds. It would implement Sixth—and Fifth—Amendment rights. It would logically extend the policy of the CJA to effectuate the Constitutional protection to all citizens, rich, poor, or the large group in between. An important limitation is that the people of the United States would not be called upon to pay one dime to persons convicted in the proceedings of a crime against the people of the United States, as charged.

Second, I would address the matter of the expense of this proposal.

We start with the proposition that when an innocent person is accused of crime, someone necessarily pays. One's good name, once besmirched by a criminal accusation, can never be returned—or paid for with all of a Midas' gold. No mere money can pay for the humiliation, the depreciation, the embarrassment, the opprobrium, the mental—and phyical—anguish, the wear and tear on self and family and friends, the business or professional standing lost or never achieved because of an accusation of criminality. In short, you can pay for lawyers and investigators and the like. But there are just some things money won't buy. Ask a Mayor of Fayette, Mississippi or an Ex-Governor of Texas—to cite a couple of well publicized examples. The direct expenses of defending fees, investigative costs, and the like—can be astronomical.

But this proposal may well be less expensive than upon first blush it might appear. I suspect that statistics available to you from the Administrative Office of the United States Courts or the Library of Congress would show that well over 90% of the persons accused of crimes against the United States are proven to be guilty. If I'm right, we're talking about only a few persons—5 or 10 percent of those accused—who would would benefit from this proposal.

The question, however, is not whether a criminal defense is—like a criminal prosecution—expensive. The question is one of who is best able to bear the expenses—the individual innocent citizen against whom the people of the United States move, on the one hand, or the movant, the people of the United States, on the other hand. Who should bear these costs One citizen or 200,000,000 citizens

To put the question differently, can this Nation afford to *Not* correct the injustice toward which my suggestion is directed?

It may well be that some limitations must be written in, if only for practical, political and budgetary reasons. It may be, for example, that some limitations would have to be written in patterned after the provisions for compensating victims of crime. On that, I would simply rely on your judgement as an experienced defense lawyer, a lawmaker and a representative of the people.

There is a third consideration to which I will allude briefly. This proposal presents an opportunity for the Federal Government to exercise some leadership by example in this important area of Constitutionally protected rights. In our own state, for example, the Legislature in which you served adopted forward thinking provisions on Defense of Indigents accused of crime and on bail for the accused along the lines of similar legislation by the Congress of the United States in which you now sit. Even now the South Carolina Legislature is considering revising our state's criminal procedures and I'm sure they will be looking carefully at what the United States Congress is doing.

I won't say, John, that my proposal is perfect, or beyond improvement or the like. What it is is an effort to move us in the right general direction in this important sphere. I do hope you will do what you can to make it a reality.

Warm personal regards.

Sincerely yours,

MORDECAI C. JOHNSON.

REFORMING FEDERAL REGULATION MAKING

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. GILMAN. Mr. Speaker, the November 12, 1977, edition of the National Journal offered its readers an article entitled "The Headache of Writing Regulations in a New Language—English." Indeed, anyone turning to a daily issue of the Federal Register is bound to feel somewhat bewildered as he confronts page after page of abstrusive rules and regulations issued by executive departments and agencies.

President Carter issued for comment on November 18, 1977, a proposed Executive order which commits his administration to "assuring that Federal regulations are as effective, reasonable, and as understandable as possible." The resolution I am introducing today puts Congress squarely on record as urging a continued Presidential commitment to assuring that Federal regulations: First, are issued expeditiously; second, are written clearly so as to be readily understandable by those persons subject to or affected by these regulations; and third, are otherwise designed to meet efficiently the goals of those programs to which they relate.

Moreover, by urging the President to submit anually a report to Congress indicating the progress made towards assuring that regulations are effective, readily understandable, and expeditiously written, this legislation affords Congress the opportunity to identify continuing impediments to effective Federal regulation-making, and then to formulate legislative remedies, if necessary, to eliminate such impediments.

Mr. Speaker, I am certain that all my colleagues have frequently encountered constituents who, affected by a certain Federal rule or regulation, simply toss their hands up in puzzlement because of the difficulties they have in determining just what it is that a particular regulation demands of them. It is obvious that an individual seekng to conform to a regulation must first be able to clearly understand that regulation.

Health, Education, and Welfare general counsel Inez S. Reid sums up a large part of the problem. Quoted in the abovementioned National Journal article, she states that—

> Regulation writers must recognize that in most cases their audience is not the legal profession, but individuals who must follow the regulations.

While recognizing the important criteria that regulations must be written so as to be legally defensible and enforceable, she logically points out that regulations must also be "understandable to those who must follow them."

In a recent edition of Time magazine, Fred J. Emery, director of the Federal Register—and an individual who is attempting to tackle the regulation writing problem—offered to columnist Hugh Sidey, an anecdote which well conveys the bewilderment so often accompanying attempts to ferret out the meaning and the applicability of certain Federal regulations:

> It is like the two fellows in the hot air balloon who get lost in a cloud and, emerging, call down to a man on the ground, "Where are we?" The fellow calls back, "In a hot air balloon."

The man's answer, Emery observes, "like a lot of regulations, is absolutely accurate but totally useless."

However, several promising efforts to reassert "plain English" as the language of the realm prove that Federal regulations do not have to be characterized by verbiage and "gobbledygook."

The Federal Trade Commission (FTC), for example, hired Harvard language specialist, Dr. Rudolf Flesch, to work with FTC staff in redrafting a proposed hearing aid regulation which FTC planned to issue. The proposed rule as first issued was approximately 8,000 words long and rated 21 or "very difficult"—comparable in difficulty of reading to the Harvard Law Review—on Dr. Flesch's scale. The redraft of the rule contained only 5,000 words, scoring a 68 or "standard" rating—comparable in difficulty of reading to the Reader's Digest.

In another instance, HEW Secretary Joseph A. Califano, Jr. has inaugurated "Operation Commonsense" in an attempt to alleviate the problems plaguing HEW rulemaking. Califano admits that HEW has been painfully slow in issuing some important regulations. For example, as the National Journal observes, the regulations Califano issued in May to prohibit discrimination against the handicapped, followed enactment of the 1973 Rehabilitation Act by 3½ years.

The National Journal also points out somewhat encouragingly that a 3-day course in regulation-writing being offered by the Federal Register to officials of the executive departments and agencies, is "booked up" for the next 2 months.

We can draw encouragement from initial steps taken to publish readily understandable regulations within a reasonable period of time. However, the task of rewriting much of the incomprehensible jargon of the more than 70,000 pages of the regulations contained in the Code of Federal Regulations is formidable, and bureaucratic resistance is sure to be encountered as we endeavor to assure that future Federal regulations are efficiently issued and written so as to be readily understandable. Yet, reform of the Federal regulation-making process is needed now.

Accordingly, I urge my colleagues to support the resolution I am introducing today so that we may begin in earnest to unmuddy the waters of Federal regulationmaking.

I request that the full text of this resolution be inserted at this point in the RECORD:

H.R. —

Concurrent resolution urging a continuing Presidential commitment to improving Federal regulation-making

Whereas all too often regulations issued by executive departments and agencies are both difficult to understand and issued far too long after enactment of programs to which the regulations relate; and

Whereas these regulations should be written both within a reasonable time after enactment of programs to which the regulations relate and in terms that are clear to and understandable by those persons subject to or affected by these regulations; and

Whereas President Carter recently outlined in a proposed Executive order his commitment to issuing regulations which are "as simple and clear as possible" and which "achieve legislative goals effectively and efficiently": Now, therefore, be it.

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that there should be a continuing Presidential commitment to assuring that Federal regulations (1) are issued expeditiously; (2) are written clearly so as to be readily understandable by those persons subject to or affected by these regulations; and (3) are otherwise designed to meet efficiently the goals of those programs to which the regulations relate. Furthermore, it is the sense of the Congress that the President should submit annually a report to the Congress indicating the progress made towards achieving the objectives set forth in this resolution.

POSITIONS ON RECORD VOTES

HON. JEROME A. AMBRO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. AMBRO. Mr. Speaker, I accompanied Mr. James McIntyre, the acting director of the Office of Management and Budget, a long standing date, on a visit to Long Island yesterday for a meeting with a great many local officials on a matter of the utmost importance to residents of my congressional district, and indeed all Long Islanders.

We presented arguments to the Budget Director in support of our petition for a separate planning agency for Nassau and Suffolk Counties, independent of the Tri-State Regional Planning Commission, under the A-95 review process. Without going into the details of this extremely complex issue, it is one of great significance to all the people on Long Island and in my judgment, it was essential that Mr. McIntyre understand that it is a matter of the highest concern to the congressional representatives from the bicounty area.

Since the matter was so important and the meeting went on for several hours, I was unable to return to Washington until early evening and therefore could not vote on several important measures which reached the floor yesterday.

Lest there be any doubts raised as to my position on the issues brought to the floor yesterday, I would like to indicate for the RECORD how I would have voted on the following legislation that came to the floor December 7, 1977:

Health Professions Education Amendments, H.R. 9418—Yes.

Conference report on Legal Services Corporation Amendments of 1977, H.R. 6666—Yes.

Continuing Appropriations:
Rule to consider Senate amendments—Yes.
To concur with Senate amendments—No.
ERDA Authorization, rule to consider—Yes.
SEC Authorization—Yes.
Unlawful Corporate Payments—Yes.
Continuing Appropriations:
Rule to consider Senate amendment—Yes.
To concur with Senate amendment—No.

DAVID McCULLOUGH ON THE PANAMA CANAL TREATIES

HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. STUDDS. Mr. Speaker, David McCullough is the author of "The Path Between the Seas," a superb history of the construction of the Panama Canal. Mr. McCullough's exhaustive research into this issue has made him one of the Nation's foremost experts on the canal, while placing him in an ideal position to comment on the current debate over the new proposed Panama Canal treaties. The following is a copy of a letter which Mr. McCullough has written to President Carter outlining his views on the current debate. I believe that this letter captures brilliantly the issues involved in the treaty controversy and I am sure that it will be of interest to my colleagues:

West Tisbury, Mass.,
October 21, 1977.

Dear Mr. President: Rosalee and I were so very pleased and honored to be able to meet you last Friday, and especially on such a propitious day in your campaign for the canal treaties. Your generous inscription on the newspaper picture of you and Gen. Torrijos, as well as your thoughtful remarks about my book, pleased us more than I can say, and we thank you most sincerely.

May I add also that after so many years of studying and writing about dead Presidents, I found it an enormous thrill to see and shake the hand of a live one.

During our afternoon at the White House, I had, as perhaps you know, a chance to talk at some length with presidential aides Landon Butler and Joseph Aragon, and it was Butler's suggestion that a letter covering some of my thoughts on the Panama issue might be of help to you in the months to come.

Mr. President, I am concerned about a certain lack of creative fervor in what has been said in behalf of the treaties thus far. The opposition has a "cause." Its response is full of emotion, even passion, while the arguments for the treaties, however intellectually solid, remain for many people largely an abstraction.

This is not to discount for a moment the powerful logic of the case for the treaties. Indeed, the more we are told of the hard practicalities involved—political, military, operational—the more convincing they become. They virtually speak for themselves, if presented in language of the kind the layman can understand, and, when set forth for the country by a Commander-in-Chief who is himself a former naval officer and engineer, their effect cannot help but be profound, perhaps even deciding.

But how much more important and useful this great national debate could become, how much better off we will all be for it, if the treaties are seen also as the expression of a high ideal, if in making this historic decision we can sense what Theodore Roosevelt called "the lift toward nobler things which marks a great and generous people."

There are, as I know you appreciate, all kinds of reasons why suddenly we seem to care so intensely about the canal, a subject most of us have never given much thought to until lately. To say that the opposition springs from some vague or naive nostalgia for a simpler past is really to miss the point. There is a grandeur about the Panama Canal and a grandeur of a kind we like to think of as particularly American. The canal is a triumph of an era we remember fondly for its confidence and energy, youth and sense of purpose. The canal is something we made and have looked after these many years; it is "ours" in that sense, which is very different from just ownership.

It works, still. Despite time and change it remains a huge American Success, and this just now, in the aftermath of Vietnam, is of psychological import. (There is a haunting kind of irony to the realization that we went into the jungles of Vietnam to rescue a disastrous French failure, just as once we went into the jungles of Panama to rescue a disastrous French failure.)

Probably it is the aura of power surrounding the canal that has the most to do with our feelings about it. We have known since school days of the tremendous powers called forth to build it—the power to eradicate disease, the power to literally move mountains. There is its own miraculous power to lift and transport ships from ocean to ocean. It is both the symbol and implement of sea power. So when we talk of the canal, whether we are old, young, for or against the treaties, we are talking about very elemental feelings about our own strengths, and it is this, I think, that makes the thought of giving it up or giving it away so disturbing to many people who fail to see the treaties as a positive step.

Still, by the same token, we want, all of us, a more humane and stable world.

We believe in good will, as well as strength.

We want to be builders no less than did that generation which created the canal.

So for all these reasons it is imperative that the case for the treaties be expressed in the most positive terms, *and* with eloquence. It is because the canal is of such critical importance, because it must be kept secure and in use, because we revere it as a monument to the human spirit, that the long outmoded Bunau-Varilla treaty has to be replaced and the nature of our presence in Panama brought up to date. Our decision must not be a grudging concession, but a far-seeing, constructive innovation. This, we should be able to say, is something we do because we know it is right. This is not merely the surest way to "Save Our Canal," it is the strong, positive act of a still-confident, still-creative, still-purposeful people.

Our sanction of this unprecedented step can become a source of national pride and self-respect in much the way building the canal was. It is the spirit in which we act that is so very important. The way we say yes to the treaties, the words we use, can, on the other hand, influence how we stand in the eyes of all Latin America, but it can also influence how we stand in our own eyes, and that, too, I know you will agree, is "in the national interest."

I think of what Theodore Roosevelt might say were he alive today. (I have a small bust of him which looks down on me from the top of a file cabinet as I write this.) An ardent reader of history, he knew the world has its moods. He saw history itself as a force, and the history of our own time and the changes it has brought would not be lost on him. He adored and drew inspiration from the great deeds of the past and was often saddened by the passing of an era before his eyes—the vanishing of the great frontier days of the West for example. But change was inevitable, he knew, and necessary. Change was growth. The true conservative, he once remarked, keeps his face to the future.

He believed down to his boots in a strong Executive, in presidential leadership, and the fact that the treaties reflect the policies and intentions of three prior administrations, in addition to your own, would carry enormous weight with him. Well before anyone else Roosevelt recognized the importance of Alfred Thayer Mahan's thesis (the nation that controls the sea controls the decisive factor in warfare), and so it is hard to picture him dismissing or discounting such testimony to the military value of the treaties as voiced by the Joint Chiefs.

But were he to endorse the treaties, as I am quite sure he would, it would be mainly because he would see the decision as one by which we are demonstrating the kind of power we wish to be. For Roosevelt the canal was a gateway to the very different and uncertain new world of the new 20th century, a world in which the United States had no choice but to play a major part. "We cannot avoid meeting great issues," he said. "All that we can determine for ourselves is whether we shall meet them well or ill."

Mr. President, the Panama Canal is a vast, heroic expression of that age-old desire to bridge the divide and bring people closer together. The task now, it seems to me, is to give the country the conviction that this too is what the treaties are all about.

Sincerely,

David McCullough.

RESOLUTION SALUTING THE WORCESTER PARKS AND RECREATION COMMISSION

HON. JOSEPH D. EARLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. EARLY. Mr. Speaker, it is with the greatest sense of pride that I share with my colleagues in the House of Representatives, the text of the following resolution adopted by the Massachusetts House of Representatives. This resolution is in recognition of the work done by the city of Worcester Parks and Recreation Commission and the Worcester Area Association For Retarded Children, and congratulates them upon receiving the National Voluntary Service Award.

I would like to take this time to publicly salute these fine organizations on the occasion of this tribute, and I commend them for their ongoing efforts in servicing the needs of the mentally retarded. The Massachusetts House of Representatives resolution follows:

Resolutions Congratulating the Parks and Recreation Commission of the City of Worcester and the Worcester Area Association for Retarded Children Upon Receiving the National Voluntary Service Award.

Whereas, The Worcester Parks and Recreation Commission and the Worcester Area Association for Retarded Children, Inc. have joined together in pioneering and servicing the needs of the mentally retarded; and

Whereas, They competed with contestants from all fifty states and Canada for the National Voluntary Service Award given by the National Recreation and Parks Association, whose membership consists of 18,000 professionals in the parks and recreational field; and

Whereas, At the National Recreational Congress held in Las Vegas, Nevada, on October 3rd, 1977, the Worcester Parks and Recreation Commission and the Worcester Area Association for Retarded Children, Inc. were the recipients of this coveted Award, and are reported to be the first in the Commonwealth to receive such a national Award; therefore be it

Resolved, That the Massachusetts House of of Representatives hereby congratulates the Parks and Recreation Commission of the City of Worcester and the Worcester Area Association for Retarded Children, Inc. upon receiving the National Service Award of the National Recreation and Parks Association and commends them for their efforts in behalf of the mentally retarded; and be it further

Resolved, That copies of these resolutions be forwarded by the Clerk of the House of Representatives to the Parks and Recreation Commission of the City of Worcester and the Worcester Area Association for Retarded Children, Inc.

RESULTS OF QUESTIONNAIRE

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. BIAGGI. Mr. Speaker, for the benefit of my colleagues I am pleased to submit the results of my 10th Congressional District 1977 legislative questionnaire. I consider these questionnaires most helpful in formulating my positions on key issues. The response will hopefully provide some insights into the major issues we should address in the next session.

The results follow:

Results of 1977 Legislative Questionnaire

1. Should the Federal government spend more on child abuse prevention and treatment?

Average: 74.5 percent yes, 25.5 percent no.

2. Should the Federal government provide subsidies to parents adopting "hard to place" children?

Average: 65 percent yes, 35 percent, no.

3. Do you support imposition of separate mandatory penalties for persons convicted of crimes against the elderly?

Average: 70 percent yes, 30 percent no.

4. Should the Federal government compensate crime victims for their losses?

Average: 64.5 percent yes, 35.5 percent no.

5. Should pregnancy be considered a temporary disability by employers?

Average: 42.5 percent yes, 57.5 percent no.

6. Should affirmative action programs requiring quotas be abolished?

Average: 68.5 percent yes, 31.5 percent no.

7. Is there too much emphasis on human rights in our foreign policy?

Average: 63 percent yes, 37 percent no.

8. Are present bilingual education programs successful?

Average: 6.5 percent yes, 93.5 percent no.

9. Do you support turning over control of the Panama Canal by the year 2000?

Average: 31.5 percent yes, 68.5 percent no.

10. Should we normalize relations with Cuba?

Average: 37 percent yes, 63 percent no.

11. Should we abandon our relations with Taiwan?

Average: 19 percent yes, 81 percent no.

12. Does the United Nations still serve an important function in the world?

Average: 48 percent yes, 52 percent no.

13. Should the ban on Laetrile be continued?

Average: 30.5 percent yes, 69.5 percent no.

14. Should amnesty be provided for illegal aliens who entered the United States before 1970?

Average: 25 percent yes, 75 percent no.

15. Do you support a comprehensive, cradle-to-grave national health insurance program?

Average: 68.5 yes, 31.5 percent no.

16. Should national health insurance be limited to those with catastrophic illnesses?

Average: 17 percent yes, 83 percent no.

17. Should apartment renters be able to deduct from their income taxes the amount of property tax they pay as part of their rent?

Average: 63.5 percent yes, 36.5 percent no.

18. Do you support a restoration of the death penalty for capital crimes?

Average: 88.5 percent yes, 11.5 percent no.

19. Should Federal employees be able to engage in political activities?

Average: 50 percent yes, 50 percent no.

20. Do you support unionization of armed services personnel?

Average: 4.5 percent yes, 95.5 percent no.

21. Do you support imposing civil rather than criminal penalties for possession of small amounts of marijuana?

Average: 50 percent yes, 50 percent no.

22. Should the outside earnings limitation for Social Security recipients be eliminated?

Average: 61 percent yes, 39 percent no.

23. Should the SST be banned from landing at Kennedy Airport?

Average: 60 percent yes, 40 percent no.

24. Should Saturday mail delivery be eliminated if it will help hold down postal rates?

Average: 53 percent yes, 47 percent no.

25. Do you support financing of Congressional elections with tax dollars?

Average: 48.5 percent yes, 51.5 percent no.

26. Should the U.S. withdraw ground forces from Korea?

Average: 38.5 percent yes, 61.5 percent no.

27. Do you believe the Soviet Union is stronger militarily than the U.S.?

Average: 52 percent yes, 48 percent no.

28. Do you support the restoration of the House Internal Security Committee?

Average: 75 percent yes, 25 percent no.

29. Should the U.S. limit future admissions of foreign medical students?

Average: 81 percent yes, 19 percent no.

TRIBUTE TO THE LATE HONORABLE CARLETON J. KING

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 1, 1977

Mr. DON H. CLAUSEN. Mr. Speaker, I was deeply saddened by the news of the passing of my former colleague and close friend, Carleton J. King; and would like to extend my sympathies to his wife, Constance, and their children upon whom the tragedy of his death bears the most heavily.

Carl's legal career was both lengthy and distinguished. He served as district attorney for Saratoga County before coming to Congress in 1960 and returned to private practice upon leaving the Congress in 1974. I had the privilege of serving with Carl in the House of Representatives for almost 11 years. During that time, I knew him as a man who worked tirelessly for the well being of the people of the 39th Congressional District of New York.

Through his talent, energy and sheer genious, he won the respect and admiration of all his professional and personal associates. All those around him learned and benefited from his knowledge and warm personality. He has undoubtedly left a void that cannot be filled.

As a member of the Armed Services Committee, Carl was widely recognized for his leadership in matters affecting our national defense. He was a brilliant defender of our military services which earned him the Chairmanship of the Board of Visitors of the U.S. Military Academy at West Point.

Carl will sincerely be missed by all who have had the occasion to know him and work with him.

DAVID KIRKPATRICK BRUCE

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, a very great and dear friend of mine passed away on Monday of this week, David K. E. Bruce.

David Bruce served his fellow man, his Nation, in several capacities.

Calling Bruce a "career diplomat" really applies a one dimensional term to a multidimensioned individual.

David Bruce, in the words of a New York Times editorial, was "a lawyer, author, twice-elected State legislator, banker, soldier, gentleman farmer, wine connoisseur, World War II OSS spymaster, and Marshall plan administrator when President Truman named him Ambassador to France in 1949."

France was only the beginning of Bruce's diplomatic career which saw him serve both Democratic and Republican Presidents alike.

He was a gentle man of breeding who served the public unselfishly, dedicated to international peace and harmony.

I will miss David Bruce and so will the Nation.

My wife Lucy and I extend our heartfelt sympathies to Evangeline, his wife, and their children.

I would like to include in the RECORD at this time editorials from the New York Times and the Washington Post, describing the life and career of David Bruce:

David Bruce, American and European

David Kirkpatrick Este Bruce was proof that American foreign policy could be bipartisan and that the amateur—selected for ability, not campaign contributions—could equal the professional in diplomacy. A lifelong Democrat, he served as ambassador for six Presidents, three of them Republican. President Eisenhower appointed him Ambassador to Bonn despite his campaign contribution and much-sought advice in 1956 to the Democratic Party. His political affiliation was never concealed; His Republican appointments, which he did not seek, were resigned before Presidential campaigns. But in international affairs, he saw only a continuum of national interest in the American search for a peaceful world.

The son of a lawyer and Pulitzer-Prize biographer who became a United States Senator, David Bruce himself had been a lawyer, author, twice-elected state legislator, banker, soldier, gentleman farmer, wine connoisseur, World War II O.S.S. spymaster and Marshall Plan administrator when President Truman named him Ambassador to France in 1949.

Before he finished his ambassadorial functions more than a quarter-century later, he had served in Bonn, London, Peking and at NATO headquarters in Brussels, a record unique in variety and duration as well as distinction. He served Dean Acheson as Undersecretary of State and, in Peking, headed America's first liaison mission to Communist China. Yet his most important task was one of his earliest and one in which he—and the United States—failed. Theodore White called it "Ambassador to a Dream"—the dream of a United States of Europe. Together with Jean Monnet in France, John J. McCloy in Bonn and Dwight Eisenhower, Mr. Bruce sought to catalyze the political union of Western Europe. The instrument was the abortive European Defense Community treaty. Six nations signed, but France, after a four-year debate, refused to ratify despite Mr. Bruce's vigorous efforts as special American representative.

Military and political union remain on West Europe's future agenda, but what has been achieved as a result of that effort in the early 1950's is an economic community of nine nations, known as the Common Market. It has helped to keep the democratic way vitally alive in Europe. In the history of our era, his service to the European idea will always qualify David Bruce not only as a distinguished American but as an eminent European.

David Kirkpatrick Este Bruce

"Each honest calling, each walk of life," James Bryant Conant once wrote, "has its own elite, its own aristocracy, based on excellence of performance." In the calling of diplomacy, David Bruce, who died Monday morning at the age of 79, was very nearly the embodiment of that aristocracy. He was, as Trollope said of Plantagenet Palliser, "a perfect gentleman." That is to say that he was, in the strict dictionary sense, "a man of good breeding, education and manners . . . civilized . . . sensitive . . . a man of independent income who does not work for a living." But that's only to begin with; it doesn't really describe the man, and still less his extraordinary career of public service. It is true that David Bruce did not need to work for a living. And so, while he was from time to time a lawyer, a tobacco farmer, a banker and a business broker with eclectic interests (sugar plantations, race tracks, newspapers, parachute-manufacture, oil and a project for de-nicotinizing cigarettes), he worked almost all of his life for his country.

It began the day he left Princeton in 1917 as a sophomore at age 19 to enlist as a private in the U.S. Army in World War I, and it ended last year when he resigned from his post as American ambassador to the North Atlantic Treaty Organization—at the age of 78. And in between? There is no way to convey a sense of David Bruce's service in those intervening years without at least some brief résumé: Chief of the Office of Strategic Services in Europe in World War II, Assistant Secretary of Commerce, administrator of the Marshall Plan for France, ambassador to France, Undersecretary of State, ambassador to West Germany, ambassador to Great Britain, and the head of the first U.S. liaison office in Peking in 1973. And that's not complete: It doesn't, for example, take into account elective office: Mr. Bruce was a member at different times during his career of *both* the Maryland and Virginia Houses of Delegates.

The defeats and disappointments can be dealt with quickly—the triumphs take longer. There was the unrewarding 16-month tour as the U.S. representative to the Vietnam peace talks in Paris, beginning in 1970, when there was not much disposition on either side to compromise. And there was the shattering of a cherished dream when the French refused to ratify the European Defense Community for which he had labored hard as the American "observer" on an interim committee set up to advance this critical move toward European unity. For such unity as the Europeans have achieved, however, David Bruce deserves large credit. "It was Bruce who first singled out the Schuman Plan—the first realization of European unity—as a vital new idea, and mobilized American diplomacy to support it," wrote Theodore H. White in 1954.

As for the other triumphs, they were mostly quiet and difficult to measure, for they took the form of nothing more spectacular than the consistently effective, professional practice of diplomacy. David Bruce was not an ideologue. He was more often the engineer than the inventor of policy—he made things work. "Diplomacy is the management of international relations by negotiation," he once said. "It is not a system of moral philosophy." For him, the key to it was "the application of intelligence and tact," which he possessed in abundance. Most who knew him would add uncommon charm, intellectual curiosity, cultivation, consideration, patience—and toughness of mind.

In "A Thousand Days," Arthur M. Schlesinger Jr. speaks of the "great confidence" that President Kennedy had in David Bruce's "steadiness of judgment." That's what it came down to, with six Presidents of both parties, over a span of more than 30 years. And that is why his country is so heavily in his debt.

THE AMERICAN MEDICAL ASSOCIATION'S IMMUNIZATION CAMPAIGN

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. MAZZOLI. Mr. Speaker, using children's games to publicize public health threats is a time-honored tradition. A version of "Ring Around the Rosie," for example, explained the bubonic plague in 17th century England with various verses referring to symptoms and treatment of the plague. Today, the American Medican Association and its auxiliary are using the game of hopscotch to promote awareness of childhood diseases and the need for immunization against them.

Twenty million children fourteen years or younger have not been adequately immunized against childhood diseases, including polio, measles, German measles, diphtheria, whooping cough, tetanus, and mumps. In light of the national relief experienced when these vaccines were first developed and their present availability, often at minimal cost, the current situation seems ironic.

To fight apathy and misinformation among young parents who never knew the effect of these diseases, the hopscotch campaign is constructed to appeal to children, and through them to their parents. Hopscotch courts are being given an educational twist. Immunization has been substituted for sky-blue on the top of the game and each one of the squares is labeled with a separate disease.

The American Medical Association and auxiliary have developed a kit containing background material on the current status of immunization, model press releases, model editorials both for the print and the electronic media. With commercials, puppet shows, and full-size stencils for permanent hopscotch courts, the American Medical Association has launched an enthusiastic, nationwide efforts.

1977: THE SEEDS OF DEFEAT

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. DORNAN. Mr. Speaker, the esteemed defense journal without peer, "Jane's All the World's Aircraft," says it all in the forward to its 1978 edition. I commend to my colleagues' attention this thoughtful, detailed, and frightening analysis of Soviet malignant growth by Jane's editor, Mr. John W. R. Taylor.

The article follows:

1978—"Jane's"

If our planet is subjected one day to the unimaginable horrors of a third World War, 1977 might be recorded as the year in which the seeds of defeat for the Western Powers were sown. This gloomy assessment reflects no abandonment of *Jane's* traditional non-political status, for there would be no victor in such a holocaust. Survivors would never be quite certain that their next mouthful of food was fit to eat, or their next lungful of air safe to breathe. Their first post-war tasks would include disposal of the sixty million dead which computers predict coldly for a nation like the United States, on print-out pages headed 'Calculated Risk.' It is, therefore, vital for all peoples to understand that the fragile coexistence maintained for a generation by balanced East/West military power is being allowed to slip, inch by inch, from our grasp.

We live in an age which considers itself so omniscient that it can learn nothing from history. It is insignificant to many people that the second World War and the more recent conflict between the United States and North Vietnam were ended by demonstrations of the destructive might of the manned strategic bomber. To state this fact will be construed in some quarters as no more than a final, rather pathetic plea for the American B–1, mightiest bomber of all time but so costly that it was rejected deliberately in favour of cruise missiles. It may even seem irrelevant to point out that only one military leader has previously put massive faith in such missiles, and that Britain, in a far from technologically advanced age, had little difficulty in coping with Adolf Hitler's V–1 flying bombs.

Can we be confident that modern cruise missiles, flying at subsonic speed, lacking the discrimination of human control and short of effective countermeasures at this stage of their evolution, would prove immensely more successful? However great or small the threat of cruise missiles might be, now or in the future, the vital ingredient of a deterrent policy is variety in potential means of attack *on both sides.* A great nation that is free to concentrate its technological talents and funds on countering a single threat, rather than three or four vastly differing kinds of attack, is in a happy position.

The Soviet Union has no illusion about this. When discussing further East/West strategic arms limitations, it fought uncompromisingly to restrict US deployment of both the B–1 and the cruise missile. Its leaders must be surprised beyond belief that the US President has disposed of the B–1 without asking any Soviet concession in return. One must, perhaps, be a West European, living within range of the Tupolev's 'Backfire' and Sukhoi Su–19 'Fencer,' to feel apprehensive when such formidable aircraft are ranged side by side with a force of about 1,400 ICBMs, 600 IRBM/

MRBMs, 950 submarine-launched ballistic missiles and 200 older long-range bombers, each capable of annihilating a city in a second of time.

The US Administration argues, with some justification, that even the wealthiest nation can no longer afford to build vast quantities of every conceivable kind of weapon; such profligacy is, in any case, quite unnecessary.

The U.S. Air Force never needed to think solely in terms of an optimum force of 244 B–1 bombers, costing an estimated $28,000 million initially or $100,000 million over their lifetime (equivalent to $100 for every minute which has passed since the birth of Christ or, according to the *Chicago Tribune*, the cost of a few weeks of welfare fraud in New York). Even a hundred B–1s would have compelled the Soviet Union to expend huge sums of money and immense effort on developing, producing and maintaining defences against air attack. Good as its current generation of combat aircraft may be, it is not within sight of a home defence force that could cope with squadrons of B–1s. As a start, it lacks an efficient AWACS to detect and track a low-flying attack and direct fighters towards an interception.

In contrast, America's Aerospace Defense Command has the services of a superb AWACS in the shape of the Boeing E–3A, but only 341 mid-1950s interceptors compared with 2,540 in the Soviet home defence units, many of them new. Another year has passed without any contract for the U.S. Follow-on Interceptor (FOI) needed to replace current F–106s. In the fashionable cover-up political language of the 1970s, key U.S. defence programmes are being 'slipped'. In plain terms, they have been pushed under the carpet for twelve months, out of sight, in the hope that no-one will notice if some of them never re-emerge. The latest programmes described as 'slipped' as this Foreword is being written include those for the U.S. Navy's McDonnell Douglas F–18 Hornet air combat fighter and the U.S. Marine Corps' AV–8B advanced development of the British Harrier V/STOL attack/reconnaissance aircraft.

Initial reports of what will be contained in the U.S. Defense Department's fiscal year 1979 budget proposals suggest that any McDonnell-Douglas F–15 Eagles allocated to the FOI force will have to come from the 729 aircraft intended for Tactical Air Command. Similarly, the U.S. Air Force reconnaissance force is expected to be updated by converting in-service F–111Ds for the task, taking the place of hoped-for RF–15s and *all* reconnaissance RPVs.

In the past, the fact that NATO tactical air forces are outnumbered nearly three to two by Warsaw Pact tactical aircraft in Europe was offset by the higher standards of Western aircraft and training. The advantage is being eroded rapidly. Replacing older aircraft on a one-to-one basis, the Soviet aerospace industry has given its squadrons a 500 per cent increase in both radius of action and weapon load within a decade. At the same time, the amount of advance warning of an impending attack that NATO units can expect, even on the basis of highly efficient satellite monitoring, has diminished from an estimated thirty days to four or five days.

Increasingly it becomes clear that strength must be matched with strength at every level. So-called ultimate weapons have been made far too ultimate for use in anything but a despairing last-ditch situation when a major country is faced with extinction. Most modern confrontations are pitched at a far lower level, and it would be disastrous to possess only thermonuclear weapons with which to deal with them. Nor are such weapons any longer the most terrible in the inventory or under development. During the past year there have been repeated references in the press to America's neutron bomb, described as the ideal 'capitalist' weapon, which eliminates men but leaves property and equipment intact. The USSR, we are told, can match this with Bgas, which swats men like flies sprayed with DDT, by destroying their nervous system. Then there are embryo 'death rays' based on laser technology, and other weapons of equally horrific kinds, straight out of the pages of science fiction but becoming feasible.

The time has come for an honest and practicable scaling down of all weapons of mass destruction. Whether it is feasible to agree to a total ban in any particular category is debatable. Some of the deadliest means of extermination are among the easiest to produce, and a great nation engaged in an all-out struggle for survival might feel justified in using any means to avoid defeat, however terrible. A mutual deterrent policy that works is still the key to co-existence; if approached more rationally, there is no reason why it should not be acceptable economically as well as militarily.

At the present time, on the basis of the initial arms limitation agreements, the USA and the Soviet Union maintain sufficient strategic nuclear weapons to destroy each other several times over—what the military refer to as an overkill factor of three, four or five. The cost is crippling, which is why, for example, the USA cannot afford to pursue all its options and has to sacrifice certain weapons like the B–1 to pay for more than it needs of others.

If the current overkill factor were assessed at, say, four, could it not be reduced within twelve months to three? . . . then two? Each side would retain adequate weapons to "kill the other twice over," but the overall cost would be much reduced, even if a proportion of the saving were switcher to other means of defence. There are few people in the world, East or West, who would find such a step unwelcome, and who knows what might develop eventually from such a display of statesmanlike commonsense?

Had the Soviet Union staged one of its old-style Aviation Day flypasts over a Moscow Airport in July 1977, to mark the sixtieth anniversary of the Revolution, as many people expected and hoped, it would have proved a shattering exeprience for Western observers. The spearhead could have been anything from fifty to a hundred missile-armed "Backfire" supersonic bombers, a similar number of Su–19 "Fencer" long-range attack aircraft, and many hundreds of MiG–23/27 "Floggers" and Sukhoi Su–17 "Fitters"—all with variable-geometry wings. Midstream might have come sufficient MiG–21 "Fishbeds" to darken the sky, ominous formations of missile-armed Tu–16 "Badger", Tu–22 "Blinder" and Tu–95 "Bear" maritime reconnaissance bombers, a huge assault force of Mi–24 "Hind" helicopters, squadrons of Il–76 "Candid" turbofan transports packed with paratroops, a top cover of Su–15 "Flagon" all-weather fighters and MiG–25 "Foxbats", fastest combat aircraft in the world, and a rearguard of types never glimpsed before, passing so quickly and in such abundance that brains seeking to retain myriad details and impressions became saturated and confused. Such a sight could well have made the United States regret that it had been so hasty in cancelling B–1 production; which is one good reason why it did not happen.

Nonetheless, it has been possible once again to glean a considerable volume of new information on Soviet military aircraft this year. 'Backfire' has undergone a particularly thorough re-assessment, in view of the continued controversy that surrounds this bomber, even in Congress, the Pentagon and the backrooms of the CIA. In brief, it continues to look as strategic as ever, and when more can be published about its A–6 'Kingfish' missile, Britain's need for the ADV Tornado interceptor will be utterly apparent. At the present time, the RAF is confident that it could cope with even 'Foxbat' if it had to do so, in view of the lengthy warning period that the UK receives whenever an unidentified aircraft approaches around the North Cape or over Europe. No Soviet military aircraft has ever intruded into British airspace, and some turn back hundreds of miles from the UK coastline. However, Soviet interest in the UK is indicated by the fact that in 1976 RAF 'quick reaction alert' fighters were scrambled on 133 occasions to investigate potential intruders, of which 123 were intercepted and escorted on their way.

A 'Backfire', coming in low perhaps from the West, might present new problems. So might 'Fencer', which has a radius of action adequate to reach most places in England from its bases in Eastern Europe, without recourse to flight refueling. Nor can those responsible for UK defence ignore the threat of sudden saturation by 'Kelt' air-to-surface missiles, mixed with a proportion of more advanced 'Kitchens', launched by a large fleet of 'Badgers' from stand-off range. The Soviet Union has a strange aversion to discarding any aeroplane that can still fly, and it would be all too easy to underestimate the threat posed by such missiles, carried by bombers as old as the US Air Force's B–52s.

DR. LARRY WOODWORTH

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 7, 1977

Mr. LEDERER. Mr. Speaker, I am both saddened and shocked to learn of the untimely death of Dr. Larry Woodworth. We will all miss Dr. Woodworth and especially the newer Members of Congress who knew him only a short time but who have grown to respect and admire him greatly.

When I came to Congress in January, I was assigned to serve on the Ways and Means Committee. Other more senior members of that committee already knew Larry and had worked with him on difficult and complex tax issues for many years. As a new Member, just feeling his way, I depended on Larry's brilliant mind and extraordinary knowledge of our tax code for help and guidance. Larry was always willing and ready to help me understand and decipher the most arcane passages of the Internal Revenue Code.

Mr. Speaker, more importantly and far more significant than his brilliant mind were Larry's human qualities. He was a decent and good man. His life of public service was marked with expressions of friendship and concern for his fellow man. Always with kindness and a smile, Larry dealt for 33 years with the most complex and intricate legislative measures of our time. The combination of his brilliant mind and basic goodness made him one of the most effective members of the current administration.

Mr. Speaker, may I offer my sincere condolences to Larry's wife Margaret; his children, Laurence Sheldon, Joseph Ray, Ester Margaret and Melissa Mary and to the other members of Larry's family.

ENCOURAGING EMPLOYMENT OR UNEMPLOYMENT?

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. ASHBROOK. Mr. Speaker, the present administration and the liberal majority in Congress keep pushing for new Federal spending programs that are supposed to fight unemployment. These programs usually result in larger Federal deficits and do little to solve the unemployment problem.

While Secretary of Labor Marshall's decision to do away with hundreds of senseless OSHA regulations is a step in the right direction, the usual emphasis still is on regulation and cosmetic approaches that do nothing to help encourage employment. In point of fact, the emphasis by the liberal majority in Congress seems to be one of discouraging private enterprise through greater regulation and working against investment.

In a recent column in Human Events Louis Rukeyser pointed out 10 ways in how the unemployment rate can be kept high. The liberals seem to be following his steps quite well.

At this point I include the text of his column:

TEN EASY WAYS TO KEEP THE UNEMPLOYMENT RATE HIGH

(By Louis Rukeyser)

How to keep the unemployment rate high—in 10 easy lessons:

(1) Attack business profits at every opportunity. Call them "obscene" and talk about "ripoffs" and stuff like that. Scare the pants off businessmen and investors. Cast them as the enemies of the common man. Nobody loves a "profiteer," so it's good to keep hinting that most business profits are "excess" or "windfall" or worse. Never let on that they are the key to rising living standards.

(2) When you have a problem like the impending bankruptcy of the Social Security system, solve it by greatly increasing the cost of employing new workers. Most people won't realize that you are really putting a surtax on labor, and even if they do that's still better than dealing with the problem directly or creatively. Don't make people nervous by forcing them to think.

(3) Have an energy program that emphasizes conservation rather than production. Play on the hairshirt tendency in modern American life, where people like to be told that they're going to live worse in the future, and it's going to be really good for them. Ignore the importance of increasing supplies both as the only rational long-term solution and the only possible near-term means of boosting economic growth and employment. The unemployed probably won't realize that you're victimizing them.

(4) Safety is popular; who do you know that opposes it? So carry it to ridiculous extremes. Let self-important government regulators go into small and large businesses all over the country with limitless powers and unending fine print. Adjust the height of fire extinguishers and demand changes in just about everything. And if this so escalates business costs that new hiring is diminished, count on the fact that few Americans will make the connection.

(5) Behave the same way about the environment. Nobody is cheering for pollution, are they? So insist that we create a test-tube-pure ecology overnight, banishing the last 1 per cent of filth. Pretend that we could actually do this if industrialists weren't so callous and grasping. Pretend that we can burn lots more coal, for example, without letting down the environment barriers one inch. And if we can't, and if production and employment remain sluggish because of overambitious environmental timetables, that's a mighty small sacrifice—for the employed.

(6) Keep raising the minimum wage, and insist that teen-agers get paid the full minimum. This means, of course, that many will find their actual wage is zero—they won't be able to get jobs, because they won't be worth that price to employers—but everybody will think you are marvelously humane.

(7) Give in to George Meany at every opportunity. He knows best for America, doesn't he? Pass new laws expanding unions' influence. Never, never examine the possibility that their own monopoly powers may already in some cases be excessive. Maybe some Americans won't get jobs as a result, but you'll get a fine rating from the AFL–CIO at re-election time.

(8) Play legislative games with major employers like the auto companies. Give them a standard to meet—a fleet average of 27.5 miles per gallon by 1985—and then, when they're racing to get there, start changing the rules at halftime. Talk about taxing "gas guzzlers" (don't, whatever you do, call them "cars for large families") or even banning them outright. The International Trade Commission and the Bureau of Labor Statistics estimate that such measures would reduce sales and cause a loss of 90,000 jobs, but who read their reports?

(9) Maintain, and enlarge a system of welfare and unemployment benefits that encourages many recipients to reject many jobs.

(10) Give a very low priority to tax incentives for new investment. Why help the rich? The tax system is a disgrace already, isn't it? And if that means a slower growth of the nation's industrial capacity, and thus of its ability to hire new workers—well, the voters aren't Ph.D.'s in economics, are they? You can probably keep on fooling them for years, and complaining about unemployment all the while.

MONTEREY PARK CHAMBER OF COMMERCE ADOPTS CHINESE LANGUAGE PROGRAM

HON. GEORGE E. DANIELSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. DANIELSON. Mr. Speaker, the Monterey Park, Calif., Chamber of Commerce recently extended the welcome mat to a growing number of Chinese-American merchants by conducting a get-acquainted meeting where Chinese was spoken as well as English.

The invitation sent to all merchants was printed in Chinese as well as English, and the Chamber has established a special committee to aid these businessmen and to open lines of communication.

I would like to commend the Monterey Park Chamber of Commerce for its forward looking attitude in welcoming these new merchants in this unique and understanding way.

WILLIAM S. GAUD—IN MEMORIAM

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. GONZALEZ. Mr. Speaker, I was saddened to learn today of the death of William S. Gaud.

Mr. Gaud was a public servant of great distinction and achievement. He was among those who are well known and respected within Government, but who nevertheless are not widely recognized as public figures. Yet here is a man of bold vision and courage, a real innovator, and a fine administrator. Such a man deserves fame to match his merit, and yet the William S. Gauds of this world are quite comfortable without it. For him, it was enough to serve.

Mr. Gaud came into Government with the Kennedy administration, and spent 8 years with the Agency for International Development. It was he who coined the term "green revolution" and he who promoted the widespread use of new, high-yielding food grains. And it was Mr. Gaud who insisted that gaining control of population growth must go hand in hand with development efforts.

Today we are inclined to question whether development is possible, in the terms of the vision that Mr. Gaud had. And yet, had it not been for him, the miseries of the world would have been far greater than they are today. He was a man who brought not just hope, but the reality of better life, to millions upon millions of the poorest people on earth.

I had the privilege of knowing this man. I am profoundly saddened by his passing.

I include in the RECORD the obituary for Mr. Gaud, as published in the Washington Post today:

[From the Washington Post, Dec. 7, 1977]

WILLIAM S. GAUD, FORMER AID OFFICIAL

(By J. Y. Smith)

William S. Gaud, a former administrator of the Agency for International Development who emphasized food production and population control, died Monday of cancer at the Washington Home for Incurables. He was 70.

Mr. Gaud coined the term "the green revolution" to dramatize his belief that the use of new, high-yield kinds of wheat and rice could help the underdeveloped world feed itself. He was equally certain that the breakthroughs in agriculture efforts to control population.

Mr. Gaud joined AID when it was first set up in 1961 at the outset of the Kennedy administration. He was in charge of its operations in the Near East and South Asia until 1964, when he became deputy administrator. From 1966 to 1969, he was administrator.

The increase in food production in this period—particularly in Turkey, India and Pakistan—was astonishing. In 1964, India produced 9.8 million tons of wheat. In 1969, it produced 18 million tons. Pakistan's yield rose from 4 million to 7 million tons in the same five years.

These increases were made possible by the introduction of strains of wheat developed in Mexico under the auspices of the Ford and Rockefeller foundations. The foundations also developed high-yield rice in the Philippines.

Mr. Gaud's contribution was to make them available to the countries that needed them. President Johnson had proclaimed a "war on hunger" and the foreign aid programs were the means by which it was to be fought.

President Johnson announced in 1965 that the United States would finance birth control programs abroad. This was a sharp departure from previous policies.

Mr. Gaud felt that these two efforts—food production and population control—would permit the world to feed itself and avoid massive famines. He did not think that the task would be easy.

The developing countries, he told Congress in 1968, "lack the skills to do the necessary adaptive research. They lack the foreign exchange to import fertilizer. They lack the capital to build fertilizer plants. They lack the facilities and techniques needed to train their people in the new ways."

The United States and other rich countries must fill these needs, he said.

The new grains, he wrote in a letter published in The Washington Post in 1968, would allow the world to meet its "medium term" requirements. He added, "But this is not enough for the long term. Today's rapid rate of population growth must be slowed or people will outstrip even this expanded food supply before the turn of the century.

"To meet the long-term challenge of moderating the population increase, AID gives family-planning programs the highest priority, together with assistance to agriculture."

The 1960s were what one former associate of Mr. Gaud called the "golden era" of cooperation between the United States and India and Pakistan. But foreign aid, as well as many other programs, began to run into increasing difficulties in Congress from critics of the war in Vietnam. Much of Mr. Gaud's tenure as administrator of AID was devoted to trying to preserve the programs in which he was most interested in the face of this criticism.

When he left government, Mr. Gaud became the executive vice president of the International Finance Corporation of the World Bank Group. He remained there until 1974, when he became a consultant to the World Bank and president of the Population Crisis Committee, a private organization that promotes population control.

Robert S. McNamara, the president of the World Bank and the former Secretary of Defense, said yesterday that Mr. Gaud was "one of the most dedicated officers I have worked with in my 17 years in government and international organizations."

Moeen A. Qureshi, Mr. Gaud's successor at the International Finance Corporation, called his death a loss "to the peoples of the developing world for whom he worked so hard and accomplished so much."

Mr. Gaud was born in New York City and earned bachelor's and law degrees at Yale University. After teaching briefly at Yale and then starting a private law practice in New York, he became an assistant corporation counsel for New York City. One of the projects on which he worked was the city's acquisition of control over its subway system.

He served in the Army in the China-Burma-India theater during World War II. There he worked with Dean Rusk, who was secretary of State in the Kennedy and Johnson administrations. It was Rusk who persuaded Mr. Gaud to give up his New York law practice after the war and come to Washington in 1961.

Mr. Gaud's survivors include his wife, the former Eleanor Mason Smith, of the home in Washington; a daughter, Anne Tinker, also of Washington, and a brother, Henry Taylor Gaud, and a sister, Mrs. John Leland, both of Charleston, S.C.

EFFECTIVE OLDER WORKERS

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. PEPPER. Mr. Speaker, as chairman of the House Select Committee on Aging, one of my chief concerns has been to ban mandatory retirement. An arbitrary age deadline not only deprives the American people of an effective work force; it also puts an undue strain on the social security system and causes needless poverty and anguish for many elderly persons. For these reasons, I commend my colleagues for having passed, by the overwhelming vote of 35 to 4, H.R. 5383 which bans mandatory retirement in the Federal sector and extends protection from mandatory retirement to age 70 in the private sector.

On the occasion of Eric Sevareid's retirement on his 65th birthday last week, I commented on the great loss this country will now feel without the guidance of such a committed and competent journalist. His absence from the nightly newsstands is an example to us of the needless effect of forced retirement.

For my colleagues' benefit, I would like to insert in the RECORD an article from the Wall Street Journal of December 7, 1977, which further highlights the effectiveness and competency of our Nation's elderly work force:

UNRETIRING WORKERS: TO THESE EMPLOYEES, THE BOSS IS A KID

(By John L. Moore)

CHEVERLY, MD.—Like many American workers, Leo La Fontaine rises before dawn five days a week, dresses, eats breakfast, packs a lunch and drives an hour to his job.

Once there, he puts in another eight hours as a production clerk for his employer, a Pepsi-Cola bottling plant. A peppy, cheerful man, Mr. La Fontaine often draws praise from co-workers for his stamina. One of his bosses, Robert Arsenoff, a vice president, declares flatly that "Leo is a phenomenon."

Leo is also 78 years old. And while Congress debates whether to push the mandatory retirement age back to 70 from 65, Mr. La Fontaine keeps plugging away at the Pepsi plant, where he has spent the last 14 of his 61 working years. "I'll be 79 next February," Mr. La Fontaine says, "and I don't see any reason for quitting as long as I feel good."

A septuagenarian employe is something of a rarity, of course. Most companies don't hire or retain workers over the age of 65, often because management wants to give younger employes a chance for promotion or because labor-union contracts set a mandatory retirement age. Thomas Harper, a Philadelphia management consultant, also notes that companies tend to view elderly workers as a liability since "many of them become less than productive as they grow older."

750,000 STILL WORKING

Yet Mr. La Fontaine is by no means the only extra-senior citizen still on the job. According to the Labor Department, more than 750,000 Americans age 72 and over were employed full or part-time last year. Their ranks include women such as Elizabeth Houlihan, an 80-year-old secretary to Pennsylvania's Secretary of Labor, and men such as 83-year-old Nathan Recht, who spends three or four nights a week waiting on tables at a Miami airport restaurant. And to hear many of them tell it they wouldn't have it any other way.

"Lots of people can sit under a tree and enjoy it—I can't" says Harry Jones a 73-year-old industrial engineer. Mr. Jones has worked at Portec Inc.'s Troy N.Y. steel mill ever since 1968 the year he retired from another job only to discover retirement wasn't to his liking. Today, Mr. Jones vows he won't "hang up my slide rule" for another four or five years.

These older workers say keeping busy isn't the only reason they're reluctant to leave the factory or the office. Aware that many retirees are hard pressed to get by on pensions and Social Security payments, they are also happy to have the financial independence that accompanies a regular paycheck. Indeed, to stay on a payroll, some are even willing to take a cut in salary.

"I COMPLETED THE COURSE"

Mr. Jones, for instance, earns $15,620 a year at Portec, a salary which he says is about 30 percent below the local going rate for industrial engineers. But Social Security payments of $485 a month, plus interest from savings accounts, more than make up the difference. "When I buy a car, I pay cash for it," Mr. Jones says. "I like to pay my bills when they're due." Besides, he adds, "I just love to get that Social Security check. I was working (in 1937) when they started it. I completed the course, and now they're paying me."

(Under the Social Security laws, beneficiaries under age 72 who make $3,000 a year or more have $1 in benefits withheld for every $2 earned above that level. However, job holders age 72 and over draw full Social Security benefits regardless of their earnings.)

Perhaps the dean of American workers is 86-year-old George Kraft, who has been employed by Globe Dye Works Co. in Philadelphia since 1907. When he started, his boss was a Civil War veteran and most of the company's deliveries and shipments were made by horse-drawn wagons.

Until recently, Mr. Kraft worked a five-day week at Globe, rising at 5:15 a.m. and grabbing three different buses in a 40-minute commute to his job as a receiving clerk.

Indeed, he's annoyed that, shortly after he announced he would retire at the end of this year, Globe cut him back to three days a week as part of an austerity move in which several younger workers were laid off.

Thomas Greenwood Sr., Globe's president and the grandson of the man who hired Mr. Kraft, says the company retains the octogenarian because he is a competent, reliable worker. "As long as a man can produce, he can keep his job," Mr. Greenwood explains. He and others make it clear, however, that employers can't afford to coddle older workers. "If they can't produce, we can't keep them," says Wilson Greenwood Sr., Globe's vice president.

As they advance in age, of course, many long-time workers do lose the physical strength and mental acuity they enjoyed in earlier years. Still, sagging productivity isn't necessarily a characteristic of elderly employes. Take Frank Kiernan, a packaging salesman for the Lehigh Packaging Division of Lehigh Press Inc., a New Jersey-based printer and packager.

Now 77 years old, Mr. Kiernan is pursuing what he calls "one of the biggest" deals of his 50-year sales career. Like any salesman with an eye on the competition, Mr. Kiernan is reluctant to divulge details of the pending deal. But John O'Meara, who heads the

Lehigh division, says that because of Mr. Kiernan's enterprise, a pharmaceutical company is on the verge of buying a new Lehigh concept for packaging pills. If the transaction takes place, Mr. O'Meara adds, it would mean a multi-million dollar sale for Lehigh.

It would embellish Mr. Kiernan's already impressive record at the company. In 1975, he was the division's top salesman with a volume of $1.2 million. This year, his sales again are approaching $1 million, and as a result, his boss says, Mr. Kiernan "is a pretty highly paid man."

Despite his success, however, Mr. Kiernan says he rarely devotes more than four days a week to business—primarily because he doesn't want to let work interfere with his golf game. "Would you if you were my age?" he asks.

DEWEY D. STONE

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. BURKE of Massachusetts. Mr. Speaker, it is with the deepest feelings of regret and loss that I stand in tribute at the passing of my valued friend, Mr. Dewey D. Stone.

Mr. Stone was a lifelong resident of Brockton, Mass., but he touched the lives of many across this country and abroad. He is nationally recognized as a supporter of world Jewry, having donated, among countless other contributions, the administration building at the Weizmann Institute of Science in Israel.

The Jewish community has often recognized his philanthropy. He was named "Man of the Year" by the Jewish War Veterans of America in 1953, and later the State of Israel designated its new school of journalism in Jerusalem the Dewey Stone School.

Yet his generosity was ecumenical, extending beyond the Jewish community; with his brother, he donated a science building to Boston University. It is fitting that we all remember Dewey Stone, his friendship, kindness, and generosity.

Though he has passed from this world, he has passed along to those he left a cherished memory of unquestioned admiration.

An article from the Boston Herald American concerning Mr. Stone follows:

BROCKTON.—Services for Dewey D. Stone, 77, industrialist, philanthropist and one of the country's most prominent Jewish leaders, will be held tomorrow at noon in Temple Israel, Brockton.

A lifelong resident of Brockton, he died Saturday at Brockton Hospital.

Born of immigrant parents, he attended Brockton schools and was graduated from Boston University School of Business Administration in 1920.

In his business career, he was the president of the Harodite Finishing Co. of North Dighton, but he was much better known as a public spirited citizen and contributor to the American way of life and world Jewry.

The administration building at the Weizmann Institute of Science in Israel was a gift from Mr. Stone and his wife, Anne (Abrams), who survives.

He also established, with his brother, the late Probate Court Judge Harry K. Stone, a science building at Boston University.

In 1953, he was honored as "Man of the Year" by the Jewish War Veterans of America for his efforts in establishing the state of Israel and the cause of world Jewry.

He was the recipient of many honorary degrees and won many honors from the state of Israel, which, on the occasion of his 70th birthday, named a new school of journalism in Jerusalem the Dewey Stone School.

Active in politics, he was a strong supporter and confidant of President Truman and Kennedy and was influential in affairs involving Israel in the United Nations.

Both he and his wife were active in affairs of Brandeis University, where he was a trustee.

Besides his wife, he leaves a brother, Abraham, of Brockton.

Arrangements were made by the Levine Funeral Chapel, Brookline.

SPECIAL FALL 1977 QUESTIONNAIRE RESULTS

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. FISH. Mr. Speaker, because of the timeliness and importance of the many issues that faced the 95th Congress in the closing days of the 1st session, I felt it necessary to poll the 25th Congressional District of New York in a special fall 1977 questionnaire—mailed in early September.

I have just received the final tabulations and would like to make the results a part of the official record, by printing them below. I hope my colleagues in the House will find the following information of interest.

REP. HAMILTON FISH, JR., SPECIAL FALL 1977 QUESTIONNAIRE:

(All answers in percentage)

(1) Do you favor halting construction of the Clinch River Commercial Liquid Metal Fast Breeder Reactor?

Yes	30.4
No	36.8
No opinion	26.0
No response	6.9

(2) Do you favor withdrawing the 33,000 U.S. combat soldiers from South Korea?

Yes	46.7
No	46.6
No opinion	4.8
No response	1.9

(3) Do you favor creating an independent Consumer Protection Agency?

Yes	60.1
No	33.8
No opinion	4.0
No response	2.1

(4) Do you favor creating a special status for illegal aliens who have been in the U.S. since January 1, 1970, to permit them to legally work here for five years?

Yes	21.2
No	72.2
No opinion	4.5
No response	2.1

(5) Do you favor increasing the minimum wage to $2.65 immediately, thereafter indexed to the average hourly industrial wage to an estimated $2.85 in 1979 and $3.15 in 1980?

Yes	47.6
No	46.7
No opinion	3.6
No response	2.1

(6) Do you favor establishing a two-price postage stamp with business mail at 16c and treated as first class, and citizen mail at 13c and not treated as first class?

Yes	25.6
No	68.1
No opinion	4.2
No response	2.2

(7) Do you favor presenting the Senate with a new Panama Canal treaty that would include increased U.S. payments to Panama and substantially reduce U.S. control over the operation and defense of the Canal?

Yes	24.4
No	67.1
No opinion	5.6
No response	3.0

(8) Do you favor placing an 18-month moratorium on the ban of saccharin by the Food and Drug Administration pending further scientific study?

Yes	64.1
No	27.6
No opinion	6.5
No response	1.8

(9) Do you favor denying VA benefits for Vietnam-era veterans whose discharges have been upgraded by the Presidential pardon?

Yes	65.2
No	29.2
No opinion	3.7
No response	1.9

(10) Do you favor denying medicaid payments for abortions except when the life of the mother would be in danger?

Yes	50.6
No	46.2
No opinion	2.0
No response	1.2

(11) Do you favor the handling of an investigation by the House Ethics Committee on alleged payments to Members of Congress by the South Korean Government?

Yes	67.0
No	21.3
No opinion	8.0
No response	3.7

(12) Do you favor reversing the mandatory installation of airbags in all automobiles manufactured beginning in 1981?

Yes	59.2
No	30.6
No opinion	7.3
No response	2.7

(13) In general, how would you rate President Carter's performance in office thus far?

Excellent	4.9
Good	28.4
Fair	38.7
Poor	23.1
No response	4.9

DICTATOR TORRIJOS OF PANAMA

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. ASHBROOK. Mr. Speaker, President Carter's push for relinquishing the American canal in Panama has raised much justified opposition. Beginning to get more attention is the issue of Omar Torrijos, the dictator of Panama, and his regime.

The American Council for World Freedom recently released a study on Torrijos. It raises a number of issues that deserve attention. Among these are the lack of human rights in Panama and the use of torture; the Marxist background of Torrijos and people around him; and the involvement of the Torrijos regime in drug trafficking.

At this point I include in the RECORD excerpts of the study.

Torrijos of Panama: Profile of a Dictator

(By George Fowler)

(NOTE.—Nothing in this study is to be interpreted as necessarily reflecting the views of the American Council for World Freedom or an attempt to aid or hinder the passage of any bill before Congress.)

Panama's mercurial dictator, Omar Torrijos Herrera, rehuddled with President Jimmy Carter October 14 in an emergency session held to reassure the U.S. Senate that America's basic interests in the Panama Canal will be guaranteed by the Torrijos regime should the current treaties go through. But immediately upon returning home after the short session in Washington, D.C., Torrijos announced that he had signed nothing——"not even an autograph."

Increasingly, the question is asked: "What about this seeming enigmatic figure? Just who, and what, is General Omar Torrijos?"

Born Feb. 13, 1929, in Santiago de Veragues (115 miles from Panama City), Omar Torrijos Herrera is the son of rural Panamanian schoolteachers who, according to knowledgeable anti-Communists (some still within the country) founded a Communist cell in Veraguas Province. This cell is now considered by these sources as the most powerful and influential in Panama. The current dictator became a member of the "Young Veraguas," a Marxist organization, when he attended the Normal School of the Province of Veraguas. His early formative years were undeniably within the sphere of intimate Marxist-Communist indoctrination.

Soon after Torrijos came to power on Oct. 11, 1968, the late Drew Pearson (who checked with his CIA sources following a tip by a highly placed American then in Panama) identified Torrijos as a member of the Communist People's Party of Panama. The column, headed "Print Panama Junta Pink," ran in U.S. papers Nov. 19, 1968.

Torrijos attended the military academy at San Salvador, El Salvador from Feb. 1947 to Nov. 1951, whereupon he was commissioned a second lieutenant in the Panamanian National Guard, the nation's primary military-police arm. Today, the National Guard ranks just below the Torrijos regime hierarchy in terms of influence; yet, it is said to contain sub-rosa rightist elements which would constitute much of the hope for any eventual government overthrow and retreat from the present Marxist trend.

Just how closely Torrijos holds to his red-tinged indoctrination years is debated by even those who see him as an unqualified disaster for his country and Latin America. Reader's Digest noted that "Omar Torrijos is a moody, unpolished man who is ill at ease with strangers. Both foreign diplomats and impartial Panamanians doubt that he is a Marxist, but he is clearly to the left of the center. Torrijos maintains that Scandinavian socialism is his model, and that he is opposed to the 'social cost'—meaning totalitarian violence—of Communist revolution." In any event, all political party opposition was terminated in 1968, a condition which clearly continues today. . . .

One journalist who was not soothed by Torrijos' balm is Washington columnist and knowledgeable Latin Affairs writer Georgie Anne Geyer. Geyer had mixed results in pinning down the general eyeball-to-eyeball, but from her sources and observations captured a clear picture of the regime while in Panama. Geyer concluded that "Torrijos is at best eccentric, and at worst unbalanced (I personally have seen him at times when he was totally out of control of his sense), that he has run Panama into bankruptcy, that his family is deep in the Latin heroin trade, that there is no process for succession, and that he has anti-American leftists in high positions around him."

For those many Americans who are properly concerned about human rights, Georgie Anne revealed that the State Department's assistant secretary for Latin America, Terence Todman, "told me with admirable candor": "Of course, we're not going to challenge human rights in Panama because we want the treaty."

It should be noted that Freedom House, a liberal New York-based organization, rates the Torrijos regime one of the most despotic on earth. Freedom House rates nations on a scale of one down to seven in the categories of political rights and civil liberties. Panama now rates seven and six, respectively, the same score as Cuba and among the worst in the world.

Dr. Raymond Gastil of Freedom House told us, for example, that "In Chile, there are publications that aren't government line. There are also political parties, admittedly small, and radio stations that express themselves freely. And the Church is quite vocal in Chile. None of these factors apply in Panama."

Dr. Gastil said that Panama has "a quasi-legislature, but it is pretty much facade. We look for competitive politics in a country, and we find little evidence of such in Panama."

Recently, highly respected columnist, Henry J. Taylor, wrote that the head of the Communist party in Panama is a troika: Romulo Excobar Bethancourt (the foreign minister and Torrijos' closest advisor), Marcelino Jaen and Juan Materno Vasquez (chief of the supreme court, now terminally ill with cancer). Taylor noted that Torrijos was originally kept in the dark regarding the coup because of his particularly severe drinking at the time.

Taylor continued: "When the troika achieved putting Torrijos in the presidency, Torrijos made a mistake. He left Panama and went to Mexico City to take in a horse race," whereupon he was deposed by rival Marxists for one day. Torrijos then showed his clout by swiftly reassuming the command which he still shares with his small Marxist-Communist clique. To this day, he enjoys telling crowds (half tongue-in-cheek) that the U.S. Army southern command engineered his short duration exile.

According to knowledgeable sources "troika" head Marcelino Jaen, a lawyer who is married to Torrijos' sister Toya, belongs to the Central Committee of the Communist Party of Panama, and has held party membership for a number of years. He is currently president of the National Legislative Commission, which is termed by anti-regime Panamanians "the Communist-controlled law making body."

Very close to the leadership, and considered the chief planner for Panama's now-chaotic economy, is Ruben Dario Herrera. Sources state that he is a member of the Communist Party, which is known internally as the People's Party. He is said to be one of the regime's "most influential ideologists."

Dictator Torrijos' brother Moises, currently ambassador to Spain, is generally considered as a Marxist-since-youth, and is alleged to be a member of the Central Committee of the People's Party. According to close observers of the Torrijos regime, Moises has a great deal of influence with brother Omar, and in addition coordinates the Mafia-type activities within the country.

Columnist Charles Bartlett has noted that "Geraldo Gonzalez, the former Communist leader who is now Torrijos' vice president, has asserted in recent days that Panamanians would not have had a new treaty if they had persisted in 'the farce which in the past they considered democracy.' He termed elections 'a complex and repudiated system' which divided Panamanians into groups."

Another key figure is Rolando Murgas, considered a People's Party operative and a former "firebrand student leader" and anti-American instigator. He was the author of Panama's new Labor Code, which is considered one of the most important factors in the country's current economic paralysis. According to a report by the Panamanian Committee for Human Rights, "Murgas was later named Minister of Labor, in order to implement the Party's plan of disarticulation of the private sector and government take-over of many private industries. Now a member of the Communist-controlled Legislative Committee."

Perhaps the most ominous of those enjoying inner circle power is Manuel Antonio Noriega, head of the G–2 State Security "torture squads." The Panamanian Committee for Human Rights contends that "the dictatorship of Omar Torrijos has systematically tortured persons who stand against the regime" and that "in general, there is among (a cross section of the Panamanian population) a permanent state of unrest due to the persecutions, threats and arbitrary detentions carried on by the G–2 of the National Guard, which is in charge of the 'national security' of Omar Torrijos' dictatorial regime. Whoever dares to oppose this regime is liable of disappearing, of being tortured or publicly being libeled by the dictator's controlled press."

Torture tactics said to be employed by Noriega's squads include carnal (including homosexual) violations, ice baths in severe freezing temperatures tubs, electric shocks to sensitive parts of the body, and even a bone crushing machine.

One of the more celebrated of the Torrijos regime's alleged atrocities involved the June 9, 1971 disappearance of Father Hector Gallego, a Catholic priest from Colombia, who was active among the Panamanian people and is thought to have emphasized too strongly their human rights limitations. A fellow priest, Father Pedro Hernandez Rabadal, spoke with the French Press Agency in Colombia August 21, 1972 and stated: "The Colombian priest, Father Hector Gallego, 30 years of age, was thrown into the sea from an airplane (actually a helicopter) on June 9, 1971, by order of General Omar Torrijos, head of the Panamanian National Guard." Bishop Martin Legarra of Panama described Father Gallego as "an authentic witness of the gospel" who had been persecuted "for defending the cause of the poor."

Knowledgeable sources continually report that the unwarranted search of homes by the Military Police, another arm of the 8,000 member National Guard, is a regular happening. In addition, it is contended that the reputations of persons adverse to the illegally constituted government are continually under attack by way of the state controlled press and radio (Torrijos will not allow home television in the country), and that the phone calls and mail of those thought unfriendly are monitored.

It is a matter of fact that all political parties were terminated in 1968. The Political Constitution of Panama was proclaimed by the regime in 1972, and ostensibly it allows for the formation and function of independent political organizations. But in effect the National Guard forbids them with the excuse that they have not been regulatd by the government. The only political party that now openly exists is the People's Party, which recognized the Torrijos' regime in 1969, soon after his takeover.

Intimate Panamanian sources charge that professional associations, such as the Movement of Independent Lawyers, the Engineers and Architects Society and others are continually harassed and repressed by the G–2 apparatus. The building and the records of the Panama Business Executive Association were confiscated in January, 1976. At that time, Torrijos forced the expatriation of two former presidents of the Panama Chamber of Commerce. The lack of press freedom is dramatized by the closing of Editora La Verdad, a printing firm that was to publish the independent-minded "La Opinion Publica." The excuse given was that the printers had "on many occasions, printed subversive materials."

The World Bank's computer shows Panama's external debt (as of Dec. 31, 1976) to be $1,408,535,000. The World Bank confirmed that from January 1, 1977 to June 30, 1977, the external debt of Panama increased by $239 million.

Torrijos has systematically created laws that have thrown a great number of private concerns into bankruptcy. Such businesses are placed in the hands of "the workers," a la Cuba, with the inevitable Marxist style cadre taking the leadership. Expropriation of land is, of course, a major part of this Torrijos regime pattern, with the formation of "Asentamientos Campesinos" (rural settlements) which are subsidized by the government and run by rural Marxist political organizations.

In acknowledgment of the strong political position of the National Guard, the Communists have been increasingly infiltrating the Guard, planning to use it as an operational base to broader power. The Guard has taken over fields in the central provinces and sown them with products such as rice, with an eye toward supplanting the private producers. A couple of years ago Torrijos created the "Tomas Herrera Military Institute" and staffed it with Cuban instructors. The apparent plan is to ensure Marxist-Communist indoctrination of the guard cadets, thus ensuring an increasingly ideological leadership.

But the connection appears to be much deeper and more insidious. The National Guard's G–2 is said to work under the close guidance of Cuba. Before relations between the two countries were reestablished, following the Torrijos takeover, G–2 head Noreiga travelled to Cuba for indoctrination.

Since 1970, intimate sources report, all key members of the G–2 department have openly travelled to Cuba for training and orientation in "political security." The G–2 indoctrinees were soon followed to Cuba by delegations of athletes, students from Panama University, union leaders and communal junta leaders. The composition of junketing groups is decided by G–2, working closely with the government-controlled Latin Press offices, which sets the propaganda tone for such trips.

The well known chumminess between Torrijos and Fidel Castro reached its visual peak during the Panamanian dictator's visit to Cuba in January 1976. The Panama American, one of the regime's controlled press organs, editorialized just after the visit: "The joint 'Panama-Cuba' declaration issued in Havana at the conclusion of Brig. Gen. Torrijos' visit to that Caribbean Island, is bound to become an historical document of international impact.

"For the document comprises a clear message directed at all lovers of freedom, as it seeks a unified effort to forcefully combat such social defects as imperialism, colonialism, neocolonialism and racism, which tend to prevent nations from achieving the levels of development and progress in line with human dignity. The joint communique is not a mere manifestation of support to the Cuban and Panamanian revolutions. It comprises a true message of continental projections.

"Thus the motive behind the joint statement goes further. It focuses international problems and the necessity of a unified struggle to eliminate the enemy in the form of 'imperialism' and all other 'isms' that form stumbling blocks in a nation's process of liberation."

Thus, a Torrijos-mouthpiece summation of that meeting between the two Latin dictators.

A pleasant social note regarding Omar and Fidel: Castro regularly supplies his fellow heavy cigar smokers with a supply of the finest Havana blends—in personalized wrappers.

In 1976, there were an estimated 225 Cuban diplomatic personnel accredited to the small Isthmus nation. Some of them, it is contended meet with and advise Torrijos on a regular basis.

The Cuban Embassy also functions as a conduit for North American goods bought in Panama for shipment to Havana and other points. This business is conducted by an outfit known as Transit, S.A., which also specializes in distributing Cuban manufactured goods in Panama. In addition this company, owned by Torrijos' intimate Rodrigo, exports equipment and goods to Cuba which Cubans cannot themselves produce and could not easily obtain without this service. The Cuban Embassy also works closely with G–2 and Latin Press in relation to the ever-increasing traffic of picked Panamanians to Cuba.

It appears beyond denial that the Torrijos regime is functioning as a central conduit for the Latin American narcotics traffic. Informed sources state that it is an absolute fact that members of the Torrijos family are central functionaries in this vile trade. Top sources at the U.S. Drug Enforcement Administration privately confirm the close link between the Mafia's International narcotics complex and key figures of the Panama hierarchy.

The long alleged connection of the Torrijos family and regime with the international narcotics underworld, which we had been investigating during the preparation of this report, broke open last October 13, the day before Torrijos' visit, when Senator Robert Dole (R-Kans.) addressed the matter on the Senate floor.

Dole stated that "It is my understanding that a number of documents now in the possession of the U.S. Drug Enforcement Administration have been 'classified,' which bear directly upon allegations of drug trafficking by General Torrijos. Those documents should be immediately turned over to the U.S. Senate for examination." (They were not, although Senate Majority leader Robert Byrd (D-W. Va.) expressed grave concern regarding their contents.)

Dole continued that he considered his source "to be sufficiently reliable to give me deep concern about the nature of the Panamanian leader with whom we are dealing. Suggestions that he—perhaps in conjunction with Fidel Castro—is involved in an illegal international drug operation is cause enough for concern. The allegation that these drugs are being funneled directly into the United States and that General Torrijos himself may be profiting directly from drug sales, makes the matter all the more serious.

In conjunction with Senator Dole's remarks, Senator James Allen (D-Ala.) asked that two news articles, in line with our own information for this report, be entered into the Record. The Oct. 13 Washington Star stated that "The brother of Panamanian chief of state Omar Torrijos was indicted in New York five years ago on federal narcotics smuggling charges but U.S. authorities have never been able to arrest him, Justice Department sources have confirmed."

The Star quoted its Justice Department sources as saying that the Moises Torrijos indictment "has never been unsealed because we have never found him back in this country to arrest him."

The Star story continued: "The Miami Herald reported yesterday that Atty. Gen. Griffin Bell told President Carter about a variety of allegations that members of Torrijos' family have been involved in smuggling drugs to the United States. Department spokesman Robert Havel confirmed that Bell discussed the matter with Carter on Oct 3."

The other article Sen. Allen entered was by Benjamin Welles in the March 15, 1972 New York Times, which said that Rep. John M. Murphy (D.-N.Y.) "charged today that an investigation into heroin smuggling into the United States had touched the 'highest levels' of the government of Panama."

The Times said that Murphy, "chairman of a House subcommittee on the Panama Canal, named Juan Tack, Panamanian Foreign Minister (and a chief canal treaty negotiator—ed.) and Moises Torrijos Panamanian Ambassador to Spain, as the officials allegedly involved in narcotics."

Welles' article noted that just the day before, March 14, "Mr. Tack ordered the expulsion of three American narcotics agents from Panama within 24 hours" for, in Tack's words, having "intervened in the internal affairs of Panama." Welles noted that "the expulsion followed initial reports two days ago in the syndicated column of Jack Anderson linking Mr. Tack and Mr. Torrijos with narcotics smuggling."

Murphy's subcommittee, the Times stated, "recalled details of two recent drug-smuggling cases that, it contended, involved Mr. Tack and Mr. Torrijos. One concerned the arrest in New York (July 8, 1971) of Rafael Richard, son of the Panamanian Ambassador to Taiwan. Mr. Richard who was 23, was travelling on a diplomatic passport signed by Mr. Tack, which gave him immunity from prosecution.

"At the time of his arrest, he was on his fifth visit to the United States, during each of which he brought about 150 pounds of heroin, the report said."

"The other case involved Joaquin Gonzales, former international transit chief of Tocumen International Airport at Panama, who was indicted in the smuggling of $1 million worth of heroin to Dallas." The Times said that Gonzales was arrested by U.S. authorities Feb. 6, 1971, when he entered the Canal Zone to attend a ball game, and was flown to Texas, where he was tried and sentenced to five years." Mr. Tack exerted strong but unsuccessful diplomatic efforts to have him released," the subcommittee said.

CBS News correspondent Phil Jones disclosed October 15 that his network had "obtained a detailed list of the Drug Enforcement Agency" files that Sen. Dole had requested be turned over to House and Senate investigative committees. Jones said that Congressional sources consider information in the files explosive.

The March, 1974 files, for instance, describe G–2 boss Col. Manuel Noriega as the "bag man" for Cuba's Fidel Castro as well as for Omar Torrijos. Considered by DEA agents as a liaison between Torrijos and Castro, Noriega was "allegedy in charge of setting up bank accounts and laundering narcotics money." 1974 files also contain allegations that Gen. Torrijos' associates "planned to assassinate former Panama President Arnulfo Arias, who was then in exile and threatening to return to Panama."

Correspondent Jones said the March, 1975 files "have information that Torrijos and a Ramiro Rivas were attempting to buy a transportation company as a front to move drugs." February 1975 files indicate that Omar Torrijos' brother Hugo "was using Panamanian Air Force planes to transport drugs."

Human Events (Oct. 29, 1977) said that "Panama's trafficking in drugs is an old story," and the Panama Canal subcommittee in a report published Jan. 2, 1975, quoted a 1971 Bureau of Narcotics and Dangerous Drugs (now part of DEA) report as saying that:

"Panama is one of the most significant countries for the transshipment of narcotic drugs to the United States . . . It is clear that the Republic of Panama has not and is not paying sufficient attention to narcotics enforcement activities to achieve noticeable results. This may be due to high level apathy, ignorance or collusion."

The Torrijos family is incontrovertibly connected to a number of "businesses" in Panama which have long been linked to the drug traffic. Omar Torrijos' older brother Hugo has for years been general director of the government-monopoly gambling casinos in Panama and is connected with "Juliano International," which deals in the sale and rental of gambling machines. It is charged that through "Espectaculos Nacionales S.A.," he controls the prostitution industry in Panama and the white slave market (transporting young women for purposes of prostitution) from Panama to other Latin American nations.

From evidence presented in the March, 1972 draft report of the Panama Canal subcommittee of the House Merchant Marine and Fisheries Committee, and a summary report of Chairman John M. Murphy of New York following a visit to the Panama Canal Zone (Feb. 18–24, 1972) there can be little argument that the Torrijos clan and its top level confederates are deeply involved in hemispheric narcotics and vice activities.

Liberal columist Charles Bartlett, a longtime Kennedy confidante, wrote from Panama City last February: "Rarely in American history has the nation been obliged to contemplate the award of a great prize to a government as deficient as the one now presiding over Panama."

"Drink is Torrijos' personal vice; avarice is the preoccupation of his brothers; brutality is the distinguished feature of his police, and extravagant ineptness is the failing of his economic planners. The regime has put the small nation so deeply in the red (an estimated $1.2 billion) that the canal treaty has no supporters more fervent than the American bankers whose hopes for repayment rest on a revival of faith in the Panamanian economy."

Among the many printed and verbal allegations regarding Omar Torrijos' carnal appetites, his overriding personal problem is his apparent advanced alcoholism. Mr. Bartlett referred to Torrijos' drinking as a vice. . . . He is, with every report, said to be in the advanced stages of alcoholic addiction; the disease-level demands of alcohol upon his psyche and body chemistry dictating to the victim dictator.

Secretary of State Cyrus Vance testified that ratification and approval of the treaties would move us toward a "sound relationship" with the regime. He did not point out that the treaties would remove the current five-miles-on-either-side buffer zone, which to a large degree has deterred mob violence. He did not point out that without a new treaty, and the huge injection of monies it would bring to the regime, the Torrijos dictatorship faces the strong possibility of an early collapse. Should that happen, and with a positive rather than masochistic reaction on the part of the United States, there is a clear possibility of Torrijos being replaced by a more stable and democratic government.

The State Department line behind closed doors and to pro-treaty journalists is that Torrijos stands in the way of a complete Communist takeover of Panama, and that if his regime fails we lose all leverage, short of war. It concludes that, when the dice roll following a Torrijos collapse, our number won't come up, despite the possibilities that an anti-Communist coalition would prevail. Communism's number would inevitably come up, according to this well-known, shopworn State Department analysis.

Hanson W. Baldwin discussed the future in a recent issue of the AEI Defense Review, published by the American Enterprise Institute. Mr. Baldwin who wrote on military affairs for the New York Times (1929–1968) and for the Reader's Digest (1968–1976), is considered one of the prime military-strategic minds of this century.

Mr. Baldwin wrote: "The character of the regime to which we are being asked to turn over the Panama Canal is clear. It does not matter whether Torrijos is a Communist or not; Castro was not a self-proclaimed Communist until he seized power and now Cuba is shackled to Communist doctrines. Torrijos may well have started as a populist who broke the monopoly of the oligarchy that had long ruled Panama, but today he is a beleaguered tyrant, surrounded at the top by men who profess or are extremely friendly to an ideology and to nations which have sworn our undoing."

Baldwin noted that "The Torrijos regime is all the more unstable because of the growing discontent of the masses, upon whom he has attempted to build his power base. His original populist image is wearing thin . . . opposition from students, businessmen, and the middle class, wary of communism, has increased materially in the past few years."

Baldwin reasoned that "If Washington gives him the canal, Torrijos will be a hero for a day and his tenure will be lengthened, but the triumph will be brief. Panama's volatility and instability are here to stay; the political hero of today is the villain of tomorrow. The vacuum left when the United States retreats will be quickly filled by Cuban and Soviet power and influence." Discussing the Panama Canal in relation to the Caribbean Sea-Gulf of Mexico complex, the veteran expert emphasized that the area's security "is vital to our country" and that "unless we are capable of controlling it, we are, indeed, undone."

It is worth keeping in mind Torrijos' answer to a question regarding Panama Canal rights, asked of him at Cuba's Jose Marti Airport at the conclusion of his celebrated visit in January 1976:

"We have the last word. The right to liberation cannot be waived. When and how must be determined. We should realize that we are not in a process of negotiation but in a process of liberation, and one of the means by which liberation is achieved is through negotiation. But neither the people nor its leaders have waived the right to liberation."

To even casual students of 20th century diplomatic history, Torrijos' words would recall the callous Ribbentrop-Molotov Pact of 1939. A major difference is that the Soviet and Nazi negotiators largely confined their less temperate expressions of hatred and contempt to private diaries and conversations. Torrijos, canal treaty opponents maintain, is showing himself openly "warts and all." If we refuse to see the truth, the consequences for the United States and all of Latin America will prove disastrous.

ON TO CAIRO

HON. LARRY WINN, JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. WINN. Mr. Speaker, amidst rhetoric, wars—religion and terrorism—among oil politics and geoeconomics, the search for a lasting peace in the Middle East has been ongoing for years. Suddenly and dramatically—from Jerusalem to Cairo—new and ambitious peace efforts are being initiated, peace efforts which, I believe, will provide substance for later negotiations in Geneva. On the eve of this holy season, the Cairo Conference, conceived with candor and strength, and enjoying the vital participation of the United States, holds out to us momentous hope—the hope of a lasting peace in the Holy Land.

ROMANIA IS WORKING TOWARD WORLD PEACE

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. BIAGGI. Mr. Speaker, for the last few years, I have had a good, working relationship with the Ambassador of Romania and have come to respect the people of Romania as industrious individuals seeking a peaceful existence in our turbulent world.

My first involvement with the country was over the issuance of exit visas for their citizens seeking to emigrate to the United States. I had been approached by several constituents who were of Romanian background and sought to have their relatives join them in this country. Both the former Ambassador, Corneliu Bogdan, and the present Ambassador, Nicolae Nicolae, have been most helpful and cooperative. This assistance and cooperation has continued to this day on numerous cases. So impressed was I with their cooperation that I testified before the House Ways and Means Committee earlier this year in support of continuing most-favored-nation status with the country. I believe the Romanian Government demonstrated on numerous occasions their continued interest in the Helsinki accord and in basic human rights for all peoples.

More recently, though, they carried their quest for a peaceful world to the international arena. The Romanian President, Nicolae Ceausescu, played a key role in bringing together Egypt's President Anwar-el Sadat and Israel's Prime Minister Menahem Begin for their historic meeting in Jerusalem. The Sadat visit to Israel may yet go down in history as the critical factor in bringing about peace in the troubled Middle East. It is noteworthy that Romania, a country not usually considered as an international power broker, provided the impetus for the meeting.

For me, it is yet another example of the Romanian Government's desire to live at peace with its neighbors and all countries in the world community. President Ceausescu is committed to a program of growth and industrial development that will bring about a high standard of living for the people of Romania. Such a program is not without its difficulties as recent turmoil in the mining industry indicates.

Similarly, a recent general amnesty for prisoners was not as successful as initially hoped. In trying to bring these individuals back into the mainstream of Romanian society where their labors were urgently needed in factories and in other occupations, it was quickly found that many criminals continued to pursue the occupation they knew best—crime.

Yet in all these efforts, it is clear that the Romanian Government is working very hard to bring its people into an active participation in international political and economic affairs. They have demonstrated that they want to be an instrument of peace in the world and at the same time to provide a better standard of living for the people of their country.

Such bold initiatives and respect for peace and human rights should be encouraged by this country. I hope that this Congress and the administration will look more closely at the Romanian Government's efforts and examine next year the possibilities of extending the most-favored-nation status for a longer period of time. A 3-to-5-year extension is essential to encourage business investment in that country and to assure better economic planning. They have shown themselves to be sincere not only in their treatment of individuals in their own country but in working toward world peace. As long as this attitude and these actions continue, it is imperative that our country respond in an appropriate fashion and support the independent path they have chosen.

Mr. Speaker, for the benefit of my colleagues, I would like to include at this point in the RECORD a copy of an editorial comment by David A. Andelman, which appeared in the New York Times editions for November 27, 1977, detailing the Romanian Government's efforts in the Sadat-Begin meeting and in other international activities.

[From the New York Times, Nov. 27, 1977]

Bucharest Keeps Many Friends

(By David A. Andelman)

BUCHAREST, RUMANIA.—Rumania is becoming the world's consummate go-between. There is none of the drama and dash of a Kissinger shuttle, but in a dozen capitals and in a hundred boardrooms, Rumania has quietly and professionally acquired the reputation as the place to go for a delicate diplomatic initiative or a sensitive business deal.

Last week, Rumanians were euphoric at the visit of President Anwar-el Sadat of Egypt to Jerusalem and at the letter that arrived on the eve of the visit for their President, Nicolae Ceausescu, from Prime Minister Menahem Begin of Israel. Thanks, the note said in effect, for Rumania's good offices, for its role of confidante and conduit for Mr. Begin and Mr. Sadat whose successive visits here in August and October were a back route that smoothed the path from Cairo to Jerusalem.

But the Rumanian connection, as it has come to be known in diplomatic circles in Bucharest and around the world, was already well-traveled—a pathway that for 20 years has provided as many benefits for Rumania and its neighbors, the Soviet Union in particular, as it has for others who have repeatedly taken advantage of it. "To boast about it would be childish," a senior Rumanian journalist with high Communist Party connections said last week. "But yes, events have confirmed our principal position. Yes, I could say our road is the right road."

In the Middle East, the connection goes back to the 1967 war, when Rumania incurred the wrath of the Arab nations and the rest of the Soviet bloc for its open attempts at conciliation at a time when confrontation was the rule. Yet in the course of the 1960's and into the '70's, Rumania's door remained open. The leaders of the Middle East—Syria's Hafez al-Assad, Yasir Arafat of the Palestinian Liberation Organization, Egypt's President Sadat and Israel's Menahem Begin and Golda Meir—all paid court to and confided in President Ceausescu.

For Israel, Rumania was the remaining link with Eastern Europe. It was the only Communist country to retain diplomatic, even cordial, relations with the Jewish state after the 1967 war. For tens of thousands of Rumanian Jews, this evenhanded diplomacy allowed a quiet emigration route to Israel at a time when the Soviet Union, after initially permitting increased emigration during the heyday of détente, had drastically decreased the flow.

For Moscow, the Rumanian policy was at once an irritation and a tool that from time to time was extremely useful. As such, it afforded the Rumanians a measure of security that other members of the Soviet bloc, the Czechoslovaks among them, did not enjoy. "Ceausescu has always operated on the Tito theory that the more friends you have in all camps, the more independent of the Soviet Union you can be," said one Western diplomat who has observed the delicate workings of both President Ceausescu and Josip Broz Tito of Yugoslavia.

The result has been Rumania's injection into a broad range of world forums and imbroglios. It was Rumania, for instance, that tried some early attempts at mediation between Peking and Moscow; it was Mr. Ceausescu who repeatedly sounded out the leadership in Hanoi on possible solutions to the Vietnam war and who retained relations with the junta in Chile while receiving thousands of refugees from the Marxist government the junta deposed. Rumania was the first East European country outside the Soviet Union to open diplomatic and trade relations with West Germany. And last year, President Ceausescu quietly invited Ethiopians and Somalis to Bucharest to try, though so far unsuccessfully, to resolve their confrontation in Africa.

Rumanians, who view themselves as a Latin island in a potentially hostile Slavic sea, emphatically deny that the Soviet Union has had a secret role in any of these initiatives. But all involve areas of vital interest to the Soviet Union, and often the United States as well. In many cases, the interest is more material than diplomatic.

Last year, Rumania quietly founded Delta, a state trading company with offices in the Ministry of Foreign Trade, but, unlike similar entities, with no brass plaque on the door and no full color brochures. For Delta is to politically sensitive trade what President Ceausescu's reception room is to quiet diplomacy. In the last 18 months, deals have reportedly been arranged that have allowed the Soviet Union to buy French wheat and American corn without entering the market directly and driving up the price and have allowed Chilean copper and Israeli oranges to reach Socialist markets. Britain has charged at the United Nations that Rumania has been a conduit for buyers of chrome from Rhodesia, the object of United Nations trade sanctions.

Rumania has always been, and probably will continue to be, an anomaly—a member of Comecon, the Soviet bloc's common market, as well as the Western-dominated International Monetary Fund and the World Bank; a member of the Warsaw Pact but with no Soviet troops stationed on its soil; a rigid police state but with few political prisoners.

At a watershed conference of European Communists in Berlin last year, Rumania joined with the Eurocommunists parties of Western Europe to wrest from the Soviet Union acknowledgement of the right to pursue an independent road to Socialism, something Rumania had sought for 20 years. Since the conference, President Ceausescu has broadened Rumania's diplomatic and economic initiatives. And the Soviet Union, perhaps resigned to the fact that nothing short of an invasion—an unlikely and politically dangerous alternative—could change Rumanian behavior, has acquiesed, for whatever diplomatic or material value the Rumanian connection may hold.

POW TORTURER—JUDAS JOURNALIST TOURS UNITED STATES

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 8, 1977

Mr. DORNAN. Mr. Speaker, I commend to my colleagues' attention a shocking recent article by the New York Post's courageous investigative reporter, Mr. William Heffernan. The State Department exhibited incredible stupidity by allowing a top Soviet KGB agent, Wilfred Burchett, to travel freely throughout this country on a propaganda speaking and fund-raising tour under the guise of a foreign journalist. This treacherous "quisling" was heavily responsible for the interrogation and brutal torture of American POW's in both Korea and Vietnam. What a direct and incomprehensible insult to our brave fighting men who survived this torture, not to mention the heart-breaking slap across the face to every child, parent, wife, brother and sister of those who died broken and bleeding in Communist cells.

The article follows:

[From the New York Post, Nov. 17, 1977]

P.O.W. Torturer—Judas Journalist Tours United States

(By William Heffernan)

The ability of Soviet KGB agent Wilfred Burchett to now travel freely throughout the U.S. on a speaking and fund-raising tour can be traced directly back to former Secretary of State Kissinger "as payment for favors received," a State Dept. source has revealed.

Burchett, 66, a Communist newsman who has worked for various publications throughout the world, is known to government officials here as a paid agent of the KGB who was involved in the interrogation and torture of American PWs in Korea and Vietnam.

He is presently, however, traveling throughout the nation presenting his views on college campuses and raising money to further his "future journalistic assignments" in Europe and South Africa.

An investigation by The Post has found that Burchett, who was strictly limited in his travels here in the past, had those restrictions removed on orders from Kissinger's office during the Nixon Administration.

AIDED HANOI

Burchett, it was found, served as a liaison for the Hanoi government during the Vietnam war and was responsible for passing on diplomatic signals that led to the Paris peace talks.

He also conferred with U.S. negotiator Averell Harriman just prior to those talks to present the North Vietnamese position.

Burchett also met with Kissinger in his White House office in October, 1971, to help pave the way for President Nixon's visit to China the following February.

During a recent interview, Burchett acknowledged that he "helped with the Paris peace talks" but insisted he had little to do with Nixon's China trip.

Burchett acknowledges that he was a close friend of both North Vietnam's Ho Chi Minh and China's Chou En-lai and "may have discussed those matters with them." He insists, however, that his role was "minor at best."

RESTRICTIONS EASED

A State Dept. source said, however, that Kissinger "apparently had a different view of Burchett's role." Shortly after the 1971 White House meeting, he added, word came down from Kissinger's office to ease Burchett's travel restrictions in the future.

Prior to that time Burchett was strictly limited in his visits to this country. In 1969, in fact, while covering the UN for an American left-wing newspaper, he was limited to a 10-day visit and travel within a 25-mile radius of Columbus Circle.

On his present trip Burchett has free movement around the nation on a waiver granted by the Dept. of Immigration.

That waiver was given on the recommendation of high-ranking State Dept. officials, who failed to disclose Burchett's KGB background or his involvement in the brainwashing and torture of PWs.

MADE AVAILABLE

Immigration officials have since complained about that withholding of information, saying such data had been made available in previous waiver requests.

A State Dept. source insisted that the decision to withhold that information and push for more liberal travel for Burchett went directly back to the 1971 White House directive.

"You have to understand how the State Dept. works," he said. "Once a suggestion comes down from the White House and becomes part of someone's file, it would be followed blindly until someone else—perhaps decades later—directed that it be changed."

"This was no conspiracy to help Burchett," he added. "This was a typical bureaucratic foulup."

During his present tour, the Communist newsman—who spoke yesterday before the prestigious Nieman Fellowship Society at Harvard—is presenting his views on Eurocommunism, the "coming revolution in South Africa" and other matters of interest to the Soviet bloc.

ON SOUTH AFRICA

During a recent speech to students and faculty at Ripon College, Ripon, Wis. Burchett predicted that the Communist-led revolutionaries in South Africa would soon wage open warfare there.

"South Africa is the very center of the anti-Imperialist struggle," he said. "We've tried many nonviolent demonstrations and tactics and they've all been met with force and violent reactions. Only organizing for armed struggle can get anywhere," he added.

Throughout his tour Burchett has been raising funds to help pay the expenses of his future work in Africa.

He is described in CIA reports as a top KGB propagandist, with close ties with the Chinese Communists and Cuba, who is sent to potential trouble spots.

In testimony before the Senate Internal Security subcommittee, KGB defector Yuri Krotkov identified Burchett as a paid KGB agent he had worked with in Europe and Moscow.

Burchett has also been identified by American, British and Australian PWs from both Korea and Vietnam in sworn testimony as the person who brutally interrogated them, in some cases threatened them with death and who urged many to defect at the end of the war.

Burchett denies those charges, saying that "at best I was mistaken for someone else."

He also claims he is the victim of a smear campaign directed by the John Birch Society which he terms "one of the small prices one must pay to retain one's journalistic integrity while pursuing the truth from the people's side of the barricades."

[From the New York Post, Nov. 17, 1977]

HOUSE OF REPRESENTATIVES—*Monday, December 12, 1977*

The House met at 12 o'clock noon.

DESIGNATION OF SPEAKER PRO TEMPORE

The **SPEAKER** pro tempore (Mr. FOLEY) laid before the House the following communication from the Speaker:

WASHINGTON, D.C.,
December 12, 1977.

I hereby designate the Honorable THOMAS S. FOLEY to act as Speaker pro tempore for today.

THOMAS P. O'NEILL, JR.,
Speaker of the House of Representatives.

PRAYER

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Fear not; for, behold I bring you good tidings of great joy, which shall be to all people.—Luke 2: 10.

O Thou who art the source of light and life and whose glory is in all the world lift our minds from the littleness of our own thoughts to the greatness of Thine that we may learn to live by Thy laws, in Thy light, and with Thy love in our hearts. Help us to celebrate this Advent season with hearts of compassion, deeds of kindly service, and the spirit of good will toward all Thy children.

Bless our Nation with Thy favor and grant that Thy Spirit may dwell in all our hearts this season and all seasons; to the glory of Thy holy name. Amen.

THE JOURNAL

The **SPEAKER** pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The **SPEAKER** pro tempore. The Chair desires to announce that pursuant to the authority granted the Speaker on Thursday, December 8, 1977, the Speaker did on that day sign the following enrolled bills:

H.R. 3313. An act for the relief of Mark Charles Mieir and Liane Maria Mieir;

H.R. 7738. An act with respect to the powers of the President in time of war or national emergency; and

H.R. 9378. An act to amend title IV of the employee retirement Income Security Act of 1974 to postpone, for 2 years, the date on which the corporation first begins paying benefits under terminated multiemployer plans.

A PLEA FOR AGREEMENT ON SOCIAL SECURITY LEGISLATION

(Mr. **BURKE** of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. **BURKE** of Massachusetts. Mr. Speaker, as chairman of the Subcommittee on Social Security and as one of the conferees on the pending legislation, I regret to announce that the conferees broke up Friday night without reaching agreement over a nongermane amendment that was attached to the bill by the other body.

It seems to me that something should be worked out, and that this legislation should be passed before the end of this year. With every day that passes, all we do is aggravate the problems of the elderly of this country. We have failed to send them a message that the social security trust fund will be stabilized into the next century.

I urge all the Members of the Congress to contact the conferees and ask them to get together and work out their differences. If we do not do this, we will just place more worry on the minds of the elderly, who feel that their checks are in jeopardy. The disability insurance fund is about to run out; in fact, it could run out in 1978.

Mr. Speaker, I believe it is incumbent upon us as the elected Representatives of the people to enact this legislation as quickly as possible.

ADOLPH RUPP

(Mr. HUBBARD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HUBBARD. Mr. Speaker, it is with sadness that I speak today in the House of Representatives regarding Kentucky's beloved Adolph Rupp.

Adolph Rupp, age 76, the winningest college basketball coach in history, died Saturday night, December 10, at Lexington, his hometown and the home of the University of Kentucky, where he coached basketball for 42 years.

The "Baron of Basketball," as basketball fans everywhere called him, retired in 1972, after winning 875 games and 4 national titles as coach of the University of Kentucky Wildcats.

At the University of Kentucky, Rupp had a lifetime winning percentage of 82.5 percent, as his teams lost only a total of 190 games. He and his University of Kentucky Wildcats captured four National Collegiate Athletic Association titles and won the Southeastern Conference crown or tied for it 27 times.

One of Rupp's all-time greats was Frank Ramsey, a constituent of mine from Madisonville, Ky., and a former All-American at the University of Kentucky. Ramsey spoke for all Kentuckians yesterday when he said:

> He was the greatest college basketball coach of all times. He was the man by whom all other coaches were measured, and we are going to miss him.

I extend to his wife and family my sincere sympathy.

Mr. MAZZOLI. Mr. Speaker, will the gentleman yield?

Mr. HUBBARD. I yield to the gentleman from Kentucky (Mr. MAZZOLI).

Mr. MAZZOLI. Mr. Speaker, I thank the gentleman for yielding.

I would like to join with the gentleman today in his tribute. It is my privilege to represent the Third District of Kentucky and I join with the gentleman from the First District in extending our condolences to the family of Coach Rupp and noting for the record the great contributions which Coach Rupp has made, not just to the athletic annals of our Commonwealth, but also to the athletic annals of this Nation and the world because he was a citizen of the world.

I thank the gentleman from Kentucky for speaking on this subject.

AGRICULTURE AND FRAUD IN COMMODITY FUTURES OPTIONS

(Mr. WHITTEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WHITTEN. Mr. Speaker, all have taken note of the plight of those engaged in agriculture and their efforts in recent weeks to call the attention of the American people, the Secretary of Agriculture, and President Carter to their situation.

What few seem to realize is that this situation is the type of thing that, unless we can alleviate it to a substantial degree, can lead to a breakdown in the overall economy. We point all of this out in our report on appropriations for the Department of Agriculture, Rural Development, and Related Agencies on pages 22 and 23 of last year's report H. Rept. No. 94-1224) in a paragraph which we entitled, "The Lessons of History." We dealt here in detail with some of the occurrences which caused the bankruptcy which hit those engaged in agriculture and spread to the overall economy and set off the last depression.

Mr. Speaker, it strikes me we are facing the same situation again. Believing this, on October 17 I introduced H.R. 9608 which would provide that the target and loan rates set up in the Agriculture Act of 1977 would increase in direct proportion to increases in the minimum wage or to wages as a result of contracts or increases in the cost of living. This would put agriculture, industry, and labor on the track where each would follow the other.

It is so evident to me that if either of the three goes under, the other two follow. This belief is supported by the history of our Nation.

May I say, Mr. Speaker, that I was joined in this bill by the members of our Appropriations Subcommittee which reviews the agriculture operations each year.

May I add that the chairman of the Committee on Agriculture has asked for a report from the Department as to cost, and so forth, to which I, in turn, have suggested that we make a report as to what the effect will be unless we act to maintain a balance between agriculture, industry, and labor.

All of this has caused me to realize the need to point up a serious situation, which may become worse, because of the serious plight facing agriculture. Many of those engaged in farming as well as others are apt to turn to sales in advance which did lots of damage several years ago when the so-called purchaser merely took bankruptcy when the price went down, leaving the producer the loser.

Because of these recent occurrences, I am today, as a part of my remarks, calling attention to a report of the investigating staff of the Appropriations Committee on the commodity futures option program.

While our investigation is not complete and while all information we obtain will be made available to the Department of Agriculture and the Department of Justice, as well as to appropriate committees of Congress, I feel I should make an interim report to the Congress in the hope that we may thereby prevent at least some losses resulting from fraud which presently exists. The present situation in agriculture makes me feel it is necessary to call these to the attention of the Congress and the people.

For some months now I have been disturbed by published accounts of widespread fraud in telephone sales of so-called commodity options. What are these commodity options? Basically, they are contracts giving the purchaser the right, but not the obligation, to buy or sell a commodity futures contract at an agreed-upon price during a specified period of time. The price of the option, the premium, plus any commissions involved, is the maximum amount the customer can lose on the transaction. If the price moves in his favor, he exercises the option and realizes his profit. If the price goes against his position, he lets the option expire and loses his investment.

But what really are the chances of an option speculator making a profit? Experts say that 7 or 8 out of 10 actual commodities futures transactions—some say more—result in losses to the customer. When the customer deals in options, the loss rate is much greater. Not only must the price of the underlying future move in the customer's direction, it must move sufficiently to cover the cost of the option before the customer is in the money.

And as risky as commodity options are when sold by legitimate dealers to knowledgeable speculators, in the hands of unscrupulous "ripoff artists" they become a catastrophe. Some options firms are "bucket shops"—the order is dumped in a "bucket" and that is the end of it. Dealers may never buy the option for the customer on the assumption—usually correct—that the customer is going to lose anyway. In the rare event that the customer does profit, the dealer can pay him with money from other customers who are not so lucky.

But even if he is not operating a "bucket shop," the unscrupulous options dealer still does not "give the sucker an even break." For example, a dealer may be able to buy a London option—commodity options cannot now be traded on any U.S. exchange—for, say, $2,500 or $3,000; the price varies. However, the unsophisticated American victim might pay twice that amount, or more, to the firm in the United States. For example, one dealer offered a London sugar option to a prospect in the United States for $4,100;

the option in London cost $2,500. The markup—$1,600. Because of this high markup, sugar would have to be moved over 3½ cents a pound before the customer could begin to make a profit; and during the period involved, sugar never moved more than 3 cents a pound.

And the markup frequently is much greater than $1,600; it may be whatever the traffic will bear.

Sales of commodity options, which have become so tainted by fraud that few reputable brokers will touch them, have, almost unnoticed, become an industry handling $1 billion a year. Thousands of Americans have been induced to invest in these highly speculative deals on groundless promises of huge profits. "Boiler rooms" are crammed with as many as 250 salesmen manning long-distance WATS telephones 10 hours a day, "pitching" commodity options to people in all parts of the country. One commodity options firm operator reportedly conceded that "his business depends entirely on persistent phone solicitation of people who typically don't know a commodity option from a commode."

One commodity options firm, started with a $2,000 investment by a broker barred from the securities industry for using customers' securities as collateral to raise loans, now reportedly is a $50 million-a-year business; his telephone bill runs close to $150,000 a month.

Commodity options firms have drawn "pitchmen" from shady land development schemes and confidence men. And although options are not for the "little guy" with a few thousand dollars to invest, more and more "little guys" are being taken by fast-talking salesmen working long-distance telephones from "boiler rooms."

"Horror" stories abound. In Dallas, a diabetic mother of four sold her house and dipped into her savings to invest $65,000 because the salesman promised "you will be wealthy and your future will be secured for life." A retired Wisconsin farmer living in Florida "invested" $12,550 in options. The stories go on and on; only the names and amounts change.

And what is the Government doing to protect its citizens and to stop this infamous traffic? Apparently very little, or at least very little that has been effective.

Historically, commodity options trading has been so corrupt that commodity options finally were banned in the United States by the Congress in 1936. The Congress imposed the ban because of rampant fraud in trading and because of fear that unscrupulous traders would use options to manipulate prices.

But while commodity options trading has been banned on U.S. exchanges since 1936, domestic traders have been allowed to buy options for American customers on the London exchange. These are the "London options" currently being sold in the United States—in such commodities as coffee, sugar, rubber, and copper.

Then, in 1974, the Congress passed and the President signed the Commodity Futures Trading Commission Act of 1974, the 1974 amendments to the Commodity Exchange Act, establishing the Commodity Futures Trading Commission (CFTC). The 1974 amendments continue the flat prohibition against trading options in the traditional agricultural commodities specifically named in section 2 of the Commodity Exchange Act—wheat, cotton, corn, potatoes, soybeans, pork bellies, and the like. However, the 1974 amendments permit trading in options in all other commodities under such terms and conditions as may be prescribed by the CFTC. The 1974 amendments also would allow the Commission to ban commodity options trading entirely.

In November 1976, the CFTC issued a "package" of regulations on options trading. In the ensuing months, the efforts of the Commission to regulate options trading led to a morass of litigation.

In November 1976, the CFTC proceeded against First Commodity Corp. of Boston for fraudulent and deceptive sales practices. The company signed a consent decree agreeing to no further abuses. In August 1977 the firm was still selling options, and had been audited only once since the time of the court action, and that audit had taken place in the spring.

In February 1977, the CFTC charged a Boston firm, Lloyd, Carr & Co., with selling commodity options without being registered. Six months later, CFTC finally ordered the firm to stop selling, and denied it registration. But even this move meant very little—the order was appealed, and the firm continues to sell commodity options.

In August 1977 the U.S. Supreme Court refused to reverse a decision of the court of appeals which prevented CFTC from enforcing its regulations while the issues were being fought in lower court. Rejection of the appeal to the Supreme Court permitted the firms trading in London commodity options to continue doing business as usual until the Court decided whether it would hear the case. Eventually, in November, the Supreme Court declined to hear the case, and in effect upheld the CFTC regulations.

Part of the regulatory package promulgated by CFTC is the segregation rule. The segregation rule requires that a commodity options dealer must keep 90 percent of a customer's premium money in a special account in a bank in the United States. The funds must be kept segregated until the option is exercised or expired. But Federal courts stayed enforcement of this regulation. Meanwhile, the customers continued to lose money. During the summer of 1977, two commodity options firms went bankrupt; they had not segregated customer funds, and owe their clients over a half million dollars. These clients are now general creditors of the bankrupt dealers and must stand in line with all other creditors of the firms to recover their money.

The 1974 amendments preempted the States from regulating the trading of commodity futures and commodity options, and vested all enforcement powers in the CFTC. And CFTC has not been able to deal with the fraud-ridden commodity options industry.

The Congress, in the 1974 amendments to the Commodity Exchange Act, authorized a reparations proceeding. Persons who suffer losses because of violations of the act or the regulations thus were given a "small claims court" type procedure to get their money back—but the amounts involved often are much larger than those in the usual small claims court. But even here the options cases have effectively bogged down the system and aggrieved individuals suffer greater and greater delay in obtaining restitution. Figures released by the CFTC in August 1977 show that reparations claims for commodity options made up about 75 percent of the total claims received. And of 424 cases received at that time, over 300 were still pending. Since that time, of course, the backlog has grown, and CFTC has promulgated a new set of regulations which will permit trading of commodity options on certain approved U.S. exchange.

The Commodity Futures Trading Commission was established only a little over 2 years ago. Because I felt that a general investigation at this time would be beneficial to the detection of emerging problems, I asked the Surveys and Investigations Staff of the Appropriations Committee to make an in-depth study of the Commission. The alarming situation in the field of commodity options which I have just described confirms the desirability of such a review. However, even before the report of the investigative staff is completed, I feel that I should communicate my concern to the Congress.

PRAISE FOR EGYPTIAN PRESIDENT ANWAR SADAT AND ISRAELI PRIME MINISTER MENAHEM BEGIN FOR THEIR COURAGEOUS STEPS TOWARD PEACE

(Mr. NEDZI asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. NEDZI. Mr. Speaker, I wish to join with those who have praised Egyptian President Anwar Sadat and Israeli Prime Minister Menahem Begin for their courageous steps toward peace in the Middle East. I was honored to be part of the delegation headed by Chairman Melvin Price of the Armed Services Committee which was present in the Middle East to the initiation of this great event and I would like to take this opportunity to insert in the Record the statement issued by Chairman Price on our return.

I concur with Chairman Price's statement that Mr. Sadat's visit to Jerusalem was "one of the bravest acts of statesmanship in my time." I certainly concur with the statement later made by Chairman Price that President Sadat is the No. 1 candidate for the Nobel Peace prize this year.

Our Armed Services Committee delegation visited the Middle East and Africa during the period November 6–22 and it happened that we were in Jerusalem and met with Mr. Begin just after Mr. Sadat's first offer to go to Jerusalem became public. As Chairman Price indicates in his statement, Mr. Begin asked us to take a message to Egypt stating that President Sadat would be welcome in Israel.

Two days later when we met with Mr. Sadat and Chairman Price had delivered the message, I asked Mr. Sadat when he would go to the Knesset. Mr. Sadat replied that would depend on Mr. Begin. He said that he was prepared to go to the Knesset and he was prepared to go to the end of the Earth if it would serve the cause of peace. He said he was prepared to go whenever "they" were ready.

I stated to Mr. Sadat that Mr. Begin says he is ready now. I asked him if he had received an official invitation from Mr. Begin.

Mr. Sadat said, "No, absolutely not."

I think this exchange is interesting because it was just 2 days later that an official invitation was relayed through the good offices of America's embassies.

All of us in our delegation were happy that our group was present to provide a forum through which Mr. Sadat could emphasize the sincerity of his offer and clear up the fact that he was prepared to go without any preconditions.

I would like to express my special thanks to Chairman Price for the leadership he provided to our delegation and for giving the members of our committee an opportunity to learn firsthand about the significant events in a way that would be impossible here in Washington.

Mr. Price's statement follows:

STATEMENT OF CHAIRMAN PRICE

We have just completed what was for me one of the most informative and rewarding fact-finding trips of my 33 years in Congress. In a little over two weeks this delegation talked to six heads of state, examined conditions in some of the very tense areas of the world, and was proud to make a contribution, however small, to the dramatic movement for peace in the Middle East.

We met with Israeli President Menahem Begin the day the news came of Egyptian President Sadat's offer to go to Jerusalem. Mr. Begin asked me to deliver a message to Mr. Sadat that he would personally meet the Egyptian leader and welcome him to Jerusalem. I delivered that message two days later.

Mr. Sadat replied that there had been no official invitation. It was shortly after that that an official invitation was relayed through American embassies.

It is interesting to note that Mr. Sadat met our group in public, with TV and press present, and used the occasion to reinforce the sincerity of his offer. Previous meetings he has held with delegations from our committee have been in private.

Besides Mr. Begin and Mr. Sadat, the delegation had meetings with President Siad Barre, of Somalia; President Kenneth Kaunda of Zambia; President Mobutu of Zaire and President Houphouet-Boigny, of Ivory Coast.

All of these meetings were private and the delegation had many opportunities for frank questioning and candid exchange of views.

The delegation also visited Iran and Kenya and in these countries, as well as most of the others, talked with numerous defense and foreign ministry officials. We also talked with U. S. officials at each stop.

We gathered valuable information about the military balance in the Middle East; reviewed the military requirements of Iran—the number one purchaser of U. S. military equipment; and discussed with several African leaders the situation in the Horn of Africa, where war now rages between Somalis and Ethiopians in the Ogaden. We also got new insights from African leaders about the chances for peaceful governmental changes in Rhodesia and South Africa, and about developments in Angola.

We collected a great deal of information, some of it necessarily sensitive, and plan to provide both classified and unclassified reports for the committee. I believe we will have a very worthwhile report.

I cannot speak for the whole delegation at this time and, therefore, do not want to state specific conclusions. Personally, however, I was particularly impressed by several factors: The sincere desire for peace of many leaders as well as the people one meets at all levels in both the Middle East and Africa; the extent to which Middle Eastern and African leaders look to the United States for leadership; the concern of African leaders about the Cuban presence in Africa; and the great questioning of Soviet aims in Africa.

Finally, I want to add my voice to those who have praised President Sadat for his courageous venture in visiting Jerusalem. I consider it one of the bravest acts of statesmanship in my time. All of us in our delegation join in offering our prayers that his efforts may lead toward permanent peace in that area of the world where so many great religions were born and so many tragic wars have been fought.

CONTINUED DENIAL BY THE SOVIET UNION OF BASIC HUMAN RIGHTS

(Mr. BUCHANAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BUCHANAN. Mr. Speaker, today in two disparate parts of the world—San Francisco and Venice, Italy—meetings are underway on two varied subjects: the arts and labor unions. Unfortunately, both have one thing in common in that they reflect the continued denial by the Soviet Union of basic human rights guarantees to its citizens.

These violations continue notwithstanding commitments made not only by signing the Final Act of the Conference on Security and Cooperation in Europe, but the Universal Declaration of Human Rights and other international convenants on human rights.

It is ironic that we should find such blatant and continuing violations of basic rights at the very time when we are observing Human Rights Day in commemoration of the signing of the Universal Declaration of Human Rights.

Soviet Nobel Prize recipient Andre Sakharov had been invited to the AFL–CIO Convention now underway in California and to the Biennale of Dissent in Italy. He is attending neither.

As Sol Chaiken, a vice president of the AFL–CIO and a public member of the U.S. delegation to the Belgrade Conference, recently pointed out, the AFL–CIO's invitation to Mr. Sakharov and five other individuals was never answered through no fault of Mr. Sakharov.

A similar invitation to Sakharov was sent for the Biennale, but it was returned marked "addressee unknown." It is my understanding that the Italian delegation to the Belgrade Conference has expressed its concern over this incident.

One of the longstanding criticisms leveled at the Soviet Union is that concerning the interference with the rights of citizens to send and receive mail. These incidents would seem to indicate that this situation has not changed.

How the Government of the Soviet Union can manage not to know a Nobel laureate and one of its most prominent citizens is beyond belief.

ADJOURNMENT TO THURSDAY, DECEMBER 15, 1977

Mr. MAZZOLI. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 10 o'clock a.m., Thursday, December 15, 1977.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

Mr. WHITEHURST. Mr. Speaker, reserving the right to object, and I shall not object, I will ask the distinguished acting majority leader if he can tell us if there has been any change in the schedule for Thursday.

Mr. MAZZOLI. Mr. Speaker, will the gentleman yield?

Mr. WHITEHURST. I yield to the gentleman from Kentucky.

Mr. MAZZOLI. Mr. Speaker, the gentleman would answer that question in this way: At this point, the leadership is still hopeful of bringing before the House of Representatives on Thursday, December 15, 1977, the conference report on the Social Security Act, as well as the conference report on the Clean Water Act. The gentleman from Virginia is aware, as the gentleman from Massachusetts (Mr. Burke) indicated earlier today, that there is a disagreement on the vote of the conferees on the social security conference, and there is some question as to whether or not that can be brought up. The leadership, as of this point, is hopeful that the schedule for Thursday will be the social security conference report and the clean water conference report.

Mr. WHITEHURST. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

SALT "LEAKS"—A DIVERSIONARY CONTROVERSY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Idaho (Mr. Symms) is recognized for 15 minutes.

Mr. SYMMS. Mr. Speaker, I have noted with interest that the administration and other supporters of the proposed SALT–II agreement have been undertaking a self-serving and sanctimonious critique of the so-called SALT leaks.

Some of us who have tried to raise substantive issues and respond to the administration's selective use of "leaking" and "backgrounder" reports to generate support for their proposals have been charged with breaking national security information. Our colleague, Representative Robin Beard, chairman of the Republican Task Force on National Defense, was charged with publicly disclosing information he had received in a classified briefing on SALT. This criticism was made despite the fact that the House Armed Services Committee, on which he serves, has had no SALT briefings since the Carter-Gromyko White House meeting—the meeting given credit for breaking the SALT-II deadlock. Now, I recognize that those who lack substantive arguments in support of their position will undertake such attacks.

But to be frank, I fail to understand how any discussion of the merit of the SALT issues could be considered a breach of national security. Clearly the Soviets know what we are discussing at SALT. So, are the critics concerned that the American people will learn about the terms of the proposed SALT-II agreement? I understood President Carter to say that he has confidence in the judgment of the American people and that we can and should publicly debate the objectives and ramifications of U.S. foreign and defense policies. Certainly, I have more confidence in the judgment of the American people than the self-imbued elitists who profess to know all the answers and who are impervious and indignant with those of us who do not share the confidence of their vision.

I think the crux of the ongoing controversy was recently well expressed in a Wall Street Journal editorial. As the editorial points out, there was no concern expressed about SALT leaks so long as administration sources were directing the leaks and public revelations on SALT represented the administration's viewpoint.

Once the administration's proposals were challenged, even though this was done in a constructive and meaningful way, so that the merits and objectives of SALT could receive the national attention and debate they deserve, administration supporters tried to close off the prospects of a debate by calling for investigations into the "breaches of classified information." The real worry, as the Wall Street Journal pointed out, is not about classified information, "but worry about (Mr. Nitze's) clear-eyed interpretation that there were no Soviet concessions, that the "breakthrough's (at SALT) consisted of U.S. capitulation and that the (SALT) agreement condemns the U.S. to strategic inferiory."

Mr. Paul Nitze, one of this country's most experienced and distinguished statesmen and arms control experts, has borne the brunt of the criticism. Yet his substantive criticisms have gone unanswered, even though the administration has conceded that his facts and figures are essentially correct.

Recently one Member of Congress, Representative ROBERT CARR, quoted in Aerospace Daily, called for "some code of honor from those who are against any agreement—at least among congressional insiders," and that there should be "a complete self-enforced ban on leaking details of SALT status or commenting on third party reports."

Now I assume my colleague who made this suggestion meant the "self-enforced ban" should apply to the supporters of the proposed SALT-II agreement, not just those "who are against any agreement." But he then proceeded to offer viewpoints on the prospects of what SALT might accomplish, and criticism of SALT critics which, in my view not only ran contrary to his proposed self-enforced ban, which were also, in my opinion, biased and distorted. Should supporters of the proposed SALT agreement continue to make such statements, I am confident that those concerned about the inadequacy of the proposed agreement will feel compelled to respond.

At the outset, the major critics of the proposed SALT-II agreement, whom I know, are not opposed to "any agreement." They have offered proposals which they believe would contribute to a balanced and equitable SALT agreement, one that would support "strategic stability," as U.S. policy presently prescribes it, and which would enhance our national security interests. Further, I am not sure what a "congressional insider" is. Perhaps the gentleman who made this point considers himself an "insider," since he states he has spent more time at the SALT negotiations than any other Member of Congress. If that is the case, however, I think he presents a somewhat simplistic view of the SALT negotiations process. Moreover, he should know better when he says:

> . . . the fact is that if a SALT agreement is as effective as I think it will be, Minuteman will not grow in vulnerability.

Mr. Speaker, I think that is an irresponsible statement without any basis in fact whatsoever. And herein lies my criticism. If administration supporters are confident that the SALT agreement we can expect to be submitted to the Senate early next year for ratification is a good agreement, that can stand on its own merits, why do they hold out the illusion that the agreement will, in fact, accomplish something that cannot be accomplished? The blunt fact is that the present generation of Soviet ICBM's are inherently effective silo killers. The guidance improvements necessary to give these Soviet ICBM's the required accuracy are of such a nature that they could not be verifiably restricted through any SALT agreement discussed to date, including the administration's so-called comprehensive March SALT proposals. A top-ranking defense official made this very point in a November 6 backgrounder briefing. Similarly, Secretary of Defense Harold Brown recently on ABC news' "Issues and Answers" acknowledged that, with or without a SALT agreement, the Soviets "by some time in early 1980's, certainly by 1985" will have the capability to inflict credible damage on our silo-based ICBM force.

Congressman CARR criticizes Senator JAKE GARN as presenting inaccurately the terms relating to prohibitions on testing or deployment of new systems. He then states in the Aerospace Daily article:

> It has, of course, been disclosed—not by anyone in the government—that the protocol likely contains a ban on mobile missiles.

I am pleased that the gentleman believes he is staying abreast of administration "leaks," but I recently read an interview with Paul Warnke—a member of the Government—in which he stated that under the new treaty "we will have preserved all our options" for MX. The Aerospace Daily article continues:

> Instead of an 8-year-ban on development of the MX, there only will be a protocol to the treaty limiting deployment and testing of the weapon until 1981.

Next, Congressman CARR tells us that "SALT opponents always leave out the fact that the Soviet silos are more vulnerable than ours." He states, we have made "threefold improvements in (Minuteman) accuracy equivalent to a ninefold increase in numbers. Even before adding the Mk. 12 warhead, we made a 30 percent increase in the CEP. This was like doubling the number of Minuteman."

In reality, however, the Soviets are gaining the capability to destroy between 70 and 95 percent of the U.S. silo-based missile force in a surprise attack and still retain an 80 percent to 90 percent ICBM force residual. By contrast, the United States, with its force structure, could not expect to destroy more than 50 percent to 70 percent of Soviet ICBM's, while totally denying ourselves residual ICBM force capability.

In short, I see no military incentive for the United States to strike first, but clearly from a military standpoint, the Soviets could have such an incentive.

It is true that we might have one-third to one-half of SLBM fleet survive; we might have—without the B-1—half the alert bomber fleet survive, but is that a credible enough retaliatory capability? Would we unleash that force against the Soviet population after a Soviet counterforce attack that took 6 million American lives, and place at risk the 200 million Americans who survived?

I do not know the answer, but I am less confident than the advocates of this so-called minimum deterrence.

I would like to make one final point in this context. My good colleague took issue with Senator GARN's statement that the Soviets have five new ICBM's in R. & D. and that to get five new R. & D. systems one would have to include the SS-17's and the SS-18's. Now he chooses to protect himself by saying he has had the benefit of CIA and DIA briefings. I would point out, without wanting to get into classified information, that Secretary of Defense Brown has himself stated that the Soviets have four new ICBM's in R. & D. I would, therefore, recommend that my colleague review those CIA/DIA briefings more closely next time.

It may, indeed, "be economic stupidity" for the Soviets to constantly build new ICBM systems and they probably should, instead, concentrate on modernization of existing forces. I submit, Mr. Speaker, that if we ban deployment of new ICBM systems, and make it stick, so that the Soviets do not deploy their fifth generation of ICBM's, then force modernization is precisely what we will see. The present fourth generation of Soviet ICBM's enjoy more throwweight than I consider reasonable or necessary for deterrence or defense objectives. As the Soviets continue to make accuracy improvements to their ICBM systems, they will be able to further fractionate their force and increase their number of RV's.

Recently, another group of Senators who have decried SALT "leaks" made public a letter they had written to the President, with their recommendations for a SALT agreement. These Senators appear to fall under the category of "insiders" since they have the benefit of periodic briefings on SALT and thus are current on the status of the negotiations. Again, if there were to be private constructive recommendations why would they be made public in the form of a press release? Moreover, the issues they raise are matters which must be covered in their SALT status briefings.

To illustrate, their letter to the President states:

> Since cruise missiles promise to be a critical part of our retaliatory force in the future, we believe that any final agreement must contain a practical definition of cruise missile range capability which takes into account the manner such missiles are intended to operate in normal flight.

This letter was written on November 29, quite sometime after an administration source had informed the New York Times that the Soviets had agreed to a range definition for the air launched cruise missile. Even though this agreement was touted as a Soviet "concession," it did nothing to extend our coverage beyond 2,500 kilometers, as reportedly recommended by the Joint Chiefs of Staff. The new agreement merely took into account the flight profile of the cruise missile, which is not a straight line, thus targets beyond a 2,500 kilometer perimeter—if we abide by the agreement—would still be beyond our capability.

Another point raised in the letter follows:

> We believe it is fundamentally important to obtain as stringent limits as possible on improvements in Soviet ICBM technology. Unrestrained Soviet development of a new generation of ICBM's or of markedly improved existing missiles would greatly compound our concerns about the confidence that Soviet planners might place in their ICBM threat to our own land-based missile force.

Again, this statement comes back to whether or not we can preserve the security of the U.S. silo-based force. As I pointed out earlier, the Secretary of Defense himself has stated that with or without a SALT agreement that force, by no later than the middle of the next decade, will be vulnerable to a Soviet first strike. Additionally, there has been ample study throughout the Department of Defense to confirm the Secretary's conclusion and I fail to see what purpose such a statement by congressional SALT "insiders" serves, except to mislead the American people about the realistic goals of SALT II and the vulnerability of our ICBM force.

These critics may not believe it is necessary to have or preserve the ICBM leg of the Triad, but they should state so candidly and not attempt to obfuscate the issue.

Mr. Speaker, let me conclude by saying that if the administration and its supporters were not to engage in the selective and tendentious releasing of SALT details which served their purpose, then there would be very little publicly available, for those who are concerned, to criticize. But to the extent that biased and distorted presentations of SALT continue, I am confident that rebuttals thereto will also continue.

THE SMALL BUSINESS DILEMMA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Mississippi (Mr. COCHRAN) is recognized for 5 minutes.

Mr. COCHRAN of Mississippi. Mr. Speaker, I received a letter recently from a man back home in Mississippi which illustrates in a very dramatic way some of the serious problems facing a person who tries to operate a small business.

Our Nation has prided itself in the opportunities it affords its citizens to be self-sufficient, to own a business, and to participate fully in the economic system. This sounds great, but it is sometimes only an idle boast, particularly to those who have been frustrated instead of rewarded in their quest for financial success.

I want to quote some parts of this letter to show you what I mean:

> When I discussed my dilemma with friends and relatives that all said write Representative Cochran. I am writing you for your help and advice and to inform you of the difficulty and the unfair rules and laws placed on small businessmen.
>
> Several years ago I started to achieve the great American dream of owning my own business. I opened a small convenience store. Over several years of hard work by my wife and myself we expanded to four stores.
>
> I have always tried to pay my employees well and to give them as many benefits as I could. We paid all our full time employees hospital insurance and paid vacations.
>
> Our work week is 48 hours. When I hired employees I told them what our work week was and how much they would be paid for 48 hours. I started our school age employees at minimum wages and raised them at different intervals. Our full time employees were paid above minimum wage.
>
> Recently I was audited by the U.S. Department of Labor, Wage and Hour Division. [. . . The man they sent] was a very courteous and fine young man doing his job.
>
> I was informed that since I did not enter 40 hours at so much per hour and eight hours at so much per hour in our payroll records, I would have to go back and pay overtime for two years even though I was paying more than minimum wage figuring 40 hours at minimum and eight hours overtime.
>
> We also used part-time students . . . I hired several boys over the years under sixteen years of age. Most of these boys had to work to help support their families.
>
> I was informed that I had violated the Child Labor Law and was subject to a $1,000 fine on each count (nine violations).
>
> I know ignorance of the law is no excuse, but it is impossible for a small businessman to know all the rules and regulations imposed on small business people. Most of us cannot afford professional people to help us in our operation. If I was trying to cheat my employees, I could readily accept this decision by Wage and Hour.
>
> It seems ironic that the federal government is appropriating millions of dollars to give young people jobs and when business people hire youngsters they run the risk of violating "Child Labor Laws".
>
> As a result of this confrontation with the Wage and Hour and so much red tape and assorted federal and state rules and regulations, I decided to end my American dream and sell my business.

To me this is a real tragedy. It is this kind of experience that sours our people on government and the system generally.

I think Congress has to respond to this problem. When I was a teenager, I was lucky and always had some part-time job to help my family make ends meet. And in the summers I managed to get full-time work.

If we cannot help create a better economic environment, unemployment is going to continue to escalate, and no amount of government programs will really help solve the problem.

I'm asking the Small Business Committee of the House of Representatives to make as its highest priority hearings to investigate the realities of our current laws and rules as they are applied to small business and to develop recommendations for exceptions and even repeal of those laws and rules that do us more harm than good.

A commonsense approach to that task would probably put more people back to work than a new multibillion-dollar "public jobs" program such as that being pushed by the administration.

WILL THE TAX CUT BE TOO LITTLE TOO LATE?

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. MILLER) is recognized for 5 minutes.

Mr. MILLER of Ohio. Mr. Speaker, it is great to see that the President is finally beginning to see the need for a significant tax cut next year to keep the economy moving in a positive direction, and it is almost certain Congress will heed his request when it is proposed. However, will the proposed administration tax cut be enough to offset the new tax increases that he and his majority party in Congress have already enacted or plan to enact? It does not look like it.

Because of the administration's staggering budget which includes: First, the new social security tax increase, second, the new energy taxes in the energy bill, third, new spending programs costing billions, and fourth, the ever present force of inflation pushing all citizens into higher and higher tax brackets each year—it is estimated that Americans could be faced with an unprecedented $120 billion tax hike over the next 3 years. The anticipated $15 to $20 billion tax cut by President Carter next year will hardly be felt if this estimate comes true.

All of this seems strange from candidate Carter who "promised" in last year's election that "I would never increase taxes for the working people of our country and the lower- and middle-income groups." So far this year, the majority party in Congress has broken nearly all records for imposing new taxes on working Americans.

In this week's Newsweek, Milton Friedman asks some very timely questions in regard to the President's proposed tax cut. Is Congress simply throwing up a "smoke screen" to temporarily pacify the voters? Does it not seem a bit odd to raise taxes on the one hand, and then turn around and offer the Nation a tax cut with the other? Why not stop the tax hike to begin with and then the tax cut would not be needed? Or better yet, why not cut Government spending?

Professor Friedman correctly points out that the "bottom line" to the tax dilemma is not the size of the tax cut, but the size of Government spending. Without a cut in Government spending, the tax cut will be of little value.

It should be obvious that there are only two ways to finance Government activities, by taxing either:

One. Directly—through taxation or borrowing from the people directly, or

Two. Indirectly—through inflation caused by massive Federal spending which leads to large Federal deficits which leads to money creation.

Congress should therefore quit trying to deceive the American taxpayer by taxing through inflation and give the country something of lasting value: a significant cut in Government spending and a balanced budget. Then a tax cut will really be felt by the American people. I trust Mr. Friedman's article will shed additional light on this subject:

TAX SHENANIGANS

(By Milton Friedman)

The President has recommended and Congress is likely to approve;

1. A whopping increase in the social-security tax on wages.

2. Heavy new taxes and substantial increases in existing taxes as part of the so-called energy bill.

In addition:

3. Inflation will automatically raise income-tax rates by pushing individuals into higher brackets, reducing the real value of exemptions and deductions stated in dollars, and artificially overstating income subject to tax through paper capital gains and inadequate depreciation allowances.

4. Accelerating inflation will automatically raise the hidden tax that has been imposed on holders of government-issued money and long-term debt—you would not be wrong to regard the green pieces of paper you carry in your pocket as receipts for taxes paid.

5. President Carter has said he will recommend cuts in individual and corporate income taxes to offset the increases under items 1 and 2. The rumored size of the cuts would, as it happens, just about equal the automatic increase under item 3.

PUZZLES

Query: Why increase taxes on wages (item 1) and then propose to offset the increase by reducing taxes on income (item 5)?

Answer: In order to continue deceiving voters about the true character of social security and thereby increase the fraction of their income they are willing to have the government take in taxes.

Social security is not a system under which "nine out of ten working people in the United States are now building protection for themselves and their families" (as HEW misleadingly describes it). Social security is a system under which nine out of ten working people pay taxes to finance payments to persons not working. There is little connection between the taxes an individual pays and the amount he is entitled to receive.

Promises have outrun resources. The social-security system is in trouble. But it would be far preferable to bring into the open the welfare component of the system by drawing on general revenues than to raise still higher the wage tax—in my opinion, one of the worst taxes on the books.

Query: Why go through the charade of first letting inflation automatically raise income taxes (item 3) and then offsetting the rise by an explicit tax reduction of roughly equal size (item 5)? Congress has been only too willing to provide for the automatic adjustment of its own salaries and the salaries of other government employees for inflation. Why should it not be equally willing to provide for a similar automatic indexation of taxes?

Answer. If you were a Congressman, would you want to give up a system that provides more tax revenue for you to spend, yet at the increase in the effective graduation of the same time lets you vote for tax reduction? In addition, this system has facilitated an increase in the effective graduation of the income tax, thereby continuing the process of imposing heavier taxes on the productive members of society and granting larger subsidies to the unproductive.

Query: Why impose heavy taxes on energy and then propose either to rebate them to consumers or to offset them by other tax reductions?

Answer: The ostensible reason is to promote energy conservation. But that objective would be better served by setting energy prices free and letting the market allocate energy. The real reasons are to transfer control of energy from the market to a government bureaucracy (i.e., to socialize energy), and to redistribute income from some groups to others.

THE BOTTOM LINE

These measures have little to do with the total tax burden on the American people. That burden is measured by the amount that government spends, not by the receipts that are labeled "taxes." If government spends more than it receives in the form of "taxes," you pay the difference—in concealed form.

Neither the President nor the Demorcratic leadership in Congress has proposed to reduce the fraction of your income spent by government. Hence, the bottom line is that President Carter and the Congressional leadership are proposing to raise, not lower, the total tax burden on the American people. The disputes about taxes are important both as a smoke screen and because they will affect who bears the burden.

MS. BARBARA KANTOR: OUTSTANDING PUBLIC OFFICIAL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. STOKES) is recognized for 5 minutes.

Mr. STOKES. Mr. Speaker, I would like to take this opportunity to bring to the attention of my colleagues in the House the outstanding career of Ms. Barbara Kantor of Cleveland, Ohio. Until recently, Ms. Kantor held the important and influential position of District Director of the Immigration and Naturalization Service in Cleveland.

During my years in Congress, Mr. Speaker, my staff and I have maintained a close working relationship with Ms. Kantor on immigration issues. She has always been extremely helpful expediting matters relating to my 21st District constituents.

Mr. Speaker, even though Ms. Kantor's presence will be missed, I am pleased that she has accepted a challenging new assignment in Hong Kong. At this time, I would like to ask that my colleagues join with me in extending our best wishes to Ms. Kantor for continued professional success in her new job. Through her dedicated service to our city, she has won the respect, admiration, and friendship of hundreds of people seeking citizenship in America.

HEARINGS ON DEEP SEABED MINING LEGISLATION

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, on behalf of my colleague from Minnesota, Mr. FRASER, and myself, I wish to announce that the Subcommittee on International Organizations and the Subcommittee on International Economic Policy and Trade of the International Relations Committee will hold 3 days of hearings the week of January 23 on H.R. 3350, the Deep Seabed Hard Minerals Act.

This bill was reported by the Committee on Merchant Marine and Fisheries August 9, 1977, and by the Committee on Interior and Insular Affairs November 7, 1977. It has been sequentially referred to the Committee on International Relations for a period ending not later than February 10, 1978, for consideration of such provisions of the bill as fall within the committee's jurisdiction under clause 1(k), rule X.

In an attempt fairly to allocate the limited time available for oral testimony among interested parties, the subcommittees have decided on the following schedule for the hearings:

Day 1: General policy witnesses from the administration, the GAO, and academia;

Day 2: Members of Congress (one hour) and industry witnesses (one hour);

Day 3: Commodities experts (one hour) and nongovernmental organizations (one hour).

Precise dates, times, and locations will be announced later.

The hearings will focus exclusively on the effects of the proposed legislation on the foreign policy and national security of the United States. Issues to be aired include the following:

First. Probable effects of the legislation on the law of the sea negotiations;

Second. The issue of investment guarantees;

Third. The compatibility of licensing arrangements with international law and U.S. foreign policy;

Fourth. Provisions for the protection of the ocean environment;

Fifth. The issue of extraterritorial sovereignty;

Sixth. Reciprocating states provisions;

Seventh. Provisions for an international revenue sharing fund; and

Eighth. Effects of the legislation on the supply of critical minerals and on the economies of current suppliers.

Persons desiring further information should contact the Subcommittee on International Organizations (202–225–2298) or the Subcommittee on International Economic Policy and Trade (202–225–3246).

STATEMENT BY SOL CHAIKIN, PUBLIC MEMBER, U.S. DELEGATION TO THE CSCE CONFERENCE, BELGRADE, YUGOSLAVIA

(Mr. BUCHANAN asked and was given permission to extend his remarks at this point in the Record and to include extraneous matter.)

Mr. BUCHANAN. Mr. Speaker, I call to the attention of our colleagues the recent statement by Mr. Chaikin at the Belgrade Conference which outlines the recurring violations still facing citizens behind the Iron Curtain:

Statement by Mr. Sol Chaikin, Public Member, U.S. Delegation to the CSCE Conference, Belgrade, Yugoslavia

Mr. Chairman, as we approach the conclusion of our review of implementation of the Declaration of Principles of the Final Act, my delegation wishes to commend further on Principles 9 and 10—concerning Cooperation among States and Fulfillment in good faith of international obligations under international law.

Ambassador Goldberg has already expressed United States views on some important aspects of the implementation of Principle 10, in particular, in his statement on language of the Final Act which asserts: "In exercising their sovereign rights, including the right to determine their laws and regulations . . . (the participating states) will conform with their legal obligations under international law."

Earlier in our review, Professor Hughes also spoke of the implementation of these same principles and noted some difficulties that had arisen in the period since signature of the Final Act.

Like Professor Hughes, I am a private citizen and not a professional diplomat. I am President of a large, well-known national union, and in addition I have the honor and responsibility to be a Vice-President of the AFL–CIO. I represent many millions of the free trade union members of the United States, which together with their families, make up a tremendous body of public opinion in our country. Today I wish to discuss matters falling within the purview of the Final Act that are of direct interest to all of them and, thus, to our Government.

But first let us recall some of the precise language of Principles 9 and 10. It was agreed at Helsinki, in the context of cooperation among states, that the CSCE participants "confirm that governments, institutions, organizations and persons have a relevant and positive role to play in contributing toward the achievement of these aims of their cooperation." In pledging to honor their obligations under international law, the participating states specifically defined their obligations as those "arising from the generally recognized principles and rules of international law and those obligations arising from treaties or other agreements, in conformity with international law, to which they are a party." Moreover, in their promises at Helsinki to fulfill in good faith their obligations under international law, all participants reaffirmed the primacy of their obligations to the Charter of the United Nations.

Mr. Chairman, the American people are looking upon our discussions at Belgrade with the expectation that we can have a frank and full exchange of views on the implementation of the Final Act to date and with the hope that we can agree on further concrete measures to strengthen the CSCE process and its contribution to the overall construction of detente.

In the period since August 1975, my own country, which openly acknowledges its imperfections and seeks to correct them, has endeavored to bring its policies and practices fully into conformity with the Final Act. In this effort, the Congress of the United States has this year enacted legislation to facilitate the issuance of visas to members of communist trade unions. This legislation, I think I do not need to emphasize, has not been universally popular among all of us in the United States. But it is now the law of the land, a solemn obligation of my Government, and it is honored.

I regret to say, however, that on the other hand some of the obligations incurred by the Soviet Union in subscribing to abovementioned precepts of the Final Act do not appear to have been similarly honored.

Mr. Chairman, I have with me a copy of an invitation addressed on September 6 by President George Meany of the AFL–CIO to Academician Andre Sakharov, winner of the Nobel Prize and fearless champion of human rights, and five other Soviet citizens to attend a convention of the AFL–CIO in December. This invitation was sent from Washington to Academician Sahkarov and the other invitees in early September through the ordinary mail. But what has transpired since then is a mystery. We cannot confirm that the invitation ever reached Mr. Sakharov, and neither has Mr. Meany ever received a reply.

After sending these invitations, Mr. George Meany, President of the AFL–CIO, wrote to President Carter asking him help in encouraging the Soviet authorities to issue exit visas for our invited guests and of course to allow them to return home. It is our belief that since we have changed our own visa policies, it remains to be seen whether individuals and groups who are in the mainstream of American democratic thought can effectively invite Russians with whom they wish to meet.

I might add that the American Embassy in Moscow has sent a formal diplomatic note to the Soviet Ministry of Foreign Affairs officially supporting Mr. Meany's invitation to Mr. Sakharov. Yet, uncertainty continues to cloud the question of whether Mr. Sakharov is permitted to receive his mail from Mr. Meany and to dispatch a reply, and whether the visas will be issued.

Now, this appears to be a clear-cut violation of the "Freedom of Transit" guarantees of the Universal Postal Convention and thus a failure to honor obligations under international law and the Final Act. If this is so, and it certainly appears to be, then the obvious result will be for many millions of Americans, to conclude that our unilateral change in visa policy has failed to persuade the Soviet authorities to ameliorate theirs. This could only, in many minds in our own country, cast doubt upon our own efforts to go to great lengths to perfect compliance with the Final Act.

Mr. Chairman, I cite this case not to damage the atmosphere of this important meeting at Belgrade but to attempt to ascertain what has happened to a piece of mail sent from my country to a distinguished citizen of the Soviet Union. If there is an explanation of what has transpired, my delegation would be most eager to hear it. In the meantime, we feel obliged to draw attention to what appears to be a violation of pledges undertaken by all of us in Principles 9 and 10 of the Final Act.

May I conclude by reiterating what has often been stressed here at Belgrade by Ambassador Goldberg—namely that the American people, and certainly this is true of the American workers, will only support the process of detente provided the process is humane and just and if solemn pledges, like those endorsed at Helsinki at the highest level, are truly respected.

I thank you, Mr. Chairman.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. Whitehurst) to revise and extend their remarks and include extraneous material:)

Mr. Symms, for 15 minutes, today.

Mr. Cochran of Mississippi, for 5 minutes, today.

Mr. Miller of Ohio, for 5 minutes, today.

(The following Members (at the request of Mr. Mazzoli) to extend their remarks and include extraneous material:)

Mr. Annunzio, for 5 minutes, today.

Mr. Gonzalez, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. Whitehurst) and to include extraneous matter:)

Mr. Vander Jagt.

Mr. Whalen.

Mr. Steiger.

Mr. Buchanan in two instances.

Mr. Brown of Ohio in two instances.

Mr. Conable in two instances.

Mr. Hansen in four instances.

Mr. Steers.

(The following Members (at the request of Mr. Mazzoli) and to include extraneous matter:)

Mr. Annunzio in six instances.

Mr. Anderson of California in three instances.

Mr. Gonzalez in three instances.

Mr. Brown of California in 10 instances.

Mr. Rangel in five instances.

Mr. Reuss.

Mr. Richmond.

Mr. Mazzoli.

Mr. Carney in three instances.

Mr. Baucus.

Mr. Eilberg.

ENROLLED BILLS SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 3313. An act for the relief of Mark Charles Mieir and Liane Maria Mieir;

H.R. 7738. An act with respect to the powers of the President in time of war or national emergency; and

H.R. 9378. An act to amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for two years, the date on which the corporation first begins paying benefits under terminated multiemployer plans.

BILLS AND JOINT RESOLUTION PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on the following dates present to the President, for his approval, bills and a joint resolution of the House of the following title:

On December 7, 1977:

H.R. 5555. For the relief of Adelaida Rea Berry.

On December 8, 1977:

H.R. 3313. For the relief of Mark Charles Mieir and Liane Maria Mieir;

H.R. 3722. To amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978;

H.R. 7738. With respect to the powers of the President in time of war or national emergency;

H.R. 9378. To amend title IV of the Employee Retirement Income Security Act of 1974 to postpone, for two years, the date on which the corporation first begins paying benefits under terminated multiemployer plans;

H.R. 9418. To amend the conditions for schools receiving capitation grants under section 770 of such Act, and for other purposes; and

H.J. Res. 662. Making further continuing appropriations for the fiscal year 1978, and for other purposes.

ADJOURNMENT

Mr. MAZZOLI. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 14 minutes p.m.), under its previous order, the House adjourned until Thursday, December 15, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2809. A letter from the Acting Director, Office of Management and Budget, Executive Office of the President, transmitting a cumulative report on rescissions and deferrals of budget authority as of December 1, 1977, pursuant to section 1014(e) of Public Law 93-344 (H. Doc. No. 95-268); to the Committee on Appropriations and ordered to be printed.

2810. A letter from the Deputy Assistant Secretary of Defense (Installations and Housing), transmitting notice of the location, nature, and estimated cost of various construction projects proposed to be undertaken by the Air National Guard, pursuant to 10 U.S.C. 2233a(1); to the Committee on Armed Services.

2811. A letter from the Deputy Assistant Secretary of Defense (Military Personnel Policy), transmitting a report covering the period July 1, 1976, through August 31, 1977, on implementation of the Aviation Career Incentive Act of 1974, pursuant to 37 U.S.C. 301a(e); to the Committee on Armed Services.

2812. A letter from the Secretary of Housing and Urban Development, transmitting a report on a study of home inspection and warranty programs, pursuant to section 9(b) of the Housing Authorization Act of 1976; to the Committee on Banking, Finance and Urban Affairs.

2813. A letter from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting proposed final regulations to govern the program of instructional equipment grants for institutions of higher education, pursuant to section 431(d)(1) of the General Education Provisions Act, as amended; to the Committee on Education and Labor.

2814. A letter from the Assistant Secretary of the Interior, transmitting a report on the Departments' study of the El Camino Real, pursuant to section 5(b) of the National Trails System Act; to the Committee on Interior and Insular Affairs.

2815. A letter from the Acting Secretary of State, transmitting a report reviewing various aspects of the U.S. role in maintaining the security of the Republic of Korea, pursuant to section 668 of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

2816. A letter from the Assistant Administrator for Legislative Affairs, Agency for International Development, Department of State, transmitting a report on the programing and obligation of funds for Lebanon relief and rehabilitation since funds became available on October 1, 1976, pursuant to section 495C of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

2817. A letter from the Assistant Administrator for Legislative Affairs, Agency for International Development, Department of State, transmitting a report on the Agency's allocations of funds appropriated for fiscal year 1978, by country or international organization and by program, pursuant to section 653(a) of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

2818. A letter from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

2819. A letter from the Acting General Counsel, Department of Energy, transmitting notice of a meeting relating to the International Energy Program to be held December 13, 1977, in Paris, France; to the Committee on Interstate and Foreign Commerce.

2820. A letter from the Vice President for Government Affairs, National Railroad Passenger Corporation, transmittng reports monthly financial reports of the Corporation for July and August 1977, pursuant to section 308(a)(1) of the Rail Passenger Service Act of 1970, as amended; to the Committee on Interstate and Foreign Commerce.

2821. A letter from the Vice President for Government Affairs, National Railroad Passenger Corporation, transmitting reports covering the months of July and August 1977, on the average number of passengers per day on board each train operated, and the on-time performance at the final destination of each train operated, by route and by railroad, pursuant to section 308(a)(2) of the Rail Passenger Service Act of 1970, as amended; to the Committee on Interstate and Foreign Commerce.

2822. A letter from the Chief Justice of the United States, transmitting the proceedings of the meeting of the Judicial Conference of the United States held in Washington, D.C., on September 15-16, 1977, pursuant to 28 U.S.C. 331 (H. Doc. No. 95-269); to the Committee on the Judiciary and ordered to be printed.

2823. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting reports concerning visa petitions approved according certain beneficiaries third and sixth preference classification, pursuant to section 204(d) of the Immigration and Nationality Act, as amended (79 Stat. 915); to the Committee on the Judiciary.

2824. A letter from the President, National Conference on Citizenship, transmitting the audit report of the organization for the year ended June 30, 1977, pursuant to section 3 of Public Law 88-504; to the Committee on the Judiciary.

2825. A letter from the Comptroller General of the United States, transmitting a report on the Department of Agriculture's inspection of meat and poultry processing plants (CED-78-11, December 9, 1977); jointly, to the Committees on Government Operations, and Agriculture.

2826. A letter from the Comptroller General of the United States, transmitting a report on the Army's proposed close combat armored vehicle team (PSAD-78-11, December 12, 1977); jointly, to the Committees on Government Operations, and Armed Services.

2827. A letter from the Comptroller General of the United States, transmitting a report on credit programs for small farmers in Latin America (ID-77-1, December 9, 1977); jointly, to the Committees on Government Operations, and International Relations.

2828. A letter from the Comptroller General of the United States, transmitting a report on the potential effects of a national mandatory deposit on beverage containers (PAD-78-19, December 7, 1977); jointly, to the Committees on Government Operations, and Interstate and Foreign Commerce.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. FOLEY (for himself, Mr. Wampler, Mr. Jones of Tennessee, and Mr. Madigan):

H.R. 10285. A bill to extend the Commodity Exchange Act, as amended, for 4 years; to the Committee on Agriculture.

By Mr. GRADISON:

H.R. 10286. A bill to amend the Internal Revenue Code of 1954 to provide for automatic cost-of-living adjustments in the income tax and withholding rates; to the Committee on Ways and Means.

By Mr. HAMMERSCHMIDT (for himself, Mr. Alexander, Mr. Thornton, and Mr. Tucker):

H.R. 10287. A bill to designate the proposed new Veterans' Administration hospital in Little Rock, Ark., as the John L. McClellan Memorial Veterans' Hospital, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. LEACH:

H.R. 10288. A bill to amend title XV of the Public Health Service Act to provide flexibility in the application of national health planning guidelines to rural areas and to areas a disproportionately high proportion of elderly people; to the Committee on Interstate and Foreign Commerce.

By Mr. BOWEN:

H.J. Res. 673. Joint resolution proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. LONG of Maryland introduced a bill (H.R. 10289) for the relief of Saira Baig, which was referred to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

363. By the SPEAKER: Petition of the National College of Probate Judges, Chicago, Ill., relative to amendment of the Tax Reform Act of 1976 to eliminate the "carryover basis" for probate assets; to the Committee on Ways and Means.

364. Also, petition of the National Guard Association of the United States, Washington, D.C., relative to policy statements adopted by the organization's 99th General Conference; jointly, to the Committees on Armed Services, and International Relations.

FACTUAL DESCRIPTIONS OF BILLS AND RESOLUTIONS INTRODUCED

Prepared by the Congressional Research Service pursuant to clause 5(d) of the House rule X. Previous listing appeared in the Congressional Record of December 5, 1977 (page 37522).

H.R. 7201. May 16, 1977. Armed Services; Judiciary. Increases the amount which the

Secretary of a branch of the armed forces is authorized to pay in settlement of claims against the United States not cognizable under any other provision of law for property damage, personal injury or death caused by a civilian employee of a military department or the Coast Guard, or member of the armed forces, incident to the use of a vehicle of the United States on Government installations.

H.R. 7202. May 16, 1977. Judiciary. Repeals the specified bond amounts in the Miller Act with respect to required surety bonds for public construction contracts. Retains the requirement that such bonds be provided for the protection of all persons supplying labor and material in connection with such contract.

H.R. 7203. May 16, 1977. Judiciary. Transfers responsibility for furnishing certified copies of payment bonds pursuant to the Miller Act from the Comptroller General to the department secretary or agency head of the contracting agency.

H.R. 7204. May 16, 1977. Judiciary. Provides for the issuance of an initial Federal agency decision pursuant to an agency hearing in the event the presiding employee is not available to render such decision. Prohibits agency employees from participating in investigative or litigating functions in connection with a case in which such employee must render a decision. Authorizes agencies to issue subpenas without any other specific statutory authority and requires such agencies to authorize officers to issue such subpenas.

H.R. 7205. May 16, 1977. Judiciary. Amends the Immigration and Nationality Act to authorize the Attorney General and the President to admit certain refugees to the United States. Permits refugees to become permanent residents of the United States upon approval of the Immigration and Naturalization Service.

H.R. 7206. May 16, 1977. Judiciary. Authorizes the Law Enforcement Assistance Administration to purchase a group life insurance policy or policies from private life insurance companies for the benefit of public safety officers.

Sets forth guidelines relative to such group plan.

Establishes an Advisory Council on Public Safety Officer Group Life Insurance composed of the Attorney General, the Secretary of the Treasury, the Secretary of Health, Education, and Welfare, and the Director of the Office of Management and Budget.

H.R. 7207. May 16, 1977. Ways and Means. Amends the Internal Revenue Code to provide tax-exempt status to certain computer and fiscal management services which serve social service organizations.

H.R. 7208. May 16, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals alternative, limited income tax credits or deductions for the tuition paid for the primary, secondary or higher education of the taxpayer, his spouse and dependents.

H.R. 7209. May 16, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to prohibit the television broadcasting of programs portraying nudity, obscenity, or explicit sexual activity.

H.R. 7210. May 16, 1977. Ways and Means. Amends Title II (Old-Age, Survivors and Disability Insurance) of the Social Security Act to eliminate the five month waiting period which is presently a prerequisite of eligibility for disability insurance benefits and for widow's or widower's benefits on the basis of disability.

H.R. 7211. May 16, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase to $4,800 the amount of outside earnings which is permitted an individual each year without any deduction from benefits under such Title.

H.R. 7212. May 16, 1977. Judiciary. Establishes a system for settling disputes and appealing decisions settling disputes between executive agencies and private contractors. Permits the establishment within each agency Board of Contract Appeals. Requires the establishment of procedures for appeals involving claims of $25,000 or less.

H.R. 7213. May 16, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act by removing the limitation upon the amount of outside income which an individual may earn while receiving benefits.

H.R. 7214. May 16, 1977. Agriculture. Amends the Food Stamp Act of 1964 to transfer all responsibility for the program from the Secretary of Agriculture to the Secretary of Health, Education, and Welfare. Eliminates charges and coupons and substitutes a program of direct payments to households.

H.R. 7215. May 16, 1977. Banking, Finance and Urban Affairs. Amends the Federal Fire Prevention and Control Act of 1974 to authorize the Administrator of the National Fire Prevention and Control Administration to make grants to voluntary fire departments to enable them to purchase firefighting equipment which they cannot afford due to post-1972 inflation.

H.R. 7216. May 16, 1977. Ways and Means. Amends the Internal Revenue Code to allow an income tax deduction by volunteer firefighters for their firefighting clothing expenses.

H.R. 7217. May 16, 1977. Ways and Means. Amends the Internal Revenue Code to exempt nonprofit volunteer firefighting or rescue organizations from the excise tax on sales of special fuels, automotive parts, petroleum products, and communication services.

H.R. 7218. May 16, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to authorize payment for specified services performed by chiropractors, and physical examination, and related routine laboratory tests.

H.R. 7219. May 16, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) and Title II (Old-Age, Survivors', and Disability Insurance) of the Social Security Act to extend Medicare hospital coverage to include drugs. Establishes a Formulary Committee within the Department of Health, Education, and Welfare to prepare and maintain a listing of qualified drugs.

H.R. 7220. May 16, 1977. Ways and Means. Amends the Social Security Act by entitling an Old-Age, Survivors, and Disability Insurance claimant to a reconsideration of the initial decision concerning such claimant's eligibility for benefits. Allows such claimant to request a hearing on such reconsideration determination. Requires that such a hearing be presided over by an administrative law judge and conducted on the record.

Directs the Secretary of Health, Education, and Welfare to appoint administrative law judges to conduct such hearings.

Sets forth criteria requiring the remand of a disputed claim to the appropriate regional commissioner of the Social Security Administration.

H.R. 7221. May 16, 1977. Judiciary. Amends the Indochina Migration and Refugee Assistance Act of 1975 to extend through 1980 funds for the provision of financial, medical, employment, and relocation assistance to refugees from Cambodia, Vietnam, or Laos.

H.R. 7222. May 16, 1977. Government Operations. Establishes the Federal Emergency Assistance and Preparednes Administration to implement and coordinate all Federal disaster assistance and emergency preparedness programs and to collect data to be made available to the public, States and localities respecting the prediction and planning for emergencies and disasters. Extends the Civil Defense Act to September 30, 1980.

H.R. 7223. May 16, 1977. Judiciary. Deems the application of a certain individual for with the Social Security Administration in Social Security Benefits to have been filed 1966.

H.R. 7224. May 17, 1977. Ways and Means. Amends the Tariff Schedules of the United States to increase for a five-year period the customs duty on specified hand tools.

H.R. 7225. May 17, 1977. Education and Labor. Repeals the Occupational Safety and Health Act of 1970.

H.R. 7226. May 17, 1977. Ways and Means. Amends the Internal Revenue Code to provide an additional personal exemption for elderly individuals whose spouses have died.

H.R. 7227. May 17, 1977. Ways and Means. Amends the Food Stamp Act of 1964 to limit eligibility. Amends the Social Security Act to revise eligibility requirements and disbursement procedures under Title XVI (Supplemental Security Income Program); to increase the ceiling on Federal social services funding under title XX (Grants to States for services); and to revise procedures for the payment to States for child welfare services programs established under Title IV (Aid to Families with Dependent Children).

Amends Title XVI of the Social Security Act to extend the Supplemental Security Income program to Guam, Puerto Rico, and the Virgin Islands.

H.R. 7228. May 17, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to revise carbon monoxide and nitrogen oxide emission standards for light-duty motor vehicles. Extends interim emission standards for hydrocarbons and carbon monoxide through model year 1979. Extends interim standards for nitrogen oxides through model year 1981. Authorizes revisions or waivers of nitrogen oxide standards in subsequent model years.

Authorizes non-disclosure of emission data to the public where deemed necessary to preserve trade secrets. Establishes procedures for public participation in hearings on proposed motor vehicle emission standards.

Authorizes appropriations to carry out the Act through fiscal year 1980.

H. R. 7229. May 17, 1977. Government Operations. Establishes the Federal Emergency Assistance and Preparedness Administration to implement and coordinate all Federal disaster assistance and emergency preparedness programs and to collect data to be made available to the public, States and localities respecting the prediction and planning for emergencies and disasters. Extends the termination dates of specified provisions of the Federal Civil Defense Act to September 30, 1980.

H.R. 7230. May 17, 1977. Ways and Means. Amends the Internal Revenue Code to provide the same credit for the elderly to each eligible individual regardless of marital status. Replaces the adjusted gross income limitations for such individuals with a $2,500 earned income limitation for each eligible individual. Eliminates the joint filing requirement for married persons receiving the credit.

H.R. 7231. May 17, 1977. Interior and Insular Affairs. Redesignates the Boundary Waters Canoe Area in Superior National Forest, Minnesota, as the Boundary Waters Wilderness Area. Specifies restrictions relating to timber harvesting, mining, and use of recreational vehicles within such area.

Increases the one and-quarter percent of the fair appraised value the amount payable to the State of Minnesota with respect to lands within the Superior National Forest.

H.R. 7232. May 17, 1977. Post Office and Civil Service. Changes the observance of Memorial Day from the last Monday in May to May 30.

H.R. 7233. May 17, 1977. Veterans' Affairs. Directs the Administrator of Veterans' Affairs to permit a veteran, who is being supplied with drugs but who is not a patient in a Veterans' Administration facility, to determine whether the drugs will be supplied directly by the Administrator or from a source approved by the Administrator and whether the Administrator shall pay such source directly or reimburse the veteran who will pay for the drugs.

H.R. 7234. May 17, 1977. Judiciary. Provides for the appointment of a special prosecutor to conduct investigations relative to alleged violations of criminal law involving abuse of office fraud against the United States, or obstruction of justice, or campaign finance by any of specified Federal officials or campaign managers.

Directs the Attorney General to promulgate regulations requiring employees of the Department of Justice to disqualify themselves from investigations or prosecutions which may result in a conflict of interests or the appearance thereof.

H.R. 7235. May 17, 1977. Agriculture. Declares the policy of the Federal Government to retain, protect and improve agricultural land, to reduce its conversion to nonagricultural uses and to limit the encroachment of industrial activities. Establishes the Agricultural Land Review Commission to ,study issue research grants, report and recommend pursuant to such policy. Authorizes the Secretary of Agriculture to provide financial and technical assistance for pilot projects testing methods of retaining, protecting and improving such land.

H.R. 7236. May 17, 1977. Ways and Means. Amends the Internal Revenue Code to allow limited, nonrefundable income tax credits for individuals who: (1) install qualified insulation in their residences; (2) install qualified solar heating and cooling equipment in dwelling units used by them, or leased to others as residences; (3) replace the heating system in any dwelling with a reversible, compressible refrigerant system (i.e., a heat pump system); or (4) purchase personal or family electric highway vehicles between 1976 and 1982.

H.R. 7237. May 17, 1977. Public Works and Transportation; Banking, Finance and Urban Affairs. Amends the Disaster Relief Act of 1974 to: (1) specify the disaster-related expenses of individuals or families which will be included and excluded from coverage by Presidential grants; (2) set forth the percentage of each such grant which may be extended by States and local governments for grant administration; and (3) include nursury and pre-school programs within the definition of "educational facilities" for purposes of receiving grants for repair and restoration.

Amends the National Flood Insurance Act of 1968 to establish a flood insurance coverage limit on residential dwelling units for any property and permanent fixtures contained thereon.

H.R. 7238. May 17, 1977. Veterans' Affairs. Declares that service during World War I by any female citizen of the United States as a member of a telephone operating unit of the Army Signal Corps shall be considered active duty in the Army for purposes of all laws administered by the Veterans' Administration.

H.R. 7239. May 17, 1977. Judiciary. Establishes new procedures for the determination of the mental competency of an individual accused of a crime. Authorizes the trial court to commit an accused who is found incompentent to the care of the Secretary of Health, Education, and Welfare. Outlines the procedure required for civil commitment of such persons. Requires an annual review of the danger posed by any accused in the Secretary's custody. Requires discharge if no danger is found and entitles the accused to a hearing if the determination is adverse.

H.R. 7240. May 17, 1977. Judiciary. Permits, and specifies procedures for registration of United States district court criminal judgments imposing fines in other judicial districts.

H.R. 7241. May 17, 1977. Judiciary. Authorizes the Director of the Administrative Office of the United States Courts, in accordance with such regulations as he may prescribe and are approved by the Judicial Conference of the United States, to pay the defense costs of a judge or Federal court employee who is sued for acts performed or omissions made in his official capacity.

H.R. 7242. May 17, 1977. Judiciary. Amends the Bail Reform Act of 1966 to require consideration of the safety of others and the community at large in setting conditions for pretrial release. Stipulates that conditions imposed to that end may not be financial.

H.R. 7243. May 17, 1977. Judiciary. Prohibits the bringing of a civil action in Federal district court on the basis of diversity of citizenship in any State or which a plaintiff is a citizen.

H.R. 7244. May 17, 1977. Judiciary; Merchant Marine and Fisheries. Amends the Canal Zone Code provisions respecting the appointment, duties and service of probation officers.

H.R. 7245. May 17, 1977. Rules. Adds a new rule to the Federal Rules of Criminal Procedure which permits, and sets forth procedures for, appeal of certain sentences by either a defendant or the government on the grounds of clear unreasonableness.

H.R. 7246. May 17, 1977. Post Office and Civil Service. Repeals the Postal Reorganization Act. Reenacts provisions relating to the postal service which were in effect immediately prior to the enactment of such Act.

H.R. 7247. May 17, 1977. Judiciary; Ways and Means. Prohibits a State from imposing a tax on income earned by a non-domiciliary unless the income was earned in that State. Permits the State taxation of income earned by domiciliaries outside the State to the extent that such taxation exceeds the tax imposed by the State in which the income was earned.

H.R. 7248. May 17, 1977. Public Works and Transportation. Prohibits the expenditure of Federal funds for the conversion of highway signs to the metric system unless the Congress specifically authorizes such an expenditure.

H.R. 7249. May 17, 1977. Judiciary. Amends the charter of the Big Brothers of America to include within such organization the Big Sisters International, Incorporated. Renames such organization as the Big Brothers-Big Sisters of America. Restricts the activities of such organization to the United States (previously Canada and the United States).

H.R. 7250. May 17, 1977. Education and Labor. Establishes a community service youth employment program under the Comprehensive Employment and Training Act of 1973 pursuant to which the Secretary of Labor is to financially assist local governments and private nonprofit organizations submitting approved applications. Directs such local governments and organizations to make grants to eligible applicants for projects which will provide public service job opportunities for certain persons over age 18.

Establishes a National Commission on Youth Community Service to assist in carrying out this act.

H.R. 7251. May 17, 1977. Post Office and Civil Service. Specifies civil penalties for persons who continue to engage in conduct which the Postal Service determines constitutes either (1) a scheme or device for obtaining money or property through the mail by means of false pretenses or (2) a lottery, gift enterprise, or similar scheme for the distribution of money or property, and for persons who fail to comply with orders issued by the Postal Service as a result of such a determination.

H.R. 7252. May 17, 1977. Interstate and Foreign Commerce. Amends the Interstate Commerce Act to prohibit common carriers subject to Part I of such act (railroads, and combined rail and water carriers) from establishing a rate for any commodity for export which is different from the established rate for the similar domestic movement of such commodity unless the carrier simultaneously establishes export rates for that commodity from the same point of origin to all port ranges served by such carrier.

H.R. 7253. May 17, 1977. Government Operations. Establishes the Federal Emergency Assistance and Preparedness Administration to implement and coordinate all Federal disaster assistance and emergency preparedness programs and to collect data to be made available to the public, States and localities respecting the prediction and planning for emergencies and disasters. Extends the termination dates of specified provisions of the Federal Civil Defense Act to September 30, 1980.

H.R. 7254. May 17, 1977. Judiciary. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

Imposes criminal penalties for violations of this Act.

H.R. 7255. May 17, 1977. Ways and Means. Interstate and Foreign Commerce.

Amends Titles II (Old-Age, Survivors, and Disability Insurance) and XVIII (Medicare) of the Social Security Act and the Railroad Retirement Act of 1974 to eliminate the requirement that an individual be entitled to disability benefits for at least 24 consecutive months in order to qualify for hospital insurance benefits under the Medicare program.

H.R. 7256. May 17, 1977. Judiciary. Authorizes the naturalization of a certain individual who lost his U.S. citizenship.

H.R. 7257. May 17, 1977. Judiciary. Declares that certain provisions of the Immigration and Nationality Act are inapplicable to a certain individual.

H.R. 7258. May 18, 1977. Interstate and Foreign Commerce. Creates an Electric Energy Office in the Federal Power Commission to establish and enforce national minimum standards for electric utility rates to be binding upon all utilities and regulatory agencies. Requires that utility rate structures be designed so as to provide lower rates for residential and small business users and to penalize wasteful consumption of electric energy.

H.R. 7259. May 18, 1977. Interior and Insular Affairs. Restores Federal recognition and benefits to the Confederated Tribes of Siletz Indians of Oregon. Provides for the establishment of a tribal government. Directs the Secretary of the Interior to draft lgeislation for the creation of a Siletz reservation in Lincoln County, Oregon.

H.R. 7260. May 18, 1977. House Administration. Amends the Federal Election Campaign Act of 1971 to direct that copies of documents required to be filed with States be filed with the State officer charged with maintaining State election campaign reports.

Revises the period for which copies of such documents must be retained.

Requires that only those portions of filed documents which relate to candidates for election in the State of filing need be preserved.

Authorizes the appropriation of specified sums to the Federal Election Commission for the purpose of reimbursing during 1977 and 1978 State offices with which campaign documents are filed.

H.R. 7261. May 18, 1977. Small Business. Authorizes the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning, and development and international market development. Establishes a Small Business Management and Technical Assistance Division within the Small Business Center program.

H.R. 7262. May 18, 1977. Small Business. Authorizes the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning, and development and international market development. Establishes a Small Business Management and Technical Assistance Division within the Small Business Administration to administer the Small Business Development Center program.

H.R. 7263. May 18, 1977. Veterans' Affairs. Provides for a burial allowance of $150 to be paid by the Veterans' Administration: (1) to an State or political subdivision thereof for burying a veteran in any cemetery owned by the State or subdivision if such cemetery or section thereof is used solely for the interment of veterans; or (2) to a person prescribed by the deceased veteran if burial is in a cemetery other than the kind described.

H.R. 7264. May 18, 1977. Interior and Insular Affairs. Establishes the Channel Islands and Santa Monica Mountains National Park and Seashore in California.

Directs the Secretary of the Interior to undertake specified transportation studies.

Establishes the Channel Islands and Santa Monica Mountains National Park and Seashore Advisory Commission.

H.R. 7265. May 18, 1977. Ways and Means. Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for optometric and medical vision care under the supplementary medical insurance program.

H.R. 7266. May 18, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XI (General Provisions) of the Social Security Act to require the participation of optometrists in the activities of the National Professional Standards Review Council and of local professional standards review organizations.

H.R. 7267. May 18, 1977. Ways and Means. Amends the Internal Revenue Code to allow an income tax deduction for State and local property taxes that are allocable to the construction or improvement of sewage treatment works, even though such benefits tend to improve the value of the property taxed.

H.R. 7268. May 18, 1977. Education and Labor. Increases the dollar amount of contracts to which the Davis-Bacon Act applies and provides for future increases tied to cost-of-living increases. Makes such act applicable only to unskilled laborers. Details the method for computing the "prevailing wage" under the act. Establishes a Federal Construction Appeals Board to hear appeals regarding wage rate determinations under the act.

H.R. 7269. May 18. 1977. Agriculture. Amends the Soil Conservation and Domestic Allotment Act to provide financial assistance to agricultural producers based on farm and ranch conservation plans approved by local conservation districts.

H.R. 7270. May 18, 1977. Government Operations. Establishes a Department of Education within the executive branch of the Federal Government to take over specified functions of the Department of Health, Education, and Welfare; all of the functions of the Education Division and various educational functions handled by the Departments of Agriculture, Defense, and Interior; the Secretary of Housing and Urban Development; the National Foundation on the Arts and the Humanities; the National Endowments for the Arts and Humanities; and National Science Foundation.

Creates the Federal Interagency Committee on Education and the National Advisory Commission on Education.

H.R. 7271. May 18, 1977. Ways and Means. Amends the Internal Revenue Code to exempt nonprofit volunteer firefighting or rescue organizations from the excise tax on sales of special fuels, automotive parts, petroleum products, and communication services.

H.R. 7272. May 18, 1977. Judiciary; Rules. Requires that the public be given opportunity to participate in the rulemaking proceedings of a Federal agency.

Requires that proposed rules be submitted to Congress for disapproval before they become effective.

H.R. 7273. May 18, 1977. Judiciary; Rules. Requires that the public be given an opportunity to participate in the rulemaking proceedings of a Federal agency.

Requires that proposed rules be submitted to Congress for disapproval before they become effective.

H.R. 7274. May 18, 1977. Judiciary; Rules. Requires that the public be given an opportunity to participate in the rulemaking proceedings of a Federal agency.

Requires that proposed rules be submitted to Congress for disapproval before they become effective.

H.R. 7275. May 18, 1977. Judiciary; Rules. Requires that the public be given an opportunity to participate in the rulemaking proceedings of a Federal agency.

Requires that proposed rules be submitted to Congress for disapproval before they become effective.

H.R. 7276. May 18, 1977. Ways and Means. Amends the Internal Revenue Code to provide a limited, refundable tax credit to persons age 65 or over for the real property taxes or the rent they pay for their principal residences.

H.R. 7277. May 18, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 7278. May 18, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1936, to stipulate that the trade-in and trade-out values of mariner class vessels acquired by the Secretary of Commerce in exchange for obsolete vessels in the National Defense Reserve Fleet shall be the higher of their scrap value in domestic or foreign markets.

H.R. 7279. May 18, 1977. Public Works and Transportation. Designates the United States Customs Court and Federal Office Building at 1 Federal Plaza, New York, New York, the "Paul P. Rao United States Customs Court and Federal Office Building."

H.R. 7280. May 18, 1977. Veterans' Affairs. Increases from 10 to 12 years the delimiting period for a veteran to complete a program of education.

H.R. 7281. May 18, 1977. Ways and Means. Amends the Internal Revenue Code to exempt farm and soil and water conservation trucks from the highway use tax.

H.R. 7282. May 18, 1977. Ways and Means; Judiciary. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to require that resident aliens reside continuously in the United States for five years to qualify for supplemental security income benefits.

Amends the Immigration and Nationality Act to prevent an immigrant from entering the United States unless a United States citizen (immigration sponsor) agrees to support the immigrant for five years from the date of the immigrant's admission.

H.R. 7283. May 18, 1977. House Administration. Establishes an art bank in the Congress for the purpose of selecting American works of art for display in the House and Senate Office Buildings.

H.R. 7284. May 18, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for optometric and medical vision care under the supplementary medical insurance program.

H.R. 7285. May 18, 1977. Armed Services. Entitles members of the uniformed services with four years of service or less to family separation allowances.

H.R. 7286. May 18, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act by directing the Secretary of Health, Education, and Welfare to establish a National Sickle Cell Anemia Institute for the diagnosis, treatment, and prevention of sickle cell anemia.

H.R. 7287. May 18, 1977. Ways and Means. Amends the Social Security Act with respect to Old-Age, Survivors, and Disability Insurance by directing the Secretary of Health, Education, and Welfare to establish procedures for expediting (1) replacement of lost, stolen or misdelivered benefit checks; (2) initial benefit payments; (3) hearings on eligibility; and (4) final determinations of eligibility.

H.R. 7288. May 18, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XI (General Provisions) of the Social Security Act to require the participation of optometrists in the activities of the National Professional Standards Review Council and of local professional standards review organizations.

H.R. 7289. May 18, 1977. Judiciary. Makes the killing of an officer or employee of the Small Business Administration who is performing official duties a Federal crime.

H.R 7290. May 18, 1977. Judiciary. Makes the killing of an officer or employee of the Small Business Administration who is performing official duties a Federal crime.

H.R. 7291. May 18, 1977. Public Works and Transportation. Directs the Secretary of Transportation to designate certain highways in Oklahoma and Texas as part of the National System of Interstate and Defense Highways.

H.R. 7292. May 18, 1977. Post Office and Civil Service. Establishes pay classifications ATC–1 through ATC–9 for Federal air traffic controllers and establishes salary levels to correspond to such classifications. Requires trainees and nonjourneyman controllers to be classified in positions ATC–1 through ATC–8 according to the proficiency required to fill such positions. Requires the classification of journeyman controllers at positions ATC–4 through ATC–9 on the basis of the award of points which reflects the type of facility where such person performs duties and the complexity of the job considering such characteristics as the volume of air traffic and runway configurations.

H.R. 7293. May 18, 1977. House Administration. Entitles congressional candidates meeting certain criteria and agreeing to comply with specified spending limits and reporting requirements to campaign payments on a matching basis.

Directs the Secretary of the Treasury to establish a separate Congressional General Election Payment Account in the Presidential Election Campaign Fund to finance such payments.

Raises the general election spending limit for Presidential candidates who are eligible to receive public funds.

Provides an alternative method for determining the amount of funds to which candidates in a general Presidential election are entitled.

Permits Presidential candidates to receive additional contributions from small contributors.

H.R. 7294. May 18, 1977. Ways and Means. Amends the Internal Revenue Code to allow a deferral of an individual's income tax liability to the extent it equals a limited portion of the educational expenses incurred for the taxpayer, his spouse and dependents.

Provides for independent studies by the Secretaries of the Treasury and Health, Education, and Welfare on the effects of this Act.

H.R. 7295. May 18, 1977. Post Office and Civil Service. Changes the organizational structure of the United States Postal Service by: (1) transferring the authority of the Board of Governors to the Postmaster General; (2) revising the procedures for adjustment of rates and services; (3) creating a procedure for review of proposed capital investments; and (4) requiring the Postal Rate Commission to submit to the President a separate annual budget.

Prohibits a reduction in the frequency of mail delivery service below the frequency in effect on April 21, 1977.

H.R. 7296. May 18, 1977. Public Works and Transportation. Designates the new Terminal Radar Approach Control Federal Building on Steward Avenue, Hempstead, Long Island, New York, as the "Charles A. Lindbergh Federal Building."

H.R. 7297. May 18, 1977. Post Office and Civil Service. Requires all revenues and fees collected by the Postal Service to be deposited in the general fund of the Treasury of the United States. Requires the Postal Service to describe all operations and provide any other necessary information to Congress when seeking appropriations for its operations before the appropriate congressional committees as required by this Act.

Requires the Postal Service to provide door or curbline mail delivery to all permanent residential addresses receiving such service on or after the date of enactment of the Postal Reorganization Act Amendments of 1976 until September 15, 1977.

H.R. 7298. May 18, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to require persons engaged in domestic air transportation to provide financial protection and indemnification for victims of aircraft occurrences in amounts established by the Secretary of Transportation. Directs the Secretary to establish a fund to indemnify victims of extraordinary aircraft incidents as defined in this act when liability for such an incident exceeds the financial protection provided by the carrier.

H.R. 7299. May 18, 1977. Judiciary; Ways and Means. Directs district courts to award court costs to prevailing individual parties in civil actions where (1) an action was brought by the United States or agent thereof and the court finds that the bringing of the action constituted harassment or (2) the court finds that the conduct of the United States or agent thereof which gave rise to the action constitued harassment.

Directs the Tax Court to award costs to individual taxpayers who substantially prevail in a proceeding for redetermination of a deficiency.

H.R. 7300. May 18, 1977. District of Columbia. Restates the charter of the George Washington University, Washington, D.C. in its entirety.

H.R. 7301. May 18, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to authorize the Federal Communications Commission to grant broadcast licenses and license renewals for five-year terms.

Revises the Act to allow certain appeals from orders or decisions of the Commission to be brought in the United States court of appeals for the circuit in which the broadcast facility is, or is proposed to be located.

Requires the Commission to examine its broadcast license renewal procedure to determine how it can be simplified.

H.R. 7302. May 18, 1977. Ways and Means. Amends the Internal Revenue Code to allow taxpayers to bring civil suits in United States district courts for recovery of damages arising from unreasonable or excessive property assessments for the collection of taxes.

H.R. 7303. May 18, 1977. Judiciary; Education and Labor. Amends the Civil Rights Act of 1964 to prohibit discrimination on the basis of marital status in (1) public accommodations, (2) public facilities, (3) public education, and (4) federally assisted opportunities. Prohibits such discrimination in housing. Amends the Education Amendments of 1972 to prohibit such discrimination in federally assisted education.

H.R. 7304. May 18, 1977. Merchant Marine and Fisheries. Amends the Merchant Marine Act, 1936, to increase the amount of a ship construction loan which the Secretary of Commerce may guarantee from 75 to 87½ percent with respect to certain ferry boats.

H.R. 7305. May 18, 1977. Public Works and Transportation. Designates the Federal building located at 202 West Church Street, Champaign, Illinois, as the "William L. Springer Building."

H.R. 7306. May 18, 1977. Ways and Means. Amends the Internal Revenue Code to increase the amounts excludable from gross income as income earned abroad by repealing the provisions respecting such exclusions enacted in the Tax Reform Act and restoring former law.

H.R. 7307. May 18, 1977. Judiciary. Amends the provision of the Gun Control Act of 1968 which imposes additional sentences for using or unlawfully carrying a firearm during the commission of a Federal felony to (1) include State felonies and felonies with knives, (2) revise such additional sentences, and (3) prohibit a probationary or suspended sentence with respect to a first, as well as to a subsequent, conviction.

H.R. 7308. May 18, 1977. Judiciary; Intelligence. Establishes procedures for the application, approval, and extension of orders authorizing the use of electric surveillance for foreign intelligence purposes. Permits the Attorney General to authorize emergency employment of such surveillance for 24 hours in the absence of a judicial order.

Requires the Chief Justice of the United States to designate seven district court judges to hear applications for, and grant orders approving, electronic surveillance anywhere within the United States.

H.R. 7309. May 18, 1977. International Relations. Establishes a Bureau of Claims Against Foreign Diplomats within the Department of State to award compensation to persons injured by foreign diplomats and to reimburse local governments for revenues lost because of their inability to collect parking fines from foreign diplomats.

H.R. 7310. May 18, 1977. Education and Labor. Authorizes the Secretary of Commerce upon request by the chief executive officer of a noncontiguous State or territory which has been affected by an interruption in essential maritime transportation for more than five days, to: (1) activate and direct vessels of the national defense reserve fleet to provide such transportation; (2) request any officer, department, or instrumentality of the Federal Government to make available personnel, services, or facilities for use in providing such transportation; or (3) commence a civil action in the appropriate Federal court to terminate such interruption.

H.R. 7311. May 18, 1977. Ways and Means. Amends the Social Security Amendments of 1972, which lowered the age computation point for Old-Age, Survivors, and Disability Insurance (OASDI) benefits for men from age 65 to 62, the age which had previously applied only to women, in order to apply such revision to men who were entitled to OASDI benefits for January 1977 or months thereafter, and who attained age 62 after December 1972, such revision having applied previously only to individuals who became 62 after 1974.

H.R. 7312. May 18, 1977. Judiciary. Confers jurisdiction on the United States District Court for the Southern District of Indiana to hear, determine, and render judgment on a particular claim by a certain individual.

H.R. 7313. May 19, 1977. Science and Technology. Establishes a five-year program in the Energy Research and Development Administration designed to develop advanced automobile propulsion systems. Directs the Secretary of Transportation and the Administrator of the Environmental Protection Agency to evaluate test vehicles for compliance with applicable environmental, energy efficiency, and motor vehicle safety requirements.

H.R. 7314. May 19, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to revise carbon monoxide and nitrogen oxide emission standards for light-duty motor vehicles. Extends interim emission standards for hydrocarbons and carbon monoxide through model year 1979. Extends interim standards for nitrogen oxides through model year 1981. Authorizes revisions or waivers of nitrogen oxide standards in subsequent model years.

Authorizes non-disclosure of emission data to the public where deemed necessary to preserve trade secrets. Establishes procedures for public participation in hearings on proposed motor vehicle emission standards.

Authorizes appropriations to carry out the Act through fiscal year 1980.

H.R. 7315. May 19, 1977. Ways and Means. Amends the Internal Revenue Code to allow a limited tax credit in an amount of $250 for each individual who is at least 65 years of age before the beginning of the taxable year, whose principal place of abode during the taxable year is the principal residence of the taxpayer, and who is not a lodger with the taxpayer.

H.R. 7316. May 19, 1977. Judiciary. Places further restrictions upon interception of communications without court sanction by requiring that either all parties consent or that the interceptor is a party to the communication and reasonably believes that the communication violates State or Federal law.

H.R. 7317. May 19, 1977. Interstate and Foreign Commerce. Amends the Federal Food, Drug, and Cosmetic Act to deem a food additive safe if the Secretary of Health, Education, and Welfare (1) makes a finding that the public benefit from permitting the use of such additive would exceed the public risk resulting from such use; (2) gives notice in the Federal Register of such a finding and opportunity for public comment; and (3) issues a final order not earlier than 120 days from such publication.

Specifies factors that must be taken into consideration when evaluating a food additive.

Deems saccharin a safe food additive unless the Secretary declares it unsafe under the provisions of this Act.

H.R. 7318. May 19, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title XVIII (Medicare) of the Social Security Act to provide payment for optometric and medical vision care under the supplementary medical insurance program.

H.R. 7319. May 19, 1977. Judiciary. Requires certain organizations engaged in lobbying activities to comply with specified registration, reporting, and recordkeeping requirements.

Directs the Comptroller General to develop filing and cross-indexing systems to identify persons and organizations engaged in lobbying activities.

H.R. 7320. May 19, 1977. Ways and Means. Amends the Internal Revenue Code to revise the time requirements and limitation pertaining to deductions of expenses paid to related taxpayers, Subchapter S elections, tax free exchanges in corporate liquidations, income tax credit carrybacks, and income tax returns by certain tax exempt organizations. Expands the class of individuals qualifying as farmers or fishermen for purposes of declarations of estimated tax. Increases the adjustment to basis of property transferred under corporated distributions.

H.R. 7321. May 19, 1977. Public Works and Transportation. Amends the Federal Aviation Act of 1958 to direct the Federal Aviation Administration to promulgate comprehensive regulations for the control and abatement of noise resulting from the operation of civil supersonic transportation aircraft in the United States at subsonic speed. Stipulates that such regulations, at a minimum, shall require such aircraft to comply with the noise standards prescribed for new subsonic aircraft in effect on January 1, 1977.

H.R. 7322. May 19, 1977. Public Works and Transportation. Authorizes airport operators to prohibit, on a nondiscrimination basis, the operation of any type of aircraft at such airport for the purpose of controlling and abating aircraft noise.

H.R. 7323. May 19, 1977. Ways and Means. Amends title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to make benefits under such title payable to a resident alien only if such alien has continuously resided in the United States for at least two years.

H.R. 7324. May 19, 1977. Judiciary. Authorizes classification of two individuals as children for purposes of the Immigration and Nationality Act.

H.R. 7325. May 23, 1977. Banking, Finance, and Urban Affairs. Amends the Federal Reserve Act and the Federal Deposit Insurance Act to regulate the establishment, operation, and control of bank branches in the United States by foreign banks.

Authorizes the Comptroller of the Currency, the Federal Reserve Board, and the Secretary of the Treasury to administer the provisions of this Act.

H.R. 7326. May 23, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title XVIII (Medicare) of the Social Security Act to provide payment for certain clinical psychologists' services under the supplemental insurance program.

H.R. 7327. May 23, 1977. International Relations. Amends the Mutual Educational and Cultural Exchange Act of 1961 to disallow Federal employees to accept grants and other types of assistance provided by a foreign government to facilitate participation of such employees in certain cultural exchange programs.

H.R. 7328. May 23, 1977. Education and Labor. Amends the Higher Education Act of 1965 to authorize appropriations for, and establish a program of grants to, urban universities for (1) development of urban-oriented educational, research, or service programs; and (2) assistance in carrying out such programs.

Authorizes a five year comprehensive grant to a university qualifying as an "urban grant university" and establishes criteria for such designation.

Creates an Urban University Advisory Council to (1) review, along with the Commissioner of Education, "urban grant university" applications; (2) advise the Commission; and (3) make recommendations to the President and to the Congress.

H.R. 7329. May 23, 1977. Public Works and Transportation. Directs the Secretary of Transportation to establish mandatory operating procedures to reduce noise, conserve fuel, and improve the operational safety of civil turbojet aircraft operating within the United States. Specifies certain operating procedures for aircraft which shall be included in such regulations. Directs the Secretary to study the advisability of requiring the use of new flight instruments in the landing operations of civil turbojet powered aircraft to reduce noise and increase the safety of landing operations and to report the results of such study to Congress.

H.R. 7330. May 23, 1977. Judiciary. Enacts Title 11 of the United States Code to establish a uniform law of bankruptcy. Changes the administration of bankruptcy cases including the determination of claims and allowances. Amends procedures for liquidation and reorganization. Makes provisions for the adjustment of debts of municipalities and individuals with regular income.

Amends Title 28 of the United States Code and the Federal Rules of Evidence as they pertain to the creation and the powers of bankruptcy courts. Provides for a transition period of the bankruptcy court system.

H.R. 7331. May 23, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to revise carbon monoxide and nitrogen oxide emission standards for light-duty motor vehicles. Extends interim emission standards for hydrocarbons and carbon monoxide through model year 1979. Extends interim standards for nitrogen oxides through model year 1981. Authorizes revisions or waivers of nitrogen oxide standards in subsequent model years.

Authorizes non-disclosure of emission data to the public where deemed necessary to preserve trade secrets. Establishes procedures for public participation in hearings on proposed motor vehicle emission standards.

Authorizes appropriations to carry out the Act through fiscal year 1980.

H.R. 7332. May 23, 1977. Interstate and Foreign Commerce. Prescribes criteria for Federal, State, and local agencies regulating electric utilities which would require that rate schedules accurately reflect long-run incremental costs of service and that price differentials for different customers classes reflect actual documented differentials in cost or service.

Prohibits any allowance for recoupment of any advertising costs except if such advertising is designed to discourage energy consumption during peak load periods or to encourage conservation of electricity in general.

Establishes standards for the treatment of fuel adjustment clauses and for the determination of effective dates for proposed changes in rates and schedules.

H.R. 7333. May 23, 1977. Public Works and Transportation. Directs the Administrator of the Environmental Protection Agency to establish research and demonstration programs for the control of sludge. Authorizes financial assistance for sludge removal programs.

H.R. 7334. May 23, 1977. Science and Technology. Directs the Administrator of Energy Research and Development to establish a program for research and development of industrial energy conserving technologies. Authorizes financial assistance in the form of grants and loans for the development and demonstration of such technologies, with special attention to be given to stimulation of depressed industrial areas.

H.R. 7335. May 23, 1977. Banking, Finance and Urban Affairs; Small Business. Amends the National Housing Act and the Small Business Act to authorize Federal financial assistance to individuals, families, nonprofit groups, and small business for the purchase of solar, renewable source, or other energy conserving measures and equipment.

H.R. 7336. May 23, 1977. Armed Services. Requires defense contracts for an amount exceeding $5,000 to require the defense contractor to report annually the name of each subcontractor who is under any contract with such contractor involving an amount exceeding $5,000. Requires such report to list by State the portion of the total amount of such subcontract which is performed in each State. Requires the Secretary of Defense to compile such information and submit to Congress the names of defense subcontractors and the total amount of all defense subcontractors which are performed in each State.

H.R. 7337. May 23, 1977. Judiciary. Amends the Clayton Act to prohibit specified interlocking corporate management relationships.

H.R. 7338. May 23, 1977. Ways and Means. Amends the Social Security Act to assure that recipients of Aid to Families with Dependent Children (Title IV); Supplemental Security Income (Title XVI); specified programs of assistance to the aged, blind, and disabled (Titles I, X, and XIV); veterans' pensions and compensation; assistance under the Food Stamp Act of 1964 or the United States Housing Act of 1937; and benefits under any Federal retirement or disability program shall not have the amount of such assistance or benefits reduced because of cost-of-living increases in monthly social security benefits.

H.R. 7339. May 23, 1977. Interstate and Foreign Commerce. Prohibits the shipment in interstate or foreign commerce of any fur or leather, raw or in finished form, from animals trapped in any State or foreign country which has not banned the manufacture, sale, or use of leg-hold or steel jaw traps.

Directs the Secretary of Commerce to publish a list of such States and foreign countries.

H.R. 7340. May 23, 1977. Ways and Means. Provides that the income tax treatment of certain transportation expenses between the taxpayer's residence and place of work shall be determined without regard to Revenue Ruling 76–453 or any other ruling, regulation or decision reaching the same result.

H.R. 7341. May 23, 1977. Interstate and Foreign Commerce; Judiciary. Amends the Communications Act of 1934 to add a new title which replaces and generally revises provisions relative to the interception of oral and wire communications.

Increases the types of communications which are protected from unlawful interference.

Narrows present exceptions to the prohibitions against interception and/or disclosure of the contents of protected communications.

Revises the types of crimes with respect to which interceptions may be authorized.

Requires prior judicial approval of all authorizations.

H.R. 7342. May 23, 1977. Agriculture. Amends the Consolidated Farm and Rural Development Act to make operating and real estate loans under such Act available to private domestic corporations and partnerships engaged in farming or ranching.

Provides for congressional authorization of program levels under such Act.

H.R. 7343. May 23, 1977. Agriculture. Amends the Consolidated Farm and Rural Development Act to make operating and real estate loans under such Act available to private domestic corporations and partnerships engaged in farming or ranching.

Provides for congressional authorization of program levels under such Act.

H.R. 7344. May 23, 1977. Interior and Insular Affairs. Directs the Secretary of Agriculture and the Secretary of the Interior to study the feasibility of a proposed Southern Appalachian Slope National Recreation Area in Georgia, North Carolina, and South Carolina.

H.R. 7345. May 23, 1977. Veterans' Affairs. Increases the rates of: (1) pensions for war veterans with a non-service-connected disability, their surviving spouses and children; (2) dependency and indemnity compensation for parents of veterans who died in active military service; and (3) the monthly rate of death compensation payable to a widow or dependent parent if the payee is a patient in a nursing home or helpless or blind.

H.R. 7346. May 23, 1977. Armed Services. Entitles specified members of the armed forces reserves to retirement pay.

H.R. 7347. May 23, 1977. Judiciary. Allows nationals of Chile who are being persecuted in Chile or are in danger of being persecuted if returned to Chile, and the spouses, children or parents of such nationals to be granted admission into the United States and the status of permanent residents if specified requirements are met.

H.R. 7348. May 23, 1977. Veterans' Affairs. Directs the Administrator of Veterans' Affairs to select and acquire land for a national cemetery in Broward County or Dade County, Florida.

Directs the Administrator of the General Services Administration to transfer to the Veterans' Administration without reimbursement or transfer of funds any Government-owned land in the named counties which the Administrator of Veterans' Affairs may determine suitable for a national cemetery.

Directs the establishment of such national cemetery.

H.R. 7349. May 23, 1977. Government Operations. States that the authority of the Comptroller General to have access to documents and other materials upon request under the Budgeting and Accounting Act, 1921 shall not be limited, with respect to the Department of Justice, to materials pertaining to the receipt and expenditure of public funds but shall extend to all such materials in the possession of the Department.

H.R. 7350. May 23, 1977. Judiciary. Grants a Federal charter to the United States Submarine Veterans of World War II.

H.R. 7351. May 23, 1977. Agriculture. Repeals the Food Stamp Act of 1964. Replaces the existing program with a new program substantially similar, but: (1) eliminates for coupon allotments and makes coupons redeemable for cash; (2) requires national income standards of eligibility to be income guidelines for the nonfarm United States prescribed by the Office of Management and Budget; (3) directs that food stamp applications be included on application forms for other public assistance programs; and (4) directs the Secretary to make contracts or grants for research that will help improve the administration and effectiveness of the food stamp program.

H.R. 7352. May 23, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to set forth the percentage of the total charges which a mortgagee must pay to the Federal Government upon foreclosure of a government-insured mortgage loan.

Restricts the power of the Secretary of Housing and Urban Development to enter mortgage insurance contracts where the mortgagee has already foreclosed upon a specified number of mortgages insured under such Act.

H.R. 7353. May 23, 1977. Post Office and Civil Service. Requires the Civil Service Commission to establish a Special Cost-of-Living Pay Schedule for Federal employees located in any locality. Directs that such schedule shall contain special rates of basic pay representing increases in comparable rates provided by the General Schedule, for the purpose of offsetting the increased cost-of-living of such employees located in each locality.

H.R. 7354. May 23, 1977. Education and Labor. Amends the Age Discrimination in Employment Act of 1967 to extend the coverage of such Act to individuals 65 or over, and to make unlawful seniority systems and employee benefit plans which require the retirement of individuals 40 or over.

H.R. 7355. May 23, 1977. Armed Services. Revises the pay and allowances of enlisted members of the uniformed services who are appointed officers and warrant officers who are appointed as commissioned officers.

H.R. 7356. May 23, 1977. Merchant Marine and Fisheries. Directs the Secretary of the Interior to make a comprehensive study of the wolf for the purposes of developing adequate conservation measures.

Establishes a moratorium on all killing of wolves except as game in areas not protected under the Endangered Species Act, pending the results of such study.

H.R. 7357. May 23, 1977. Rules. Amends the Congressional Budget Act of 1974 to require economic impact statements for every bill or joint resolution reported in Congress and for each rule proposed by any Federal agency to show the effects of such proposed law on specified sectors of the economy. States that statements pertaining to agency rules shall disclose the effects of such proposed rule on State and local governments, small business, and low- and middle-income families.

H.R. 7358. May 23, 1977. Ways and Means. Amends the Internal Revenue Code to require each spouse on a joint tax return to verify by oath or affirmation that such spouse has equal ownership, management, and control of the income, assets, and liabilities of the marriage partnership.

H.R. 7359. May 23, 1977. Interstate and Foreign Commerce; International Relations. Amends the Emergency Petroleum Allocation Act of 1973 to establish a Crude Oil Allocation Office within the Federal Energy Administration. Directs the Office to maintain a current inventory of domestic crude oil reserves.

Requires petroleum and refining companies to make fair and equitable allocation of petroleum products. Prohibits export of domestic crude oil or petroleum products in any year where such products are imported into the United States.

H.R. 7360. May 23, 1977. Ways and Means. Amends the Internal Revenue Code to exempt certain farm vehicles from the highway use tax.

H.R. 7361. May 23, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to exclude work-related expenses of mentally retarded individuals in determining their income for supplemental security income benefit purposes.

H.R. 7362. May 23, 1977. Ways and Means. Amends the Internal Revenue Code to provide that married individuals filing separately shall be taxed at the same income tax rate as unmarried individuals, absent an election to have existing rates for such individuals, apply. Provides that the community income so taxed against individuals in community property jurisdictions shall consist of that income which would be taxed to them as personal income in other States.

H.R. 7363. May 23, 1977, Judiciary. Amends the Immigration and Nationality Act to change the status of Indochinese refugees who entered the United States after March 31, 1975, to that of permanent resident aliens. Permits the Attorney General at his discretion, to change to the status of permanent resident alien specified Indochinese who entered the country prior to such date and children and spouses of persons receiving permanent resident status under this Act.

H.R. 7364. May 23, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to include outpatient services by a community mental health center among the benefits provided under such title.

H.R. 7365. May 23, 1977. Banking, Finance and Urban Affairs; Interstate and Foreign Commerce; Ways and Means. Amends the Internal Revenue Code to increase the rate of the investment tax credit and to provide tax incentives for the use of coal and the installation of air pollution control equipment in certain electric powerplants and major fuel-burning installations.

Authorizes the Administrator of the Federal Energy Administration to make loans to businesses for the purchase of certain coal-fired equipment.

Amends the Energy Supply and Environmental Coordination Act of 1974 to establish deadlines for coal conversion by certain powerplants. Grants the President authority to declare energy emergencies.

H.R. 7366. May 23, 1977. Judiciary. Allows nationals of Chile who are being persecuted in Chile or are in danger of being persecuted if returned to Chile, and the spouses, children or parents of such nationals to be granted admission into the United States and the status of permanent residents if specified requirements are met.

H.R. 7367. May 23, 1977. Veterans' Affairs. Designates services as a member of the Women's Air Force Service Pilots as active duty for the purposes of all laws administered by the Veterans' Administration.

H.R. 7368. May 23, 1977. Judiciary. Requires specified organizations which employ lobbyists to register and file quarterly expense reports with the Comptroller General. Makes such reports available to the public. Establishes civil and criminal sanctions to enforce this act.

H.R. 7369. May 23, 1977. Banking, Finance and Urban Affairs. Authorizes the Federal Energy Administrator to make grants to States and localities for the construction, purchase, and installation of solar energy systems in public buildings. Directs the Secretary of Housing and Urban Development to prescribe standards governing the operation of such equipment.

H.R. 7370. May 23, 1977. Interstate and Foreign Commerce. Amends the Department of Transportation Act and the Regional Rail Reorganization Act to revise the time periods during which Federal financial assistance shall be available for rail service assistance programs under such acts.

H.R. 7371. May 23, 1977. Interstate and Foreign Commerce; Ways and Means. Prohibits any person from performing psychosurgery in any federally connected health care facility or such facility from allowing any person to perform psychosurgery.

Imposes penalties for violations of such prohibition.

Authorizes individuals upon whom psychosurgery was performed to bring a civil action for damages against the person performing or the facility in which such psychosurgery was performed.

Establishes the Psychosurgery Commission which shall be empowered to issue subpenas requiring the attendance and testimony of witnesses, to assess civil penalities, and to bring civil actions to restrain violations of this act.

H.R. 7372. May 23, 1977. Banking, Finance and Urban Affairs. Requires any person who makes a federally related mortgage loan to maintain facilities to insure availability of information concerning such mortgages, and to provide adequate notification of foreclosure proceedings.

H.R. 7373. May 23, 1977. Banking, Finance and Urban Affairs. Requires any person who makes a federally-related mortgage loan to maintain facilities to insure availability of information concerning such mortgages, and to provide adequate notification of foreclosure proceedings.

H.R. 7374. May 23, 1977. Interstate and Foreign Commerce. Directs the Secretary of Health, Education, and Welfare to establish and maintain a program to reimburse providers of utility services to certified households and landlords for a percentage of the cost of such utility services.

H.R. 7375. May 23, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income Program) of the Social Security Act to set benefits under such Title at poverty level. Allows each spouse in an eligible couple to receive such benefits in his or her own right. Reduces from 65 to 60 the age of eligibility for such benefits. Provides for the issuance of duplicate benefit checks where the initial checks are lost or delayed.

Directs the Secretary of Health, Education, and Welfare to establish an outreach program to make information concerning the program easily accessible. Requires that any application for benefits under this Title shall be acted upon by the Secretary within 30 days after it is filed.

H.R. 7376. May 23, 1977. Education and

Labor; Ways and Means. Directs the Secretary of Labor to enter into contracts with national community-based organizations for the provision of employment services, career education, and job opportunities to unemployed persons, particularly youths.

Directs the head of each agency exercising authority under specified programs to give preference to community-based organizations in providing employment services.

Amends the Comprehensive Employment and Training Act to provide year-round work experience to urban and rural youths.

Amends the Internal Revenue Code to allow a tax credit for part of the wages paid to previously unemployed persons during the first 12 months of employment.

H.R. 7377. May 23, 1977. Education and Labor; Ways and Means. Directs the Secretary of Labor to enter into contracts with national community-based organizations for the provision of employment services, career education, and job opportunities to unemployed persons, particularly youths.

Directs the head of each agency exercising authority under specified programs to give preference to community-based organizations in providing employment services.

Amends the Comprehensive Employment and Training Act to provide year-round work experience to urban and rural youths.

Amends the Internal Revenue Code to allow a tax credit for part of the wages paid to previously unemployed persons during the first 12 months of employment.

H.R. 7378. May 23, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to remove the present ceiling on the contribution and benefit base. Increases the primary insurance amount under such Title. Provides full benefits at a reduced age for members of groups with less than average life expectancy. Repeals the earnings test. Requires that Federal employees be covered by Title II. Decreases the number of years a divorced woman must have been married to an insured individual in order for her to qualify for wife's or widow's benefits on his wage record.

H.R. 7379. May 23, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) and Title XIX (Medicaid) of the Social Security Act to provide payment for services performed by professional clinical social workers. Includes outpatient services, community mental health centers, and neighborhood health centers among "qualified providers" under Titles XVIII and XIX. Removes specified limitations which are imposed on coverage of psychiatric and mental health services under such Titles.

H.R. 7380. May 23, 1977. Education and Labor; Interstate and Foreign Commerce. Requires the Secretary of Health, Education, and Welfare to appoint a Committee on Uniform Adoption Regulations.

Directs such Committee to review current conditions, practices, and laws relating to adoption and to propose to the Secretary uniform adoption regulations.

Directs the Secretary to make grants to States for allocation to State agencies and to public and private nonprofit adoption agencies to assist such agencies in meeting the costs involved in the adoptive placement of children.

Establishes a National Office of Adoption Information and Services. Requires the establishment of a national adoption data, tracking, and analysis system utilizing computers.

H.R. 7381. May 23, 1977. Judiciary. Prohibits commerce in contraband cigarettes.

Defines "contraband cigarettes" as a quantity of more than 20,000 cigarettes, bearing no evidence of payment of applicable State cigarette taxes, which are in the possession of any person other than (1) a person licensed by the State where the cigarettes are found or by the Internal Revenue Service, (2) a common or contract carrier, or (3) a government agent in the performance of duties.

Subjects dealers in cigarettes to such reporting requirements as the Secretary of the Treasury may prescribe.

H.R. 7382. May 23, 1977. Banking, Finance and Urban Affairs. Directs Federal banking regulatory agencies to issue regulations prohibiting a lending institution from making any loan which is to be used to purchase any newly constructed one- to four-family dwelling unit unless such dwelling is to be occupied by the borrower or is to be used by such person for rental purposes.

H.R. 7383. May 23, 1977. Judiciary. Allows, for retirement purposes, credit to certain individuals for specified periods during which they were licensees of the Agricultural Marketing Service in the United States Department of Agriculture.

H.R. 7384. May 23, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7385. May 23, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7386. May 23, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7387. May 23, 1977. Judiciary. Deems a certain individual an immediate relative under the Immigration and Nationality Act so that he may be lawfully admitted to the United States for permanent residence.

H.R. 7388. May 24, 1977. Education and Labor. Extends the provisions of the Service Contract Act of 1965 to professional employees other than executives or administrators.

H.R. 7389. May 24, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to authorize the Federal Communications Commission to require that apparatus designed to receive any amplitude modulated (AM) or frequency modulated (FM) broadcast be capable of adequately receiving all frequencies allocated by the Commission for AM and FM broadcasting when such apparatus is shipped in interstate commerce, or is imported from any foreign country into the United States, for sale or resale to the public. Specifies that such authorization shall not extend to apparatus designed to receive only AM or FM broadcasts and retailing for less than $15.

H.R. 7390. May 24, 1977. Interstate and Foreign Commerce. Amends the Railroad Retirement Act of 1974 to reduce the minimum age for the receipt of spouse's benefits under such Act from 65 to 60.

H.R. 7391. May 24, 1977. Interstate and Foreign Commerce. Amends the Railroad Revitalization and Regulatory Reform Act of 1976 to eliminate the requirement that States match Federal funds for improvement of nonoperational portions of stations used in intercity rail passenger service and of related facilities and fencing in the Northeast Corridor.

H.R. 7392. May 24, 1977. Merchant Marine and Fisheries. Amends the Endangered Species Act of 1973 to exempt certain Federal public works projects from prohibitions against the jeopardizing or taking of endangered species, and the destruction or modification of their habitats.

H.R. 7393. May 24, 1977. Agriculture. Authorizes the Secretary of Agriculture, through the Packers and Stockyards Administration, to monitor sales and transfers of meat and meat food products of forty thousand pounds or more and to require persons involved in such sales and transfers to report information concerning prices and quantities.

H.R. 7394. May 24, 1977. Agriculture. Directs the Secretary of Agriculture, in cooperation with other Federal, State and local agencies, to carry out a continuing appraisal of the soil, water and related resources of the Nation and to develop a national soil and water conservation program, and to report to Congress thereon.

H.R. 7395. May 24, 1977. Interior and Insular Affairs; Interstate and Foreign Commerce; International Relations. Directs the Nuclear Regulatory Commission to cease the granting of licenses or construction authorizations for certain nuclear power plants pending the outcome of a comprehensive study by the Office of Technology Assessment. Requires a five-year independent study of the nuclear fuel cycle by the Office of Technology Assessment with final reports and recommendations to be made to the Congress.

H.R. 7396. May 24, 1977. Agriculture. Amends the United States Grain Standards Act of 1976 to: (1) grant discretion to the Administrator of the Federal Grain Inspection Service to make recordkeeping requirements for transactions and processes not directly related to grain inspection and weighing; (2) reduce fees for activities of the Service in connection with such inspection or weighing; (3) establish a committee to advise the Administrator about implementation of such Act; (4) clarify the jurisdiction of official inspection and weighing agencies; and (5) prohibit any official analysis or certification with respect to specified characteristics of Hard Red Winter Wheat.

H.R. 7397. May 24, 1977. Interstate and Foreign Commerce. Amends the Railroad Revitalization and Regulatory Reform Act of 1976 to eliminate the requirement that States match Federal funds for improvement of nonoperational portions of stations used in intercity rail passenger service and of related facilities and fencing in the Northeast Corridor.

H.R. 7398. May 24, 1977. Agriculture. Requires, under the Federal Meat Inspection Act, that imported meat and meat food products made in whole or part from imported meat be labeled "imported" or "imported in part" at all stages of distribution until reaching the ultimate consumer.

Prohibits the importation of any dairy product into the United States unless it has been inspected and found to be wholesome and unless the foreign farms and plants in which such products were produced comply with all inspection, grading and other standards prescribed by the Secretary of Heatlh, Education, and Welfare.

H.R. 7399. May 24, 1977. Ways and Means. Restricts the importation of fresh, chilled or frozen beef, goat, and sheep meat to entry under specified tariff classifications, regardless of form, classification as processed, change in tariff classification, executive definition, or entry into the United States through any foreign trade zone and modification in form within the trade zone.

H.R. 7400. May 24, 1977. Merchant Marine and Fisheries; Interior and Insular Affairs. Prohibits the development of hard mineral resources of the deep seabed except under international conventions or pursuant to a license issued by the Secretary of Commerce. Prescribes requirements and imposes limitations on the granting of such licenses by the Secretary.

H.R. 7401. May 24, 1977. Ethics. Requires Members of Congress, specified congressional employees and officials, and candidates for the office of Member of Congress to file a financial disclosure report annually. Specifies the contents of such reports including the source and amount of income, source and identity of gifts received, and identity and value of property held by such persons.

H.R. 7402. May 24, 1977. Judiciary. Amends the Clayton Act to make it unlawful, after December 31, 1980, for any person who owns or controls a pipeline to transport by such pipeline any petroleum, petroleum product, or natural gas which it owns or controls, or has owned, controlled, produced, or refined.

Requires each person who transports by such pipeline any petroleum, product of petroleum refining or natural gas, not later than December 31, 1979, to submit to the Attorney General plans for compliance with this Act.

H.R. 7403. May 24, 1977. Judiciary. Amends the Clayton Act to make it unlawful for any person owning any nonnuclear energy technology to refuse or fail to make it available to any qualified applicant at reasonable rates and on reasonable and nondiscriminatory terms, for use in the development, demonstration, or commercial application of any nonnuclear energy process.

H.R. 7404. May 24, 1977. Judiciary. Grants the Court of Claims jurisdiction to render judgments against the United States upon claims for losses other than lost profits sustained by producers, processors, manufacturers, distributors, dealers, or other persons resulting from the ban on apparel, fabric, yarn, or fiber containing tris phosphate.

H.R. 7405. May 24, 1977. Interstate and Foreign Commerce. Amends the Federal Food, Drug, and Cosmetic Act to provide that new drugs for human or animal use will be regulated under such Act solely to assure their safety, and not their effectiveness.

H.R. 7406. May 24, 1977. Banking, Finance and Urban Affairs; Judiciary. Prohibits any United States entity or representative from obtaining copies of, or access to, information contained in the financial records, toll records, or credit records of any customer of a financial institution, communication common carrier, credit card issuer, or consumer reporting agency. Lifts such prohibition if: (1) the records are described with sufficient particularity; and (2) the customer has authorized disclosure, the disclosure is obtained in response to an administrative subpoena, search warrant, or judicial subpcena, or disclosure is in compliance with specified provisions of the Fair Credit Reporting Act. Restricts the use of mail covers and the interception of wire and oral communications for purposes of supervisory observing by communication common carriers and others.

H.R. 7407. May 24, 1977. Ways and Means; Interstate and Foreign Commerce. Amends the Social Security Act to require the development and promulgation of standards relating to the rights of patients to be met by health care institutions participating in programs under Titles XVIII (Medicare) and XIX (Medicaid) of such Act.

Enumerates the guaranteed rights of patients receiving care or treatment in such institutions. Establishes enforcement procedures and remedies for patients seeking to vindicate their rights.

H.R. 7408. May 24, 1977. Education and Labor. Amends the Age Discrimination in Employment Act of 1967 to make the provisions, formerly applicable to persons between 40 and 65 years of age, applicable to anyone 40 years of age or older.

H.R. 7409. May 24, 1977. Interstate and Foreign Commerce. Directs the Secretary of Transportation to make grants to eligible applicants for projects involving the repair, rehabilitation, or improvement of railroad roadbeds and facilities. Stipulates that the purposes of such grant program are to: (1) reduce unemployment in areas of substantial unemployment; (2) improve severely deteriorated roadbeds and facilities which are a risk to public safety or seriously inhibit freight and passenger service; and (3) improve roadbeds and facilities which meet transportation needs and policies.

H.R. 7410. May 24, 1977. Judiciary. Grants a Federal charter to the National Federation of Music Clubs.

H.R. 7411. May 24, 1977. Post Office and Civil Service. Directs the Secretary of Commerce, in conducting any census or interim survey in which data is collected indicating the ownership of property within the United States, to collect and publish additional data to determine whether such property is subject to foreign ownership. Requires the Secretary in conducting agricultural censuses to publish data indicating the amount and value of agricultural land which is under foreign ownership, owned by financial institutions, and under the ownership of corporations or unincorporated associations having annual sales of nonagricultural goods and services in excess of $10,000,000.

H.R. 7412. May 24, 1977. Interior and Insular Affairs. Amends the Mineral Leasing Act of 1920 to prohibit persons owning or controlling petroleum pipelines from transporting Federal lease petroleum which such person owns or controls or has owned, controlled, refined, or produced.

H.R. 7413. May 24, 1977. Judiciary. Adds Muncie to the places where United States district court shall be held for the Indianapolis Division of the Southern District of Indiana.

H.R. 7414. May 24, 1977. Interior and Insular Affairs; Merchant Marine and Fisheries. Authorizes the Secretary of the Interior or the Secretary of Agriculture to permit the private, noncommercial ownership of excess wild free-roaming horses and burros.

H.R. 7415. May 24, 1977. Public Works and Transportation. Amends the Airport and Airway Development Act of 1970 to direct the Secretary of Transportation to disapprove any airport development project with respect to any proposed airport site unless such airport has been approved by the community or communities to be served by such airport.

H.R. 7416. May 24, 1977. Ways and Means; Banking, Finance and Urban Affairs. Amends the Federal Financing Bank Act of 1973 to require that receipts and disbursements of the Federal Financing Bank be included in the Federal Budget.

Directs such Bank to make commitments to purchase and to purchase specified obligations which are guaranteed by Federal agencies.

H.R. 7417. May 24, 1977. Interstate and Foreign Commerce. Amends the Federal Power Act to direct the Federal Power Commission to establish a program of grants and low-interest loans to encourage the development of small hydroelectric power projects.

Revises licensing requirements under the Act to reduce the maximum annual charges for licenses involving Government dams issued in 1976 and thereafter.

H.R. 7418. May 24, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to regulate, through a comprehensive licensing and inspection scheme, activities related to recombinant DNA.

Requires the establishment of local biohazards committees to participate in the licensing of facilities conducting such activities, and to inspect and monitor such activities.

Establishes the Recombinant DNA Advisory Committee to advise the Secretary of Health, Education, and Welfare in promulgating regulations required by this Act.

H.R. 7419. May 24, 1977. Judiciary. Authorizes classification of a certain individual as a child for purposes of the Immigration and Nationality Act.

H.R. 7420. May 25, 1977. Public Works and Transportation. Authorizes the Secretary of the Army, acting through the Chief of Engineers, to design and construct on an expedited basis certain flood control facilities on portions of the Big Sandy River, and the Cumberland River, in Kentucky and West Virginia.

H.R. 7421. May 25, 1977. Ways and Means. Amends the Social Security Act to provide that an individual who would be fully qualified at age 62 for benefits under the Old-Age, Survivors, and Disability Insurance program may qualify for disability benefits under such program if such individual has 20 quarters of coverage, regardless of when such quarters were earned.

H.R. 7422. May 25, 1977. Judiciary. Removes the jurisdiction of the United States Supreme Court and the Federal district courts over any case arising out of State statute, ordinance, rule, or regulation which relates to the assignment of public school students to particular schools because of race, creed, color, or sex.

H.R. 7423. May 25, 1977. Judiciary. Amends the Sherman Antitrust Act to impose an additional fine against any person who is convicted of combination or conspiracy in restraint of trade or commerce, or monopolization or attempt to monopolize, or combination or conspiracy to monopolize any part of trade or commerce.

Directs the court to distribute the funds collected by such fine to any person who suffered a direct monetary loss as a result of the illegal act which resulted in the fine.

H.R. 7424. May 25, 1977. Ways and Means. Amends the Internal Revenue Code to allow taxpayers to take accelerated amortization deductions for converting to coal and nonfossil heating equipment and for facilities used for research, and for manufacturing equipment certified by the Secretary of the Treasury as energy efficient. Allows taxpayers a limited income tax credit for a portion of their energy source research expenses in those facilities. Imposes a motor fuel efficiency excise tax on automobiles, trucks and automobile buses. Allows a limited income tax for a portion of the user's purchase cost of fuel efficient automobiles.

H.R. 7425. May 25, 1977. Education and Labor. Amends the Age Discrimination in Employment Act of 1967 to make unlawful seniority systems and employee benefit plans which require the retirement of individuals 40 or over.

H.R. 7426. May 25, 1977. Government Operations. Prohibits the employment of chauffeurs and the use of Government motor vehicles for transporting any Government official between dwelling and his place of employment. Exempts from the provisions of this Act: (1) the Chief Justice of the United States; (2) the President and Vice President; (3) specified officers of Congress; and (4) specified officials. States that this Act does not prohibit the operation of a bus, car pool, or van pool system established pursuant to law.

H.R. 7427. May 25, 1977. Veterans' Affairs. Declares that service during World War I by any female citizen of the United States as a member of a telephone operating unit of the Army Signal Corps shall be considered active duty in the Army for purposes of all laws administered by the Veterans' Administration.

H.R. 7428. May 25, 1977. Ways and Means. Amends the Internal Revenue Code to allow an income tax credit for 25 percent of the amount of rent paid by the taxpayer which is equal to the taxpayer's proportionate share of the local and State property taxes imposed on the land and building in which his dwelling is located.

H.R. 7429. May 25, 1977. Ways and Means. Amends the Internal Revenue Code to exempt buses used in local transit systems from the excise taxes on buses, tires, inner tubes and tread rubber.

H.R. 7430. May 25, 1977. Ways and Means. Amends the Internal Revenue Code to increase the amount of the excise tax refunds on gasoline and other motor fuels to local transit systems, and to revise the definition of tax-exempt commuter revenue. Extends the refund of the excise tax for lubricating oil to local transit systems.

H.R. 7431. May 25, 1977. Armed Services. Removes the present restrictions which prohibit the assignment of women members of the Navy to naval vessels not expected to be assigned combat missions on other than a temporary basis or the assignment of such individuals to vessels or aircraft engaged in combat missions.

H.R. 7432. May 25, 1977. Agriculture. Designates the United States Department of Agriculture's Bee Research Laboratory in Tucson, Arizona, the "Carl Hayden Bee Research Center."

H.R. 7433. May 25, 1977. Veterans' Affairs. Requires the Secretary of Defense to pay a lump-sum of $100 to each qualified Vietnam-era veteran, and an additional lump-sum of $400 to each qualified Vietnam-era combat veteran, or to such veteran's survivor if such veteran is deceased.

H.R. 7434. May 25, 1977. Merchant Marine and Fisheries. Increases the appropriations authorized for the Canal Zone Biological Area from $350,000 to $600,000.

Forbids title to, or jurisdiction over, any capital improvements made with such funds, or the land upon which such improvements are situated, from being disposed of to any other entity without congressional approval.

H.R. 7435. May 25, 1977. Ways and Means; Interstate and Foreign Commerce. Requires every employer to offer qualified health care insurance to his employees and their families. Establishes a program of Federal participation to provide qualified health care insurance to low-income, nonemployed and self-employed individuals and their families. Requires the Secretary of Health, Education, and Welfare to pay the full premium for continuation of qualified health care insurance for individuals receiving State or Federal unemployment benefits.

H.R. 7436. May 25, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act and the Internal Revenue Code to increase to $30,000 over a three-year period the ceilings on the amount of earnings which may be counted for social security and tax purposes.

H.R. 7437. May 25, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce.

Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 7438. May 25, 1977. Judiciary. Amends the provision of the Gun Control Act of 1968 imposing additional sentences on persons committing Federal felonies while carrying, or with the use of, a firearm to (1) increase the penalties thereunder, (2) encompasses State crimes and (3) prohibit a suspended, probationary, or concurrent sentence with respect to a first conviction.

H.R. 7439. May 25, 1977. Ways and Means. Amends the Internal Revenue Code to lower the corporate normal taxes and increase the surtax exemption.

H.R. 7440. May 25, 1977. Banking, Finance and Urban Affairs; Judiciary. Prescribes standards and procedures for dicsclosure of financial records of any customer by a financial institution to any State or any political subdivision of any State. Sets conditions under which the interception or oral or wire communications in the course of doing business is lawful. Establishes criminal and civil penalties for violations of this Act.

H.R. 7441. May 25, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to require each television broadcast station licensee to, by contractural agreement, participation in a program with the national television broadcast network with which such licensee is affiliated, which permits such licensee to review, not less than 30 days before the scheduled transmission of a program, any entertainment program material provided by such network which is intended for prime time viewing.

H.R. 7442. May 25, 1977. Interstate and Foreign Commerce. Amends the Communications Act of 1934 to require the Federal Communications Commission to regulate the rates, terms, and conditions for pole attachments used for wire communication, in any case in which such rates, terms, and conditions are not regulated by any State authority.

Sets forth the limits for charges by a utility for pole attachments.

H.R. 7443. May 25, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain individual in full settlement of such individual's claims against the United States.

H.R. 7444. May 26, 1977. Agriculture. Amends the Consolidated Farm and Rural Development Act to increase the percentage of the cost of a water or waste project which the Department of Agriculture may fund by grants to local associations. States general formulae for the calculation of grant amounts according to prescribed maximum rates for the project facility use payment made by an average domestic user of an area to be served by a project. Revises the priorities for recipients of project grants.

H.R. 7445. May 26, 1977. Ways and Means. Amends the Internal Revenue Code to exempt certain short-haul farm vehicles from the highway use tax.

H.R. 7446. May 26, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title II (Old-Age, Survivors, and Disability Insurance), of the Social Security Act to (1) remove the limitation on the amount of outside income which an individual may earn while receiving benefits under such Title; (2) revise certain eligibility requirements for such benefits; and (3) authorize direct payment to the provider of services to Medicare supplementary medical insurance beneficiaries under certain circumstances.

Amends the Social Security Act and the Internal Revenue Code to allow individuals 65 years of age or older to elect to exempt wages and self-employment income from social security taxation.

H.R. 7447. May 26, 1977. Ways and Means. Amends the Internal Revenue Code to tax the unrelated income of tax-exempt organizations which is derived from farm real property.

H.R. 7448. May 26, 1977. Banking, Finance and Urban Affairs; Government Operations. Amends the Defense Production Act of 1950 to prohibit Federal contracting officers from having specified financial interests in contractors doing business with the agency for which such contracting officer works. Prohibits for specified periods the employment of such officers by contractors with whom such officers dealt in their official capacity. Establishes a Conflict of Interest Review Board to monitor compliance with this Act.

H.R. 7449. May 26, 1977. Banking, Finance and Urban Affairs; Government Operations. Amends the Defense Production Act of 1950 to prohibit Federal contracting officers from having specified financial interests in contractors doing business with the agency for which such contracting officer works. Prohibits for specified periods the employment of such officers by contractors with whom such officers dealt in their official capacity. Establishes a Conflict of Interest Review Board to monitor compliance with this Act.

H.R. 7450. May 26, 1977. Banking, Finance and Urban Affairs; Government Operations. Amends the Defense Production Act of 1950 to prohibit Federal contracting officers from having specified financial interests in contractors doing business with the agency for which such contracting officer works. Prohibits for specified periods the employment of such officers by contractors with whom such officers dealt in their official capacity. Establishes a Conflict of Interest Review Board to monitor compliance with this Act.

H.R. 7451. May 26, 1977. Veterans' Affairs. Designates service as a member of the Women's Air Forces Service Pilots as active duty for the purposes of all laws administered by the Veterans' Administration.

H.R. 7452. May 26, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for optometric and medical vision care under the supplementary medical insurance program.

H.R. 7453. May 26, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for certain clinical psychologists' services under the supplemental medical insurance program.

H.R. 7454. May 26, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to include outpatient services by a community mental health center among the benefits provided under such title.

H.R. 7455. May 26, 1977. Judiciary. Directs the United States to pay reasonable litigation costs, including attorney fees, to prevailing defendants in civil actions in which the United States is a plaintiff.

H.R. 7456. May 26, 1977. Interior and Insular Affairs. Amends the Revised Organic Act of the Virgin Islands to empower the Legislature of the Virgin Islands to impose limited customs duties on imports.

H.R. 7457. May 26, 1977. Judiciary; Interior and Insular Affairs. Establishes the Bull Run Watershed Management Unit within Mount Hood National Forest, Oregon.

H.R. 7458. May 26, 1977. Public Works and Transportation. Directs the Secretary of the Army, acting through the Chief of Engineers, to construct treatment facilities and a regional conveyance system of water from Kaw Lake for non-Federal public members of the Kaw Reservoir Authority, Oklahoma.

H.R. 7459. May 26, 1977. Ways and Means. Amends the Internal Revenue Code to allow owners of real property an income tax deduction for the reasonable expense incurred for the removal of trees required by a government to be removed to prevent the spread of Dutch elm disease.

H.R. 7460. May 26, 1977. Ways and Means. Amends the Internal Revenue Code to exempt certain gambling activities conducted by tax exempt organizations from treatment as unrelated business activities.

H.R. 7461. May 26, 1977. Judiciary. Amends the Rules Enabling Acts to empower the Supreme Court of the United States to prescribe general rules of pleading, practice, and procedure for Federal courts upon the recommendation of the Judicial Conference of the United States. Requires the Judicial Conference to publish proposed rules and a list of issues raised by such proposals in the Federal Register, and to accept and consider, before making its final recommendations, timely written comments of such proposals.

H.R. 7462. May 26, 1977. Public Works and Transportation. Amends the Federal-Aid Highway Act of 1976 to establish a ceiling on obligations for Federal-aid highways and highway safety construction programs for fiscal year 1978.

H.R. 7463. May 26, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to make benefits under such Title payable to a resident alien only if such alien has continuously resided in the United States for at least five years.

H.R. 7464. May 26, 1977. Education and Labor. Amends the Occupational Safety and Health Act of 1970 to extend coverage under such Act to congressional employees.

H.R. 7465. May 26, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to permit the Secretary of Housing and Urban Development to insure mortgages and loans with varying rates of amortization corresponding to anticipated variations in family income on a regular basis.

Amends the Internal Revenue Code to

establish tax-exempt savings accounts which would be available to first-time home buyers, known as individual housing accounts.

H.R. 7466. May 26, 1977. House Administration. Requires the President pro tempore of the Senate and the Speaker of the House of Representatives to install telecommunication devices to enable deaf persons and persons with speech impairments to engage in toll-free communications with Members of Congress.

H.R. 7467. May 26, 1977. House Administration. Requires the President pro tempore of the Senate and the Speaker of the House of Representatives to install telecommunication devices to enable deaf persons and persons with speech impairments to engage in toll-free communications with Members of Congress.

H.R. 7468. May 26, 1977. Judiciary. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 7469. May 26, 1977. Merchant Marine and Fisheries; Interior and Insular Affairs. Enlarges the boundaries of Sequoia National Park, California, by including Mineral King Valley.

H.R. 7470. May 26, 1977. Post Office and Civil Service. Entitles a widow or widower of a person drawing a civil service pension to the same annuity to which such widow or widower would have been entitled but for the fact that he or she married the pensioner after his or her retirement from Federal service.

H.R. 7471. May 26, 1977. Judiciary. Establishes the Federal Judicial Nominating Commission whose duty shall be to identify, and recommend to the President the best qualified persons to fill a vacancy whenever one occurs in an office of judge for a United States district court or a United States court of appeals.

H.R. 7472. May 26, 1977. Merchant Marine and Fisheries. Directs the Commandant of the Coast Guard to establish a permanent exhibition aboard the Coast Guard cutter Chautaqua for the purpose of educating the public regarding the present and future mission of the Coast Guard.

H.R. 7473. May 26, 1977. Banking, Finance and Urban Affairs; Interstate and Foreign Commerce. Amends the Energy Supply and Environmental Coordination Act of 1974 to authorize the Administrator of the Federal Energy Administration to make and guarantee loans to assist industries in the purchase and installation of air pollution control devices for coal-fired boilers and heating devices.

Requires that facilities subject to coal conversion orders issued under the Act be given priority consideration.

H.R. 7474. May 26, 1977. Interstate and Foreign Commerce. Amends Title XIX (Medicaid) of the Social Security Act to increase percentage payments to States for early and periodic screening, diagnosis, and treatment.

H.R. 7475. May 26, 1977. Judiciary. Requires commencement in the United States Court of Appeals for the District of Columbia circuit of any suit in which one party seeks injunctive relief to avoid compliance with a Congressional subpena.

H.R. 7476. May 26, 1977. Interstate and Foreign Commerce. Establishes mandatory standards for State no-fault benefit plans for the compensation and rehabilitation of motor vehicle accident victims.

Establishes within the Department of Transportation the Standards for No-Fault Benefits Review Panel to evaluate the performance and effect of approved State plans.

H.R. 7477. May 26, 1977. Public Works and Transportation; Ways and Means. Authorizes the Secretary of Transportation to approve Federal participation in State projects to replace bridges not located on any of the Federal-aid systems. Amends the Highway Revenue Act of 1956 to extend appropriations authorized under such Act for the Highway Trust Fund through fiscal year 1990. Amends the Land and Water Conservation Fund Act to extend such fund through fiscal year 1990. Amends the Internal Revenue Code of 1954 to postpone specified excise tax reductions and to increase the excise tax on gasoline, diesel fuels, and special motor fuels.

H.R. 7478. May 26, 1977. Interstate and Foreign Commerce. Amends the Clean Air Act to revise carbon monoxide and nitrogen oxide emission standards for light-duty motor vehicles. Extends interim emissions standards for hydrocarbons and carbon monoxide through model year 1979. Extends interim standards for nitrogen oxides through model year 1981. Authorizes revisions or waivers of nitrogen oxide standards in subsequent model years.

Authorizes non-disclosure of emission data to the public where deemed necessary to preserve trade secrets. Establishes procedures for public participation in hearings on proposed motor vehicle emission standards.

Authorizes appropriations to carry out the act through fiscal year 1980.

H.R. 7479. May 26, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act by removing the limitation upon the amount of outside income which an individual may earn while receiving benefits.

H.R. 7480. May 26, 1977. Ways and Means. Amends the Internal Revenue Code to allow a limited credit against an individual's tax for the tuition paid by such individual to one or more eligible elementary or secondary education institutions for any of his dependents.

H.R. 7481. May 26, 1977. Education and Labor. Directs the Secretary of Health, Education, and Welfare to reimburse the States for real property tax relief programs aimed at elderly households with incomes of $15,000 or less.

Provides that the amount of such reimbursement shall be a percentage (determined on the basis of the household income) of the tax relief provided multiplied by the aggregate number of households receiving such relief.

H.R. 7482. May 26, 1977. Veterans' Affairs. Stipulates that the recalling to duty and assignment on a full-time basis of any retired member of the Armed Forces to the American Battle Monuments Commission shall not be chargeable against the authorized end strengths and grade limitations of the Department of Defense or the military departments concerned nor to any administrative ceiling established by the Secretary of Defense.

H.R. 7483. May 26, 1977. Ways and Means. Amends the Social Security Act with respect to Old-Age, Survivors, and Disability Insurance by directing the Secretary of Health, Education, and Welfare to establish procedures for expediting (1) replacement of lost, stolen, or misdelivered benefit checks; (2) initial benefit payments; (3) hearings on eligibility; and (4) final determinations of eligibility.

H.R. 7484. May 26, 1977. Ways and Means. Amends the Social Security Act with respect to Old-Age, Survivors, and Disability Insurance by directing the Secretary of Health, Education, and Welfare to establish procedures for expediting (1) replacement of lost, stolen, or misdelivered benefit checks; (2) initial benefit payments; (3) hearings on eligibility; and (4) final determinations of eligibility.

H.R. 7485. May 26, 1977. Banking, Finance and Urban Affairs. Authorizes national banking associations to underwrite and deal in non-general obligations of States and cities.

Sets limitations and restrictions on dealings in such obligations by national banking associations.

H.R. 7486. May 26, 1977. Interstate and Foreign Commerce. Amends the Railroad Revitalization and Regulatory Reform Act to increase the Federal share for rail assistance programs under the Department of Transportation Act, rail service continuation projects under the Regional Rail Reorganization Act of 1973, and the costs of providing mandatory rail passenger service under the Railroad Revitalization and Regulatory Reform Act.

H.R. 7487. May 26, 1977. Public Works and Transportation. Establishes an Office of Ridesharing within the Urban Mass Transportation Administration of the Department of Transportation to coordinate Federal ridesharing programs. Establishes procedures and guidelines for State ride-sharing programs Authorizes financial assistance for ride-sharing programs, and research and demonstration projects.

H.R. 7488. May 26, 1977. House Administration. Directs the Secretary of the Senate and the Clerk of the House to prepare a daily electronic recording which shall include a summary of action taken in the Senate and House Chambers during the preceding day and a list of laws signed by the President during the 35-day period before the day on which such recording is prepared.

Requires the establishment of a toll-free telephone listing to be used to transmit such electronic recordings.

H.R. 7489. May 26, 1977. Judiciary. Repeals provisions stipulating that nothing in certain sections relating to interception of communications shall be construed to limit the power of the President to take measures to protect national security.

Directs that applications for authorizations to intercept communications in connection with specified national security crimes be made to the United States Court of Appeals for the District of Columbia.

Authorizes interceptions of communications with respect to violations of the Foreign Agents Registration Act of 1938 and the Export Administration Act of 1969.

Sets forth time limits and admissibility standards for national security surveillance. Authorizes waiver of notice to persons surveilled.

H.R. 7490. May 25, 1977. Post Office and Civil Service. Amends the Legislative Reorganization Act of 1946 to prohibit any cost-of-living adjustments to the salaries of Senators and Representatives which take effect before October 1, 1978.

H.R. 7491. May 26, 1977. Education and Labor. Requires the Bureau of Labor Statistics, in compiling unemployment statistics, to classify as unemployed: (1) any farmer who reports a farm net loss on his or her income tax return; and (2) any dependent of such farmer whose sole occupation consists of working 15 or more hours per week on the farm. Requires the Secretary of the Treasury to report the number of such farmers and dependents to the Bureau of Labor Statistics. Requires any Federal programs in which funds are allocated on the basis of unemployment statistics to base such allocations on unemployment statistics compiled pursuant to this Act.

H.R. 7492. May 26, 1977. Veterans' Affairs.

Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced because of increases in social security benefits.

H.R. 7493. May 26, 1977. Judiciary. Expands the civil and criminal jurisdiction of United States magistrates.

Revises the method for selecting magistrates and requires as a qualification for appointment appropriate bar membership for five years.

Amends procedures for removal of criminal matters from magistrate's court.

H.R. 7494. May 26, 1977. Judiciary. Declares two individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7495. May 26, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7496. May 26, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7497. May 26, 1977. Judiciary. Declares a certain individual lawfully admitted, and another individual conditionally admitted, to the United States for permanent residence.

H.R. 7498. June 1, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to pay (in addition to any already paid) a monthly pension to each veteran of World War I who meets specified service requirements, or to the surviving spouse of each such veteran, or when there is no surviving spouse, to the child or children of each such veteran.

H.R. 7499. June 1, 1977. House Administration. Entitles congressional candidates meeting certain criteria and agreeing to comply with specified spending limits and reporting requirements to campaign payments on a matching basis.

Directs the Secretary of the Treasury to establish a separate Congressional General Election Payment Account in the Presidential Election Campaign Fund to finance such payments.

Raises the general election spending limit for Presidential candidates who are eligible to receive public funds.

Provides an alternative method for determining the amount of funds to which candidates in a general Presidential election are entitled.

Permits Presidential candidates to receive additional contributions from small contributors.

H.R. 7500. June 1, 1977. Judiciary. Modifies the prohibition against a bank's or other credit institution's granting of a loan to a bank examiner to permit loans to persons who are authorized to but do not actually examine such institution.

H.R. 7501. June 1, 1977. Merchant Marine and Fisheries; Armed Services. Amends the Maritime Academy Act of 1958 to authorize the Secretary of the Navy to appoint students at maritime academies or colleges assisted under such Act as Reserve midshipmen in the Navy and to commission such individuals as Reserve ensigns upon graduation.

H.R. 7502. June 1, 1977. Merchant Marine and Fisheries. Directs the Secretary of the Department under which the Coast Guard is operating to document the vessel Quoddy Pride, owned by the Washington County Vocational Technical Institute of Calais, Maine, as a vessel of the United States with the privilege of engaging in the American fisheries so long as such vessel is owned by a citizen of the United States and is used for instructing students in vocations related to commercial fishing.

H.R. 7503. June 1, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals alternative, limited income tax credits or deductions for the tuition paid for the primary, secondary or higher education of the taxpayer, his spouse and dependents.

H.R. 7504. June 1, 1977. Armed Services. Requires the Secretary of Defense, before entering into any contract for more than $100,000 for the performance of any commercial or industrial activity of the Department, to conduct a cost-effectiveness review of such activity to determine whether it should be done by contractor or by Government personnel. Authorizes the Secretary to waive such review under specified circumstances. Directs the Secretary to conduct random audits of such contracts.

H.R. 7505. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to eliminate the deduction from payments to providers of health services for unreplaced blood and provides for payment to providers of health services for processing fees incurred in the replacement of blood.

H.R. 7506. June 1, 1977. Education and Labor. Amends the Age Discrimination in Employment Act of 1967 to make the provisions, formerly applicable to persons between 40 and 65 years of age, applicable to anyone 40 years of age or older.

H.R. 7507. June 1, 1977. Veterans' Affairs. Increases the period of veterans' education assistance from 45 to 54 months, and eliminates the delimiting period. Grants eligibility for such assistance to any veteran of World War II, the Korean conflict, or the Vietnam era whose previous entitlement terminated without such veteran's availing himself of all the assistance to which he was entitled.

H.R. 7508. June 1, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to reduce from 72 to 65 the age beyond which deduction on account of an individual's outside earnings will no longer be made from such individual's benefits.

H.R. 7509. June 1, 1977. Ways and Means. Amends the Internal Revenue Code to exempt aircraft used primarily for agricultural operation from the excise tax imposed on the use of civil aircraft.

Provides for the refund of the tax on gasoline used for farming purposes in an aircraft to the aerial applicator who is the ultimate purchaser thereof.

H.R. 7510. June 1, 1977. Public Works and Transportation. Prohibits the expenditure of Federal funds for the conversion of highway signs to the metric system unless the Congress specifically authorizes such an expenditure.

H.R. 7511. June 1, 1977. Judiciary. Prohibits use or supply of false documentation or information, or birth or immigration documents for purposes of obtaining Federal documents containing an element of identification.

Forbids commerce in such information, documentation, or official documents for purposes of securing a State or local government document containing an element of identification.

Proscribes specified acts relative to: (1) forgery, counterfeiting, or alteration of Federal, State, or local government documents containing an element of identification; (2) interstate or foreign commerce in any such counterfeited, forged, or altered document; and (3) receipt, possession, use, or furnishing of any such document with intent to secure false official identification.

H.R. 7512. June 1, 1977. Veterans' Affairs. Directs the Secretary of Defense to place a plaque and a permanent display of medals, ribbons, and tributes of the Vietnam era on the crypt at the National Cemetery at Arlington, Virginia, reserved for an unknown American serviceman who lost his life in Southeast Asia.

Directs the Secretary to perform the duties required by this Act even though the remains of such serviceman have not yet been placed in the crypt.

H.R. 7513. June 1, 1977. Veterans' Affairs. Directs the Secretary of Defense to place a plaque and a permanent display of medals, ribbons, and tributes of the Vietnam era on the crypt at the National Cemetery at Arlington, Virginia, reserved for an unknown American serviceman who lost his life in Southeast Asia.

Directs the Secretary to perform duties required by this Act even though the remains of such serviceman have not yet been placed in the crypt.

H.R. 7514. June 1, 1977. Veterans' Affairs. Directs the Secretary of Defense to place a plaque and a permanent display of medals, ribbons, and tributes of the Vietnam era on the crypt at the National Cemetery at Arlington, Virginia, reserved for an unknown American serviceman who lost his life in Southeast Asia.

Directs the Secretary to perform the duties required by this Act even though the remains of such serviceman have not yet been placed in the crypt.

H.R. 7515. June 1, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 7516. June 1, 1977. Government Operations. Limits expenditures of the Government other than those for national defense and security for fiscal year 1978, to an amount which is five percent less than the total of such expenditures for fiscal year 1977. Limits Government expenditures for fiscal year 1978, for compensation of officers and employees of the United States other than those whose employment is directly related to national defense and security, to an amount which is ten percent less than such expenditures for fiscal year 1977.

H.R. 7517. June 1, 1977. Interstate and Foreign Commerce. Requires franchisors to give franchisees 90-days notice, with limited exceptions, of intent to cancel, or failure to renew, a franchise agreement. Allows such cancellation or failure to renew only for certain specified reasons. Requires a franchisor to compensate a franchisee for the value of the franchisee's business when the franchisor, for a legitimate business reason, fails to renew the franchise. Sets forth the judicial remedies available to a franchisee for a violation of this Act by the franchisor.

H.R. 7518. June 1, 1977. Interstate and Foreign Commerce. Provides protection for certain sales representatives terminated from their accounts without justification by requiring the principals to identify the sales representatives.

H.R. 7519. June 1, 1977. District of Columbia. Amends the District of Columbia Code to remove the automatic disqualification of any person convicted of an offense involving moral turpitude from engaging in the bail bonding business in the District of Columbia.

H.R. 7520. June 1, 1977. Judiciary. Sets forth guidelines relative to State and local government liability and Federal court abstention in civil actions for the deprivation of a constitutional or Federal statutory right, including the right to enjoy one's reputation, by persons acting under color of law.

Renders a prosecuting officer of a State, municipality, or other unit of local government liable for damages or subject to an injunction for failure to disclose material evidence.

H.R. 7521. June 1, 1977. Education and Labor. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this Act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph which has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 7522. June 1, 1977. Judiciary. Prohibits the sexual exploitation of children by making it unlawful for any individual to (1) cause or permit a child to be photographed or filmed engaged in a sexual act prohibited under this act; (2) photograph or film a prohibited sexual act; (3) knowingly transport a film or photograph depicting a prohibited sexual act; or (4) receive for sale or sell any such film or photograph, if such individual knows or should know such film or photograph has or may be transported in such a manner as to affect interstate or foreign commerce.

H.R. 7523. June 1, 1977. Ways and Means; Judiciary. Amends Title XVO (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to require that resident aliens reside continuously in the United States for five years to qualify for supplemental security income benefits.

Amends the Immigration and Nationality Act to prevent an immigrant from entering the United States unless a United States citizen (immigration sponsor) agrees to support the immigrant for five years from the date of the immigrant's admission.

H.R. 7524. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) and Title XIX (Medicaid) of the Social Security Act to include the services of licensed practical nurses under the coverage provided pursuant to such Titles.

H.R. 7525. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare and Title XIX (Medicaid) of the Social Security Act to include the services of licensed practical nurses under the coverage provided pursuant to such Titles.

H.R. 7526. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) and Title XIX (Medicaid) of the Social Security Act to include the services of licensed practical nurses under the coverage provided pursuant to such Titles.

H.R. 7527. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act to require automatic sprinkler systems in all skilled nursing facilities and intermediate care facilities certified for participation in the Medicare or Medicaid programs unless a waiver of such requirement is granted in accordance with conditions set forth in this Act.

Establishes a program of low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems.

H.R. 7528. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act to require automatic sprinkler systems in all skilled nursing facilities and intermediate care facilities certified for participation in the Medicare or Medicaid programs unless a waiver of such requirement is granted in accordance with conditions set forth in this Act.

Establishes a program of low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems.

H.R. 7529. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act to require automatic sprinkler systems in all skilled nursing facilities and intermediate care facilities certified for participation in the Medicare or Medicaid programs unless a waiver of such requirement is granted in accordance with conditions set forth in this Act.

Establishes a program of low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems.

H.R. 7530. June 1, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Titles XVIII (Medicare) and XIX (Medicaid) of the Social Security Act to require automatic sprinkler systems in all skilled nursing facilities and intermediate care facilities certified for participation in the Medicare or Medicaid programs unless a waiver of such requirement is granted in accordance with conditions set forth in this Act.

Establishes a program of low-interest Federal loans to assist such facilities in constructing or purchasing and installing automatic sprinkler systems.

H.R. 7531. June 1, 1977. Education and Labor. Amends the administration and enforcement procedures of the Employee Retirement Income Security Act of 1974 to direct the President to establish an Employee Benefit Administration.

Empowers such Administration to perform, among other duties, (1) the functions of the Secretary of Labor under the Employee Retirement Income Security Act and the Welfare and Pension Plans Disclosure Act and (2) such functions of the Secretary of the Treasury under the Internal Revenue Code regarding employee benefit plans and under the Employee Retirement Income Security Act as the President may designate.

Establishes the Pension Benefit Guarantee Corporation within the Administration.

H.R. 7532. June 1, 1977. Education and Labor. Amends the National Labor Relations Act to include agricultural laborers within the definition of "employee."

H.R. 7533. June 1, 1977. Judiciary. Amends the Immigration and Nationality Act to eliminate the limit on the number of alien children which may be adopted.

H.R. 7534. June 1, 1977. Ways and Means. Amends the Internal Revenue Code to allow as a credit against the income tax a limited amount of specified higher education expenses, including tuition, fees, books and supplies, incurred by the taxpayer for himself and any other individual.

H.R. 7535. June 1, 1977. Agriculture. Authorizes the Secretary of Agriculture to distribute, upon request and without cost, up to three packages of seeds per household for use in home gardening to produce food for the personal consumption of the household.

H.R. 7536. June 1, 1977. Small Business. Amends the Small Business Act to authorize the Small Business Administration to offer reinsurance against excess losses resulting from products liability claims or completed operations claims against small business concerns.

H.R. 7537. June 1, 1977. Post Office and Civil Service. Sets the postal rate for personal mail of individuals sealed against inspection and mailed in the United States at 13 cents for the first ounce of each piece and 11 cents for each additional ounce for each piece. Permits the Postal Service to adjust such rate annually in proportion to the increase in the Consumer Price Index since the previous rate adjustment but not to an amount exceeding the current rate for first class mail.

H.R. 7538. June 1, 1977. Post Office and Civil Service. Entitled a Federal employee whose position is reduced in grade to have the grade of such position treated as if such reduction had not occurred so long as such position is continued to be filled by such employee without a break in service.

H.R. 7539. June 1, 1977. Veterans' Affairs. Directs the Secretary of Defense to restore the wartime recognition of certain Filipino veterans of the Commonwealth Army and of the United States Armed Forces in the Far East (USAFFE) whose records were subsequently revoked or nullified.

H.R. 7540. June 1, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 7541. June 1, 1977. Ways and Means. Amends the Internal Revenue Code to allow a deduction for domestic geological and geophysical costs incurred in searching for oil and gas deposits. Allows a deduction for intangible drilling and development costs and domestic geological and geophysical costs in the case of wells for geothermal resources.

H.R. 7542. June 1, 1977. Judiciary. Permits Federal agencies to award fees and costs of participation of persons who contribute substantially to the agency's decision making process and whose interest in the outcome is comparatively small, or who could not participate but for such an award. Permits courts of the United States to award litigation costs to parties seeking judicial review of an agency action if such person is afforded the relief sought, an important public purpose is served by such action, and such person's economic interest in the outcome is comparatively small or such person could not bring such action but for such award.

H.R. 7543. June 1, 1977. Interstate and Foreign Commerce; International Relations. Requires payments to a foreign official in connection with official acts or contracts with foreign governments to be reported to the Office of Foreign Business Practices, established by this Act.

Establishes the Commission of Foreign Business Practices to study the adequacy of measures to prevent improper payments to foreign officials.

Authorizes civil suit for treble damages by any person injured by such improper payment.

H.R. 7544. June 1, 1977. Agriculture. Excludes from eligibility for food stamps under the Food Stamp Act of 1964 any household whose principal wage earner is on strike for the duration of such strike. Excepts a household from this exclusion if it was participating in the food stamp program immediately prior to start of such strike, or if any of its members is subject to an employer's lockout.

H.R. 7545. June 1, 1977. Veterans' Affairs. Authorizes the Administrator of Veterans' Affairs to assist certain totally disabled veterans, including hemiplegics, in acquiring suitable housing units with special fixtures.

H.R. 7546. June 1, 1977. Interstate and Foreign Commerce. Requires franchisors to give franchisees 90-days notice, with limited exceptions, of intent to cancel, or failure to renew, a franchise agreement. Allows such cancellation or failure to renew only for certain specified reasons Requires a franchisor to compensate a franchisee for the value of the franchisee's business when the franchisor, for a legitimate business reason, fails to renew the franchise. Sets forth the judicial remedies available to a franchisee for a violation of this Act by franchisor.

H.R. 7547. June 1, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to pay (in addition to any already paid) a monthly pension to each veteran of World War I who meets specified service requirements, or to the surviving spouse of each such veteran, or when there is no surviving spouse, to the child or children of each such veteran.

H.R. 7548. June 1, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7549. June 1, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7550. June 1, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 7551. June 1, 1977. Judiciary. Deems a certain individual an immediate relative under the Immigration and Nationality Act so that he may be lawfully admitted to the United States for permanent residence.

H.R. 7552. June 2, 1977. Makes appropriations for fiscal year 1978 to the Treasury Department, the United States Postal Service, the Executive Office of the President, and related agencies.

H.R. 7553. June 2, 1977. Makes appropriations for fiscal year 1978 to the Energy Research and Development Administration, the Department of the Army, the Department of the Interior and related agencies for public works.

H.R. 7554. June 2, 1977. Makes appropriations for fiscal year 1978 to the Department of Housing and Urban Development, to the Federal Disaster Assistance Administration and to independent related agencies.

H.R. 7555. June 2, 1977. Makes appropriations for fiscal year 1978 to the Department of Labor, the Department of Health, Education, and Welfare and related agencies.

H.R. 7556. June 2, 1977. Makes appropriations for fiscal year 1978 to the Department of State, the Department of Justice, the Department of Commerce, the Judiciary and related agencies.

H.R. 7557. June 2, 1977. Appropriates specified amounts for the various components of the Department of Transportation for fiscal year 1978. Appropriate specified amounts for fiscal year 1978 to: (1) the National Transportation Safety Board; (2) the Interstate Commerce Commission; (3) the Panama Canal Zone Government; (4) the Civil Aeronautics Board; (5) the United States Railway Association; (6) the Washington Metropolitan Area Transit Authority; and (7) the National Transportation Policy Study Commission. Sets forth restrictions on the use of funds made available under this Act.

H.R. 7558. June 2, 1977. Appropriates specified sums of money for fiscal year 1978 for specified programs of the Department of Agriculture, the Food and Drug Administration of the Department of Health, Education, and Welfare, and Commodity Futures Trading Commission, and the Farm Credit Administration.

H.R. 7559. June 2, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to pay (in addition to any already paid) a monthly pension to each veteran of World War I who meets specified service requirements, or to the surviving spouse of each such veteran, or when there is no surviving spouse, to the child of children of each such veteran.

H.R. 7560. June 2, 1977. Veterans' Affairs. Requires the Administrator of Veterans' Affairs to pay (in addition to any already paid) a monthly pension to each veteran of World War I who meets specified service requirements, or to the surviving spouse of each such veteran, or when there is no surviving spouse, to the child or children of each such veteran.

H.R. 7561. June 2, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such Act.

H.R. 7562. June 2, 1977. Interstate and Foreign Commerce. Amends the Federal Power Act to authorize the Federal Power Commission to take additional steps to improve the efficiency in the generation of electricity and to meet unanticipated shortages. Establishes procedures to eliminate unfair methods of competition and discriminatory rate structures. Requires hearings prior to increases in utility rate schedules.

Establishes procedures for planning of bulk power facilities by electric utilities. Imposes national minimum standards for State-regulated and nonregulated utilities.

Amends the Energy Conservation and Production Act to authorize Federal assistance to State regulatory agencies. Establishes procedures for representation of consumer interests in Federal Power Commission proceedings.

H.R. 7563. June 2, 1977. Post Office and Civil Service. Permits postage-free mailing of correspondence to any Member of Congress by residents of the State or district represented by such Member which is sent to the Member's official business address.

H.R. 7564. June 2, 1977. Judiciary. Authorizes the Law Enforcement Assistance Administration to purchase a group life insurance policy or policies from private life insurance companies for the benefit of public safety officers.

Sets forth guidelines relative to such group plan.

Establishes an Advisory Council on Public Safety Officer Group Life Insurance composed of the Attorney General, the Secretary of the Treasury, the Secretary of Health, Education, and Welfare, and the Director of the Office of Management and Budget.

H.R. 7565. June 2, 1977. Ways and Means. Amends the Internal Revenue Code to allow individuals an income tax deduction for their commuting expenses on public transportation systems.

H.R. 7566. June 2, 1977. Public Works and Transportation. Authorizes the Secretary of Transportation to provide financial assistance to States for major repairs to routes on any Federal aid system which were damaged as a result of the severe winter weather.

H.R. 7567. June 2, 1977. Banking, Finance and Urban Affairs; Education and Labor. Directs the President, through the Secretary of Labor, to carry out a program of projects, by means of contracts with public and private employers and institutions of higher education, to: (1) increase employee particiaption in decisionmaking and gains due to increased productivity; and (2) demonstrate programs and guidelines to maintain employment levels and improve the quality of working life.

Establishes a Human Resources Advisory Council to furnish advice and assistance in the administration of such projects.

Authorizes the Secretary to guarantee loans made to small businesses to enable them to participate in projects under this Act.

H.R. 7568. June 2, 1977. Judiciary. Establishes an office of the United States Correctional Ombudsman to: (1) investigate acts of the Bureau of Prisons or the Board of Parole pertaining to the treatment of Federal prisoners or parolees and conditions in certain correctional facilities; and (2) report to Congress on unfair or otherwise objectionable laws relative to corrections.

H.R. 7569. June 2, 1977. Post Office and Civil Service. Requires all revenues and fees collected by the Postal Service to be deposited in the general fund of the Treasury of the United States. Requires the Postal Service to describe all operations and provide any other necessary information to Congress when seeking appropriations for its operations before the appropriate congressional committees as required by this Act.

Requires the Postal Service to provide door or curbline mail delivery to all permanent residential addresses receiving such service on or after the date of enactment of the Postal Reorganization Act Amendments of 1976 until September 15, 1977.

H.R. 7570. June 2, 1977. Agriculture. Amends the Food Stamp Act of 1964: (1) to require the Secretary of Agriculture to establish uniform national eligibility standards for participation in the Food Stamp program; (2) to define household income limits and the amount of household assets which will be permitted in determining eligibility; (3) to stipulate the conditions under which unemployment or underemployment will disqualify an applicant; (4) to establish regulations for the redemption of coupons; and (5) to set the value of a household's coupon allotment and the amount the household must pay therefor.

H.R. 7571. June 2, 1977. Education and Labor. Revises the purposes for which grants may be made under Title I (Financial Assistance to Local Educational Agencies for the Education of Children of Low-Income Families) of the Elementary and Secondary Education Act of 1965. Extends the authority of the Commissioner of Education to make such grants through 1982.

Amends Title VII (National Reading Improvement Program) of the Education Amendments of 1974 to restate the purposes of such program and set forth new requirements for local educational agency reading improvement programs. Extends the Bilingual Education Act.

Establishes a program of grants to State and local educational agencies to assist in the development and operation of programs designed to meet the special educational needs of gifted and talented children at the preschool and elementary and secondary school levels.

H.R. 7572. June 2, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (medicare) of the Social Security Act to provide payment for hearing aids, eyeglasses (and related examinations), prescription drugs, and dentures under the supplementary medical insurance program.

H.R. 7573. June 2, 1977. Post Office and Civil Service. Prohibits the U.S. Postal Service from reducing the frequency of weekly mail delivery service below the frequency in effect on March 15, 1977.

H.R. 7574. June 2, 1977. Ways and Means. Amends Title II (Old-Age, Survivors and Disability Insurance) of the Social Security Act to revise the eligibility requirements for disability insurance benefits for blind persons. Revises the method of computing the primary insurance amount for blind persons under such act.

H.R. 7575. June 2, 1977. Interstate and Foreign Commerce. Subjects to liability for harm caused by the use of a product any individual engaged in interstate commerce who manufactures or sells a product which is in a defective condition or fails to warn against a dangerous condition to the use or misuse of the product.

Allows any person harmed by a product who is a reasonably anticipated user or consumer of the product to bring an action in "product liability" against the manufacturer or seller of the product.

H.R. 7576. June 2, 1977. Ways and Means. Amends Title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) of the Social Security Act to permit the payment of benefits to individuals in publicly operated infirmaries and other publicly operated community residences, without regard to the presently applicable limitation on the number of residents served by such institutions.

H.R. 7577. June 2, 1977. Education and Labor. Amends the Economic Opportunity Act of 1964 to change specified programs including: community actions programs, Headstart and Follow Through programs, the Community Economic Development program, and the Native American program.

Amends the statement of congressional purpose of such act to call for the expansion of programs attacking poverty.

Authorizes appropriations for research and development, for the Headstart program, for the Community Economic Development program, and for evaluation of programs and projects.

H.R. 7578. June 2, 1977. Small Business. Authorizes the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning, and development and international market development. Establishes a Small Business Management and Technical Assistance Division within the Small Business Administration to administer the Small Business Development Center program.

H.R. 7579. June 2, 1977. Judiciary. Amends the Mann Acts, which prohibits the transportation of females for immoral purposes, to extend coverage to prohibit transportation of any individual for immoral purposes and to increase the penalties specified in such Act.

H.R. 7580. June 2, 1977. Judiciary. Grants the Court of Claims jurisdiction to render judgments against the United States upon claims for losses other than lost profits sustained by procedures, processors, manufacturers, distributors, dealers, or other persons resulting from the ban on apparel, fabric, yarn, or fiber containing tris phosphate.

H.R. 7581. June 2, 1977. Ways and Means. Amends the Internal Revenue Code to provide that income received from nonmember telephone companies shall not be used in determining whether mutual and cooperative telephone companies qualify as tax exempt organizations.

H.R. 7582. June 2, 1977. Appropriations. Amends the Department of Defense Appropriation Act, 1977, to repeal the prohibition of expenditure of funds for claims for nonemergency inpatient hospital care under the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) when such care was available at a facility of the uniformed services within a 40-mile radius of the patient's residence.

H.R. 7583. June 2, 1977. Banking, Finance and Urban Affairs. Extends the inapplicability of State usury ceilings until 1980 to certain obligations issued to small businesses, agricultural entities, and other concerns by Federal Reserve member banks and their affiliates.

H.R. 7584. June 2, 1977. Judiciary. Requires specified organizations which employ lobbyists to register and file quarterly expense reports with the Comptroller General. Makes such reports available to the public. Establishes civil and criminal sanctions to enforce this Act.

H.R. 7585. June 2, 1977. House Administration. Amends the Federal Election Campaign Act of 1971 to (1) prohibit all political committees other than National, State, or local committees of national political parties from making contributions to candidates or their committees and (2) forbid all political committees from making contributions to other political committees, with the exception of transfer between and among National, State, and local party committees.

H.R. 7586. June 2, 1977. Education and Labor. Directs the Secretary of Labor to establish and maintain in counties with populations under 20,000 a pilot program designed to provide a guaranteed job opportunity to certain county residents from low-income households by partially reimbursing public and private employers for wages paid to certain such individuals, and fully reimbursing such employers for wages paid to certain other such individuals.

H.R. 7587. June 2, 1977. Ways and Means. Amends the Internal Revenue Code to allow certain individuals whose employers make contributions to pension plans a deduction for their contributions to employer pension funds, and to allow a deduction to certain individuals who establish modified individual retirement plans when the employer-employee pension contributions are small.

H.R. 7588. June 2, 1977. Interior and Insular Affairs. Confirms a conveyance of certain real property, with respect to all interests of the United States in its surface rights, by the Southern Pacific Railroad Company to a certain individual.

H.R. 7589. June 2, 1977. Appropriates specified sums for fiscal year 1978 to each of the military departments and their reserve components and to the defense agencies for military construction projects.

H.R. 7590. June 3, 1977. Government Operations. Amends the Office of Federal Procurement Policy Act to require the payment of interest on contract payments which are overdue under Federal contracts with small businesses.

H.R. 7591. June 3, 1977. Judiciary. Amends the provision of the Gun Control Act of 1968 imposing additional sentences on persons committing Federal felonies while carrying, or with the use of a firearm to (1) increase the penalties thereunder, (2) encompass State crimes, and (3) prohibit a suspended, probationary or concurrent sentence with respect to a first conviction.

H.R. 7592. June 3, 1977. Banking, Finance and Urban Affairs. Amends the National Housing Act to make government mortgage insurance available to only those servicemen whose household income does not exceed 95 percent of the median household income for the area.

H.R. 7593. June 3, 1977. Ways and Means. Amends the Social Security Act to provide that, if the delivery day for benefit checks under Titles II and XVI falls on a Saturday, Sunday or legal public holiday, benefit checks for such month shall be mailed for delivery on the first day preceding such designated day which is not a Saturday, Sunday or legal public holiday, without regard to whether the delivery of such checks is made in the same calendar month for which such benefit checks are issued.

H.R. 7594. June 3, 1977. Ways and Means. Amends the Tariff Schedules of the United States to repeal the duty imposed on articles assembled abroad with components produced in the United States.

H.R. 7595. June 3, 1977. Post Office and Civil Service. Forbids the Postal Service from closing any post office for the purpose of: (1) merging the operation of such post office with the operation of another; (2) changing its name or ZIP code; or (3) reducing its services without the approval of a majority of patrons of such post office who respond to a referendum conducted pursuant to this Act. Requires the postmaster of the affected facility in the event such change is planned, to distribute a referendum proposing such action to persons regularly served by such post office and to receive responses during the following 60-day period.

H.R. 7596. June 3, 1977. Judiciary. Authorizes the Administrator of the Law Enforcement Assistance Administration to provide grants and technical assistance to certain units of local government having populations of at least 250,000 for the establishment and operation of programs designed to identify and expedite the prosecution of career criminal offenders. Sets forth requirements for grant applications and limits on payments to any single local government.

H.R. 7597. June 3, 1977. Ways and Means; Banking, Finance and Urban Affairs. Amends the Federal Financing Bank Act of 1973 to require that receipts and disbursements of the Federal Financing Bank be included in the Federal Budget.

Directs such Bank to make commitments to purchase, and to purchase specified obligations which are guaranteed by Federal agencies.

H.R. 7598. June 3, 1977. Education and Labor. Amends the Federal Coal Mine Health and Safety Act of 1969 to increase the annual authorization of appropriations for coal mine health and safety research.

H.R. 7599. June 3, 1977. Interstate and Foreign Commerce. Directs the Institute of Medicine of the National Academy of Sciences to conduct a review of toxic and carcinogenic substances and to report its findings and advisory recommendations to the Congress and the Secretary of Health, Education, and Welfare within 1 year.

Authorizes the continued use of saccharin for 18 months. Prohibits the Secretary from taking any action under the Federal Food, Drug, and Cosmetic Act to prohibit or restrict the sale or distribution of saccharin.

H.R. 7600. June 3, 1977. Post Office and Civil Service. Guarantees to those employees in the executive branch of the Federal Government, and to employees of the government of the District of Columbia; who have completed the probationary or trial period, and whose positions are not of a confidential or policy determining character, a prompt evidentiary hearing before an impartial individual before removal or suspension without pay.

SENATE—*Monday, December 12, 1977*

The Senate met at 11 a.m. and was called to order by the Acting President pro tempore (Mr. METCALF).

The ACTING PRESIDENT pro tempore. Pursuant to the previous order, the Senate now stands adjourned until Thursday, December 15, 1977, at 11 a.m.

ADJOURNMENT UNTIL 11 A.M., THURSDAY, DECEMBER 15, 1977

Thereupon (at 11 o'clock and 5½ seconds a.m.), the Senate adjourned until Thursday, December 15, 1977, at 11 a.m.

EXTENSIONS OF REMARKS

HUMAN RIGHTS DAY SPEECH BY AMBASSADOR ARTHUR GOLDBERG

HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. BUCHANAN. Last Friday, in honor of Human Rights Day, the head of our delegation, Ambassador Arthur Goldberg, spoke elequently on the U.S. commitment to human rights and called on other nations to reexamine their compliance with the various human rights documents, including the Helsinki Final Act, signed over the years.

I commend Justice Goldberg's comments to the attention of our colleagues.

TEXT OF SPEECH DELIVERED IN PLENARY BY AMBASSADOR GOLDBERG, DECEMBER 9, TO COMMEMORATE 20TH ANNIVERSARY OF ADOPTION OF UNIVERSAL DECLARATION OF HUMAN RIGHTS

Mr. Chairman, it is altogether fitting that this Belgrade meeting, as you have done, Mr. Chairman, take proper recognition that tomorrow is Human Rights Day. My government and most other members of the United Nations, as well as many groups and individuals, will be observing the 29th anniversary of he adoption of the Universal Declaration of Human Rights, which as I noted in a prior intervention, is incorporated by reference in the final act. Today I would like to suggest that the participating states of the Helsinki accord have a special opportunity to do more than "observe" this event of transcendent importance. Separately and together, we can, if we have the political will, translate the rhetoric of celebration into the concluding document and into actions that will benfit our citizens as individuals and our nations as members of a stable worldwide community.

At the heart of the universal declaration is its recognition that "the inherent dignity and the equal and inalienable rights of members of the human family" lie at "the foundation of freedom, justice and peace in the world." That same concept animates the final act. It is paraphrased in the preamble, detailed in principle 7 and specified in the act's humanitarian provisions.

As a concept, the line between the dignity of the individual and the just ordering of the society in which he lives is an old precept for many of our societies. As a foundation of international order, it is a relatively innovative idea, a vision born of two world wars and the determination to promote justice, liberty, and economic security. The universal declaration speaks of "barbarous acts which have outraged the conscience of mankind" and ties their prevention to the promotion of "friendly relations between nations."

Our conference in Belgrade has been exploring ways in which to deepen those relations, not least through the promotion of the human rights the universal declaration proclaimed. We are approaching the time for action—the drafting of our final document based on this review of our shortcomings as well as the advances we have made and the proposals tabled. It is appropriate to summarize the possibilities and challenges before us.

The United States delegation has consistently adhered to the view that this meeting has been, and is, required frankly and honestly to review the record of the implementation by all of the signatory states, as well as to consider new proposals to further implementation. We also are of the view that we are obligated individually and collectively to reaffirm our determination to fulfill our solemn undertakings in the final act. Further, we firmly believe that we must give adequate consideration to the final act's innovative commitment on respect for human rights and fundamental freedoms, including the freedom of thought, conscience, religion or belief and we must comply with these provisions. To this end my delegation, joined by others, has sponsored proposal BM/60 reaffirming principle 7 and seven other resolutions emphasizing and endorsing other specific humanitarian measures of the final act.

We should, in the opinion of my delegation, and in fidelity to the final act, also give special and collective acknowledgement to the valuable and privileged, and what should be the protected, role of individuals and organizations in furthering the process of implementation through their public scrutiny of developments and practices in their own and in other signatory countries. This too is the subject of a proposal which we and others have tabled.

And we should also jointly pledge our energetic efforts both to protect the rights of religious believers among our citizens and to facilitate international contact among them, as the final act stipulates.

Our giving of such commitments will be understood around the world as a fresh contribution to the process begun in the universal declaration of human rights and the final act. We all recognize that much of the final act depends for its realization on the unilateral actions of each of our states. In the area of human rights and fundamental freedoms, the initiative, and responsibility for action lies very much at home, subject, however to the type of international accounting we have been seeking in the important review we are conducting at this meeting.

In the United States, the agenda of the unfinished human rights business is not fully realized, although we are proud of our overall record. It includes action on ratification of certain international agreements in the field of human rights which President Carter recently signed at the United Nations. It includes programs—none of them yet perfected, but all of them already solid governmental policy commitments—to advance the equal rights of minorities and the economic security or all citizens. And, finally, it includes the search for better ways to implement the policy, enshrined in such legislation as our Foreign Assistance Act, of promoting "the increased observance of internationally recognized human rights."

The effort the United States is making is a sincere one. We would hope that other nations would, in the same spirit, examine their conduct to see, by way of illustration, whether the right to religious education is truly fostered, whether believers can freely profess and practice their faith, whether opportunities for free association of believers to worship and celebrate their religion are honored in fact as well as words. It is a fact of life that in some nations of Eastern Europe that those conditions do not obtain. This is a matter of grave concern to the United States. One hundred and forty million Americans are identified with Protestant, Catholic, Jewish, Moslem, Buddhist and other religions groups of their own choosing. This is safeguarded by the first amendment to our Constitution which guarantees the free exercise of religion. Our people share the belief of the poet Tennyson, who once wrote that, "more things are wrought by prayer than man can dream of." We regret the fact that grave violations of basic human rights and fundamental freedoms, including freedom of thought, conscience, religion and belief exist in some of the countries of the East.

Fundamental to the pursuit of human rights is the unfettered expression of divergent and peaceful views. Tomorrow, observing an anniversary of great importance to the promotion of human rights, let us not forget those who have been unjustly punished simply for expressing what is characterized as dissent. An number of the signatories of this meeting have such prisoners of conscience.

Tomorrow's anniversary is an important occasion to recommit our conference to advance toward the human rights goals of the final act. As the Secretary General of the United Nations said in his statement on the occasion of Human Rights Day "the protection and promotion of human rights is now among our most urgent priorities. Much has been accomplished over the year, but regrettably much still remains to be done. Disturbing violations in various parts of the world contradict the goals and ideals we have proclaimed not only in the declaration, but in the Charter of the United Nations, and they stand as serious barriers in the way of international peace and security."

We have cited specific cases, categories and countries during the review of implementation at this meeting dealing with significant and regrettable aspects of human rights' violations, and President Carter on December 3 in reporting to our CSCE Commission has cited in great detail both the progress and as the Secretary General of the United Nations has pointed out, the "disturbing violations of human rights which occurred and are still all too prevalent in various parts of the world.

My delegation will make President Carter's report, citing chapter and verse, available to all delegations.

It would be fitting—in the spirit of the day, and of the obligation the final acts puts on each participant—for appropriate authorities to examine again their compliance in light of the universal declaration and the final act and to take appropriate remedial action. And we have a special obligation in this connection in light of the specific human rights and humanitarian provisions of the final act.

We should respond to Secretary General Waldheim's call for "all governments, nongovernmental organizations and peoples in every nation to commemorate the historic occasion we mark today by re-dedicating themselves to securing the fundamental freedoms set forth in the declaration. The final act mandates us to do so.

I have suggested some actions our states can take here in Belgrade and elsewhere to give fitting tribute to tomorrow's anniversary. I can only add that lip service is not real observance of human rights. Actions and practices are the true test of a society's commitment to its ideals. As his excellency, the honorable Lazar Mojsov, President of the thirty-second session of the General Assembly, said in his remarks commemorating this occasion: "The oppression of man and nonrespect for human rights have always been negative omens of social unrest and even international conflict. In the interest of peaceful and progressive advancement to a better, more secure and more just world, the human community as a whole must, once and for all, do away with such manifestations which jeopardize fundamental human rights."

In light of the comments made by delegates representing some of the countries of the East questioning the relationship between human rights and security, the comments by the President of the Assembly and the Secretary General of the UN provide a definitive answer.

As the remarks by Secretary General Waldheim and General Assembly President Mojsov so eloquently point out, peace, security, and human rights are indeed indivisible, and all

those who seek detente must recognize that the detente we seek must have a human face if it is to be effective and enduring.

THE GAO REPORT ON MANDATORY RETURNABLE BOTTLES AND CANS

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. CARNEY. Mr. Speaker, on December 7, 1977, the U.S. General Accounting Office released an official version of its report on the "Potential Effects of a National Mandatory Deposit on Beverage Containers." While the whole issue of beverage container deposits is controversial to say the least, I think it is important to point out some very important facts about this study.

The GAO study is based on old materials. In fact, its authors admit that "this report depends heavily on existing studies for the data used in the economic analysis." The report goes further to point out that "a problem in assessing the effects of the various States' mandatory deposit systems has been the lack of good data on the period before and after implementation of the system."

Therefore, I respectfully submit to my colleagues that careful consideration should be made when weighing this study to determine the extent of its value.

Furthermore, GAO admitted in the study that it "agrees that a mandatory deposit proposal is but one of the options available, emphasizing that it set out to analyze just this one option."

I bring these points to the attention of my colleagues for one specific purpose, and that is that the context of this GAO report not be misinterpreted by the Congress or by the news media. There are other viable alternatives to mandatory deposit legislation that are in place today. These alternatives do not regulate the free market system and some of the results are dramatic, to say the very least.

According to GAO, a national beverage container deposit would reduce litter, conserve energy and save jobs.

The State of Washington—without forced deposits—and now other States, have comprehensive antilitter programs. The Washington program has resulted in a 66-percent reduction in litter. Oregon, with its deposit law, has only effected a 10.6-percent reduction. Even the GAO report claims litter reductions from only 7 to 37 percent with a mandatory deposit.

While GAO says a national deposit would conserve energy, it also adds that many Americans may not return containers. If even a small percentage of Americans did not return containers, the entire forced deposit concept could become counterproductive and wasteful.

GAO says jobs would be created with a national deposit. Even if this were true, any jobs created would be low-paying, unskilled laborers, mostly bottle sorters and handlers at the expense of much higher paying, highly skilled laborers who are more often than not heads of household. GAO even admits that "unemployment problems in specific areas may be severe." In a State like New Jersey, they could be catastrophic.

As you know, the Resource Conservation Committee, at the request of the Congress, has been conducting public hearings and studying the overall solid waste problem in this country. The RCC last week opted to set aside the mandatory deposit issue for now while it studies what to do about the majority portions of solid waste.

I submit to my colleagues that we need new, comprehensive evaluations of all the options at hand in dealing with this country's energy, litter, solid waste, and natural resource problems. The container legislation approach is tunnel visioned. Instead, what we need is a more comprehensive, total program. Cutting out but a small piece will still leave us with the rest of the pie.

LARRY WOODWORTH

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. BURKE of Massachusetts. Mr. Speaker, I have spent four decades in public service, and in all that time, I do not think I have ever met anyone of the caliber of Larry Woodworth. His dedication and devotion to his work was awe inspiring, his gentleness and character, second to none. Larry was a quiet and humble man; he needed no fanfare or applause. His reward was getting the job done, and no one could do it better under circumstances that would try the patience of a saint.

I had the pleasure of working with Larry for 17 years—I, as a member of the House Ways and Means Committee, Larry, as the director of the Joint Committee on Internal Revenue Taxation. He possessed a brilliant mind and ability which were enhanced by a fair and impartial objectivity, an untiring patience, and dedication. I observed him closely for 17 years and these qualities never ceased to impress me.

For a man who had precious little time to give, he always managed to make time. He was always readily available to me, and I found his advice and counsel solid and sound.

Larry was a public servant in the truest sense of the word. For over three decades he served his nation in an exemplary manner. Larry made things work. When we were deadlocked or at an impasse on a sticky tax problem, along came Larry with a solution. I saw him do this time and time again. He was a careful and thoughtful craftsman.

In what spare time he had, Larry involved himself in local community affairs; he served as mayor of Cheverly, Md., from 1959 to 1965, taught Sunday School at the United Methodist Church there, and was active in Boy Scout affairs. For the past year, Larry had been involved as the chief architect of the administration's forthcoming tax reform program.

To say that we hold this man in high esteem is to not say enough. Larry Woodworth was one of the truly great Americans, and our system of government is immeasurably sounder for having had him with us for what was too short a time. We pay him homage and our everlasting gratitude.

My deepest sympathy and that of my wife, Aileen, is extended to Margaret, his gracious and wonderful wife, and the Woodworth children.

DR. LARRY WOODWORTH

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. ULLMAN. Mr. Speaker, I would like to include in the RECORD a particularly perceptive essay on the late Larry Woodworth. The article appeared in the December 9 edition of the Wall Street Journal:

LARRY WOODWORTH: DULCE ET DECORUM . . .

By John Pierson)

WASHINGTON.—Sen. Bob Packwood remembers Larry Woodworth this way.

Last year, as the Senate Finance Committee wrestled with what later became the Tax Reform Act of 1976, Sen. Packwood was wrestling with a more personal problem: He was growing blind. Cataract surgery later restored much of the Oregon Republican's sight. In the meantime, all he could read were brief notes, printed in giant letters by his staff. Reading amendments to the Internal Revenue Code was out of the question.

Then, early one morning, Larry Woodworth, Congress's staff expert on taxes, came to Sen. Packwood's office, unbidden, and explained what the committee would be taking up that day—the law as it was, the law's shortcoming and the possible solutions. Mr. Woodworth came again the next day and the next and every day until the committee had finished with the tax bill, ultimately giving hours of his time to a junior, minority member of the 18-man Finance Committee.

"He didn't try to sell me," recalls Sen. Packwood. 'He just wanted to make sure I was informed."

Mr. Woodworth was then chief of staff of the Joint Committee on Internal Revenue Taxation and chief draftsman of the major tax bills passed by Congress in recent years. When he died Wednesday at the age of 59, he was Assistant Secretary of the Treasury for tax policy and in charge of pulling together the tax revision plan that President Carter has promised to submit early next year.

The Packwood story is revealing of Larry Woodworth in many ways. He was a kind and gentle man. In a town where cruelty often tries to pass for courage, he did numberless little deeds of kindness for Senators, Congressmen, lobbyists, lawyers and reporters.

He was a modest man. Even Mr. Woodworth's chief assistant and successor, Bob Shapiro, didn't know of the Packwood briefings until he read about them in a newspaper. Indeed Mr. Woodworth's passion for anonymity was so great that he refused to allow his biography to appear in the congressional staff directory.

He was fair. Although he had his own dearly-held views about how the tax code could be improved, he took great pains to present all sides of an issue. In fact, liberals, who regarded him as one of their own, sometimes grumbled that at crucial points in his 33 years with the joint committee, Mr. Woodworth failed to come down on the side of "reform." "A lifetime of straddling the fance," observed one liberal last January when President Carter picked Mr. Woodworth for the Treasury post.

Others who knew him well weren't so sure. "I haven't the faintest idea of his views," said Rep. Barber Conable of New York, ranking Republican on the House Ways and Means Committee. "I always felt he was trying to bring out the best in me, rather than explaining himself."

The other thing the Packwood story reveals was Mr. Woodworth's stamina. At a time when one younger member of the staff broke under the physical strain of getting out the tax bill, Mr. Woodworth had the extra strength, day after day, to brief a Senator whose vote was by no means crucial to the outcome.

Over the years, reporters too, came to appreciate this last quality, when, at the end of a grueling day, "Larry," as everyone called him, would patiently reveal the mysteries that had taken place before their often unseeing eyes.

He could have commanded a six-figure salary as a private tax consultant. But he often said that when he retired from the joint committee staff, he'd like to teach. As a matter of fact, Larry Woodworth was one of the finest teachers around.

Several generations of reporters from this newspaper learned their taxes at Larry Woodworth's knee. And through them, one hopes, the public learned something, too.

Some say that Mr. Woodworth's ability to grasp and unravel the complexities of the tax code came from the fact that he wasn't a lawyer. His degrees were in public administration. (When he got his Ph.D. in 1960 from New York University, one of his friends put a sign on his desk: "Old Doc Woodworth, Loopholes Opened and Closed.")

"Public administration" sounds dry enough, but to Larry Woodworth it was science, art and duty. Son of a Baptist minister. Mr. Woodworth seemed to have inherited a strong streak of altruism. With all his responsibilities on Capitol Hill, he still made time to serve for nine years as a member of the town council of Cheverly, Md., the suburban Washington community where he lived, and for six years as its mayor. He also taught Sunday School.

Mr. Woodworth wasn't without faults. He was at best an indifferent administrator. A loving joke among the joint committee staff was: "Anytime you give Larry a piece of paper, keep a copy yourself; he's sure to lose it."

Mr. Woodworth may have lost pieces of paper but he never lost his humor or his devotion to duty.

Dulce et decorum est pro patria mori.

AN HONEST CONGRESSIONAL RECORD

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. STEIGER. Mr. Speaker, the effort to make the CONGRESSIONAL RECORD honest has received wide endorsement. More than a third of the House has cosponsored my resolution, newspapers across the country have backed it in editorials and a number of individuals and organizations which rely on the RECORD have come out in support of it.

One of the most thoughtful endorsements has come from the New York County Lawyers' Association. Richard A. Givens, chairman of the organization's Committee on Federal Legislation, has been kind enough to share a copy of their recommendation with me.

The association stresses the importance of the CONGRESSIONAL RECORD as a legislative history. When changes of substance are permitted, the distortion can alter the interpretation of legislative intent. As the recommendation says:

> In an era of "sunshine" even those not present in the galleries should be able to know what was said in legislative debates.

As a firm believer that the RECORD should conform to its legal mandate as substantially a verbatim report of proceedings, I commend the statement of the New York County Lawyers' Association to all who read the RECORD. By the way, for any who may wonder, this statement is not being spoken, but rather inserted into the RECORD.

The statement follows:

[Report No. F-11]

NOVEMBER, 1977.

NEW YORK COUNTY LAWYERS' ASSOCIATION

RECOMMENDATION: APPROVAL

H. Res. 479, introduced by Rep. Steiger would require that ". . . the body of the Congressional Record . . . shall contain an accurate and verbatim account of remarks actually delivered . . ." The resolution permits extensions and revisions of remarks "limited to the correction of typographical errors" and allows other inclusions not delivered on the floor by unanimous consent, printed after the record of the actual debate, "preceded and succeeded by a printed designation which clearly distinguishes the insertion from verbatim remarks."

This resolution deals with a problem which has long plagued the use of the Congressional Record for such purposes as legislative history to assist the courts as well as for constituents interested in the work of their representatives. The problem was brought to light as early as 1958 by the late Senator Richard L. Neuberger of Oregon. (Neuberger, "the Congressional Record is NOT a Record," N.Y. Times Magazine, April 20, 1958, p. 14.) As stated there, members of Congress may alter substance as well as correcting grammar.

This practice has led some members of the Supreme Court to cast doubt on the weight to be given floor debates in construing legislation on the weight to be given floor delation. *Schwegmann Bros. v. Calvert Distillers Corp.*, 341 U.S. 384, 396 (1951) (Jackson J. concurring, discussed in Canter, "For an Accurate Affordable Congressional Record," N.Y. Times, 9/17/77, p. 22. Specific recent examples are set forth in Steiger, ". . . Read Any Fiction Lately? . . .," N.Y. Times, 8/29/77, p. 27. 4 U.S.C. § 901 provides that "the Congressional Record . . . should be substantially a verbatim report of proceedings . . ." yet this is not now the case as is unanimously conceded.

The inclusion of the matter in the Congressional Record not actually delivered on the floor is not a mere matter of correctness for its own sake. Rather, the legislative process can be affected because constructions can be placed on legislation contrary to the intent of the Congress as a whole. This can become a technique used by lobbyists to influence the governmental process. Compare generally Redman, The Dance of Legislation (1973). For example, lobbyist X may ask Representative Y to make comment Z on the floor to help insure that a pending bill will be construed the way the lobbyist wants if it reaches the courts for interpretation. Representative Y may reply, however: "If I say that, it is certain to provoke a storm of opposition which may lead to an amendment to insure that the bill says the exact contrary of what you want, or it may even lead to the defeat of the entire bill."

The lobbyist may answer, "Well, in that case say something innocuous, and then add these comments to your remarks for the benefit of the Record after the debate. That way, nobody can answer at the time, and if they pick it up all upon reading the voluminous pages of the record, it will probably be too late for anybody to do anything. Besides, the practice is legal." This can have the dual effect of (1) misleading the courts in certain cases where they rely on floor debates, and (2) weakening the legitimate use of floor debates that did occur. In addition, the broadcasting of floor proceedings will create an inconsistent "record" unless the RECORD becomes a true record of what actually transpired.

What are the objections to such a reform? Members of Congress, like attorneys in court, will have to realize that they are speaking for the record. The pressure generated will probably tend to raise the quality of debate in our national legislature.

In an era of freedom of information, the public and the courts should be entitled to truthful information about legislative debates as much as administrative proceedings. In an era of "sunshine", even those not present in the galleries should be able to know what was said in legislative debates. The concept of "sunset" should be applied to the antiquated practice of rewriting history to replace what was actually said with fiction, as in George Orwell's *1984*. Even if a "plain English" rule cannot be applied to legislative debates, the practice of substituting a different composition ought to be eliminated. This is a practice the time for which has come and has now gone.

The "Obey Commission" report, H. Res. 95-651 (1977) makes strides in the right direction, but H. Res. goes further and should be adopted.

We recommend approval of H. Res. 479.

Respectfully submitted,

COMMITTEE ON FEDERAL LEGISLATION,

Richard A. Givens, Chairman, Edward Arkin, Lawrence Randolph Bailey, Jr., Edward Brodsky, Evan A. Davis, Robert John Grimm, Michael D. Hess, Stephen D. Hoffman, Herbert Lebovici, John Edward Meyer, Henry Mittler, Solomon D. Monshine, Peter M. Phillipes, Susan F. Pollack, Sue Prenner, Peter Repetti, John A. Ronayne, Salvatore F. Sangiorgi, Betty Jane Santangelo, Shirley F. Sarna, Louis Norman Smigel, Lisa A. Whitney, Robert W. Wien, Benjamin J. Zinkin, Lawrence X. Cusack, Ex-Officio, Thomas Keogh, Ex-Officio.

THE FULL MARRIAGE ACT OF 1977

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. BROWN of Ohio. Mr. Speaker, on this occasion, I would like to share with you and my colleagues an article written by Herbert Stein which appeared in the Wall Street Journal on December 6, 1977.

Mr. Stein, a former Chairman of the Council of Economic Advisers, is proposing a lighthearted solution—which makes about as much sense as the Humphrey-Hawkins bill—to the nagging political and economic problems we face in America today.

"The Full Marriage Act of 1977" follows and speaks for itself:

THE FULL MARRIAGE ACT OF 1977

(By HERBERT STEIN)

A bill to translate into reality the right of all Americans able, willing and seeking to be married to full opportunity for a meaningful, nondead-end relationship; to assert the responsibility of the federal government to use all practicable programs and policies to promote meaningful relationships, and to clean up the American economic, social and political system in other respects.

This act may be cited as the "Full Marriage and Political Balancing Act of 1977."

General Findings

Sec. 2. (a) The Congress finds that 7% of the persons in the United States over the age of 16 able, willing and seeking to be married are not married, and that the unmarriage rate is much higher for persons between the ages of 16 and 21. This high unmarriage rate imposes serious costs upon the nation, including the following:

(1) Many of the unmarried and all of their mothers suffer severe mental anguish;

(2) Some of the married suffer envy;

(3) Unmarriage contributes to unemployment, since unemployment rates are significantly higher among unmarried males than among married males of the same age;

(4) Unmarriage contributes to inflation, since two can live as easily as one;

(5) Unmarriage contributes to the balance of trade deficit, since unmarried persons have a high propensity to buy small foreign cars, drink foreign wine and attend foreign movies.

(b) The Congress further finds that the operation of the free market assisted only by aggregate fiscal and monetary policies is not adequate to reduce unmarriage. The rate of unmarriage has risen as the money supply and the federal deficit have risen.

(c) The Congress further finds tha achievement of full marriage requires the establishment of goals by the President and the coordinated use of the powers of all agencies of the federal government, along with such private action as may from time to time be found helpful by the Secretary of Health, Education, and Welfare.

TITLE I—GOALS AND GENERAL POLICIES

Sec. 101. (a) The Congress declares and establishes as a national goal the fulfillment of the right of all Americans able, willing and seeking to be married to full opportunities for a meaningful relationship.

(b) The Congress further declares that no provision of this act shall be used to exercise mandatory control over any private citizen except as may be necessary to extract taxes from such citizen to achieve the purposes of this act or as it may be necessary to use powers of the federal government previously authorized or hereafter authorized to achieve the purposes of the act.

Sec. 102. (a) The Congress declares and establishes as an interim goal the reduction of the unmarriage rate for Americans over the age of 16 to no more than 4% and for Americans over the age of 20 to no more than 3%, both goals to be achieved by 1983.

(b) For the purposes of this act the terms marriage and unmarriage are defined by the President of the United States.

Sec. 103. The Congress declares and establishes as a goal the equalization of unmarriage rates among the age, sex, and race categories of the population.

Sec. 104. The Congress declares that it doesn't have the foggiest idea of how to achieve the purposes of this act. Therefore, the President shall submit within 90 days of its enactment and annually thereafter, the Annual Marriage Report of the President, setting forth:

(a) Current and foreseeable trends in births, deaths, marriages, divorces, engagements and disengagements, with an analysis of recent developments;

(b) Annual numerical goals for these variables and others affecting progress toward the interim goal stated in Section 102(a);

(c) The specific programs and policies which the President deems necessary to achieve the goals.

Sec. 105. The President shall be assisted in the preparation of the Annual Marriage Report by a Council of Marriage Counsellors consisting of three members, one of whom the President shall designate as chairman. The three members shall be chosen to represent equally the division of the American population by age, sex, race, religion, marital status, educational attainment and geographic location.

TITLE II—STRUCTURAL REMEDIES FOR UNMARRIAGE

Section 201. The Congress declares that in fishing around for ways to reduce unmarriage no stone shall be left unturned.

Section 202. Within 180 days after enactment of this act, the President shall submit to the Congress a report evaluating the effects on the unmarriage rate of present legal restrictions on polygamy, with such recommendations as he or she considers appropriate.

Section 203. Within one year after the enactment of this act the President shall submit to the Congress a cost-benefit analysis of divorce by unilateral demand, including an estimate of the extent to which the resulting increaso of marriages would exceed or fall short of the resulting increase in divorces, with such recommendations as he or she considers appropriate.

Section 204. Individuals or classes of individuals who consider their marriage opportunities to have been injured by the marriage of American citizens with foreigners may file a claim for relief with the International Trade Commission. If, after a hearing, the International Trade Commission finds that injury has been suffered, it shall submit a report with recommendations for corrective action to the President. Corrective action may consist of:

(a) Limitation of the entry of foreigners into the United States for the purpose of marriage;

(b) Limitation on the departure of Americans from the United States for the purpose of marriage; and/or

(c) Adjustment assistance in the form of a three-week, expense-paid trip for the injured party or parties to the foreign country of their choice.

(d) If the President chooses not to follow the recommendation of the International Trade Commission he shall submit a report to the Congress with an explanation of his decision.

TITLE III—SPOUSES OF LAST RESORT

Sec. 301. It is the purpose of this act to promote marriages in the following order of priority:

(a) Marriages made in heaven.

(b) Marriages arranged spontaneously and directly by the participants,

(c) Marriages arranged through the personals column of New York magazine, and

(d) Marriages arranged by mothers.

Sec. 302. Only if he or she finds that promotion of marriages of the kinds listed in Sec. 301 is inadequate to achieve the purpose of this act shall the President recommend to the Congress legislation authorizing the establishment of a reservoir of spouses of last resort. This proposed legislation shall include the following provisions:

(a) The reservoir shall include not less than 100,000 nor more than 200,000 eligible spouses of last resort. These eligible spouses of last resort shall be full-time employees of the federal government engaged for this purpose in accordance with Civil Service regulations and qualifying for compensation at the rate of a GS-9.

(b) Any unmarried American citizen over the age of 16 shall have the right to claim a spouse from the reservoir, subject to the limitation in Sec. 302(c). The Secretary of Health, Education and Welfare shall establish regulations to provide appropriate eligibility criteria to determine the order of priority of access of any person to the reservoir.

(c) No person who has rejected a bona-fide offer of suitable marriage of the kinds listed in Section 301 shall have the right to claim a spouse from the reservoir within a period of 6 months following that rejection.

(d) Eligible spouses of last resort who have been claimed and married shall be removed from the reservoir but shall be promoted to grade GS-10 and remain employed at that grade for as long as the marriage arranged under this Title shall last.

(e) As the number of eligible spouses of last resort in the reservoir is depleted by marriage, resignation or death the reservoir shall be restored to its initial size by the recruiting of new employes.

TITLE IV—SEPARABILITY

Sec. 401. Whom Congress has put together, let no man put asunder.

Sec. 402. Amen.

THE AMERICAN WAY—A RECORD OF GREAT ACCOMPLISHMENT — INDIVIDUALLY AND AS A TEAM AT UNION OIL

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12 1977

Mr. VANDER JAGT. Mr. Speaker, in recent days, I have had the opportunity to read a very special address that Mr. Fred L. Hartley, chairman and president of the Union Oil Co. of California, delivered last month as he accepted the California Manufacturer of the Year Award. At a time when this great country of ours is confronted with a serious energy situation and at a time when Congress is nearing final decisions on the administration's proposed energy plan, I strongly urge each of my colleagues to read Mr. Hartley's remarks.

I will readily admit that I am somewhat biased—I share fully and completely Mr. Hartley's strong advocacy of our Nation's free enterprise system.

This I have stressed in all my public addresses. It is the cornerstone of my feelings, my belief that our country is great not because of what Government has done for its people but what a free people were allowed to do for themselves under our Government.

But, Mr. Hartley also reveals corporate and social responsibilities that Union Oil has assumed. I think you will be most impressed. I was particularly drawn to that one part of his address when he stated:

> One last point about the corporation and social responsibility. To my mind, the greatest social responsibility a corporation has is to make a profit. If there are no profits, today's jobs are in jeopardy and new investments for new jobs are impossible. If there are no profits, there can be no support of welfare causes, education and the arts and sciences. It's a pretty fundamental issue because profitless private enterprise can only lead to a planned economy such as in the U.S.S.R.

Mr. Hartley, as I indicated, also touches on immense risk investment by his company in seeking and developing new and increased sources of energy. It is a dynamic and impressive record.

In including Mr. Hartley's address which follows, I would particularly point out his closing thoughts when he stated:

> We Americans have in the course of our history learned to do it ourselves. We have struggled. But cannot we learn from our experiences? Have we not progressed to a point where there can be greater trust and confidence, where there is understanding that our technology has been developed for the common good, that we are one nation, with an undivided desire to preserve our personal, our social, and our economic freedoms? And that we must conduct ourselves responsibly—in our schools, our companies, our labor organizations, our civil and governmental institutions including our courts, our Congress, our churches and even the Presidency.

Mr. Hartley's complete address follows:

Remarks by Fred L. Hartley

Thank you, Mr. Hudson, for that kind of introduction and for the honor bestowed upon me in being named California Manufacturer of the Year by the California Manufacturers Association.

Before coming here today, I thought of many things you might like to hear me talk about, or that you might even expect me to talk about. Perhaps the energy bill before Congress, or the problem of growth in California as a result of environmental regulations and permitting, or the increasingly popular subject of the corporation and its social responsibilities.

I have decided to discuss all of these subjects, but only briefly, because I also want to talk to you about some of the accomplishments of the Union Oil Company which I believe led to my being on this platform today.

I am very disturbed by the President's attitude on the energy bill. Deliberately or not, he used misleading figures on October 13 in accusing the oil industry over television of what he termed "war profiteering and the biggest rip-off in history." To substantiate these charges, he said:

"In 1973, for instance, just before the OPEC price rise and the oil embargo, the oil and gas industries had an *income* of $18 billion. Under our proposal, by 1985 their annual *income* would be about $100 billion, an enormous increase.

"What the oil companies and gas companies are now demanding and making some progress is $150 billion. The difference will not encourage increased production of oil. But that difference will come out of the pockets of the American consumers and go into the pockets of the oil companies themselves."

The clear implication of the President's remarks is that the oil companies had profits of $18 billion in 1973 and that those profits would rise to $100 billion by 1985 under the Administration's plan and to $150 billion under the oil industry proposal. In response to queries by the news media, the White House admitted that the President was *not* referring to profits, but instead, to gross revenues from domestic production before subtracting the cost of doing business and before subtracting the federal, state, and local taxes paid by oil companies.

Although clarifying statements were published by some of the news media, the President's highly misleading statement had its intended effect in reinforcing the opinion of much of the public that oil company profits are too high.

On the other hand, Senator John Tower inserted in the Congressional Record an unreleased Federal Energy Administration study which finds that oil company profits are not excessive. *It even suggests that higher profits are necessary!!*

I had wired the President on September 27, pleading for a halt to unwarranted attacks on the oil industry, pointing out:

"Rather than continuing to attack an industry that has, over the past 100 years, found and produced most of the world's low-cost energy, I respectfully urge you to attempt to understand the valid criticisms of your plan and to compromise with the positive suggestions being put forward."

"We, too, are loyal Americans and are as anxious as you to do what is good for the future of our nation. I pray that we both see the good in men so that we may solve our nation's energy problem in peace."

My thoughts apparently were ignored by the President and his aides when he made his ridiculous unsubstantiated remarks on October 13. Fortunately for our country, a majority of our senators have not been swayed by this outburst. It is impossible to predict at this date the final direction of our nation's energy policy, but I believe the Congress will provide a considerable degree of leadership to the Administration.

While it is the oil industry which currently is on the "hot seat" in Washington, those of you who represent other industries have your share of problems with the Administration and the bureaucracy, and should recognize that whatever adversely affects one industry will rapidly affect others.

Our own state of California, despite protestations to the contrary, continues to bedevil industry with conflicting and time-consuming regulations, principally in the environmental field.

Within the past few weeks, for example, construction of two new power plants by PG&E. to produce electricity from geothermal steam has been delayed for probably at least a year because of a jurisdictional tangle between the Public Utilities Commission and the Energy Resources Conservation and Development Commission. Procedural red tape and duplication of jurisdiction are a curse common to all of us. Incidentally, these plants would have produced kilowatts sufficient to supply the electrical requirements of a city of some 200 thousand people, thus reducing the equivalent demand for oil and natural gas.

One last point about the corporation and social responsibility. To my mind, the greatest social responsbility a corporation has is to make a profit. If there are no profits, today's jobs are in jeopardy and new investments for new jobs are impossible. If there are no profits, there can be no support of welfare causes, education and the arts and sciences. It's a pretty fundamental issue because profitless private enterprise can only lead to a planned economy such as in the U.S.S.R.

So much for our nation's problems.

I am honored that the California Manufacturers Association thinks highly of my activities, but obviously, it is not due to any personal, individual achievement, but rather because I have the good fortune to head a company which has made some rather significant contributions to our society.

When you are immersed in the daily work of running a large oil company, you spend your time dealing with the immediate matters at hand, and planning your course for the future. Last week's problem, or triumph, usually doesn't get much attention. So, I must thank you for the opportunity to reflect on a few things Union Oil has done in the recent past which, while not insuring us of a perpetual niche in heaven, might dampen the fires reserved elsewhere for those who stand by and do nothing.

While driving to this luncheon today, I passed a number of Union Oil service stations. It seemed quite natural to see the two pumps on the service island labeled "Super" and "Unleaded."

But, it was only a few years ago that there were no gasoline pumps in California with "Unleaded" or even "Low-lead" labels on them. I'm proud to say that Union Oil was instrumental in changing that. In so doing, we've helped make the air we all breathe a bit healthier. Here's how this came about—

With growing concern about the problem of smog, particularly in this basin where most of us live, the automobile and its exhaust system were identified as among the principal villains.

In 1970, I met with General Motors officials and heard their plans to install catalytic converters in the exhaust systems of their cars to capture pollutants. They would need unleaded gasoline for their 1975 cars, since lead in gasoline would foul the exhaust systems and negate their pollution abatement attempts.

Lead compounds had been added to gasoline since the 1920's to increase the octane rating and prevent engine knock. Lead is the most inexpensive and probably the best gasoline supply extender and octane improver known. It's a kind of commentary on the times that the man who discovered that use was given one of science's highest honors for his achievement—the Chemical Society Gold Medal. Yesterday's heroes don't necessarily fare too well in today's society.

Unleaded gasoline was going to require much more difficult processing at our refineries and would require a lot of time and money. We asked General Motors if they could find a way to live with just a small amount of lead—0.5 grams of lead per gallon versus the standard 3 or 4 grams—while we worked on our capacity to produce unleaded. Thus the idea of "Low-Lead" gasoline was born.

We proposed a "Transition from Leaded to Unleaded Gasoline," to the California Air Resources Board. It called for an unleaded regular of 90 to 91 octane and a leaded premium of 97 octane with not more than one grade of leaded to be offered and not less than one grade of unleaded. Other proposals being discussed at the time would have permitted two grades of gasoline containing substantial amounts of lead, and one unleaded grade. We were fearful that this would practically compel the sale of three grades of gasoline.

Union's proposal permitted only one grade containing lead, presumably premium, and encouraged the use first of a low-lead and, finally, unleaded gasoline suitable for most other cars.

The amount of lead entering the atmosphere would be reduced. At the same time, to install a third set of pumps at service stations for the new unleaded grade of gasoline would cost Union about $80 million—and the industry well over $1 billion—so our proposal had economic as well as environmental merit.

Most other companies went the three-pump route. Instead, we plowed that $80 million into facilities to produce unleaded gasoline at our refineries.

In the summer of 1970, we went ahead to practice what we had been preaching and introduced Low-Lead Regular 76 gasoline. We became one of the first oil companies to sell low-lead as its regular grade.

In January of 1973, the EPA announced that effective July 1, 1974, as anticipated, there would have to be unleaded gasoline available for the 1975 model year cars at 60 percent of a company's service stations and at all stations pumping over 200 thousand gallons per year. We were ready.

On July 1, 1974, Union Unleaded Regular was introduced at most of our retail outlets nationwide, many more than required by EPA regulations. Today, our unleaded gasoline constitutes more than two-thirds of Union's branded gasoline sales, compared with about 20 percent for the rest of the industry.

Our decision to get the lead out—to put $80 million in our refineries instead of gasoline pumps and tanks—was a manufacturing decision with all pluses.

These are not just pluses to Union Oil. For example, if you'll pardon the commercial plug, if you drive a pre-1975 model car designed to run on regular gasoline, Union Oil's unleaded gasoline can save you up to two cents a gallon in decreased maintenance costs—because spark plugs, mufflers, and tailpipes all last longer and the frequency of tuneups is reduced.

Union Oil's concern with the environment, and with producing products which help improve it, was not limited to getting the lead out of gasoline. Our research helped our manufacturing people with a number of breakthroughs in recent years.

One of our most productive activities was the development of one of Union's patented processes called Unicracking. The basic objective was to develop ways of processing heavier and heavier refinery crude oil into high yields of low sulfur transportation fuels and a minimum of high sulfur fuel oil.

I was lucky enough to head the research team that developed that process. It did something else beside cleaning up the crude oil. In simple language, our process converted four barrels of low grade crude oil into five barrels of gasoline and jet aircraft or truck fuels. Incidentally, it took some courage to go from a one and a half barrel pilot plant to a first commercial facility that was ten thousand times larger and entailed an investment of $25 million.

Another manufacturing process, called Unionfining, which has the ability to remove sulfur from gasoline, jet fuel, and diesel fuel was expanded to heavy distillates. With this technology, fuel oil can be produced from high sulfur crude which meets the specifications of utilities compelled by environmental restrictions to use low sulfur fuel oil.

Another patented manufacturing process, called Unisar, also has special significance in our polution-conscious world because it reduces the quantity of highly voliate aromatics present in paint solvents and jet fuel. This means it reduces the amount of smoke emitted by jet planes, and improves the health conditions around those working with paint solvents.

Still another manufacturing process co-developed by Union and the Ralph M. Parsons Company, came into existence a few years ago as clean air standards became stricter.

It is calleld the Beavon process, and, when working in conjunction with other processes, it is possible to recover and convert to elemental sulfur 99.9 percent of the hydrogen sulfide contained in byproduct refinery fuel gases. Prior to the development of the Beavon process, technology had limited us to about 90 to 95 percent sulfur removal.

What does this mean? Well, without hydrogen sulfide removal land conversion plants, including the Beavon process, our Los Angeles refinery would put 320 thousand pounds of sulfur as sulfur dioxide into the atmosphere every 24 hours.

Today, on the average about 400 pounds of sulfur dioxide enters the atmosphere from this phase of our refinery operations. And may I say, that all of this was accomplished without funds, subsidies, or research from the government. Further, *our* activities made new air pollution standards possible—*not* the regulators! ! We are still waiting for Mr. Tom Quinn, chairman of the California Air Resources Board, to present Union Oil Company with a medal.

While our processes are proprietary, we license them to other firms so that people everywhere may benefit from our success. In fact, nearly 600 Union-developed process units are licensed in 30 countries.

Union has done a yeoman's job in helping to clean up pollution, but there's more to being a responsive and concerned company today than that. This country vitally needs more and new energy resources. Let me tell you about one emerging energy resource we took in hand in the early 1960's, and developed it to the point where today, Union is the largest producer of this form of energy in the world.

I'm talking about geothermal energy, one of the cleanest and most exciting energy sources known today. Geothermal energy can be described as a product of nature's own boilers, fed by the natural circulation of water coming in contact with hot rocks in the depths of the earth.

We can harness geothermal energy by drilling wells into potentially productive zones, much as we do for oil or gas, and bring the steam or hot water to the surface. The most practical use for geothermal energy yet found is to spin turbogenerators to produce electricity.

When we became interested in geothermal in the early 1960's, foreign oil imports were plentiful and cheap. Not many people in government, industry, the university, or the public sector were interested in our efforts. We had to develop the technology where virtually none existed. We risked and invested millions of dollars in development and in 1967 became the operator at the Geysers geothermal field in Sonoma County, about 90 miles north of San Francisco.

By 1973, The Geysers had became the largest geothermal development in the world. And, all of this was done without one dime of government funds.

We sell the steam we produce to a most cooperative public utility company; namely, Pacific Gas and Electric Company, which has built generating plants with a capacity of half a million kilowatts of electrical power, enough to supply the needs of a city of half a million people. Four additional generating plants are now under construction and soon The Geysers will have a capacity of over 900 thousand kilowatts—which can serve a city of nearly one million people. Union is searching for more geothermal reserves in the western states, and has made important discoveries in the Imperial Valley and in New Mexico. In the Philippines, acting in concert with the Philippine government, Union has discovered two geothermal fields and is preparing to supply steam for the first 110 thousand kilowatt generating plant, and three additional 110 thousand kilowatt plants are underway.

Experts in government and the geothermal industry believe that there may be a geological opportunity to develop 20 million kilowatts of geothermally powered electrical generating capacity in the United States in the next two decades.

To put this in perspective, it would require about 700 thousand barrels of oil per day to generate this much electricity—nearly the entire daily production of the state of California.

As technological advances are made, we might see several times this capacity in succeeding decades. Development of geothermal energy can be a significant factor in our efforts to make the United States less dependent on oil imports. How soon and how well we can succeed will depend in large part on the elimination of bureaucratic institutional barriers such as I mentioned at the beginning of this talk.

We are also working to find and develop other new sources of energy. Through a subsidiary, we are planning a $45 million project to mine and mill uranium from deposits discovered in Wyoming. It will be sold to customers who will have it processed into nuclear power plant fuel. This project will represent a needed addition to the nation's efforts in meeting growing demands for energy at this time of diminishing domestic petroluem resources.

Last week, we advised members of the U.S. Senate that we were prepared to proceed immediately with a $100 million plus shale oil plant in Colorado providing the energy bill contains adequate incentives. I might add that shale oil can provide energy for much less than imported LNG or natural gas from Alaska's North Slope.

So, as I reminisce with you, I'm proud that our company has made some significant contributions to our society in manufacturing and in energy production and pollution control. But, it's not enough just to solve the technological problems and to make the right management decisions. Just as a successful country needs a dedicated citizenry, so does a successful and forward-thinking company need employees who are motivated, who understand, and who benefit from the system.

At Union Oil, we try to motivate our people, we help them to understand, and we see that they benefit from the economic system which has made this country great. They participate, and so they benefit.

Through our employees profit sharing plan, employees as a group are the largest voting shareholders in Union Oil, owning nearly six percent of the company's total outstanding shares worth about $120 million. The profit sharing plan covers all regular employees with a year of service and employees receive shares of stock in the company without having to contribute anything. Anything monetarily, that is.

Of course, the employee really does contribute. He or she contributes expertise and enthusiasm to make the company succeed. And under our plan the employee gains personally right along with the company's success. I know of no better way to convince society that our economic system is the best than through employee stock ownership.

In closing may I philosophize a little and share a recent experience with you—

It seems to me we've forgotten some pretty fundamental issues that have brought our country into its two hundred and first year.

I was reminded recently when we met with a group from the People's Republic of China at dinner what this country must have been like before we industrialized it and improved our standards of living. We offered the Chinese assistance on a particular problem, but a lady member of their delegation said they didn't want our help. She quoted Chairman Mao as saying, "We must learn to do it ourselves. We must struggle." And I mischievously responded—"Gosh, just like working for the Union Oil Company!!"

We Americans have in the course of our history learned to do it ourselves. We have struggled. But cannot we learn from our experiences? Have we not progressed to a point where there can be greater trust and confidence, where there is understanding that our technology has been developed for the common good, that we are one nation, with an undivided desire to preserve our personal, our social, and our economic freedoms? And that we must conduct ourselves responsibly—in our schools, our companies, our labor organizations, our civil and governmental institutions including our courts, our Congress, our churches and even the Presidency.

Freedom without responsibility is chaos and we see it all around us today. We must fight those forces in our nation who are trying to tear down America so they can have their government-planned and thought-controlled society.

And, lastly, I thank the California Manufacturers Association for this recognition. I accept this bronze sculpture of me not as Fred L. Hartley alone, but on behalf of the 16,000 plus employees of the Union Oil Company of California. For Union Oil, I thank you.

NEEDED—COWBOYS IN TEXAS

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. COLLINS of Texas. Mr. Speaker, I just heard from Dub McWhorter who has a ranch 35 miles out of Andrews, Tex. He needs a good ranchhand who will put in a full day's work. Being outdoors from sunup to sundown in weather that is often rough, does not seem to appeal to Americans. This job does not pay as well as relief does for those who live in New York City.

Cattle ranching requires hard work and keeping up everyday with the cows. Many Mexicans want to come across the border and get the job, but they are not allowed a work visa. What will be the answer for the McWhorter Ranch? Here are comments from Dub McWhorter of Star Route Box 54, Andrews, Tex. 79714, in his letter to me:

> We live 35 miles from Andrews, Texas. That puts us in the center of the Permian Oil Basin and makes it almost impossible to find some one to work on Ranches. The younger generation was raised with Oil and do not understand Ranch work. There are 12 Ranches in the country (some are small one man operations) and at the time 4 of them are looking for help. This would employ 10 men. There is no shortage of work in this area, it is a shortage of help.
>
> We have 100 sections of land and run 1,200 cattle. This Ranch has been in the family since 1923 and we have had help problems for the last 20 years getting worse all the time. It has now become a desperate situation. Our problem is not because of low salary, we pay salary plus room and board which equals $725 or a little more per month.
>
> We have advertised at 3 Employment Commissions (Midland and Odessa, Tex., and Hobbs, New Mexico) and the only people to apply for the job were broke and looking for a free meal, they told us this. A qualified Ranch hand does not go to an Employment Commission for a job, instead he will go to the local Sale Barn, Feed Store or Western Wear Store. Although I am having trouble convincing the Employment Commission of this.
>
> We are desperate enough that we have put this ranch up for sale, we cannot fight drought, labor, and the Government redtape all at the same time.

PEG SWEZEY AND SISTER THOMAS FRANCIS

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. ROSENTHAL. Mr. Speaker, I would like to take this occasion to call to the attention of my colleagues two people who have consistently and unselfishly worked for the betterment of the Queens Community. They are Margret (Peg) Swezey and Sister Thomas Francis.

These two people also share in the accomplishment and distinction of being the first women to serve on the board of directors of the Queens Chamber of Commerce.

Peg Swezey, through her position as vice president for business loans at the Elmhurst branch of Citibank, has helped to keep small business alive in Queens. As a Newsday article of November 28 quotes her as saying:

> If we are ever going to stabilize Queens and stop business from moving out, then—in this day when rents are going up so dramatically—we are just going to give small businessmen the capability to buy their own place of business. . . . We make the loan, but there is a 90 percent guarantee from the Small Business Administration. This program came into being a few years ago, but a lot of Queens banks have not been getting into it.

Ms. Swezey also has the distinction of being the only woman on the Jamaica Hospital Board of Trustees. In addition she has received numerous community awards from organizations which range from the Queens Boy Scouts to the Long Island City Kiwanis.

Sister Thomas Francis has served as the executive director of St. Johns Queens Hospital in Elmhurst. She is a member of many public and private community groups and is considered a dedicated and enthusiastic worker.

Both Peg Swezey and Sister Thomas Francis have taken it upon themselves to help the residents of Queens, N.Y. On behalf of my constituency I would like to thank them for all the hard work that they have done and wish them the best of luck in all their private, as well as community, endeavors.

JAZZ MUSICIAN RAHSAAN ROLAND KIRK DIES

HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. RICHMOND. Mr. Speaker, Rahsaan Roland Kirk was one of America's most outstanding jazz artists. It is with great sadness that we mark his passing as music lovers and professional musicians are left with an enormous void. An article by John S. Wilson in the New York Times, December 7 presents a graphic description of the life and artistry of Mr. Kirk. I commend the following to my colleagues:

RAHSAAN ROLAND KIRK, 41, DEAD; PLAYER OF JAZZ WIND INSTRUMENTS

(By John S. Wilson)

Rahsaan Roland Kirk, the well-known jazz musician who had been nearly blind since birth and nearly immobile since he suffered a stroke in 1975, died Monday at Bloomington (Ind.) Hospital shortly after having given a concert. He was 41 years old.

Mr. Kirk gave two concerts at Indiana University on Sunday night, and was stricken as he and his quintet, the Vibration Society, were leaving Bloomington.

The cause of death was not immediately given.

Mr. Kirk's ability to play two and even three wind instruments at once set him apart from his contemporaries in the jazz world. But it also brought charges that this unusual talent was mere gimmickry.

His primary instruments were the tenor saxophone; the manzello, a straightened saxophone instrument; the stritch, which looks like a huge blunderbuss, and the flute. The saxophone, manzello and stritch were hung around his neck, along with a whistle, while the flute was stored in the bell of the saxophone. His instruments also included clarinet, a shortened song flute that he played with his nose and an electrified, humming "evil box."

Mr. Kirk managed to play three-part harmony with the saxophone, stritch and manzello, and duets with his flute and nose flute. But he disdained the suggestion that all he was offering was a musical trick.

LAUDED AFTER INITIAL SKEPTICISM

"I do everything for a reason," he said. "Nothing is a gimmick. For me to live, I have to do what I feel. I'm not trying to turn music around. I'm just contributing what I think can be done."

Charles Mingus, the jazz bassist in whose group Mr. Kirk played in 1961, was one of the first to be impressed by his unusual talents.

"This man is what jazz is all about," Mr. Mingus declared. "He's real."

After initial skepticism, Mr. Kirk quickly won the approval of jazz critics, who gave him first place in the Down Beat international critics' poll in 1962. And, year after year, they gave him a top position in both the flute and "miscellaneous instrument" categories.

His musical interests were not limited by style or period. He could be conventionally melodic or wildly abstract. He sat in with musicians as disparate as George Lewis, the elderly New Orleans clarinetist, or members of the jazz avantgarde, and he was equally at home in both situations.

Born virtually sightless—he could distinguish light and dark—on Aug. 7, 1936, in Columbus, Ohio, Mr. Kirk was playing saxophone and clarinet when he was 12. One night, when he was 16, he dreamed he was playing three instruments at once.

"The next day," he said, "I went to a music store and tried out all the reed instruments. Eventually they took me to the basement to show me what they called the scrap."

There he found the manzello. It was battered and keys were missing. But the storekeeper did not want to sell it because he felt it was a collector's item until Mr. Kirk "bugged him every day for a week." A year later, the storekeeper, remembering Mr. Kirk's interest in "weird instruments," brought the stritch to his attention.

Through the recommendations of Ramsey Lewis, the pianist, Mr. Kirk made his first recording in 1960. He traveled with Mr. Mingus in 1961, and made his New York debut in 1962 at the Five Spot.

Several years later, he began calling himself Rahsaan Roland Kirk. His actual given name was Ronald, but he never used it. He said that was because he had a series of dreams "which led me to see music even more clearly as a way of setting off vibrations within a person so that he can more deeply feel and recognize his identity and his potential."

"For me," he said, "the name Rahsaan is part of the spiritual process. It sets off vibrations."

HUMAN RIGHTS AT THE U.N.

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. RANGEL. Mr. Speaker, the issue of human rights has been placed in the national spotlight by this administration. In order to continue to emphasize the need to insure basic human rights, the U.S. delegation to the United Nations believes it is now an excellent time for the creation of the post of a U.N. High Commissioner for Human Rights. This issue promises to be a challenge for our delegation, but one which, in the end, will raise our stature and respect among peoples everywhere.

Some nations have alleged that our firm stand with regard to this issue is used only for leverage in bargaining. But, on the contrary, I know that this end is a true and sincere wish by the leaders of our country. If the proposal passes and the post of High Commissioner becomes a reality, then without a doubt, an important first step will have been taken in this area of deep concern to us all.

Melissa Wells, a U.S. Representative in the U.N. Third Committee, has eloquently expressed our position in the U.N. with respect to this issue and she also explains in more detail the ramifications of the creation of such a position as High Commissioner on Human Rights. Her comments follow:

U.S. MISSION TO THE UNITED NATIONS,
New York, N.Y., November 22, 1977.

THE UNITED NATIONS AND THE CHANGING TIMES

We are now discussing what may be the key item for the United Nations this General Assembly, Item 76, "Alternative Approaches and Ways and Means within the United Nations System for Improving the Effective Enjoyment of Human Rights and Fundamental Freedoms." It may be the key because it seems as if the focus of humankind's interest at this moment is increasingly on the question of human rights, and because there is a renewed interest and hope in the United Nations.

If we are indeed at a moment in which we can by imagination and courage take a step forward, and if at this particular moment the goal is to find new ways and means to enjoy human rights and fundamental freedoms, then what we do under this item could have a profound effect. It is not only the substance that we are considering, it is the timing. Now is the moment in which the momentum of hope will be increased, or diminished—in part by what we do here on this item. Will we be courageous enough to accept the challenge of trying something new, of daring to accept the mandate of urgency that is laid upon us by the suffering of millions of people?

The delegation of the United States believes that this is an auspicious moment for creating the post of a United Nations High Commissioner for Human Rights. This post would be an important step forward in the process of promoting and ensuring the rights enumerated in the Universal Declaration of Human Rights and in the International Covenants on Civil and Political and Economic, Social and Cultural.

Our reasons are first, we believe the High Commissioner would possess the visibility and prestige necessary to extend the "good offices" role of the Secretary-General in this important field.

Second, the High Commissioner would help coordinate the activities of the human rights organizations that have been established in recent years.

Third, the High Commissioner would serve to integrate the civil and political, and the economic, social, and cultural rights in the two covenants, and help to interpret the link between the traditional concepts of human rights with the rights of all to have their basic needs met.

In supporting the High Commissioner we realize that the United Nations could create a post which is so weak it might just as well not be established or the opposite—the United Nations could create a post which is too powerful, with a Commissioner who could unduly interfere in the internal affairs of states.

The draft resolution, L. 25, before us can navigate between both these hazards. It is neither too weak nor too strong in our opinion.

The High Commissioner is not being proposed in order to set up an independent investigator. Nothing will be accomplished if the High Commissioner becomes "High Prosecutor" and sets out on a course that leads only to confrontation, condemnation, and coercion. In contrast, the High Commissioner's functions are essentially advisory and basically providing his services to member states at their invitation. The Commissioner's function will be to facilitate or assist compliance by the member states with their Charter commitment to human rights.

Furthermore, the position of High Commissioner as envisioned establishes a position for good offices and coordination. Investigative powers remain in the hands of the Sub-Commission, protected by the 1503 procedures. The most effective work of the High Commissioner will be privately done, in consultation and cooperation with member states.

While it is quite clear the High Commissioner will not have the authority to interfere in the functions and powers of other organs already in existence, the Commissioner's coordination tasks will reduce duplication of effort; for example, through better channeling of information among the various human rights organs.

We would like to remind the Committee of the cogent statement made by the Representatives of Kenya at last Thursday's meeting At that time he said that there was always the risk that a High Commissioner could go beyond his/her mandate and interfere in the internal affairs of states, but if that occurred it would be simply up to a majority of the General Assembly to abolish the post. We wholeheartedly agree with this formulation. The General Assembly will be the strongest, and best check to guarantee that the post of High Commissioner does not exceed its jurisdiction.

The struggle for full human justice and freedom, for peace and security for all persons and all peoples, is a never-ending quest. It demands concentration and the willingness to learn and change. Often we struggle for years to contain injustice, or to right an ancient wrong, or to reduce suffering.

But now the time has come when we can take a step forward for humanity. We happen to be the persons at the right time and place and can participate in an event that opens up new hopes and possibilities.

I think that this debate and this vote is such an opportunity. We of the Third Committee, and of this General Assembly, are able to take a step forward for mankind.

At the outset the High Commissioner will be seen by the world as a symbol of hope and international concern.

Beyond the walls of this building and assembly, a silent humanity is watching and hoping that the United Nations can respond in a new and creative way to the worldwide expectation that we are entering a new era in which human dignity is a major concern, and in which governments and international organizations become agents in the promotion of human rights.

There is usually reluctance in trying the untried, in launching out in a new direction. But, faced with the urgency of the problem, what have we to lose by accepting this challenge? To wait a year, or two, or three, or four, to study more, rather than accept this modest proposal seems to me to be a denial of the urgency of the problem of human rights in the world today. We are beginning to glimpse a common truth—that we live in one world. That rights are interdependent. That freedom and responsibilities are both individual and collective. That no person or nation can be secure or free, until all nations and peoples are free. That we need each other. That we can learn from each other. That every nation and every ideology has something of value to contribute. That free debate and exchange in the United Nations is the most dynamic and powerful source of creativity and testing of old and new ideas.

The important and central debate of the last several years has focused on the relationship between civil and political and economic, social and cultural rights.

The U.S. Delegation has endorsed, on many previous occasions, the concept of interdependence of all rights. One of these is an idea which is reflected in Resolution L 17 which is currently being discussed. We see the High Commissioner for Human Rights as a key next step in the process joining together in a universal vision the economic rights of peoples and nations and the civil and political rights of all persons.

My Government believes that by daring to hope and experiment, we will be able to give more life to the dreams not only of the founders of the United Nations, but to millions of oppressed people.

TEXTILE IMPORTS

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. BURKE of Massachusetts. Mr. Speaker, I would like to again express my deep concern over the increasing level of textile and apparel imports and the effect they are having on the health of our domestic industry.

The knitted outerwear industry in our country is being systematically replaced by the overseas production of knitted sweaters, shirts, headwear, gloves, and other items. This industry presently employes some 125,000 people, including spinners and dyers, most of whom are minorities and women and many of whom have limited skills. In addition, there are many thousands of additional jobs among the various suppliers to the knitwear manufacturers. The loss of jobs in this industry alone in the past 5 years total approximately 45,000 direct positions and many thousands of others supporting them. Approximately 36,000 of these have been lost in the beleagured Northeast and several thousand in my State alone.

Over 300 of the 1,200 knitting firms in operation a few years ago have gone out of business during this time and they are continuing to do so at an alarming rate. While the knitted outerwear industry is relatively small—less than 10 percent of total textile apparel sales—it accounts for half of the total textile apparel trade deficit.

While it is obvious that the goal of free trade should be pursued vigorously and undue protectionism must be avoided, there are equally obvious situations in which excesses have been allowed to develop and which must be corrected.

The wool textile industry and textile workers are particularly hard-hit by imports. They have suffered from a long-term decline caused by a high level of imports coupled with reduced domestic consumption. Imports have a far more injurious effect on an Industry with a shrinking market than on a growth industry. The combination of these factors has resulted in the closing of an estimated 130 mills and the loss of 81,000 jobs in the country.

Penetration of wool textile imports has risen from 22 percent in 1968 to an estimated 44 percent this year. Imports of wool fabrics, apparel, and other wool products are rising sharply—they are 38 percent above 1976 levels and 76 percent above 1975 levels in yardage. The U.S. trade deficit in wool products alone this year will be more than $640 million.

Most woolen mills are small and medium-sized businesses which employ from 100 to 500 workers and are usually located where they constitute a principal source of manufacturing employment. Each job in a wool mill creates at least one additional job in support industries such as energy, chemicals, and transportation.

The special trade representative has said that the new agreements with Hong Kong and Korea "have been praised by industry and labor." The textile and apparel industry representatives who participated as advisers in both negotiations have said that they did not accept and agree to the bilateral contracts negotiated. I have been advised that at least one labor adviser was sharply critical of the agreement with Korea.

My legitimate pleas in behalf of my constituents and of these manufacturers who need the help of Congress have been treated with indifference and insensitivity. Requests that meaningful changes be made in the multifiber arrangement have apparently gone unheeded and, if renewed, the MFA will continue to permit excessive growth rates for imports. It is under the very protection of the MFA that this industry has suffered its worse setbacks.

With no assistance in reforming the MFA and with liberal bilateral agreements now behind us we are being told that the textile apparel industry is to be included in the Tokyo round of multilateral trade negotiations in Geneva. This would be catastrophic and would raise real questions about the formulation and conduct of U.S. trade policy. Surely, the annihilation of the knitwear industry would be hastened beyond the present timetable established by previous failures on the part of our Government and serious additional attacks would be launched by our foreign competitors against the rest of the textile and apparel manufacturers.

I am speaking for 2,300,000 employees whose jobs will be further threatened by reductions in tariffs on incoming goods. Nearly 74,000 of these jobs are in Massachusetts and when those jobs are eliminated it will be very difficult to find new places for those employees. Is this not wholly inconsistent with our other efforts to create new jobs and to solve our serious unemployment problem? Many thousands of jobs would be created here at home if we were to reclaim some of the production that we have allowed to go abroad.

The following articles clearly illustrate the critical nature of this problem. I am sure that you will find them of interest; the first attachment is a particularly poignant example of the future of the textile industry if we do not take action now.

SALE BY PUBLIC AUCTION: KNITTING AND SEWING PLANT

Per order of the assignees for the benefit of creditors.

200 sewing machines; 70 knitting machines; cutting, spreading and pressing machines, laundry machinery, plant equipment, 80,000 yards fabrics, 25,000 lbs. yarns.

Re: New Knit Manufacturing Company.

(Manufacturer of Knit Sweaters & Bathing Suits.)

To be sold on the premises—21 Nottingham St., Lowell, Mass., Tuesday, December 13th, starting at 10 a.m.

Inspection: Monday, December 12th, 9 a.m. to 4:30 p.m.

Joseph Finn Co., Inc., Auctioneers, 15 Broad Street, Boston, Mass. 02109.

[From the New York Times, Dec. 4, 1977]

TEXTILE MILLS BATTLE IMPORTS

(By James Barron)

UNION CITY.—The clatter of weavers at work still spreads through William Radhuber's textile mill, which can turn out 100 dozen knitted sweaters a day. But the noise is fainter these days because the orders are smaller, the weavers are fewer and the profits are slimmer.

Like most other New Jersey mill owners, Mr. Radhuber is fighting—and losing—the battle against products imported from the Far East that cost less than garments made here. Threatened, the owners say, by a combination of hard luck and hard times, many are wondering if they will be forced to close their factories.

More than 200 in the New York metropolitan area already have, including 30 in the urban New Jersey area, where unemployment is currently abnormally high.

Textile industry observers agree that the explosive growth of the imported market has radically changed the character of the fad-ridden, seasonal domestic business in the last five years.

Despite the problems of damaged or inferior foreign goods, dock strikes and delays, wholesalers in recent years have come to prefer the cheaper imports. That decision, coupled with relentless pressure from the government to spend billions on safety equipment, has stunted the industry's recovery from the recession of the early 1970's.

Mr. Radhuber's 44-year old family-owned concern, Bergen Knitting Mills, is typical of those affected. "When business was good, we were doing 'gangbusters' here—1,000 dozen sweaters a week," Mr. Radhuber recalled the other day. But he said that his plant was falling "far short" of the 500 dozen a week needed to break even, and was having problems finding labor when work was available.

George Vargish Sr.. president of the National Association of Knitted Outerwear Manufacturers, conceded in a recent interview that "despite our efforts to meet the competition from the Far East, our technology cannot offset the vast differential between the wage rates."

As a result, the foreign mills are supplying the wholesalers and retailers that once did business with the New Jersey mills. Last year, for example, imports increased 34 per cent over 1975, and domestic production declined. This meant that imports of sweaters and women's knit shirts exceeded the total production in this country.

The state's Department of Labor and Industry estimates that 11,000 workers have been laid off in the last five years, trimming the number of textile workers in New Jersey to 23,900, according to seasonally adjusted figures for last October.

The state's knitted outerwear manufacturers appear to have been among the companies hit the hardest by the upsurge in imports. The number of jobs in their segment of the textile industry having dropped from 14,100 in 1973 to 9,700 at present. The clothes they make, which represent 5 percent of all textile-apparel sales, account for more than 50 percent of the textile-apparel deficit, some $1.3 billion of a $2.6 billion total.

But the knitwear companies are not alone. The makers of silk ties and scarves also report a sharp decline in their business and, contrary to the import problems facing the sweater manufacturers, difficulty in exporting their products to Asia.

In addition, according to Arthur O'Neill, an official of the state's Department of Labor and Industry, the effects of the textile industry layoffs spread to related industries, such as dye houses and trucking companies.

Textile union officials added that every plant job lost costs an additional 2.5 other positions.

For the mills that survive, the foreign competition has retarded production in what is said to be the lowest-paying manufacturing industry in the nation.

The mills' lackluster profits, also among the lowest, have been inhibited by recent rapid increases in both the volume of imported goods and the number of exporting countries.

The National Association of Knitted Outerwear Manufacturers, a trade group based in New York City, argues that the foreign mills pay cheap wages and permit working conditions repugnant to the American idea of labor standards, even though they rely on American-designed patterns and make garments identical to those manufactured by New Jersey plants.

The salary in Hong Kong is 78 cents an hour; in South Korea, 39 cents. In New Jersey, the minimum wage is $3.74, and the companies here also are required to maintain retirement benefits and Social Security funds for each worker, something that the Asian mills do not have to do. Nor do the overseas mills hold to the five-day work week. In Taiwan, for example, a seven-day work week is the norm.

The productivity of the foreign mills underscores the fact that the import problem is a relatively new phenomenon in the fad-dominated fashion industry in New Jersey, which a few years ago faced competition only from non-union mills in the South.

As recently as 1968, fewer than 500,000 men's and boys' suits were imported. But in 1976, a total of 3.6 million came from overseas. And imported sports coats, which made up 10 per cent of the market nine years ago, rose to nearly 50 percent last year.

Peter Freund, president of the Peter Freund Knitting Mills in North Bergen, a company that his father founded in 1919, said that such statistics were "the death knell of the industry as we know it."

Mr. Freund's mills, which make sweaters for wholesalers and retailers, employed 300 people 10 or 15 years ago. Today, his roster has been pared to 100 employees, who spend several months a year on unemployment or partial unemployment.

A number of mill owners, including Mr. Freund, and union spokesmen have asserted that the Government is unwilling to intervene to protect domestic manufacturers because of the fear that such action would bring retaliation from abroad. The owners contend that the general textile-apparel industry grows at a rate of 2.5 percent a year, while the Governmenet allows a 6 percent annual increase in imports.

As a result, the owners have asked Robert F. Strauss, President Carter's special representative for trade negotiations, to seek a rollback of 8 percent for each of the next three years on knitted sweaters and shirts imported from Taiwan.

This limit could raise total domestic production by more than 16 million shirts and 10 million sweaters a year, according to Representative Harold C. Hollenbeck, Republican of East Rutherford.

Mr. Hollenbeck and 11 other members of the New Jersey's Congressional delegation contend that the present duties are incapable of protecting American industry, particularly because a significant number of developing nations are working to improve their low-wage textile export capabilities.

These duties and other matters are being negotiated in a series of agreements called bilaterals. At present, one pact with Taiwan is under negotiation, and talks with Japan will start in about 10 days. Similar agreements have been recently concluded with Rumania and Poland.

On the state level, Governor Byrne has asked Carter to urge that essentially the same rollback steps be taken. Mr. Byrne said last month in a letter to the President that such a move could create up to 4,000 new textile jobs in the state.

The extra jobs could restore the comforting sound of productivity and prosperity to the din of the machines in plants like Mr. Radhuber's. At the moment, he hears a note of despair as the shuttles shoot back and forth in their rhythmic creation of sweaters. Mr. Radhuber's plant is running at about 50 percent capacity, a level low enough to make him wonder whether he may eventually find it necessary to close the business his father founded in 1933.

Mr. Radhuber has watched the character of his change radically in the last few years, from a concern that manufactured large runs of everyday garments to a specialty manufacturer that took on orders too complicated for the foreign factories. This is less efficient, he said, adding: "You lose time, bring down sales and volume and price yourself out of reach. First thing you know, you're drowning."

The imports also have forced Mr. Radhuber, as well as other New Jersey textile manufacturers, to adopt methods for survival that involve ingenious strategies and hard-headed management techniques, diversity and a willingness to accept smaller, short-term runs of products.

Mr. Vargish, who is chairman of Vargish Mills in Carlstadt, has faced similar problems. He said that his company had closed plants in Puerto Rico and Union City, increased its top management and added several new product lines—a dramatic change from its specialization in ladies' sweaters of 10 years ago.

But his son, George Vargish 2d, who is also associated with the company, added, "Regardless of how resourceful we try to be, it's a futile struggle. Our business is shrinking."

New Jersey's contribution to textile output has been shrinking almost from the time of the first cotton mill in the state, which was built in Paterson by the Society of Useful Manufactures in the 18th century. Around the time of the Revolutionary War, that city led the state with 25 spinning jennies and 60 single looms, but other towns along the Passaic soon joined the expanding industry.

The first silk mill was opened in 1838, and by 1870 Paterson was making half the silk manufactured in the United States. Forty years later, 300 silk manufacturers in the Paterson area were turning out 40 percent of the silk and ribbon made in the United States.

But then came the strike of 1913, during which 25,000 workers picketed and rioted for increased wages and reduced working hours from 55 a week. Mills with such names as Pelgram and Meyer, Katterman and Mitchell, and Dardy and Wardsworth were quiet at a time when, old-time textile workers now recall with pride, any four-story building near the Passaic River was a mill.

The industry rebounded by 1925, with 691 silk manufacturers and scores of immigrants, many of whom had arrived here from Poland with small looms to compete with the big manufacturers.

Two long-time Paterson weavers, Jacob Laurence and Joseph Waksberg, who is 74, remember those days.

"It was nice," Mr. Waksberg said. "The automatic looms forced weavers to run around the machine, watching if any big knots came up. When a weaver came home, he was pooped out."

Some of Mr. Waksberg's colleageus, who reminisced while sitting around a small round table in Mr. Lawrence's modern apartment house the other day, recalled the grand old days of the textile industry along the Passaic, and told how they came to the city of silk in the 1920's not knowing English. Some of the weavers wanted to go to night school, but were so exhausted that they fell asleep during classes and had to drop out.

Mr. Waksberg concluded sadly: "If the industry was what it was 30 years ago, I could get a day or two of work a week."

PRIVATE SECTOR IS KEY TO JOBS

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. DON H. CLAUSEN. Mr. Speaker, the issue of unemployment has been of major concern for several years, and it is particularly disturbing to those of us representing congressional districts which continue to have large numbers of people unemployed.

While the Congress has attempted to identify legislative solutions to this recurrent problem, we must all realize that, in the final analysis, the private sector is the job-creating sector.

The Santa Rosa Press Democrat, the largest newspaper in the redwood empire, has some realistic views of the Federal Government's attempt to create "full employment" and suggests that the best method to reduce joblessness is to encourage the private sector to invest in new plants and new products. I think my colleagues will find this editorial worthwhile reading.

As my colleagues know, I have strongly expressed myself before on the need to permanently cut taxes that would release more money to the private sector and subsequently provide investment capital for the free enterprise system resulting ultimately in creating more jobs and more purchasing power. This is the way to a stable and prosperous economy.

The editorial follows:

PRIVATE SECTOR IS KEY TO JOBS

When President Carter was campaigning for office, he promised his support for the Humphrey-Hawkins full employment legislation.

When he reached the White House, he took another look at the bill with his economic advisors and became lukewarm toward the legislation.

The bill, which sought to reach a goal of 3 percent unemployment in 18 months, was revised. Even with the addition of 2½ years to the deadline for achieving a 3 percent rate, the bill failed to reach the floor of either house for a vote last year.

Now the bill has been revised again, and President Carter has endorsed it. The goal of 3 percent unemployment remains intact, but still another year has been added to the target date, making it five years. The bill sets as a national aim, "the fulfillment of the right of all Americans able, willing and seeking to work full opportunities for useful paid employment at fair rates of compensation."

Even this watered-down version of the original Humphrey-Hawkins bill is a cruel hoax on the general public. It promises things the federal government can't deliver. The bill offers no specific programs to provide jobs. It directs the President to create a "reservoir of public service jobs" paying minimum wages or higher for those Americans unable to find work.

Presumably, the definition of "useful" employment will be left up to the federal government. Also the determination of who has the "right" to a job.

It is a known fact that among the ranks of the unemployed are many who refuse to take jobs they don't like. They are looking for work which is "meaningful" to them. Can the government promise all such people it will provide jobs they will find "meaningful"? And how does an employer, either private or public, supervise, discipline or terminate an employee who has a "right to a job"?

It reminds us of the latest effort at "full employment" by federal law. That was the Employment Act of 1946, which established "full employment" as national policy and would have "assured" everyone who wanted a job that one would be available. By the time Congress got through taking a realistic look at the bill, it was reduced to a mere statement of policy of achieving "useful employment opportunities for all seeking work."

We think the same thing will happen to the Humphrey-Hawkins bill.

We think the way to reduce the unemployment rate is to encourage the private sector of our economy to invest in new plants and new products, thus producing new jobs. Federal law is not the answer.

INSTALLATION OF UKRAINIAN CATHOLIC ARCHBISHOP OF PHILADELPHIA

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. EILBERG. Mr. Speaker, I am pleased to be able to inform my colleagues of the installation of Bishop Joseph M. Schmondiuk as the third Metropolitan Ukrainian Catholic Archbishop of Philadelphia.

The installation ceremony was held December 1 in the Cathedral of the Immaculate Conception B.V.M., with Archbishop Jean Jadot, Pope Paul's Apostolic Delegate to the United States, officiating at the installation.

The ceremony was followed by a divine liturgy celebrated by Bishop Schmondiuk; Bishop Jaroslav Gabrow, Ukrainian Catholic Bishop of Chicago; and Bishop Basil H. Losten of Philadelphia, who was recently acting bishop of Philadelphia but who is succeeding Bishop Schmondiuk in Stamford, Conn.

Archbishop Schmondiuk, Bishop of Ukrainian Catholics in Stamford for the past 16 years, will be spiritual leader for 180,000 Ukrainian Catholics in the Diocese of Philadelphia, which extends along the east coast, south of New York and east of the Mississippi River.

The new Metropolitan Archbishop attended St. Peter's Catholic School in Philadelphia and is a 1930 graduate of St. Joseph's Prep, also in Philadelphia.

Some 40 prelates of Roman and other rite Catholic churches attended the ceremony. Heading the list of religious dignitaries were John Cardinal Krol of Philadelphia, William Cardinal Baum of Washington, D.C., and John Cardinal Cody of Chicago.

NATIONAL HEALTH GUIDELINES AND THEIR IMPACT ON RURAL HOSPITALS

HON. MAX BAUCUS

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. BAUCUS. Mr. Speaker, during the past 2 weeks I have received nearly 10,000 letters from Montanans who are concerned about a single issue. It is, however, not just the sheer numbers of letters that makes this event significant. I often receive large amounts of mail on a single issue, but unlike before, these letters are not preprinted form letters.

They are lengthy, handwritten individual letters from frightened Montanans. The reason for their fear is the possible impact of the national health planning guidelines which were published in the Federal Register on September 23.

If Montana's hospitals tried or were in some ways forced to meet these guidelines, 19 Montana hospitals in isolated, rural areas of my State could be closed and a great many services in our larger hospitals would be reduced or eliminated.

I have devoted a very large share of my time since I was elected to Congress in 1974 working to improve rural health care, and I am more than disappointed by HEW's insensitivity and apparent ignorance of rural needs evidenced by these proposed guidelines.

HEW officials keep telling me that these guidelines could and would not close any Montana hospitals; that there are exceptions for rural areas. There are, in fact, some exceptions, but they are vague and confusing and oral assurance from HEW that rural facilities would not be hurt is not enough.

Furthermore, it is imperative that rural health needs be included in any national health planning. To this end, I have taken the following steps to help insure that the final guidelines are appropriate to Montana's rural health needs:

First. I wrote to Secretary Califano, as did other Congressmen from rural districts, to request that the comment period, which was to close on November 22, be extended. As a result, the comment period was extended to December 9, which gives Montanans and other rural citizens more of an opportunity to offer their comments.

Second. On November 30, I met with Secretary Califano in his office and placed before him the thousands of letters from Montana to show him how much this issue means to my constituents. At this meeting Secretary Califano gave me a copy of a letter about these guidelines he was sending to each Member, which I have reprinted below.

Third. On December 1, I cosponsored a congressional resolution (H. Con. Res. 415) urging Secretary Califano and President Carter not to include in the guidelines any provisions which could directly or indirectly cause the closing of any rural hospitals.

Fourth. Last week I had an HEW official from the regional office in Denver travel with me to six rural communities in Montana to respond to questions about the guidelines and to see firsthand that the health needs of rural Montana are different from the health needs of most other parts of the country.

Fifth. I reintroduced my rural health bill (H.R. 10250) which seeks to eliminate unrealistic Federal certification standards for small rural health facilities. The rural health bill, originally introduced as H.R. 5808 on March 30, 1977, has been revised to provide State nursing boards with a veto over waivers of 24-hour nursing requirements for small rural health facilities.

Sixth. I introduced a bill (H.R. 10251) to provide Congress with a veto power over national health planning guidelines.

I could enclose scores of additional documents further describing this problem in greater detail, but I think the following three will suffice: First, an excerpt of the Montana Hospital Association's November 8 critique of the proposed guidelines; second, comments on the guidelines by the Montana Medical Association; and third, Secretary Califano's latest statement of HEW's position on the guidelines.

[From the Montana Hospital Association, Nov. 8, 1977]

COMMENTS ON POSITION PAPER—NATIONAL GUIDELINES FOR HEALTH PLANNING

(Issued September 23, 1977, by Department of Health, Education, and Welfare)

IMPACT STATEMENT

Preface

The following is the official statement of the Montana Hospital Association regarding the impact the literal application of the National Guidelines for Health Planning would have upon the hospitals and the people being served by the hospitals in Montana.

The projections of hospital bed need estimates were furnished by the Montana Health Systems Agency, Inc. and are contained in the revised draft (November 3, 1977) of the General Hospital Acute Inpatient Services component.

The proposed guidelines purport to provide short-term solutions to problems related to health care costs and quality of care. The guidelines will provide a major Federal input to the plans currently being developed by the Health Systems Agencies, contrary to the mandate contained in Public Law 93–641, which requires that planning be conducted on the local level. These plans, in turn, will be used to control hospital capital expenditures through 1122 review and certificate of need programs. The Health Systems Agencies will be compelled to develop a state health system plan and to make the plan "consistent" with these Federal Guidelines within a five year period. Obviously, if the Health Systems Agencies want to achieve the full designation status as the health planning organization in their health service area, they will accede to the Federal government orders to make the state plan consistent with Federal Guidelines.

It is obvious the National Guidelines were not developed to take into account the unique situation which exists in Montana where an alleged "excess" of beds exists due primarily to the need for many small rural facilities which provide essential services to a sparsely distributed population (750,000 people) contained in the vast area of the state of Montana (147,000 sq. miles). In addition, Montana, as are all northern tier states, is subject to adverse weather conditions which complicate the mobility of the people but is further evidence for the survival of all facilities.

Unless the National Guidelines are changed to more adequately reflect the concerns of health care delivery system in the western part of the United States and unless more authority is given to the local Health Systems Agency to waive the strict and inflexible application of the Guidelines so as to better fulfill the obligation to the needs of the people in the service area, then the HSA should not be forced to develop a state plan which would be unworkable and unacceptable to the people in their service area.

To do otherwise would have detrimental impact upon the health care delivery system in the state of Montana which has traditionally and factually proven to have provided high quality care at a reasonable cost for all of the people of the state.

Hospitals facing complete closure and/or significant reduction of beds due to close proximity to each other and having less than 80% occupancy:

	(1)	(2)
Community Hospital, Anaconda	60	2,164
Dahl Memorial, Ekalaka	16	364
Big Sandy Medical Center	9	353
Sweet Grass Community, Big Timber	17	263
Liberty County, Chester	11	363
Roosevelt Memorial, Culbertson	19	506
Powell County Memorial, Deer Lodge	35	1,450
Rosebud Community, Forsyth	26	611
Chouteau County District, Fort Benton	17	392
Big Horn County Memorial, Hardin	16	694
Livingston Community, Livingston	54	1,828
St. Luke Community, Ronan	25	785
Mission Valley, St. Ignatius	30	913
Toole Valley, Shelby	30	850
Ruby Valley, Sheridan	20	563
Prairie Community, Terry	8	163
Broadwater, Townsend	21	466
North Valley, Whitefish	44	2,016
Poplar Community, Poplar	22	865

[1] Current licensed beds.

[2] Admissions, 1976.

Impact of Guideline II on major facilities

In accordance with Guideline II (less than 80 percent occupancy) examples of change in the number of beds which could be ordered to be accomplished by 1985 in major cities in Montana are as follows:

Great Falls—Reduction of 158 beds.
Missoula—Reduction of 98 beds.
Havre—Reduction of 31 beds.
Billings—Addition of 51 beds.
Butte—Reduction of 136 beds.
Miles City—Reduction of 47 beds.
Libby—Reduction of 17 beds.
Polson—Reduction of 13 beds.
Kalispell—Addition of 22 beds.
Hamilton—Reduction of 5 beds.
Conrad—Reduction of 15 beds.
Bozeman—Reduction of 13 beds .

CONCLUSION

The short-term solutions provided in the proposed National Guidelines for Health Planning have negative long-range effects in Montana. The total accumulative effect of closures and/or reduction of beds on communities must be considered.

Montana's small rural communities will of necessity suffer extensive social and economic losses. Loss of revenue in the community due to the closure of the hospital and loss of income for personnel employed by the facility may in many cases lead to economic collapse of the small rural town.

Closure of hospitals may well mean loss of all medical manpower previously available in the community as physicians generally tend to locate in communities already having an established hospital where they can fully utilize their skills and medical knowledge.

As population shifts occur in the next five to ten years, it may be necessary for some of the closed hospitals to reopen or to have new facilities built in expanding communities. The costs of expansion will far outweigh any savings derived from the closure at the present time and/or the reduction of beds in Montana's hospitals.

The Congressional intent of the National Health Planning and Resources Development Act of 1974 (Public Law 93-641) was designed to establish locally oriented, long-range planning by the very people who live and work in the health service areas, who utilize the services and who are aware of the needs of the area's residents. The Congressional intent was not for centralized federal control of health care throughout the nation. However, this recommended federal policy position contained in the National Guidelines works to the detriment of effective health care planning which should be based upon the health care needs of the people of the area, currently being studied by Health Systems Agencies in every area of the country.

Health services must be developed, prioritized and offered in a reasonable manner taking into account local considerations, local current health care resources, local adverse travel conditions and the ability and desire of the people living in the area to pay for the services.

THE MONTANA MEDICAL ASSOCIATION,
November 17, 1977.

OFFICE OF PLANNING, EVALUATION, AND LEGISLATION, HEALTH RESOURCES ADMINISTRATION, CENTER BUILDING, HYATTSVILLE, MD.

GENTLEMEN: As requested in the September 23 issue of the Federal Register on page 48502, this Association does hereby comment upon the proposed National Guidelines for Health Planning as promulgated by the Public Health Service, U.S. Department of Health, Education and Welfare.

Prior to 1974 when Public Law 93-641 "The National Health Planning & Resources Development Act" was signed into law, it was continually voiced by the federal spokesmen that the law was designed to insure that local health planning would be done on the local level and within very broad parameters to be established subsequently by national guidelines. It is the belief of this Association that the intent of Congress has not been fulfilled in the agency's interpretation of the law, the effect being shown in the guidelines.

It is our opinion after reviewing these proposed national guidelines that the concept of local planning for local needs under Public Law 93-641 is, in fact, not apparent. The guidelines, in actuality, do become federal directives which a local health systems agency must follow in establishing health plans for institutional providers. This, of course, is contrary to the claim that the guidelines would allow sufficient flexibility for each locality to adopt a health plan consistent with the health care needs and peculiarities of that locality; the criteria set forth are rigidly drawn and the limited exceptions to the general guidelines are equally rigid.

This Association is extremely concerned that implementation of these guidelines will result in a reduction of necessary patient care services, particularly in rural areas. The members of the Montana Medical Association are curious as to what statistical basis HEW utilized in reaching the conclusions drawn in the guidelines. The Association is also concerned as to why appropriate groups, associations, etc. were not consulted in development of the proposed guidelines. As stated previously, local planning for local needs is not apparent in the guidelines and we are concerned as to by what authority the Secretary can mandate compliance by HSA's with the guidelines. It is obvious that the guidelines do not take into account change in medical practice due to technological innovations and advancements. Of curious note is how many current HSA's are able to meet the standards set forth in the guidelines. And, what options do remain for local planning by local HSA's if the guidelines, in effect, are mandatory rules of compliance.

The entire thrust of the guidelines definitely emphasizes cost control and ignores additional expenses which would be incurred such as transportation, rental housing, wages lost, etc.; the cost therefore, in reality, being transferred from providers to other segments of society. The guidelines, since being directed towards cost control, are seriously jeopardizing, in Montana, continued operation of several hospitals. Closure of facilities will undoubtedly force severe economic hardship upon communities and, of course, also jeopardize the continued availability of medical care, that is, a physician(s) continuing to practice. The guidelines appear, we feel, to usurp the efforts of both consumers and providers who have worked earnestly drafting Montana's HSA and will perhaps make future efforts in health planning futile.

The members of the MMA seriously question the general hospitals-patient-population ratio of 4 per 1,000 and the basis upon which such statement was made. The occupancy rate of 80% appears unrealistic considering fluctuations in patient utilization of hospitals. In reality, these two guidelines should be considered together and may, in effect, actually be contradictory. The exceptions allowed were obviously not intended nor was consideration given to the state of Montana in their drafting. As a very minimum, of course, assurance is required so that a mechanism is established to allow specific waivers for particular localities.

The obstetrical services guidelines could very well, if adhered to, deplete severely or eradicate completely such services for Montana residents. The figures quoted do not appear to be realistic, again in light of Montana's needs and its realities. Pediatric inpatient services and neonatal intensive care units as mandated by the guidelines would severely deplete, it not completely eradicate, such services for children of this state. The travel time alluded to, etc. therein in discussion for pediatric inpatient services appears totally unworkable within the vast distances of our state. Occupancy rates relative to pediatric inpatient services may, of course, become contradictory relative to numbers of beds "allowed" by the guidelines.

Relative to open heart surgery and cardiac catheterization unit services and the procedures allowed annually there is definitely the indication that now services in this area would not be allowed for Montana in the future. This, of course, would necessitate Montana citizens traveling vast distances to obtain required care; of course, additional expenses by families and patients could very well be significant.

In consideration of guidelines proposed for radiation therapy and computed tomographic scanners the possibility definitely exists that of the seven radiation therapy units established in Montana two would be closed down and again total uncertainty about new services in the future and, travel again becoming apparent for patients and relatives alike. The guideline proposed for CT Scanners appears to indicate, relative to procedures performed, that such equipment should, in effect, not even be located in the state. If such regulation was, in fact, executed for this state, the citizens of Montana would obviously have to undertake considerable travel to other centers for such procedures which obviously would cost more in air fare alone than the test itself. It is believed the guidelines are contrary to the original intent of the Hill-Burton concept on hospital construction, curtailing and/or eradicating specific numbers of beds.

It is obvious that such proposed National Guidelines for Health Planning will have a definite negative effect upon health care in Montana as well as effecting severely social and economic outlay. Adherence to such regulations shall undoubtedly place severe hardship upon the major portion of Montana's population and, in effect, curtail quality medical care.

This Association is totally concerned with the quality of medical care provided to the citizens of our state. We strenuously object and disagree with the guidelines as proposed.

This Association believes such unilateral and arbitrary decisions made at the national level without prior consultation, except via comment of regulations already promulgated, completely usurps the prerogative of individual citizens in their choice of obvious necessities at the local level.

We most sincerely hope you will consider the opinions of this Association in discussions upon the proposed National Guidelines for Health Planning as promulgated in the Federal Register September 23.

This Association respectfully requests an extension of 90 days from November 22 for appropriate comment. It is essential the providers and consumers alike in consultation with the state's Governor develop workable guidelines realistic for each state's needs.

Sincerely,

James K. Cope, M.D.,
President, Montana Medical Association.

The Secretary of Health,
Education, and Welfare,
Washington, D.C., November 30, 1977.

Dear Paul: In September this Department took a major step in our efforts to control rising health care costs and to assure quality health care for the American people. As required by the National Health Planning and Resources Development Act of 1974, the Department published for public comment proposed National guidelines that would establish numerical standards for judging whether specific inpatient medical services and facilities are needed in individual communities.

While State and local planning agencies alone have the authority to review major new capital expenditures for medical facilities and equipment, this Department's effort to provide numerical guideposts is mandated by the National Health Planning Act and is critical to assist States and local communities in providing quality care without unnecessary costs. It should be clear, however, that neither the Act nor the guidelines provide any authority for the Federal Government to close any hospitals or to eliminate any services.

Several members of Congress have expresesd concern about the role of these guidelines under the 1974 Act as well as over some of the specific provisions in the proposed guidelines. In view of the importance of these guidelines and of our activities under the National Health Planning Act, I wanted to provide you personally with background on the purpose of the guidelines, the way the guidelines will be used, and our current thinking on some of the changes we envision as a result of comments we have received.

The National Health Planning and Resources Developemnt Act establishes a complex system that lodges planning decision-making in the hands of local and State planning agencies. The details of the program are set out briefly in the enclosed attachment.

While authority to review proposed new capital expenditures rests solely with the local and State planning agencies, the Act provides an important role for HEW. The Act directs HEW to develop "national guidelines," for the State and local planning agencies. These guidelines must include standards that establish the appropirate supply and distribution of health resources, and they must set goals that "to the maximum extent practicable," are expressed in numerical terms. The law requires local health plans which set out a community's need for medical care services to take into account and be consistent with HEW's guidelines.

But despite the Act's mandate to the Department to issue final guidelines by mid-1976, the previous Administration had not published even proposed guidelines by January, 1977—two years after the Planning Act was passed. Every day of this delay has substantially hampered the ability of the State and local planning agencies to act forcefully, as Congress contemplated, to assure the availability of quality care and to stem unnecessary and excessive increases in medical costs.

While the establishment of the local and State agencies has proceeded, albeit slowly in many cases, the Federal responsibility to provide guidance was simply not being met by this Department until the new Administration took office.

This Administration is committed to make the National Health Planning Act work. We believe the Act provides a major tool to help assure quality care at reasonable cost. In direct response to Congressional urging, we began to produce the guidelines called for by the Act of 1974. In September, we published for comment proposed guidelines that Congress had sought to have published nearly 18 months ago.

We published the guidelines in proposed form to obtain comment, and we are pleased the comment has been spirited. We intend to listen and learn from these comments. Not only have the comments helped us learn, they have also started in earnest a debate that must occur if we are to stem spiralling medical costs. We simply must develop appropriate standards to measure the real need for medical facilities and equipment in this country.

The comments we have received so far have primarily voiced three concerns:

That the proposed guidelines, as currently drafted, might force small rural or community hospitals to close;

That the standard applicable to obstetrical units may be too strict;

That the guidelines will tend to take decision-making out of local hands.

I appreciate these concerns, and I think it is useful to respond directly to each.

Rural and community hospitals.—The guidelines currently provide for exceptions for rural hospitals and exempt such hospitals from the standards if they provide services to patients who would otherwise be more than 45 minutes travel time from a hospital. In response to the comments we have received, we intend to clarify and broaden the exceptions applicable to rural and community facilities when the guidelines are revised. Our objective is to improve access to needed, high quality health care for those living in rural and other under-served areas.

Obstetrical units.—The Department recognizes that the currently proposed standard for obstetrical units may be too strict. We intend to review this standard carefully and to revise it appropriately to take into account the objections that have been raised.

Local control.—Nothing in the National Health Planning Act or in the proposed guidelines would or could take decisions concerning individual facilities out of local hands. The guidelines give local and State agencies national benchmarks to help in drawing up local and State plans. The plans should, and indeed must, recognize special local circumstances and requirements, and the guidelines will provide for recognizing such circumstances.

These guidelines are directed at guiding the development of local plans concerning the organization and delivery of health services. They do not include any Federal authority to close any hospitals, or to eliminate any services. Neither the Act nor the guidelines can require any local Agency, any State Agency, or the Secretary to close any hospital or hospital services.

The planning process established by the National Health Planning Act represents a critical element in our hopes to ensure access to quality health care and to hold down costs. Strong workable national guidelines are critical to that process. We intend to evaluate carefully all the comments received on the proposed guidelines and to revise them in a careful and responsible manner. I would welcome further comments or questions about our current proposals.

Sincerelv,

Joseph A. Califano, Jr.

SPEEDY PASSAGE OF THE HUMAN RESOURCES DEVELOPMENT ACT IS NEEDED TO INCREASE LABOR PRODUCTIVITY AND REDUCE INFLATION

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. STEERS. Mr. Speaker, many people in Congress, business, and the academic world have given considerable thought to which approach should be used to combat the continuous threat of inflation. One of the best approaches, in my opinion, is for labor and management to work together in order to combat common problems. It is especially important that both sides see that the increase of productivity is in their common interest. The problem of job dissatisfaction is undoubtedly one of the primary reasons for lagging productivity—a condition which eventually hits every American in the pocketbook through higher prices. Only with increases in productivity, either through technological advances or through better managerial techniques at the workplace, can there be a solid foundation for increased wages.

With these thoughts in mind, I believe that the Members of the House will be interested to read the following interview that appeared in the Washington Star on December 6, 1977. Mr. Sidney Harman, Undersecretary of Commerce, gives his views on how to increase job satisfaction in the American workplace:

Making You Satisfied in Your Work

Question: Just what do you have in mind when you talk about job enrichment?

Harman: It has to do with taking a job which is otherwise routinized, mundane and ordinary and somehow adding to it in a way that makes it a little bit more tasty. If you will, it's the business of doing a better job with a steak, add a condiment or two to it and give the person who has the job some more to do, thus enriching the job, period. That's as far as job enrichment goes, and there's nothing wrong with that. It's just a piece, and in my judgment a relatively small piece, of the total matrix that has engaged my interest.

Q: What else is involved in this total matrix?

A: My concern is with human growth and human development. It arises out of awareness that in an industrial society the world has changed very dramatically over the 50 years or so since Frederick Taylor established the fundamental principles of professional management. And you'll recall at that time that the ideal worker characterized by him would be an ox, a man, a woman, with no personal thought, no personal sense of creativity, no sense of self. The ideal way to design work was to reduce it to the absolute minimum common denominator so that the machine was dominant and the person became subordinate to the machine, or a replacement spare part in the machinery. That probably was right for its time—if by right one is talking about questions of productivity and the growth of the nation. But working people today really are of a different breed. They are younger. They're better educated.

Q: How do you see your position as undersecretary of Commerce helping you advance this cause?

A: Coming to Washington promised me an opportunity to work on a much broader scale, a much wider spectrum than what I'd done in private industry. It also provides the opportunity to quite candidly proselytize my point of view nationally. Everybody in the nation has heard of the inflexibility, the rapacious quality of the bureaucratic life. "Don't be a fool. Don't think that anything can be done that in any way can hope to change that character of government, of bureaucracy." But one of the other opportunities of coming to the department of Commerce provides is the opportunity to determine whether that is truly all that inflexible and all that impervious to change. Everybody talks about the alienation of the people who work with them, the bureaucracies. Everybody talks about how disenchanted they are, how inadequately they function. Everybody puzzles what to do about it. I do think I know something about what can be done about it in any institution because the principles are, as far as I'm concerned, fundamentally applicable throughout society.

Q: What have you done to date with the bureaucracy to humanize the working condition more?

A: I do hope that however this comes out it won't sound patronizing. I have not busied myself running around as the resident evangelist, trying to persuade everybody in government to please listen to my message. Perhaps the first thing is how we staffed this enormous and complex place. Commerce is generally regarded as something of a conglomerate, and my original assignment was to develop a procedure so the secretary and I could select the assistant secretaries for this enormous place. I knew quickly enough that I knew very little about the actual technical work of the department. I determined to hold a series of seminars. We said the purpose of the seminar was twofold: first to let the young undersecretary get a crash course in whatever it was—domestic and international business, science and technology; and second, to help determine in an almost collegial way, who among these altogether well-qualified people would be the best person to nominate as assistant secretary.

Q: What was the reaction to this?

A: People came to those seminars initially with some misgiving. They thought of it perhaps as demeaning, they thought of it as a competitive shootout. But they worked, they truly worked remarkably well. Almost without exception, somebody emerged as a really stunning figure. The very process began a kind of collegial spirit. In a department where it was not at all uncommon to think of it as, if you will, a department store—in which each agency pretty much ran itself autonomously, had very little connection with the other agencies—we began quickly, in this horizontal coordinate of developing a very collegial set of relationships. So almost at the beginning, I think we were under way in changing the character of this place in what was regarded as a rather strange, and initially seen with some skepticism, process. If what you seek is the development of an atmosphere in which each person has the opportunity to grow to his or her maximum potential, you must recognize that that growth is more threatened by intermediate and senior people than it is by an appetite for it on the part of large numbers of workers involved. It is more threatened, for that matter, by supervisors than history or system.

Q: Why is that?

A: Supervisors have struggled to get to that position, and most supervisors have spent a period of their lives subjected to what they regard as the tyranny or the direction of somebody else. Having once arrived here, they aren't all that eager to give it up. However paradoxical it may seem, therefore, if you truly want participation on the part of people, if you want the decision-making process that designs the working lives of people to move from the bottom up, it really better start at the top. Otherwise, it simply will not survive.

Q: How about the more direct elements of the worker, though?

A: Well, this was the horizontal coordinate that I see. Now we can address seriously the vertical coordinate. Some expressions of it. We have a newspaper in the Department of Commerce. There have been many newspapers in the Department of Commerce. Virtually every agency has its own house organ—polished, glossy, traditional stuff. This one isn't that at all. This one is the people's newspaper. It took a little doing before they really believed it, but the administration of the department has nothing to do with the content of the newspaper. But not one word of it was reviewed by anybody at the assistant secretary level or secretary level. Even the name of the newspaper, Comment, was developed by the people. They put together an ad hoc editorial staff. The mandate is clear—it's your paper, put in it what you like. Creative writing, poetry, criticism of the department. Raise questions, use it as a means of dialogue and communication, and have no concern other than those reasonable concerns of decency and taste and human consideration. Beyond that, nothing else.

Aside from the measures mentioned by Mr. Harman, we in Congress have a special role to play in increasing labor productivity. One of the best ways we can help further the goal of lowering inflation through increased job satisfaction is to work hard for the enactment of H.R. 2596, the Human Resources Development Act of 1977, which I have cosponsored. This bill has been considered by the Economic Stabilization Subcommittee of the Banking Committee, where it won my full support, was approved in the full Banking Committee, and is now pending in the Education and Labor Committee. I hope that the efforts of that committee and the Labor-Management Subcommittee, where the bill was referred, will be concentrated on the speedy passage of this important bill.

NATIONAL GROUPS ENDORSE THE PRODUCT LIABILITY INSURANCE TAX EQUITY ACT

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. WHALEN. Mr. Speaker, on October 27 I placed in the CONGRESSIONAL RECORD a statement identifying the cosponsors of the Product Liability Insurance Tax Equity Act, H.R. 7711, and a list of the national trade and professional associations that have endorsed the bill. Today, I am pleased to inform you that the October 27 lists are now outdated.

Several new cosponsors have added their names to the list of Representatives supporting PLITE, bringing the total to 57. Perhaps more importantly, public support for this proposed legislation continues to grow.

In brief, the Product Liability Insurance Tax Equity Act would allow the establishment of self-insurance reserve funds for protection against all or part of one's product or professional liability. The Federal tax code would be amended, to eliminate the present obstacles to self-insurance.

As I have noted in other RECORD statements, the concept of increased use of self-insurance for product or professional liability has been endorsed by the Bureau of Health Insurance at the Department of Health, Education and Welfare and by the recent report of the Commerce Department's Interagency Task Force on Product Liability.

In recent days, I have been informed that H.R. 7711 has gained the added support of the American Institute of Architects, the National LP-Gas Association, the American Metal Stamping Association and the Cast Metals Federation. As before, a large number of individuals and separate companies continue to write to me, also indicating their support for PLITE, but it is my policy not to identify individuals by name.

In previous RECORD statements, I have identified some of the other trade and professional groups, though. Here is a recapitulation of organizations that are publicly supporting my proposal:

American Consulting Engineers Council, American Institute of Architects, Boating Industry Association, Eastern Regional Roller Skating Rink Operators Association, Federation of American Hospitals, Louisiana Hospital Association, National Association of Brick Distributors, National LP-Gas Association, National Machine Tool Builders Association, National Small Business Association, National Society of Professional Engineers, and National Tool, Die and Precision Machining Association.

As you can see, this list is a varied and diverse as is our national economy. It reflects quite well the breadth of support for a change in the tax code to facilitate self-insurance for product and professional liability.

At this point in the RECORD, Mr. Speaker, I wish to insert the texts of several letters I have received recently. None has previously appeared in the public record. The letters follow:

AMERICAN INSTITUTE OF ARCHITECTS,
Washington, D.C., December 8, 1977.
Hon. CHARLES W. WHALEN, Jr.,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. WHALEN: The American Institute of Architects, the national society for the architectural profession, wishes to express its strong support for H.R. 7711, The Product Liability Insurance Tax Equity Act. The Institute believes that it is in the public interest to develop a mechanism for self-insurance by service professionals and product manufacturers.

Architects have been, and continue experiencing, the same disturbing problem of the other professions with regard to the high cost or unavailability of liability insurance. Rising premiums, and especially the costs of defense below deductible limits, are an ever increasing drain on the profession's income. Some architectural firms and individuals have been forced to proceed without professional liability insurance altogether.

The most disturbing aspects of this situation is the resultant risks to both the architectural profession and to the public. Architects risk the potential of bankruptcy when faced with successful claims if they are uninsured. The public risks the possibility of unenforceable judgments where individual or corporate assets are insufficient. With the greater availability of self-insurance your bill would provide, both risks would be substantially reduced.

In addition, while we accept the bill's dual approach to tax-deductible self-insurance reserves for professional and product liability, the Institute would strongly suggest that, because of their significant legal differences, the legislation should more clearly distinguish between the two areas of liability.

Again we wish to express our support and interest in H.R. 7711, and if you have any further questions in this regard please contact the Institute.

Sincerely,

JOHN M. MCGINTY, FAIA
President.

NATIONAL LP-GAS ASSOCIATION,
Arlington, Va., December 6, 1977.
Hon. AL ULLMAN,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: The National LP-Gas Association would like to take this opportunity to urge you to schedule hearings on H.R. 7711, the Product Liability Insurance Tax Equity Act, early in the Second Session of the 95th Congress.

The National LP-Gas Association has as its members both manufacturers of equipment and dealers who install equipment and furnish LP-Gas (propane). Our members, at both levels, have been affected by the developing product liability crisis, both in escalating premiums and in the unavailability of insurance. In a survey conducted of our members in 1976, we found that in the five-year period covered by the survey, premiums increased 170%. This does not take into consideration current increases that will occur as longer term policies expire, or coverage changes when going to greater deductible amounts (one member reported an increase in his deductible from $25,000 to $600,000 in recent years). It is not an overstatement to contemplate an average premium increase of over 200%.

As to solutions, there appears to be no immediate cureall. A number of our members have gone to higher deductibles in an attempt to hold down premium costs. Industry-wide, the NLPGA has had an Ad Hoc Liability Insurance Committee studying this problem for the last year and a half, examining captive insurance plans and other alternatives. Despite these efforts, there appears to be a growing need for statutory relief and Congressman Charles Whalen's H.R. 7711 is a promising ray of sunshine.

That bill would encourage the present trend toward self-insurance through tax deductible contributions to a tax-exempt self-insurance trust fund. Without this kind of an incentive, small, marginal operations often are unable to develop such a fund and may be caught in the product liability squeeze and forced out of business. For these reasons, we urge your Committee to move quickly to consider H.R. 7711 and related legislative proposals to resolve this growing national problem.

Sincerely yours,

DANIEL N. MYERS.

cc: Rep. Charles W. Whalen, Jr.

NATIONAL SOCIETY OF
PROFESSIONAL ENGINEERS,
Washington, D.C.
Hon. CHARLES W. WHALEN, Jr.,
Longfellow House Office Building,
Washington, D.C.

DEAR MR. WHALEN: On behalf of our 76,000 members I wish to note our interest in H.R. 7711 as introduced by you and several cosponsors to deal with the serious problem of liability claims and related expenses faced by individuals and firms engaged in the production of products and those providing professional services.

We have reviewed the legislation and related material kindly furnished by your office and we believe that the approach you have undertaken in H.R. 7711 is a very constructive and promising effort to deal with the liability problem on a realistic basis.

As indicated to Mr. Rosenberg of your staff, the National Society of Professional Engineers has been involved for many years in the development and sponsorship of a professional liability insurance program. Through this activity we have accumulated considerable background and experience in cooperation with the administrators of that program, and we would be more than willing to share such of the detailed data as may be helpful in seeking enactment of the kind of legislation you have sponsored. You may be interested in having a quite recent commentary, with statistics, on the increasing professional liability problem as set forth in the enclosed article by one of the officers of the firm which administers the program. These data illustrate better than any words the serious nature of the problem and the need for corrective legislation.

We look forward to working with you through your staff in developing support for consideration of H.R. 7711, and particularly to do what we can to have this matter considered by the Ways and Means Committee during the forthcoming hearings on tax reform legislation.

Sincerely yours,

DELBERT A. SCHMAND, P.E.
President.

AMERICAN METAL
STAMPING ASSOCIATION,
Richmond Hts., Ohio, September 13, 1977.
Hon. CHARLES W. WHALEN, Jr.
House of Representatives,
Washington, D.C.

DEAR MR. WHALEN: Product liability is an issue of great concern to members of the American Metal Stamping Association. Your Special Projects Director, Mr. Mark H. Rosenberg, recently sent AMSA a number of reprints from the Congressional Record which summarize and discuss your recent activities on behalf of those who need quick relief from rapidly rising product liability insurance premiums.

Your leadership is much appreciated! AMSA would like to add our name to the list of National Trade Associations which are interested in the Product Liability Insurance Tax Equity Act (PLITE).

Your bill, H.R. 7711, recognizes the viable role self insurance reserve funds for product liability can play by offering immediate and direct relief to those who are hardest hit by the product liability crisis. As you have noted, PLITE is not in itself a solution. However, it would provide quick relief, so long term solutions can be addressed in a rational manner.

AMSA will be watching H.R. 7711's progress with great interest.

Sincerely,

JON E. JENSON,
Executive Vice President.

NATIONAL ASSOCIATION OF
BRICK DISTRIBUTORS,
McLean, Va., November 29, 1977.
Hon. CHARLES W. WHALEN, Jr.
Longworth House Office Building,
Washington, D.C.

DEAR MR. WHALEN: As we wrote you in our previous letter of August 17, 1977, we stand behind you in support of H.R. 7711 (the Product Liability Insurance Tax Equity Act). We realize that this is not the final answer but feel it is a big step towards protecting small businessmen against product liability problems.

Our own association is now looking into ways that we can help our members out in this question. We are studying the possibility of a trust somewhat similar to a self-insurance, but as you know this is a very costly and time consuming undertaking.

Our membership has requested that NABD keep them informed of the changing facets of legislation regarding product liability so they can advise Congress of their opinion. We will continue to do this and hope that eventually this question can be brought under control.

Sincerely,

WALTER E. GALANTY, Jr.
Executive Director.

NATIONAL ASSOCIATION
OF BRICK DISTRIBUTORS,
McLean, Va., August 17, 1977.
Hon. CHARLES W. WHALEN, Jr.
Longworth House Office Building,
Washington, D.C.

DEAR MR. WHALEN: Thank you very much for sending to my office information regarding the Product/Professional Liability Insurance Issues. I have personally attended many meetings and seminars about product liability and many times find my mind boggled by the number of different solutions submitted on the question. I feel, however, that the PLITE bill you recommend has much merit.

In a recent survey taken of our members, we found that over 90% did not have product liability insurance and of the 10% who had it, most of them thought that the insurance company would pay any claim. On examination, it was found that of the two claims processed for two of our members, one claim was allowed and one was not.

We feel that because of the complexity of the issue, coupled with the fact of very little claims against our members, self-insurance is the most economical way to go and that is why we look favorable on your bill. NABD does not have a product liability insurance trust for its members, but we feel that your bill has much merit and hope it gets the support it needs.

Enclosed are two recent publications of

NABD, both of which cover the product liability question. As you can see, on the legislative report, we even ask our members to contact their congressmen regarding support.

I hope we have done our fair share in this matter and appreciate your comments.

Sincerely,

Walter E. Galanty, Jr.,
Executive Director.

"GO! FIGHTING IRISH"

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. MAZZOLI. Mr. Speaker, normally when my friend and distinguished colleague, the gentleman from Texas (Mr. Pickle) addresses this body, I stand impressed by his sense of timing, his knowledge of the subject, and his insight.

However, the gentleman's remarks in the Record of November 29 fall short of his usually high standards.

The Texas Longhorns might occupy college football's No. 1 spot for the moment, but surely the gentleman from Texas (Mr. Pickle) must know that disaster awaits the Longhorns when they go against my alma mater, Notre Dame, in the 1978 Cotton Bowl on January 2.

The Fighting Irish of Notre Dame—surely, Mr. Speaker, with a name like O'Neill, you must have a warm spot in your heart for anything Irish—last came to Texas and the Cotton Bowl in 1971, at which time they ended a 27-game Texas win streak by a score of 27 to 10.

Now, 7 years later, under the fine leadership of an "Irishman" named Joe Montana, the Irish are returning to the Cotton Bowl. And, all they have to dispose of in 1978 is a mere 11-game winning streak.

From their opening 19 to 9 victory over the current national champs, the Pitt Panthers, the Irish have steadily improved until now they are the premier college football team in the Nation.

The eyes of Texas are upon us. But Irish eyes are smiling.

Go Irish. Beat Horns.

THE YOUNGSTOWN, OHIO, POSTAL WORKERS EXPRESS APPRECIATION

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, December 12, 1977

Mr. CARNEY. Mr. Speaker, at this time I would like to insert into the Congressional Record a letter from the Youngstown, Ohio, Postal Workers to Members of the U.S. House of Representatives. This letter expresses their appreciation and thanks to all Members of the House who voted for an amendment to H.R. 9346, the "Social Security Financing Amendments of 1977," which deleted mandatory participation of Federal, State, and local government employees in the social security program in 1982.

The letter follows:

Hon. Charles J. Carney,
Rayburn House Office Building,
Washington, D.C.

Dear Sir: We ask you if it would be possible for you to read this letter to all the fine Congressmen who have done us the honor of helping us Federal employees in our crisis of the merger of the civil service-Social Security retirement programs.

We Youngstown, Ohio, Postal Workers want all these fine people to know that we very sincerely appreciate, and thank them for their efforts. May the good Lord give them the strength and guidance to continue their good work, for only in our America could this happen.

Thank you kindly,

Tom McNally.

Youngstown, Ohio.

FORMER CONGRESSMAN CARLETON J. KING OF NEW YORK

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 1, 1977

Mr. CONABLE. Mr. Speaker, I wish to join in the tributes to our former colleague from New York, Congressman Carleton J. King of Saratoga Springs. He served his home area for more than 35 years in positions of increasing importance in local, State, and Federal Government. As a Representative in Congress for 14 years, he was a sound and dedicated legislator who supported a strong national defense and recognized the importance of maintaining strong national fiscal policies as well. Those of us who were his colleagues appreciated his loyalty, responsibility, and courage.

At the time of his death, Carl King continued to exercise a special interest in our Armed Forces as Chairman of the Board of Visitors of the U.S. Military Academy. He also was a consultant to the Veterans' Administration.

Carl King had many good friends in this institution who are saddened by his passing. We all extend our condolences to Mrs. King and other members of the family.

HOUSE OF REPRESENTATIVES—*Thursday, December 15, 1977*

The House met at 10 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Unto you is born this day in the city of David, a Saviour who is Christ the Lord.—Luke 2: 11.

Eternal God, as we bow our heads in prayer in this forum of freedom may there come to us a fresh vision of Thy presence that we may be renewed in body, refreshed in spirit, and reinvigorated in mind for the day's work.

Bless this great country of ours in this hour. Out of differences and discords bring a spirit of unity and harmony that we may work together and live together peacefully, justly, and with good will. Confirm our faith in the principles upon which our Nation was founded and help us to keep them a reality in our own day.

Guide us through these hours and bring us safely to the peace and rest of eventide.

May the Lord bless us and keep us this day and all our days in every way and all the way. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

Mr. RUSSO. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

The question is on the approval of the Journal.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. RUSSO. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 284, nays 14, answered "present" 2, not voting 134, as follows:

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Chirdon, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On December 9, 1977:

H.J. Res. 662. Joint resolution making further continuing appropriations for the fiscal year 1978, and for other purposes.

On December 12, 1977:

H.R. 1904. An act to suspend until July 1, 1980, the duty on intravenous fat emulsion, and for other purposes.

On December 13, 1977:

H.R. 7. An act to authorize a career education program for elementary and secondary schools, and for other purposes;

H.R. 3313. An act for the relief of Mark Charles Mieir and Liane Maria Mieir;

H.R. 5555. An act for the relief of Adelaida Rea Berry;

H.R. 8159. An act to establish uniform structural requirements for intermodal cargo containers subject to the jurisdiction of the United States, designed to be transported interchangeably by sea and land carriers, and moving in, or designed to move in, international trade, and for other purposes; and

H.R. 8422. An act to amend titles XVIII and XIX of the Social Security Act to provide payment for rural health clinic services, and for other purposes.

CONFERENCE REPORT ON H.R. 9346, SOCIAL SECURITY FINANCING AMENDMENTS OF 1977

Mr. ULLMAN submitted the following conference report and statement on the bill (H.R. 9346) to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes:

CONFERENCE REPORT (H. REPT. NO. 95-837)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 9346) to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

That this Act, with the following table of contents, may be cited as the "Social Security Amendments of 1977".

TABLE OF CONTENTS

TITLE I—PROVISIONS RELATING TO THE FINANCING OF THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE PROGRAM

Sec. 101. Adjustments in tax rates.
Sec. 102. Allocations to disability insurance trust fund.
Sec. 103. Increases in earnings base.
Sec. 104. Effective date.

TITLE II—STABILIZATION OF REPLACEMENT RATES IN THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE PROGRAM

Sec. 201. Computation of primary insurance amount.
Sec. 202. Maximum benefits.
Sec. 203. Increase in old-age benefit amounts for delayed retirement.
"Sec. 204. Widow's and widower's insurance benefits in cases of delayed retirement.
Sec. 205. Conforming amendments.
Sec. 206. Effective date.

TITLE III—OTHER CHANGES IN PROVISIONS RELATING TO THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE PROGRAM

PART A—CHANGES IN EARNINGS TEST

Sec. 301. Liberalization of earnings test for individuals age 65 and over.
Sec. 302. Repeal of earnings limitation for individuals age 70 and over.
Sec. 303. Elimination of monthly earnings test.

PART B—COVERAGE

Sec. 311. Study of universal coverage.
Sec. 312. Coverage of nonprofit organizations which failed to file waiver certificates.
Sec. 313. Exclusion from coverage of certain limited partnership income.
Sec. 314. Employees of members of related groups of corporations.
Sec. 315. Tax on employers of individuals who receive income from tips.
Sec. 316. Revocation of exemption from coverage by clergymen.
Sec. 317. International agreements with respect to social security benefits.
Sec. 318. Modification of agreement with Illinois to provide coverage for certain policemen and firemen.
Sec. 319. Coverage for policemen and firemen in Mississippi.
Sec. 320. Coverage under divided retirement system for public employees in New Jersey.
Sec. 321. Coverage of service under Wisconsin retirement system.

PART C—BENEFIT AMOUNTS AND ELIGIBILITY

Sec. 331. Actuarial reduction of benefit increases to be applied as of time of original entitlement.
Sec. 332. Limitation on retroactive benefits.
Sec. 333. Delivery of benefit checks.
Sec. 334. Reduced benefits for spouses receiving Government pensions.
Sec. 335. Substantial gainful activity in case of blind individuals.
Sec. 336. Remarriage of widows and widowers.

Sec. 337. Duration-of-marriage requirement.

PART D—STUDY WITH RESPECT TO GENDER-BASED DISTINCTIONS

Sec. 341. Study of proposals to eliminate dependency and sex discrimination under the social security program.

PART E—COMBINED SOCIAL SECURITY AND INCOME TAX ANNUAL REPORTING

Subpart 1—Amendments to Title II of the Social Security Act

Sec. 351. Annual crediting of quarters of coverage.

Sec. 352. Adjustment in amount required for a quarter of coverage.

Sec. 353. Technical and conforming amendments.

Subpart 2—Amendments to the Internal Revenue Code of 1954

Sec. 355. Deduction of tax from wages.

Sec. 356. Technical and conforming amendments.

Subpart 3—Conforming Amendment to the Railroad Retirement Act of 1974

Sec. 358. Computation of employee annuities.

PART F—NATIONAL COMMISSION ON SOCIAL SECURITY

Sec. 361. Establishment of Commission.

PART G—MISCELLANEOUS PROVISIONS

Sec. 371. Appointment of hearing examiners.

Sec. 372. Report of Advisory Council on Social Security.

TITLE IV—PROVISIONS RELATING TO CERTAIN STATE WELFARE AND SERVICE PROGRAMS RECEIVING FEDERAL FINANCIAL ASSISTANCE

Sec. 401. Fiscal relief for States and political subdivisions with respect to costs of welfare programs.

Sec. 402. Incentive adjustments for quality control in Federal financial participation in aid to families with dependent children programs.

Sec. 403. Access to wage information.

Sec. 404. State demonstration projects.

Sec. 405. Reimbursement for erroneous State supplementary payments.

TITLE V—MISCELLANEOUS

Sec. 501. Coverage under medicare of certain power-operated wheelchairs.

Sec. 502. Federal Election Campaign Act amendments.

TITLE I—PROVISIONS RELATING TO THE FINANCING OF THE OLD-AGE SURVIVORS, AND DISABILITY INSURANCE PROGRAM

ADJUSTMENTS IN TAX RATES

Sec. 101. (a)(1) Section 3101(a) of the Internal Revenue Code of 1954 (relating to rate of tax on employees for purposes of old-age, survivors, and disability insurance) is amended by striking out paragraphs (1) and (2) inserting in lieu thereof the following:

"(1) with respect to wages received during the calendar years 1974 through 1977, the rate shall be 4.95 percent;

"(2) with respect to wages received during the calendar year 1978, the rate shall by 5.05 percent;

"(3) with respect to wages received during the calendar years 1979 and 1980, the rate shall be 5.08 percent;

"(4) with respect to wages received during the calendar year 1981, the rate shall be 5.35 percent;

"(5) with respect to wages received during the calendar years 1982 through 1984, the rate shall be 5.40 percent;

"(6) with respect to wages received during the calendar years 1985 through 1989, the rate shall be 5.70 percent; and

"(7) with respect to wages received after December 31, 1989, the rate shall be 6.20 percent.".

(2) Section 3111(a) of such Code (relating to rate of tax on employers for purposes of old-age, survivors, and disability insurance) is amended by striking out paragraphs (1) and (2) and inserting in lieu thereof the following:

"(1) with respect to wages paid during the calendar years 1974 through 1977, the rate shall be 4.95 percent;

"(2) with respect to wages paid during the calendar year 1978, the rate shall be 5.05 percent;

"(3) with respect to wages paid during the calendar years 1979 and 1980, the rate shall be 5.08 percent;

"(4) with respect to wages paid during the calendar year 1981, the rate shall be 5.35 percent;

"(5) with respect to wages paid during the calendar years 1982 through 1984, the rate shall be 5.40 percent;

"(6) with respect to wages paid during the calendar years 1985 through 1989, the rate shall by 5.70 percent; and

"(7) with respect to wages paid after December 31, 1989, the rate shall be 6.20 percent.".

(3) Section 1401(a) of such Code (relating to rate of tax on self-employment income for purposes of old-age, survivors, and disability insurance) is amended by striking out "a tax" and all that follows and inserting in lieu thereof the following: "a tax as follows:

"(1) in the case of any taxable year beginning before January 1, 1978, the tax shall be equal to 7.0 percent of the amount of the self-employment income for such taxable year;

"(2) in the case of any taxable year beginning after December 31, 1977, and before January 1, 1979, the tax shall be equal to 7.10 percent of the amount of the self-employment income for such taxable year;

"(3) in the case of any taxable year beginning after December 31, 1978, and before January 1, 1981, the tax shall be equal to 7.05 percent of the amount of the self-employment income for such taxable year;

"(4) in the case of any taxable year beginning after December 31, 1980, and before January 1, 1982, the tax shall be equal to 8.00 percent of the amount of the self-employment income for such taxable year;

"(5) in the case of any taxable year beginning after December 31, 1981, and before January 1, 1985, the tax shall be equal to 8.05 percent of the amount of the self-employment income for such taxable year;

"(6) in the case of any taxable year beginning after December 31, 1984, and before January 1, 1990, the tax shall be equal to 8.55 percent of the amount of the self-employment income for such taxable year; and

"(7) in the case of any taxable year beginning after December 31, 1989, the tax shall be equal to 9.30 percent of the amount of the self-employment income for such taxable year.".

(b)(1) Section 3101(b) of such Code (relating to rate of tax on employees for purposes of hospital insurance) is amended by striking out paragraphs (1) through (4) and inserting in lieu thereof the following:

"(1) with respect to wages received during the calendar years 1974 through 1977, the rate shall be 0.90 percent;

"(2) with respect to wages received during the calendar year 1978, the rate shall be 1.00 percent;

"(3) with respect to wages received during the calendar years 1979 and 1980, the rate shall be 1.05 percent;

"(4) with respect to wages received during the calendar years 1981 through 1984, the rate shall be 1.30 percent;

"(5) with respect to wages received during the calendar year 1985, the rate shall be 1.35 percent; and

"(6) with respect to wages received after December 31, 1985, the rate shall be 1.45 percent.".

(2) Section 3111(b) of such Code (relating to rate of tax on employers for purposes of hospital insurance) is amended by striking out paragraphs (1) through (4) and inserting in lieu thereof the following:

"(1) with respect to wages paid during the calendar years 1974 through 1977, the rate shall be 0.90 percent;

"(2) with respect to wages paid during the calendar year 1978, the rate shall be 1.00 percent;

"(3) with respect to wages paid during the calendar years 1979 and 1980, the rate shall be 1.05 percent;

"(4) with respect to wages paid during the calendar years 1981 through 1984, the rate shall be 1.30 percent;

"(5) with respect to wages paid during the calendar year 1985, the rate shall be 1.35 percent; and

"(6) with respect to wages paid after December 31, 1985, the rate shall be 1.45 percent.".

(3) Section 1401(b) of such Code (relating to tax on self-employment income for purposes of hospital insurance) is amended by striking out paragraphs (1) through (4) and inserting in lieu thereof the following:

"(1) in the case of any taxable year beginning after December 31, 1973, and before January 1, 1978, the tax shall be equal to 0.90 percent of the amount of the self-employment income for such taxable year;

"(2) in the case of any taxable year beginning after December 31, 1977, and before January 1, 1979, the tax shall be equal to 1.00 percent of the amount of the self-employment income for such taxable year;

"(3) in the case of any taxable year beginning after December 31, 1978, and before January 1, 1981, the tax shall be equal to 1.05 percent of the amount of the self-employment income for such taxable year;

"(4) in the case of any taxable year beginning after December 31, 1980, and before January 1, 1985, the tax shall be equal to 1.30 percent of the amount of the self-employment income for such taxable year;

"(5) in the case of any taxable year beginning after December 31, 1984, and before January 1, 1986, the tax shall be equal to 1.35 percent of the amount of the self-employment income for such taxable year; and

"(6) in the case of any taxable year beginning after December 31, 1985, the tax shall be equal to 1.45 percent of the amount of the self-employment income for such taxable year.".

ALLOCATIONS TO DISABILITY INSURANCE TRUST FUND

SEC. 102. (a)(1) Section 201(b)(1) of the Social Security Act is amended by striking out clauses (G) through (J) and inserting in lieu thereof the following: "(G) 1.55 per centum of the wages (as so defined) paid after December 31, 1977, and before January 1, 1979, and so reported, (H) 1.50 per centum of the wages (as so defined) paid after December 31, 1978, and before January 1, 1981, and so reported, (I) 1.65 per centum of the wages (as so defined) paid after December 31, 1980, and before January 1, 1985, and so reported, (J) 1.90 per centum of the wages (as so defined) paid after December 31, 1984, and before January 1, 1990, and so reported, and (K) 2.20 per centum of the wages (as so defined) paid after December 31, 1989, and so reported,".

(2) Section 201(b)(2) of such Act is amended by striking out clauses (G) through (J) and inserting in lieu thereof the following: (G) 1.090 per centum of the amount of self-employment income (as so defined) so reported for any taxable year beginning after December 31, 1977, and before January 1, 1979, (H) 1.0400 per centum of the amount of self-employment income (as so defined) so reported for any taxable year beginning after December 31, 1978,

and before January 1, 1981, (I) 1.2375 per centum of the amount of self-employment income (as so defined) so reported for any taxable year beginning after December 31, 1980, and before January 1, 1985, (J) 1.4250 per centum of the amount of self-employment income (as so defined) so reported for any taxable year beginning after December 31, 1984, and before January 1, 1990, and (K) 1.650 per centum of the amount of self-employment income (as so defined) so reported for any taxable year beginning after December 31, 1989,".

INCREASES IN EARNINGS BASE

SEC. 103. (a) (1) Section 230(a) of the Social Security Act is amended by inserting "or (c)" after "determined under subsection (b)".

(2) Section 230(b) of such Act is amended by striking out "shall be" in the matter preceding paragraph (1) and inserting in lieu thereof "shall subject to subsection (c)) be".

(b) Section 230(c) of such Act is amended—

(1) by inserting "(1)" immediately before "the 'contribution and benefit base' "; and

(2) by striking out "section." and inserting in lieu thereof the following:

"section, and (2) the 'contribution and benefit base' with respect to remuneration paid (and taxable years beginning)—

"(A) in 1978 shall be $17,700,

"(B) in 1979 shall be $22,900,

"(C) in 1980 shall be $25,900, and

"(D) in 1981 shall be $29,700.

For purposes of determining under subsection (b) the 'contribution and benefit base' with respect to remuneration paid (and taxable years beginning) in 1982 and subsequent years, the dollar amounts specified in clause (2) of the preceding sentence shall be considered to have resulted from the application of such subsection (b) and to be the amount determined (with respect to the years involved) under that subsection. For purposes of determining employer tax liability under section 3221(a) of the Internal Revenue Code of 1954, for purposes of determining the portion of the employee representative tax liability under section 3211 (a) of such Code which results from the application of the 9.5 percent rate specified therein, and for purposes of computing average monthly compensation under section 3(j) of the Railroad Retirement Act of 1974, except with respect to annuity amounts determined under section 3(a) or 3(f) (3) of such Act, clause (2) and the preceding sentence of this subsection shall be disregarded.".

(c) (1) Section 230 of such Act is further amended by adding at the end thereof the following new subsection:

"(d) Notwithstanding any other provision of law, the contribution and benefit base determined under this section for any calendar year after 1976 for purposes of section 4022(b) (3) (B) of Public Law 93-406, with respect to any plan, shall be the contribution and benefit base that would have been determined for such year if this section was in effect immediately prior to the enactment of the Social Security Amendments of 1977 had remained in effect without change.".

(2) The amendment made by paragraph (1) shall apply with respect to plan terminations occurring after the date of the enactment of this Act.

(d) (1) The second sentence of section 215 (i) (2) (D) (v) of such Act is amended by striking out "is equal to one-twelfth of the new contribution and benefit base" and inserting in lieu thereof "is equal to, or exceeds by less than $5, one-twelfth of the new contribution and benefit base".

(2) The third sentence of section 215(i) (2) (D) (v) of such Act is amended by striking out all that follows "clause (iv)" and inserting in lieu thereof "plus 20 percent of the excess of the second figure in the last line of column III as extended under the preceding sentence over such second figure for the calendar year in which the table of benefits is revised.".

EFFECTIVE DATE

SEC. 104. The amendments made by this title shall apply with respect to remuneration paid or received, and taxable years beginning, after 1977.

TITLE II—STABILIZATION OF REPLACEMENT RATES IN THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE PROGRAM

COMPUTATION OF PRIMARY INSURANCE AMOUNT

SEC. 201. (a) Section 215(a) of the Social Security Act is amended to read as follows:

"(a) (1) (A) The primary insurance amount of an individual shall (except as otherwise provided in this section) be equal to the sum of—

"(i) 90 percent of the individual's average indexed monthly earnings (determined under subsection (b)) to the extent that such earnings do not exceed the amount established for purposes of this clause by subparagraph (B),

"(ii) 32 percent of the individual's average indexed monthly earnings to the extent that such earnings exceed the amount established for purposes of clause (i) but do not exceed the amount established for purposes of this clause by subparagraph (B), and

"(iii) 15 percent of the individual's average indexed monthly earnings to the extent that such earnings exceed the amount established for purposes of clause (ii),

rounded in accordance with subsection (g), and thereafter increased as provided in subsection (i).

"(B) (i) For individuals who initially become eligible for old-age or disability insurance benefits, or who die (before becoming eligible for such benefits), in the calendar year 1979, the amount established for purposes of clause (i) and (ii) of subparagraph (A) shall be $180 and $1,085, respectively.

"(ii) For individuals who initially become eligible for old-age or disability insurance benefits, or who die (before becoming eligible for such benefits), in any calendar year after 1979, each of the amounts so established shall equal the product of the corresponding amount established with respect to the calendar year 1979 under clause (i) of this subparagraph and the quotient obtained by dividing—

"(I) the average of the total wages (as defined in regulations of the Secretary and computed without regard to the limitations specified in section 209(a)) reported to the Secretary of the Treasury or his delegate for the second calendar year preceding the calendar year for which the determination is made, by

"(II) the average of the total wages (as so defined and computed) reported to the Secretary of the Treasury or his delegate for the calendar year 1977.

"(iii) Each amount established under clause (ii) for any calendar year shall be rounded to the nearest $1, except that any amounts so established which is a multiple of $0.50 but not of $1 shall be rounded to the next higher $1.

"(C) (i) No primary insurance amount computed under subparagraph (A) may be less than—

"(I) the dollar amount set forth on the first line of column IV in the table of benefits contained in (or deemed to be contained in) this subsection as in effect in December 1978, rounded (if not a multiple of $1) to the next higher multiple of $1, or

"(II) an amount equal to $11.50 multiplied by the individual's years of coverage in excess of 10, or the increased amount determined for purposes of this subdivision under subsection (i),

whichever is greater. No increase under subsection (i), except as provided in subsection (i) (2) (A), shall apply to the dollar amount specified in subdivision (I) of this clause.

"(ii) For purposes of clause (i) (II), the term 'years of coverage' with respect to any individual means the number (not exceeding 30) equal to the sum of (I) the number (not exceeding 14 and disregarding any fraction) determined by dividing (a) the total of the wages credited to such individual (including wages deemed to be paid prior to 1951 to such individual under section 217, compensation under the Railroad Retirement Act of 1937 prior to 1951 which is creditable to such individual pursuant to this title, and wages deemed to be paid prior to 1951 to such individual under section 231) for years after 1936 and before 1951 by (b) $900, plus (II) the number equal to the number of years after 1950 each of which is a computation base year (within the meaning of subsection (b) (2) (B) (ii) and in each of which he is credited with wages (including wages deemed to be paid to such individual under section 217, compensation under the Railroad Retirement Act of 1937 or 1974 which is creditable to such individual pursuant to this title, and wages deemed to be paid to such individual under section 229) and self-employment income of not less than 25 percent of the maximum amount which, pursuant to subsection (e), may be counted for such year, or of not less than 25 percent of the maximum amount which could be so counted for such year (in the case of a year after 1977) if section 230 as in effect immediately prior to the enactment of the Social Security Amendments of 1977 had remained in effect without change.

"(D) In each calendar year after 1978 the Secretary shall publish in the Federal Register, on or before November 1, the formula for computing benefits under this paragraph and for adjusting wages and self-employment income under subsection (b) (3) in the case of an individual who becomes eligible for an old-age insurance benefit, or (if earlier) becomes eligible for a disability insurance benefit or dies, in the following year, and the average of the total wages (as described in subparagraph (B) (ii) (I)) on which that formula is based. With the initial publication required by this subparagraph, the Secretary shall also publish in the Federal Register the average of the total wages (as so described) for each calendar year after 1950.

"(2) (A) A year shall not be counted as the year of an individual's death or elgibility for purposes of this subsection or subsection (i) in any case where such individual was entitled to a disability insurance benefit for any of the 12 months immediately preceding the month of such death or eligibility (but there shall be counted instead the year of the individual's eligibility for the disability insurance benefit or benefits to which he was entitled during such 12 months).

"(B) In the case of an individual who was entitled to a disability insurance benefit for any of the 12 months before the month in which he became entitled to an old-age insurance benefit, became reentitled to a disability insurance benefit, or died, the primary insurance amount for determining any benefit attributable to that entitlement, reentitlement, or death is the greater of—

"(i) the primary insurance amount upon which such disability insurance benefit was based, increased by the amount of each general benefit increase (as defined in subsection (i) (3)), and each increase provided under subsection (i) (2), that would have applied to such primary insurance amount had the individual remained entitled to such disability insurance benefit until the month in which he became so entitled or reentitled or died, or

"(ii) the amount computed under paragraph (1) (C).

"(C) In the case of an individual who was entitled to a disability insurance benefit for any month, and with respect to whom a primary insurance amount is required to be computed at any time after the close of the period of the individual's disability (whether because of such individual's subsequent entitlement to old-age insurance benefits or to a disability insurance benefit based upon a subsequent period of disability, or because of such individual's death), the primary insurance amount so computed may in no case be less than the primary insurance amount with respect to which such former disability insurance benefit was most recently determined.

"(3)(A) Paragraph (1) applies only to an individual remained entitled to such disabil-insurance benefit prior to January 1979 and who in that or any succeeding month—

"(i) becomes eligible for such a benefit,

"(ii) becomes eligible for a disability insurance benefit, or

"(iii) dies,

and (except for subparagraph (C)(i)(II) thereof) it applies to every such individual except to the extent otherwise provided by paragraph (4).

"(B) For purposes of this title, an individual is deemed to be eligible—

"(i) for old-age insurance benefits, for months beginning with the month in which he attains age 62, or

"(ii) for disability insurance benefits, for months beginning with the month in which his period of disability began as provided under section 216(i)(2)(C),

except as provided in paragraph (2)(A) in cases where fewer than 12 months have elapsed since the termination of a prior period of disability.

"(4) Paragraph (1) (except for subparagraph (C)(i)(II) thereof) does not apply to the computation or recomputation of a primary insurance amount for—

"(A) an individual who was eligible for a disability insurance benefit for a month prior to January 1979 unless, prior to the month in which occurs the event described in clause (i), (ii), or (iii) of paragraph (3)(A), there occurs a period of at least 12 consecutive months for which he was not entitled to a disability insurance benefit, or

"(B) an individual who had wages or self-employment income credited for one or more years prior to 1979, and who was not eligible for an old-age or disability insurance benefit, and did not die, prior to January 1979, if in the year for which the computation or recommendation would be made the individual's primary insurance amount would be greater if computed or recomputed—

"(i) under section 215(a) as in effect in December 1978, for purposes of old-age insurance benefits in the case of an individual who becomes eligible for such benefits prior to 1984, or

"(ii) as provided by section 215(d), in the case of an individual to whom such section applies.

In determining whether an individual's primary insurance amount would be greater if computed or recomputed as provided in subparagraph (B), (I) the table of benefits in effect in December 1978 shall be applied without regard to any increases in that table which may become effective (in accordance with subsection (i)(4)) for years after 1978 (subject to clause (iii) of subsection (i)(2)(A) but without regard to clauses (iv) and (v) thereof) and (II) such individual's average monthly wage shall be computed as provided by subsection (b)(4).

"(5) For purposes of computing the primary insurance amount (after December 1978) of an individual to whom paragraph (1) does not apply (other than an individual described in paragraph (4)(B)), this section as in effect in December 1978 shall remain in effect, except that, effective for January 1979, the dollar amount specified in paragraph (3) of subsection (a) shall be increased to $11.50. The table for determining primary insurance amounts and maximum family benefits contained in this section in December 1978 shall be revised as provided by subsection (i) for each year after 1978.".

(b) Section 215(b) of such Act is amended to read as follows:

"Average Indexed Monthly Earnings; Average Monthly Wage

"(b)(1) An individual's average indexed monthly earnings shall be equal to the quotient obtained by dividing—

"(A) the total (after adjustment under paragraph (3)) of his wages paid in and self-employment income credited to his benefit computation years (determined under paragraph (2)), by

"(B) the number of months in those years.

"(2)(A) The number of an individual's benefit computation years equals the number of elapsed years, reduced by five, except that the number of an individual's benefit computation years may not be less than two.

"(B) For purposes of this subsection with respect to any individual—

"(i) the term 'benefit computation years' means those computation base years, equal in number to the number determined under subparagraph (A), for which the total of such individual's wages and self-employment income, after adjustment under paragraph (3), is the largest;

"(ii) the term 'computation base years' means the calendar years after 1950 and before—

"(I) in the case of an individual entitled to old-age insurance benefits, the year in which occurred (whether by reason of section 202(j)(1) or otherwise) the first month of that entitlement; or

"(II) in the case of an individual who has died (without having become entitled to old-age insurance benefits), the year succeeding the year of his death;

except that such term excludes any calendar year entirely included in a period of disability; and

"(iii) the term 'number of elapsed years' means (except as otherwise provided by section 104(j)(2) of the Social Security Amendments of 1972) the number of calendar years after 1950 (or, if later, the year in which the individual attained age 21) and before the year in which the individual died, or, if it occurred earlier (but after 1960), the year in which he attained age 62; except that such term excludes any calendar year any part of which is included in a period of disability.

"(3)(A) Except as provided by subparagraph (B), the wages paid in and self-employment income credited to each of an individual's computation base years for purposes of the selection therefrom of benefit computation years under paragraph (2) shall be deemed to be equal to the product of—

"(i) the wages and self-employment income paid in or credited to such year (as determined without regard to this subparagraph), and

"(ii) the quotient obtained by dividing—

"(I) the average of the total wages (as defined in regulations of the Secretary and computed without regard to the limitations specified in section 209(a)) reported to the Secretary of the Treasury or his delegate for the second calendar year (after 1976) preceding the earliest of the year of the individual's death, eligibility for an old-age insurance benefit, or eligibility for a disability insurance benefit (except that the year in which the individual dies, or becomes eligible, shall not be considered as such year if the individual was entitled to disability insurance benefits for any month in the 12-month period immediately preceding such death or eligibility, but there shall be counted instead the year of the individual's eligibility for the disability insurance benefit to which he was entitled in such 12-month period), by

"(II) the average of the total wages (as so defined and computed) reported to the Secretary of the Treasury or his delegate for the computation base year for which the determination is made.

"(B) Wages paid in or self-employment income credited to an individual's computation base year which—

"(i) occurs after the second calendar year specified in subparagraph (A)(ii)(I), or

"(ii) is a year treated under subsection (f)(2)(C) as though it were the last year of the period specified in paragraph (2)(B)(ii),

shall be available for use in determining an individual's benefit computation years, but without applying subparagraph (A) of this paragraph.

"(4) For purposes of determining the average monthly wage of an individual whose primary insurance amount is computed (after 1978) under section 215(a) or 215(d) as in effect (except with respect to the table contained therein) in December 1978, by reason of subsection (a)(4)(B), this subsection as in effect in December 1978 shall remain in effect, except that paragraph (2)(C) (as then in effect) shall be deemed to provide that 'computation base years' include only calendar years in the period after 1950 (or 1936, if applicable) and prior to the year in which occurred the first month for which the individual was eligible (as defined in subsection (a)(3)(B) as in effect in January 1979) for an old-age or disability insurance benefit, or, if earlier, the year in which he died. Any calendar year all of which is included in a period of disability shall not be included as a computation base year for such purposes.".

(c) Section 215(c) of such Act is amended to read as follows:

"Application of Prior Provisions in Certain Cases

"(c) This subsection as in effect in December 1978 shall remain in effect with respect to an individual to whom subsection (a)(1) does not apply by reason of the individual's eligibility for an old-age or disability insurance benefit, or the individual's death, prior to 1979.".

(d)(1) The matter in the text of section 215(d) of such Act which precedes paragraph (1)(C) is amended to read as follows:

"(d)(1) For purposes of column I of the table appearing in subsection (a), as that subsection was in effect in December 1977, an individual's primary insurance benefit shall be computed as follows:

"(A) The individual's average monthly wage shall be determined as provided in subsection (b), as in effect in December 1977 (but without regard to paragraph (4) thereof), except that for purposes of paragraphs (2)(C) and (3) of that subsection (as so in effect) 1936 shall be used instead of 1950.

"(B) For purposes of subparagraphs (B) and (C) of subsection (b)(2) (as so in effect)—

"(i) the total wages prior to 1951 (as defined in subparagraph (C) of this paragraph) of an individual who attained age 21 after 1936 and prior to 1950 shall be divided by the number of years (hereinafter in this subparagraph referred to as the 'divisor') elapsing after the year in which the individual attained age 20 and prior to 1951; and

"(ii) the total wages prior to 1951 (as defined in subparagraph (C) of this paragraph) of an individual who attained age 21 after 1949 shall be divided by the number of years (hereinafter in this subparagraph referred to as the 'divisor') elapsing after 1949 and prior to 1951.

The quotient so obtained shall be deemed to be the individual's wages credited to each of the years which were used in computing the amount of the divisor, except that—

"(iii) if the quotient exceeds $3,000, only $3,000 shall be deemed to be the individual's wages for each of the years which were used in computing the amount of the divisor, and the remainder of the individual's total wages prior to 1951 (I) if less than $3,000, shall be deemed credited to the year immediately preceding the earliest year used in computing the amount of the divisor, or (II) if $3,000 or more, shall be deemed credited, in $3,000 increments, to the year immediately preceding the earliest year used in computing the amount of the divisor and to each year consecutively preceding that year, with any remainder less than $3,000 being credited to the year immediately preceding the earliest year to which a full $3,000 increment was credited; and

"(iv) no more than $12,000 may be taken into account, for purposes of this subparagraph, as total wages after 1936 and prior to 1951.".

(2) Section 215(d)(1)(D) of such Act is amended to read as follows:

"(D) The individual's primary insurance benefit shall be 40 percent of the first $50 of his average monthly wage as computed under this subsection, plus 10 percent of the next $200 of his average monthly wage, increased by 1 percent for each increment year. The number of increment years is the number, not more than 14 nor less than 4, that is equal to the individual's total wages prior to 1951 divided by $1,650 (disregarding any fraction).".

(3) Section 215(d)(3) of such Act is amended (A) by striking out "in the case of an individual" and all that follows and inserting in lieu thereof the following "in the case of an individual who had a period of disability which began prior to 1951, but only if the primary insurance amount resulting therefrom is higher than the primary insurance amount resulting from the application of this section (as amended by the Social Security Amendments of 1967) and section 220.".

(4) Section 215(d) of such Act is further amended by adding at the end thereof the following new paragraph:

"(4) The provisions of this subsection as in effect in December 1977 shall be applicable to individuals who become eligible for old-age or disability insurance benefits or die prior to 1978.".

(e) Section 215(e) of such Act is amended—

(1) by striking out "average monthly wage" each place it appears and inserting in lieu thereof "average indexed monthly earnings or, in the case of an individual whose primary insurance amount is computed under section 215(a) as in effect prior to January 1979, average monthly wage," and

(2) by inserting immediately before "of (A)" in paragraph (1) the following: "(before the application, in the case of average indexed monthly earnings, of subsection (b)(3)(A))".

(f)(1) Section 215(f)(2) of this Act is amended to read as follows:

"(2)(A) If an individual has wages or self-employment income for a year after 1978 for any part of which he is entitled to old-age or disability insurance benefits, the Secretary shall, at such time or times and within such period as he may by regulation prescribe, recompute the individual's primary insurance amount for that year.

"(B) For the purpose of applying subparagraph (A) of subsection (a)(1) to the average indexed monthly earnings of an individual to whom that subsection applies and who receives a recomputation under this paragraph, there shall be used, in lieu of the amounts established by subsection (a)(1)(B) for purposes of clauses (i) and (ii) of subsection (a)(1)(A), the amounts so established that were (or, in the case of an individual described in subsection (a)(4)(B), would have been) used in the computation of such individual's primary insurance amount prior to the application of this subsection.

"(C) A recomputation of any individual's primary insurance amount under this paragraph shall be made as provided in subsection (a)(1) as though the year with respect to which it is made is the last year of the period specified in subsection (b)(2)(B)(ii); and subsection (b)(3)(A) shall apply with respect to any such recomputation as it applied in the computation of such individual's primary insurance amount prior to the application of this subsection.

"(D) A recomputation under this paragraph with respect to any years shall be effective—

"(i) in the case of an individual who did not die in that year, for monthly benefits beginning with benefits for January of the following year; or

"(ii) in the case of an individual who died in that year, for monthly benefits beginning with benefits for the month in which he died.".

(2) Section 215(f)(3) of such Act is repealed.

(3) Section 215(f)(4) of such Act is amended to read as follows:

"(4) A recomputation shall be effective under this subsection only if it increases the primary insurance amount by at least $1.".

(4) Section 215(f) of such Act is further amended by adding at the end thereof the following new paragraphs:

"(7) This subsection as in effect in December 1978 shall continue to apply to the recomputation of a primary insurance amount computed under subsection (a) or (d) as in effect (without regard to the table in subsection (a)) in that month, and, where appropriate, under subsection (d) as in effect in December 1977. For purposes of recomputing a primary insurance amount determined under subsection (a) or (d) (as so in effect) in the case of an individual to whom those subsections apply by reason of subsection (a)(4)(B) as in effect after December 1978, no remuneration shall be taken into account for the year in which the individual initially became eligible for an old-age or disability insurance benefit or died, or for any year thereafter.

"(8) The Secretary shall recompute the primary insurance amounts applicable to beneficiaries whose benefits are based on a primary insurance amount which was computed under subsection (a)(3) effective prior to January 1979, or would have been so computed if the dollar amount specified therein were $11.50. Such recomputation shall be effective January 1979, and shall include the effect of the increase in the dollar amount provided by subsection (a)(1)(C)(i)(II). Such primary insurance amount shall be deemed to be provided under such section for purposes of subsection (i).".

(g)(1) Section 215(i)(2)(A)(ii) of such Act is amended to read as follows:

"(ii) If the Secretary determines that the base quarter in any year is a cost-of-living computation quarter, he shall, effective with the month of June of that year as provided in subparagraph (B), increase—

"(I) the benefit amount to which individuals are entitled for that month under section 227 or 228,

"(II) the primary insurance amount of each other individual on which benefit entitlement is based under this title (including a primary insurance amount determined under subsection (a)(1)(C)(i)(I), but subject to the provisions of such subsection (a)(1)(C)(i) and clauses (iv) and (v) of this subparagraph), and

"(III) the amount of total monthly benefits based on any primary insurance amount which is permitted under section 203 (and such total shall be increased, unless otherwise so increased under another provision of this title, at the same time as such primary insurance amount) or, in the case of a primary insurance amount computed under subsection (a) as in effect (without regard to the table contained therein) prior to January 1979, the amount to which the beneficiaries may be entitled under section 203 as in effect in December 1978, except as provided by section 203(a)(6) and (7) as in effect after December 1978.

The increase shall be derived by multiplying each of the amounts described in subdivisions (I), (II), and (III) (including each of those amounts as previously increased under this subparagraph) by the same percentage (rounded to the nearest one-tenth of 1 percent) as the percentage by which the Consumer Price Index for that cost-of-living computation quarter exceeds such index for the most recent prior calendar quarter which was a base quarter under paragraph (1)(A)(ii) or, if later, the most recent cost-of-living computation quarter under paragraph (1)(B); and any amount so increased that is not a multiple of $0.10 shall be increased to the next higher multiple of $0.10. Any increase under this subsection in a primary insurance amount determined under subparagraph (C)(i)(II) of subsection (a)(1) shall be applied after the initial determination of such primary insurance amount under that subparagraph (with the amount of such increase, in the case of an individual who becomes eligible for old-age or disability insurance benefits or dies in a calendar year after 1979, being determined from the range of possible primary insurance amounts published by the Secretary under the last sentence of subparagraph (D)).".

(2) Section 215(i)(2)(A) of such Act is amended by adding at the end thereof the following clauses:

"(iii) In the case of an individual who becomes eligible for an old-age or disability insurance benefit, or who dies prior to becoming so eligible, in a year in which there occurs an increase provided under clause (ii), the individual's primary insurance amount (without regard to the time of entitlement to that benefit) shall be increased (unless otherwise so increased under another provision of this title and, with respect to a primary insurance amount determined under subsection (a)(1)(C)(i)(I), subject to the provisions of subsection (a)(1)(C)(i) and clauses (iv) and (x) of this subparagraph) by the amount of that increase and subsequent applicable increases, but only with respect to benefits payable for months after May of that year.

"(iv)(I) In the case of an individual who is entitled to an old-age insurance benefit that is based on a primary insurance amount determined under subsection (a)(1)(C)(i)(I), such primary insurance amount shall not be increased under this subsection for any year before the year in which occurs the first month with respect to which there is payable to such individual all or some part of such benefit after application of the provisions of section 203 relating to deductions on account of work, or, if earlier, the year in which he attains age 65.

"(II) In the case of an individual who is entitled to an insurance benefit under subsection (e) or (f) of section 202 that is based on a primary insurance amount determined under subsection (a)(1)(C)(i)(I), such primary insurance amount shall not be increased under this subsection for any year (except as provided in subdivision (III)) before the year in which occurs the first month with respect to which there is payable to such individual all or some part of such benefit after application of the provisions of section 203 relating to deductions on account of work, or, if earlier, the year in which he attains age 65.

"(III) Any increase under this subsection which would otherwise be applied to a primary insurance amount except for the provisions of subdivision (II) of this clause, shall apply to such primary insurance amount if, during any month of the year in which the increase occurs, any individual is entitled to a benefit under subsection (d), (g), or (h) of section 202 based on such primary insurance amount, and such primary insurance amount is based upon the wages and self-employment income of a deceased individual.

"(IV) No primary insurance amount determined under subsection (a)(1)(C)(i)(I) shall be increased under this subsection for any year during which no individual was entitled to any benefit based thereon under section 202 or 223 for any month of such year.

"(V) In any case in which an increase under this subsection which occurs during any year applies to a primary insurance amount determined under subsection (a)(1)(C)(i)(I), and such an increase occurring in a later year does not apply to such primary insurance amount on account of the provisions of this clause, any such increase which occurs in a later year which is applicable to such primary insurance amount shall be based upon such primary insurance amount as previously increased under this subsection.

"(v) Notwithstanding clause (iv), no primary insurance amount shall be less than that provided under section 215(a)(1) without regard to subparagraph (C)(i)(I) thereof, as subsequently increased by applicable increases under this section.".

(3) Section 215(i)(2)(D) of such Act (as amended by section 103(d) of this Act) is further amended by striking out all that follows the first sentence and inserting in lieu thereof the following: "He shall also publish in the Federal Register at that time (i) a revision of the range of the primary insurance amounts which are possible after the application of this subsection based on the dollar amount specified in subparagraph (C)(i)(II) of subsection (a)(1) (with such revised primary insurance amounts constituting the increased amounts determined for purposes of such subparagraph (C)(i)(II) under this subsection), or specified in subsection (a)(3) as in effect prior to 1979, and (ii) a revision of the range of maximum family benefits which correspond to such primary insurance amounts (with such maximum benefits being effective notwithstanding section 203(a) except for paragraph (3)(B) thereof (or paragraph (2) thereof as in effect prior to 1979)).".

(4) Section 215(i) of such Act is further amended by adding at the end thereof the following new paragraph:

"(4) This subsection as in effect in December 1978 shall continue to apply to subsections (a) and (d), as then in effect, for purposes of computing the primary insurance amount of an individual to whom subsection (a), as in effect after December 1978, does not apply (including an individual to whom subsection (a) does not apply in any year by reason of paragraph (4)(B) of that subsection (but the application of this subsection in such cases shall be modified by the application of subdivision (I) in the last sentence of paragraph (4) of that subsection)). For purposes of computing primary insurance amounts and maximum family benefits (other than primary insurance amounts and maximum family benefits for individuals to whom such paragraph (4)(B) applies), the Secretary shall publish in the Federal Register revisions of the table of benefits contained in subsection (a), as in effect in December 1978, as required by paragraph (2)(D) of this subsection as then in effect.".

MAXIMUM BENEFITS

SEC. 202. The text of section 203(a) of the Social Security Act is amended to read as follows:

"(a)(1) In the case of an individual whose primary insurance amount has been computed or recomputed under section 215(a)(1) or (4), or section 215(d), as in effect after December 1978, the total monthly benefits to which beneficiaries may be entitled under section 202 or 223 for a month on the basis of the wages and self-employment income of such individual shall, except as provided by paragraph (3) (but prior to any increases resulting from the application of paragraph (2)(A)(ii)(III) of section 215(i)), be reduced as necessary so as not to exceed—

"(A) 150 percent of such individual's primary insurance amount to the extent that it does not exceed the amount established with respect to this subparagraph by paragraph (2),

"(B) 272 percent of such individual's primary insurance amount to the extent that it exceeds the amount established with respect to subparagraph (A) but does not exceed the amount established with respect to this subparagraph by paragraph (2),

"(C) 134 percent of such individual's primary insurance amount to the extent that it exceeds the amount established with respect to subparagraph (B) but does not exceed the amount established with respect to this subparagraph by paragraph (2), and

"(D) 175 percent of such individual's primary insurance amount to the extent that it exceeds the amount established with respect to subparagraph (C).

Any such amount that is not a multiple of $0.10 shall be increased to the next higher multiple of $0.10.

"(2)(A) For individuals who initially become eligible for old-age or disability insurance benefits, or who die (before becoming so eligible for such benefits), in the calendar year 1979, the amounts established with respect to subparagraphs (A), (B), and (C) of paragraph (1) shall be $230, $332, and $433, respectively.

"(B) For individuals who initially become eligible for old-age or disability insurance benefits, or who die (before becoming so eligible for such benefits), in any calendar year after 1979, each of the amounts so established shall equal the product of the corresponding amount established for the calendar year 1979 by subparagraph (A) of this paragraph and the quotient obtained under subparagraph (B)(ii) of section 215(a)(1), with such product being rounded in the manner prescribed by section 215(a)(1)(B)(iii)

"(C) In each calendar year after 1978 the Secretary shall publish in the Federal Register, on or before November 1, the formula which (except as provided in section 215(i)(2)(D)) is to be applicable under this paragraph to individuals who become eligible for old-age or disability insurance benefits, or who die (before becoming eligible for such benefits), in the following calendar year.

"(D) A year shall not be counted as the year of an individual's death or eligibility for purposes of this paragraph or paragraph (7) in any case where such individual was entitled to a disability insurance benefit for any of the 12 months immediately preceding the month of such death or eligibility (but there shall be counted instead the year of the individual's eligibility for the disability insurance benefits to which he was entitled during such 12 months).

"(3)(A) When an individual who is entitled to benefits on the basis of the wages and self-employment income of any insured individual and to whom this subsection applies would (but for the provisions of section 202(k)(2)(A)) be entitled to child's insurance benefits for a month on the basis of the wages and self-employment income of one or more other insured individuals, the total monthly benefits to which all beneficiaries are entitled on the basis of such wages and self-employment income shall not be reduced under this subsection to less than the smaller of—

"(i) the sum of the maximum amounts of benefits payable on the basis of the wages and self-employment income of all such insured individuals, or

"(ii) an amount equal to the product of 1.75 and the primary insurance amount that would be computed under section 215(a)(1) for that month with respect to average indexed monthly earnings equal to one-twelfth of the contribution and benefit base determined for that year under section 230.

"(B) When two or more persons were entitled (without the application of section 202(j)(1) and section 223(b)) to monthly benefits under section 202 or 223 for January 1971 or any prior month on the basis of the wages and self-employment income of such insured individual and the provisions of this subsection as in effect for any such month were applicable in determining the benefit of any persons on the basis of such wages and self-employment income, the total of benefits for any month after January 1971 shall not be reduced to less than the largest of—

"(i) the amount determined under this subsection without regard to this subparagraph,

"(ii) the largest amount which has been determined for any month under this subsection for persons entitled to monthly benefits on the basis of such insured individual's wages and self-employment income, or

"(iii) if any persons are entitled to benefits on the basis of such wages and self-employment income for the month before the effective month (after September 1972) of a general benefit increase under this title (as defined in section 215(i)(3)) or a benefit increase under the provisions of section 215(i), an amount equal to the sum of amounts derived by multiplying the benefit amount determined under this title (excluding any part thereof determined under section 202(w)) for the month before such effective month (including this subsection, but without the application of section 222(b), section 202(q), and subsections (b), (c), and (d) of this section), for each such person for such month, by a percentage equal to the percentage of the increase provided under such benefit increase (with any such increased amount which is not a multiple of $0.10 being rounded to the next higher multiple of $0.10);

but in any such case (I) subparagraph (A) of this paragraph shall not be applied to such total of benefits after the application of clause (ii) or (iii), and (II) if section 202(k)(2)(A) was applicable in the case of any such benefits for a month, and ceases to apply for a month after such month, the provisions of clause (ii) or (iii) shall be applied, for and after the month in which section 202(k)(2)(A) ceases to apply, as though subparagraph (A) of this paragraph had not been applicable to such total of benefits for the last month for which clause (ii) or (iii) was applicable.

"(C) When any of such individuals is entitled to monthly benefits as a divorced spouse under section 202 (b) or (c) or as a surviving divorced spouse under section 202 (e) or (f) for any month, the benefit to which he or she is entitled on the basis of the wages and self-employment income he or she is entitled on the basis of the wages and self-employment income of such insured individual for such month shall be determined without regard to this subsection, and the benefits of all other individuals who are entitled for such month to monthly benefits under section 202 on the wages and self-employment income of such insured individual shall be determined as if no such divorced spouse or surviving divorced spouse were entitled to benefits for such month.

"(4) In any case in which benefits are reduced pursuant to the preceding provisions of this subsection, the reduction shall be made after any deductions under this section and after any deductions under section 222 (b). Whenever a reduction is made under this subsection in the total of monthly benefits to which individuals are entitled for any month on the basis of the wages and self-employment income of an insured individual, each such benefit other than the old-age or disability insurance benefit shall be proportionately decreased.

"(5) Notwithstanding any other provision of law, when—

"(A) two or more persons are entitled to monthly benefits for a particular month on the basis of the wages and self-employment income of an insured individual and (for such particular month) the provisions of this subsection are applicable to such monthly benefits, and

"(B) such individual's primary insurance amount is increased for the following month under any provision of this title.

then the total of monthly benefits for all persons on the basis of such wages and self-employment income for such particular month, as determined under the provisions of this subsection, shall for purposes of determining the total monthly benefits for all persons on the basis of such wages and self-employment income for months subsequent to such particular month be considered to have been increased by the smallest amount that would have been required in order to assure that the total of monthly benefits payable on the basis of such wages and self-employment income for any such subsequent month will not be less (after the application of the other provisions of this subsection and section 202(q)) than the total of monthly benefits (after the application of the other provisions of this subsection and section 202(q)) payable on the basis of such wages and self-employment income for such particular month.

"(6) In the case of any individual who is entitled for any month to benefits based upon the primary insurance amounts of two or more insured individuals, one or more of which primary insurance amounts were determined under section 215(a) or 215(d) as in effect (without regard to the table contained therein) prior to January 1979 and one or more of which primary insurance amounts were determined under section 215 (a) (1) or (4), or section 215(d), as in effect after December 1978, the total benefits payable to that individual and all other individuals entitled to benefits for that month based upon those primary insurance amounts shall be reduced to an amount equal to the product of 1.75 and the primary insurance amount that would be computed under section 215(a) (1) for that month with respect to average indexed monthly earnings equal to one-twelfth of the contribution and benefits base determined under section 230 for the year in which that month occurs.

"(7) Subject to paragraph (6), this subsection as in efect in December 1978 shall remain in effect with respect to a primary insurance amount computed under section 215 (a) or (d), as in effect (without regard to the table contained therein) in December 1978, except that a primary insurance amount so computed with respect to an individual who first becomes eligible for an old-age or disability insurance benefit, or dies (before becoming eligible for such a benefit), after December 1978, shall instead be governed by this section as in effect after December 1978.".

INCREASE IN OLD-AGE BENEFIT AMOUNTS FOR DELAYED RETIREMENT

SEC. 203. Section 202(w) (1) of Social Security Act is amended—

(1) by striking out "If the first month" and all that follows down through "to such individual" in the matter preceding subparagraph (A) and inserting in lieu thereof "The amount of an old-age insurance benefit (other than a benefit based on a primary insurance amount determined under section 215(a) (3)) which is payable without regard to this subsection to an individual"; and

(2) by inserting after "such amount," in subparagraph (A) the following: "or, in the case of an individual who first becomes eligible for an old-age insurance benefit after December 1978, one quarter of 1 percent of such amount,".

WIDOW'S AND WIDOWER'S INSURANCE BENEFITS IN CASES OF DELAYED RETIREMENT

SEC. 204. (a) Section 202(e) (2) (A) of the Social Security Act is amended (1) by inserting "(as determined after application of the following sentence)" after "primary insurance amount", and (2) by adding at the end thereof the following new sentence: "If such deceased individual was (or upon application would have been) entitled to an old-age insurance benefit which was increased (or subject to being increased) on account of delayed retirement under the provisions of subsection (w), then, for purposes of this subsection, such individual's primary insurance amount, if less than the old-age insurance benefit (increased, where applicable, under section 215(f) (5) or (6) and under section 215(i) as if such individual were still alive in the case of an individual who has died) which he was receiving (or would upon application have received) for the month prior to the month in which he died, shall be deemed to be equal to such old-age insurance benefit, and (notwithstanding the provisions of paragraph (3) of such subsection (w)) the number of increment months shall include any month in the months of the calendar year in which he died, prior to the month in which he died, which satisfy the conditions in paragraph (2) of such subsection (w).".

(b) Section 202(e) (2) (B) (i) of such Act is amended by inserting "and section 215(f) (5) or (6) were applied, where applicable," after "living".

(c) Section 202(f) (3) (A) of such Act is amended (1) by inserting "(as determined after application of the following sentence)" after "primary insurance amount", and (2) by adding at the end thereof the following new sentence: "If such deceased individual was (or upon application would have been) entitled to an old-age insurance benefit which was increased (or subject to being increased) on account of delayed retirement under the provisions of subsection (w), then, for purposes of this subsection, such individual's primary insurance amount, if less than the old-age insurance benefit (increased, where applicable, under section 215 (f) (5) or (6) and under section 215(i) as if such individual were still alive in the case of an individual who has died) which she was receiving (or would upon application have received) for the month prior to the month in which she died, shall be deemed to be equal to such old-age insurance benefit, and (notwithstanding the provisions of paragraph (3) of such subsection (w)) the number of increment months shall include any month in the months of the calendar year in which she died, prior to the month in which she died, which satisfy the conditions in paragraph (2) of such subsection (w).".

(d) Section 202 (f) (3) (B) (i) of such Act is amended by inserting "and section 215 (f) (5) or (6) were applied, where applicable," after "living".

(e) Section 203(a) of such Act (as amended by section 202 of this Act) is further amended by adding at the end thereof the following new paragraph:

"(8) When—

"(A) one or more persons were entitled (without the application of section 202(j) (1)) to monthly benefits under section 202 for May 1978 on the basis of the wages and self-employment income of an individual.

"(B) the benefit of at least one such person for June 1978 is increased by reason of the amendments made by section 204 of the Social Security Amendments of 1977; and

"(C) the total amount of benefits to which all such persons are entitled under such section 202 are reduced under the provisions of this subsection (or would be so reduced except for the first sentence of section 203 (a) (4)),

then the amount of the benefit to which each such person is entitled for months after May 1978 shall be increased (after such reductions are made under this subsection) to the amount such benefits would have been if the benefit of the person or persons referred to in subparagraph (B) had not been increased.".

CONFORMING AMENDMENTS

SEC. 205. (a) Section 202(m) (1) of the Social Security Act is amended to read as follows:

"(1) In any case in which an individual is entitled to a monthly benefit under this section on the basis of a primary insurance amount computed under section 215 (a) or (d), as in effect after December 1978, on the basis of the wages and self-employment income of a deceased individual for any month and no other person is (without the application of subsection (j) (1)) entitled to a monthly benefit under this section for that month on the basis of such wages and self-employment income, the individual's benefit amount for that month, prior to reduction under subsection (k) (3), shall not be less than that provided by subparagraph (C) (i) (I) of section 215(a) (1) and increased under section 215(i) for months after May of the year in which the insured individual died as though such benefit were a primary insurance amount.".

(b) Section 202(w) of such Act (as amended by section 203 of this Act) is further amended—

(1) by inserting after "section 215(a) (3)" in paragraph (1) (in the matter preceding subparagraph (A)) the following: "as in effect in December 1978 or section 215(a) (1) (C) (i) (II) as in effect thereafter";

(2) by inserting "as in effect in December 1978, or section 215 (a) (1) (C) (i) (II) as in effect thereafter," after "paragraph (3) of section 215(a)" in paragraph (5); and

(3) by inserting "(whether before, in, or after December 1978)" after "determined under section 215(a)" in paragraph (5).

(c) Section 217(b) (1) of such Act is amended by inserting "as in effect in December 1978" after "section 215(c)" each place it appears, and after "section 215(d)".

(d) Section 224(a) of such Act is amended by inserting "(determined under section 215 (b) as in effect prior to January 1979)" after "(A) the average monthly wage" in the sentence immediately following paragraph (8).

(e) Section 1839(c) (3) (B) of such Act is amended to read as follows:

"(B) the monthly premium rate most recently promulgated by the Secretary under this paragraph, increased by a percentage determined as follows: The Secretary shall ascertain the primary insurance amount computed under section 215(a) (1), based upon average indexed monthly earnings of $900, that applied to individuals who became eligible for and entitled to old-age insurance benefits on May 1 of the year of the promulgation. He shall increase the monthly premium rate by the same percentage by which that primary insurance amount is increased when, by reason of the law in effect at the time the promulgation is made, it is so computed to apply to those individuals on the following May 1.".

EFFECTIVE DATE

SEC. 206. The amendments made by the provisions of this title other than sections 201(d), 204, and 205(a) shall be effective with respect to monthly benefits under title II of the Social Security Act payable for months after December 1978 and with respect to lump-sum death payments with respect to deaths occurring after such month. The amendments made by section 201(d) shall be effective with respect to monthly benefits of an individual who becomes eligible for an old-age or disability insurance benefit, or dies, after December 1977. The amendments made by section 204 shall be effective with respect to monthly benefits for months after May 1978. The amendment made by section 205(a) shall be effective with respect to monthly benefits payable for months after December 1978 based on the wages and self-employment income of individuals who die after December 1978.

TITLE III—OTHER CHANGES IN PROVISIONS RELATING TO THE OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE PROGRAM

PART A—CHANGES IN EARNINGS TEST

LIBERALIZATION OF EARNINGS TEST FOR INDIVIDUALS AGE 65 AND OVER

SEC. 301. (a) Section 203(f)(8)(A) of the Social Security Act is amended by striking out "a new exempt amount which shall be effective (unless such new exempt amount is prevented from becoming effective by subparagraph (C) of this paragraph) with respect to any individual's taxable year which ends after the calendar year" and inserting in lieu thereof "the new exempt amounts (separately stated for individuals described in subparagraph (D) and for other individuals) which are to be applicable (unless prevented from becoming effective by subparagraph (C)) with respect to taxable years ending in (or with the close of) the calendar year after the calendar year".

(b)(1) Section 203(f)(8)(B) of such Act is amended by striking out "The exempt amount for each month of a particular taxable year shall be" in the matter preceding clause (i) and inserting in lieu thereof "Except as otherwise provided in subparagraph (D), the exempt amount which is applicable to individuals described in such subparagraph and the exempt amount which is applicable to other individuals; for each month of a particular taxable year, shall each be".

(2) Section 203(f)(8)(B)(i) of such Act is amended by striking out "the exempt amount" and inserting in lieu thereof "the corresponding exempt amount".

(3) The last sentence of section 203(f)(8)(B) of such Act is amended by striking out "the exempt amount" and inserting in lieu thereof "an exempt amount".

(c)(1) Section 203(f)(8) of such Act is further amended by adding at the end thereof the following new subparagraph:

"(D) Notwithstanding any other provision of this subsection, the exempt amount which is applicable to an individual who has attained age 65 before the close of the taxable year involved—

"(i) shall be $333.33⅓ for each month of any taxable year ending after 1977 and before 1979,

"(ii) shall be $375 for each month of any taxable year ending after 1978 and before 1980,

"(iii) shall be $416.66⅔ for each month of any taxable year ending after 1979 and before 1981,

"(iv) shall be $458.33⅓ for each month of any taxable year ending after 1980 and before 1982, and

"(v) shall be $500 for each month of any taxable year ending after 1981 and before 1983."

(2) No notification with respect to an increased exempt amount for individuals described in section 203(f)(8)(D) of the Social Security Act (as added by paragraph (1) of this subsection) shall be required under the last sentence of section 203(f)(8)(B) of such Act in 1977, 1978, 1979, 1980, or 1981; and section 203(f)(8)(C) of such Act shall not prevent the new exempt amount determined and published under section 203(f)(8)(A) in 1977 from becoming effective to the extent that such new exempt amount applies to individuals other than those described in section 203(f)(8)(D) of such Act (as so added).

(d) Subsections (f)(1), (f)(3), (f)(4)(B), and (h)(1)(A) of section 203 of such Act are each amended by striking out "$200 or the exempt amount" and inserting in lieu thereof "the applicable exempt amount".

(e) The amendments made by this section shall apply with respect to taxable years ending after December 1977.

REPEAL OF EARNINGS LIMITATION FOR INDIVIDUALS AGE 70 AND OVER

SEC. 302. (a) Subsections (c)(1), (d)(1), (f)(1)(B), and (j) of section 203 of the Social Security Act are each amended by striking out "seventy-two" and inserting in lieu thereof "seventy".

(b) Subsection (f)(3) of section 203 of such Act is amended by striking out "age 72" and inserting in lieu thereof "age 70".

(c) Subsection (h)(1)(A) of section 203 of such Act is amended by striking out "the age of 72" and "age 72" and inserting in lieu thereof in each instance "age 70".

(d) The heading of subsection (j) of section 203 of such Act is amended by striking out "Seventy-two" and inserting in lieu thereof "Seventy".

(e) The amendments made by this section shall apply only with respect to taxable years ending after December 31, 1981.

ELIMINATION OF MONTHLY EARNINGS TEST

SEC. 303. (a) Clause (E) of the last sentence of section 203(f)(1) of the Social Security Act (as amended by section 301(d) of this Act) is further amended by inserting before the period at the end thereof the following: ", if such month is in the taxable year in which occurs the first month that is both (i) a month for which the individual is entitled to benefits under subsection (a), (b), (c), (d), (e), (f), (g), or (h) of section 202 (without having been entitled for the preceding month to a benefit under any other of such subsections), and (ii) a month in which the individual did not engage in self-employment and did not render services for wages (determined as provided in paragraph (5)) of more than the applicable exempt amount as determined under paragraph (8)".

(b) The amendment made by subsection (a) shall apply only with respect to monthly benefits payable for months after December 1977.

PART B—COVERAGE

STUDY OF UNIVERSAL COVERAGE

SEC. 311. (a) The Secretary of Health, Education, and Welfare is directed to undertake, as soon as possible after the date of the enactment of this Act, a thorough study with respect to the extent of the coverage under the old-age, survivors, and disability insurance programs and under the programs established by title XVIII of the Social Security Act. The study shall examine the feasibility and desirability of covering, under such social security programs, Federal employees, State and local governmental employees, and employees of non-profit organizations who are not now covered. The study shall include alternative methods of accomplishing such coverage together with any appropriate alternatives to extending coverage to such employees.

(b) With respect to each major alternative method or proposal included in the study described in subsection (a), such study shall also include an analysis of the changes which would be required in the programs established by the Social Security Act and in any other systems or programs (such as retirement, survivorship, disability, and health programs) affecting the individuals who would be covered under such social security programs under such alternative method or proposal. Such analysis shall include the structural changes required in such programs, the financial impact of such changes, and the effect of such changes on the benefit rights and contribution liabilities of the affected individuals.

(c) In conducting the study required by subsection (a), the Secretary of Health, Education, and Welfare shall consult, as appropriate, with the Secretary of the Treasury, the Director of the Office of Management and Budget, and the Chairman of the Civil Service Commission, and those officials shall provide him with such information and assistance as he may require. The Secretary shall also solicit the views of other appropriate officials and organizations.

(d) The Secretary of Health, Education, and Welfare shall submit to the President and the Congress, not later than 2 years after the date of the enactment of this Act, a report of the findings of the study required by subsection (a) together with his recommendations for any appropriate legislative changes.

COVERAGE OF NONPROFIT ORGANIZATIONS WHICH FAILED TO FILE WAIVER CERTIFICATES

SEC. 312. (a)(1) Section 3121(k)(5) of the Internal Revenue Code of 1954 (relating to constructive filing of certificate where refund or credit has been made and new certificate is not filed) is amended—

(A) by striking out "prior to the expiration of 180 days after the date of the enactment of this paragraph," in subparagraph (B) and inserting in lieu thereof "prior to April 1, 1978,"; and

(B) by striking out "the 181st day after the date of the enactment of this paragraph," and "such 181st day" in the matter following subparagraph (B) and inserting in lieu thereof in each instance "April 1, 1978.".

(2) Section 3121(k)(7) of such Code (relating to payment of both employee and employer taxes for retroactive period by organization in cases of constructive filing) is amended—

(A) by striking out "prior to the expiration of 180 days after the date of the enactment of this paragraph" and inserting in lieu thereof "prior to April 1, 1978,";

(B) by striking out "the 181st day after such date," and inserting in lieu thereof "April 1, 1978,"; and

(C) by striking out "prior to the first day of the calendar quarter in which such 181st day occurs" and inserting in lieu thereof "prior to that date".

(3) Section 3121(k)(8) of such Code (relating to extended period for payment of taxes for retroactive coverage) is amended—

(A) by striking out "by the end of the 180-day period following the date of the enactment of this paragraph" and inserting in lieu thereof prior to April 1, 1978,";

(B) by striking out "within that period" and inserting in lieu thereof "prior to April 1, 1978"; and

(C) by striking out "on the 181st day following that date" and inserting in lieu thereof "on that date".

(b)(1) Section 3121(k)(4) of such Code (relating to constructive filing of certificate where no refund or credit of taxes has been made) is amended by adding at the end thereof the following new subparagraph:

"(C) In the case of any organization which is deemed under this paragraph to have filed a valid waiver certificate under paragraph (1), if—

"(i) the period with respect to which the taxes imposed by sections 3101 and 3111 were paid by such organization (as described in subparagraph (A)(ii)) terminated prior to October 1, 1976, or

"(ii) the taxes imposed by sections 3101 and 3111 were not paid during the period referred to in clause (i) (whether such period has terminated or not) with respect to remuneration paid by such organization to individuals who became its employees after the close of the calendar quarter in which such period began,

taxes under sections 3101 and 3111—

"(iii) in the case of an organization which meets the requirements of this subparagraph by reason of clause (i), with respect to remuneration paid by such organization after the termination of the period referred to in clause (i) and prior to July 1, 1977; or

"(iv) in the case of an organization which meets the requirements of this subparagraph by reason of clause (ii), with respect to remuneration paid prior to July 1, 1977, to individuals who became its employees after the close of the calendar quarter in which the period referred to in clause (i) began,

which remain unpaid on the date of the enactment of this subparagraph, or which were paid after October 19, 1976, but prior to the date of the enactment of this subparagraph, shall not be due or payable (or, if paid, shall be refunded); and the certificate which such organization is deemed under this paragraph to have filed shall not apply to any service with respect to the remuneration for which the taxes imposed by sections 3101 and 3111 (which remain unpaid on the date of the enactment of this subparagraph, or were paid after October 19, 1976, but prior to the date of the enactment of this subparagraph) are not due and payable (or are refunded) by reason of the preceding provisions of this subparagraph. In applying this subparagraph for purposes of title II of the Social Security Act, the period during which reports of wages subject to the taxes imposed by section 3101 and 3111 were made by any organization may be conclusively treated as the period (described in subparagraph (A) (ii)) during which the taxes imposed by such sections were paid by such organization.".

(2) Section 3121(k) (4) (A) of such Code is amended by inserting "(subject to subparagraph (C))" after "effective" in the matter following clause (ii).

(3) Section 3121(k) (6) of such Code (relating to application of certain provisions to cases of constructive filing) is amended by inserting "(except as provided in paragraph (4) (C))" after "services involved" in the matter preceding subparagraph (A).

(4) Section 3121(k) (4) of such Code is amended by striking out "date" in subparagraph (B) (ii) and inserting in lieu thereof "first day of the calendar quarter".

(c) In any case where—

(1) an individual performed service, as an employee of an organization which is deemed under section 3121(k) (4) of the Internal Revenue Code of 1954 to have filed a waiver certificate under section 3121(k) (1) of such Code, on or after the first day of the applicable period described in subparagraph (A) (ii) of such section 3121(k) (4) and before July 1, 1977; and

(2) the service so performed does not constitute employment (as defined in section 210(a) of the Social Security Act and section 3121(b) of such Code) because the waiver certificate which the organization is deemed to have filed is made inapplicable to such service by section 3121(k) (4) (C) of such Code, but would constitute employment (as so defined) in the absence of such section 3121(k) (4) (C).

the remuneration paid for such service shall, upon the request of such individual (filed on or before April 15, 1980, in such manner and form, and with such official, as may be prescribed by regulations made under title II of the Social Security Act) accompanied by full payment of all of the taxes which would have been paid under section 3101 of such Code with respect to such remuneration but for such section 3121(k) (4) (C) (or by satisfactory evidence that appropriate arrangements have been made for the payment of such taxes in installments as provided in section 3121(k) (8) of such Code), be deemed to constitute remuneration for employment as so defined. In any case where remuneration paid by an organization to an individual is deemed under the preceding sentence to constitute remuneration for employment, such organization shall be liable (notwithstanding any other provision of such Code) for payment of the taxes which it would have been required to pay under section 3111 of such Code with respect to such remuneration in the absence of such section 3121(k) (4) (C).

(d) Section 3121(k) (8) of the Internal Revenue Code of 1954 (relating to extended period for payment of taxes for retroactive coverage), as amended by subsection (a) (3) of this section, is amended to read as follows:

"(8) EXTENDED PERIOD FOR PAYMENT OF TAXES FOR RETROACTIVE COVERAGE.—Notwithstanding any other provision of this title, in any case where—

"(A) an organization is deemed under paragraph (4) to have filed a valid waiver certificate under paragraph (1), but the applicable period described in paragraph (4) (A) (ii) has terminated and part or all of the taxes imposed by sections 3101 and 3111 with respect to remuneration paid by such organization to its employees after the close of such period remains payable notwithstanding paragraph (4) (C), or

"(B) an organization described in paragraph (5) (A) files a valid waiver certificate under paragraph (1) by March 31, 1978, as described in paragraph (5) (B), or (not having filed such a certificate by that date) is deemed under paragraph (5) to have filed such a certificate on April 1, 1978, or

"(C) an individual files a request under section 3 of Public Law 94–563, or under section 312(c) of the Social Security Amendments of 1977, to have service treated as constituting remuneration for employment (as defined in section 3121(b) and in section 210 (a) of the Social Security Act),

the taxes due under sections 3101 and 3111 with respect to services constituting employment by reason of such certificate for any period prior to the first day of the calendar quarter in which the date of such filing or constructive filing occurs, or with respect to service constituting employment by reason of such request, may be paid in installments over an appropriate period of time, as determined under regulations prescribed by the Secretary, rather than in a lump sum.".

(e) The first sentence of section 3 of Public Law 94–563 (in the matter following paragraph (3)) is amended—

(1) by inserting "on or before April 15, 1980," after "fixed"; and

(2) by inserting "(or by satisfactory evidence that appropriate arrangements have been made for the repayment of such taxes in installments as provided in section 3121 (k) (8) of such Code)" after "so refunded or credited".

(f) Section 3121(k) (4) (A) (1) of the Internal Revenue Code of 1954 (relating to constructive filing of certificate where no refund or credit of taxes has been made) is amended by striking out "or any subsequent date" and inserting in lieu thereof "(or, if later, as of the earliest date on which it satisfies clause (ii) of this subparagraph.)".

(g) Section 3121(k) (4) (B) of such Code (relating to constructive filing of certificate where no refund or credit of taxes has been made) is amended—

(1) by striking out the period at the end of clause (ii) and inserting in lieu thereof ", or"; and

(2) by adding after clause (ii) the following new clause:

"(iii) the organization, prior to the end of the period referred to in clause (ii) of such subparagraph (and, in the case of an organization organized on or before October 9, 1969, prior to October 19, 1976), had applied for a ruling or determination letter acknowledging it to be exempt from income tax under section 501(c) (3), and it subsequently received such ruling or determination letter and did not pay any taxes under sections 3101 and 3111 with respect to any employee with respect to any quarter ending after the twelfth month following the date of mailing of such ruling or determination letter and did not pay any such taxes with respect to any quarter beginning after the later of (I) December 3, 1975 or (II) the date on which such ruling or determination letter was issued.".

(h) The amendments made by subsections (a), (b), (d), (e), (f), and (g) of this section shall be effective as though they had been included as a part of the amendments made to section 3121(k) of the Internal Revenue Code of 1954 by the first section of Public Law 94–563 (or, in the case of the amendments made by subsection (e), as a part of section 3 of such Public Law).

EXCLUSION FROM COVERAGE OF CERTAIN LIMITED PARTNERSHIP INCOME

SEC. 313. (a) Section 211(a) of the Social Security Act is amended—

(1) by striking out "and" at the end of paragraph (9);

(2) by striking out the period at the end of paragraph (10) and inserting in lieu thereof "; and"; and

(3) by inserting after paragraph (10) the following new paragraph:

"(11) There shall be excluded the distributive share of any item of income or loss of a limited partner, as such, other than guaranteed payments described in section 707(c) of the Internal Revenue Code of 1954 to that partner for services actually rendered to or on behalf of the partnership to the extent that those payments are established to be in the nature of remuneration for those services.".

(b) Section 1402(a) of the Internal Revenue Code of 1954 (relating to definition of net earnings from self-employment) is amended—

(1) by striking out "and" at the end of paragraph (10);

(2) by striking out the period at the end of paragraph (11) and inserting in lieu thereof "; and"; and

(3) by inserting after paragraph (11) the following new paragraph:

"(12) there shall be excluded the distributive share of any item of income or loss of a limited partner, as such, other than guaranteed payments described in section 707(c) to that partner for services actually rendered to or on behalf of the partnership to the extent that those payments are established to be in the nature of remuneration for those services.".

(c) The amendments made by this section shall apply with respect to taxable years beginning after December 31, 1977.

EMPLOYEES OF MEMBERS OF RELATED GROUPS OF CORPORATIONS

SEC. 314. (a) Section 3121 of the Internal Revenue Code of 1954 (definitions for purposes of the Federal Insurance Contributions Act) is amended by adding at the end thereof the following new subsection:

"(s) CONCURRENT EMPLOYMENT BY TWO OR MORE EMPLOYERS.—For purposes of sections 3102, 3111, and 3121(a) (1), if two or more related corporations concurrently employ the same individual and compensate such individual through a common paymaster which is one of such corporations, each such corporation shall be considered to have paid as remuneration to such individual only the amounts actually disbursed by it to such individual and shall not be considered to have paid as remuneration to such individual amounts actually disbursed to such individual by another of such corporations.".

(b) Section 3306 of such Code (relating to definitions in respect of unemployment tax) is amended by adding at the end thereof the following new subsection:

"(p) Concurrent Employment by Two or More Employers.—For purposes of sections 3301, 3302, and 3306(b)(1), if two or more related corporations concurrently employ the same individual and compensate such individual through a common paymaster which is one of such corporations, each such corporation shall be considered to have paid as remuneration to such individual only the amounts actually disbursed by it to such individual and shall not be considered to have paid as remuneration to such individual amounts actually disbursed to such individual by another of such corporations.".

(c) The amendments made by this section shall apply with respect to wages paid after December 31, 1978.

TAX ON EMPLOYERS OF INDIVIDUALS WHO RECEIVE INCOME FROM TIPS

Sec. 315. (a) Section 3121 of the Internal Revenue Code of 1954 (definitions for purposes of the Federal Insurance Contributions Act) is amended by adding at the end thereof (after the new subsection added by section 314(a) of this Act) the following new subsection:

"(t) Special Rule for Determining Wages Subject to Employer Tax in Case of Certain Employers Whose Employees Receive Income From Tips.—If the wages paid by an employer with respect to the employment during any month of an individual who (for services performed in connection with such employment) receives tips which constitute wages, and to which section 3102(a) applies, are less than the total amount which would be payable (with respect to such employment) at the minimum wage rate applicable to such individual under section 6(a)(1) of the Fair Labor Standards Act of 1938 (determined without regard to section 3(m) of such Act), the wages so paid shall be deemed for purposes of section 3111 to be equal to such total amount.".

(b) Section 3111 of such Code is amended by inserting "and (t)" after "3121(a)" in subsections (a) and (b).

(c) The amendments made by this section shall apply with respect to wages paid with respect to employment performed in months after December 1977.

REVOCATION OF EXEMPTION FROM COVERAGE BY CLERGYMEN

Sec. 316. (a) Notwithstanding section 1402(c)(3) of the Internal Revenue Code of 1954, any exemption which has been received under section 1402(e)(1) of such Code by a duly ordained, commissioned, or licensed minister of a church or a Christian Science practitioner, and which is effective for the taxable year in which this Act is enacted, may be revoked by filing an application therefor (in such form and manner, and with such official, as may be prescribed in regulations made under chapter 2 of such Code), if such application is filed—

(1) before the applicant becomes entitled to benefits under section 202(a) or 223 of the Social Security Act (without regard to section 202(j)(1) or 223(b) of such Act), and

(2) no later than the due date of the Federal income tax return (including any extension thereof) for the applicant's first taxable year beginning after the date of the enactment of this Act.

Any such revocation shall be effective (for purposes of chapter 2 of the Internal Revenue Code of 1954 and title II of the Social Security Act), as specified in the application, either with respect to the applicant's first taxable year ending on or after the date of the enactment of this Act or with respect to the applicant's first taxable year beginning after such date, and for all succeeding taxable years; and the applicant for any such revocation may not thereafter again file application for an exemption under such section 1402(e)(1). If the application is filed on or after the due date of the applicant's first taxable year ending on or after the date of the enactment of this Act and is effective with respect to that taxable year, it shall include or be accompanied by payment in full of an amount equal to the total of the taxes that would have been imposed by section 1401 of the Internal Revenue Code of 1954 with respect to all of the applicant's income derived in that taxable year which would have constituted net earnings from self-employment for purposes of chapter 2 of such Code (notwithstanding section 1402(c)(4) or (c)(5) of such Code) except for the exemption under section 1402(e)(1) of such Code.

(b) Subsection (a) shall apply with respect to service performed (to the extent specified in such subsection) in taxable years ending on or after the date of the enactment of this Act, and with respect to monthly insurance benefits payable under title II of the Social Security Act on the basis of the wages and self-employment income of any individual for months in or after the calendar year in which such individual's application for revocation (as described in such subsection) is filed (and lump-sum death payments payable under such title on the basis of such wages and self-employment income in the case of death occurring in or after such calendar year).

INTERNATIONAL AGREEMENTS WITH RESPECT TO SOCIAL SECURITY BENEFITS

Sec. 317. (a) Title II of the Social Security Act is amended by adding at the end thereof the following new section:

"INTERNATIONAL AGREEMENTS

"Purpose of Agreement

"Sec. 233. (a) The President is authorized (subject to the succeeding provisions of this section) to enter into agreements establishing totalization arrangements between the social security system established by this title and the social security system of any foreign country, for the purposes of establishing entitlement to and the amount of old-age, survivors, disability, or derivative benefits based on a combination of an individual's periods of coverage under the social security system established by this title and the social security system of such foreign country.

"Definitions

"(b) For the purposes of this section—

"(1) the term 'social security system' means, with respect to a foreign country, a social insurance or pension system which is of general application in the country and under which periodic benefits, or the actuarial equivalent thereof, are paid on account of old age, death, or disabiilty; and

"(2) the term 'period of coverage' means a period of payment of contributions or a period of earnings based on wages for employment or on self-employment income, or any similar period recognized as equivalent thereto under this title or under the social security system of a country which is a party to an agreement entered into under this section.

"Crediting Periods of Coverage; Conditions of Payment of Benefits

"(c)(1) Any agreement establishing a totalization arrangement pursuant to this section shall provide—

"(A) that in the case of an individual who has at least 6 quarters of coverage as defined in section 213 of this Act and periods of coverage under the social security system of a foreign country which is a party to such agreement, periods of coverage of such individual under such social security system of such foreign country may be combined with periods of coverage under this title and otherwise considered for the purposes of establishing entitlement to and the amount of old-age, survivors, and disability insurance benefits under this title;

"(B)(i) that employment or self-employment, or any service which is recognized as equivalent to employment or self-employment under this title or the social security system of a foreign country which is a party to such agreement, shall, on or after the effective date of such agreement, result in a period of coverage under the system established under this title or under the system established under the laws of such foreign country, but not under both, and (ii) the methods and conditions for determining under which system employment, self-employment, or other service shall result in a period of coverage; and

"(C) that where an individual's periods of coverage are combined, the benefit amount payable under this title shall be based on the proportion of such individual's periods of coverage which was completed under this title.

"(2) Any such agreement may provide that—

"(A) an individual who is entitled to cash benefits under this title shall, notwithstanding the provisions of section 202(t), receive such benefits while he resides in a foreign country which is a party to such agreement; and

"(B) the benefit paid by the United States to an individual who legally resides in the United States shall, if less when added to the benefit paid by such foreign country than the benefit amount which would be payable to an entitled individual based on the first figure in (or deemed to be in) column IV of the table in section 215(a) in the case of an individual becoming eligible for such benefit before January 1, 1979, or based on a primary insurance amount determined under section 215(a)(1)(C)(i)(I) in the case of an individual becomng eligible for such benefit on or after that date, be increased so that the total of the two benefits is equal to the benefit amount which would be so payable.

"(3) Section 226 shall not apply in the case of any individual to whom it would not be applicable but for this section or any agreement or regulation under this section.

"(4) Any such agreement may contain other provisions which are not inconsistent with the other provisions of this title and which the President deems appropriate to carry out the purposes of this section.

"Regulations

"(d) The Secretary of Health, Education, and Welfare shall make rules and regulations and establish procedures which are reasonable and necessary to implement and administer any agreement which has been entered into in accordance with this section.

"Reports to Congress; effective date of agreements

"(e)(1) Any agreement to establish a totalization arrangement entered into pursuant to this section shall be transmitted by the President to the Congress together with a report on the estimated number of individuals who will be affected by the agreement and the effect of the agreement on the estimated income and expenditures of the programs established by this Act.

"(2) Such an agreement shall become effective on any date, provided in the agreement, which occurs after the expiration of the period (following the date on which the agreement is transmitted in accordance with paragraph (1)) during which each House of the Congress has been in session on each of 90 days; except that such agreement shall not become effective if, during such period, either House of the Congress adotps a resolution of disapproval of the agreement.".

(b)(1) Section 1401 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsection:

"(c) RELIEF FROM TAXES IN CASES COVERED BY CERTAIN INTERNATIONAL AGREEMENTS.—During any period in which there is in effect an agreement entered into pursuant to section 233 of the Social Security Act with any foreign country, the self-employment income of an individual shall be exempt from the taxes imposed by this section to the extent that such self-employment income is subject under such agreement to taxes or contributions for similar purposes under the social security system of such foreign country.".

(2) Sections 3101 and 3111 of such Code are each amended by adding at the end thereof the following new subsection:

"(c) RELIEF FROM TAXES IN CASES COVERED BY CERTAIN INTERNATIONAL AGREEMENTS.—During any period in which there is in effect an agreement entered into pursuant to section 233 of the Social Security Act with any foreign country, wages received by or paid to an individual shall be exempt from the taxes imposed by this section to the extent that such wages are subject under such agreement to taxes or contributions for similar purposes under the social security system of such foreign country.".

(3) Section 6051(a) of such Code is amended by adding at the end thereof the following new sentence: "The amounts required to be shown by paragraph (5) shall not include wages which are exempted pursuant to sections 3101(c) and 3111(c) from the taxes imposed by section 3101 and 3111.".

(5) Notwithstanding any other provision of law, taxes paid by any individual to any foreign country with respect to any period of employment or self-employment which is covered under the social security system of such foreign country in accordance with the terms of an agreement entered into pursuant to section 233 of the Social Security Act shall not, under the income tax laws of the United States, be deductible by, or creditable against the income tax of, any such individual.

MODIFICATION OF AGREEMENT WITH ILLINOIS TO PROVIDE COVERAGE FOR CERTAIN POLICEMEN AND FIREMEN

SEC. 318. (a) Notwithstanding the provisions of subsection (d)(5)(A) of section 218 of the Social Security Act and the references thereto in subsections (d)(1) and (d)(3) of such section 218, the agreement with the State of Illinois heretofore entered into pursuant to such section 218 may, at any time prior to January 1, 1979, be modified pursuant to subsection (c)(4) of such section 218 so as to apply to services performed in policemen's or firemen's positions covered by the Illinois Municipal Retirement Fund on the date of the enactment of this Act if the State of Illinois has at any time prior to the date of the enactment of this Act paid to the Secretary of the Treasury, with respect to any of the services performed in such positions, the sums prescribed pursuant to subsection (e)(1) of such section 218. For purposes of this section, a retirement system which covers positions of policemen or firemen shall, if the State of Illinois so desires, be deemed to be a separate retirement system with respect to the positions of such policemen or firemen, as the case may be.

(b) Notwithstanding the provisions of subsection (f) of section 218 of the Social Security Act, any modification in the agreement with the State of Illinois under subsection (a) of this section, to the extent that it involves services performed by a policeman or fireman in positions covered under the Illinois Municipal Retirement Fund, shall be made effective with respect to—

(1) all services performed by policemen or firemen, in positions to which the modification relates, on or after the date of the enactment of this Act; and

(2) all services performed by such individuals in such positions before such date of enactment with respect to which the State of Illinois has paid to the Secretary of the Treasury the sums prescribed pursuant to subsection (e)(1) of such section 218 at the time or times established pursuant to such subsection (e)(1), if and to the extent that—

(A) no refund of the sums so paid has been obtained, or

(B) a refund of part or all of the sums so paid has been obtained but the State of Illinois repays to the Secretary of the Treasury the amount of such refund within 90 days after the date that the modification is agreed to by the State and the Secretary of Health, Education, and Welfare.

COVERAGE FOR POLICEMEN AND FIREMEN IN MISSISSIPPI

SEC. 319. Section 218(p)(1) of the Social Security Act is amended by inserting "Mississippi," after "Maryland,".

COVERAGE UNDER DIVIDED RETIREMENT SYSTEM FOR PUBLIC EMPLOYEES IN NEW JERSEY

SEC. 320. Section 218(d)(6)(C) of the Social Security Act is amended by inserting "New Jersey," after "Nevada,".

COVERAGE OF SERVICE UNDER WISCONSIN RETIREMENT SYSTEM

SEC. 321. Section 218(m)(1) of the Social Security Act is amended by inserting after "Wisconsin retirement fund" the following: "or any successor system".

PART C—BENEFIT AMOUNTS AND ELIGIBILITY

ACTUARIAL REDUCTION OF BENEFIT INCREASES TO BE APPLIED AS OF TIME OF ORIGINAL ENTITLEMENT

SEC. 331. (a) Section 202(q)(4) of the Social Security Act is amended by striking out all that follows subparagraph (B) and inserting in lieu thereof the following:

"then the amount of the reduction of such benefit (after the application of any adjustment under paragraph (7)) for each month beginning with the month of such increase in the primary insurance amount shall be computed under paragraph (1) or (3), whichever applies, as though the increased primary insurance amount had been in effect for and after the month for which the individual first became entitled to such monthly benefit reduced under such paragraph (1) or (3).".

(b) Section 202(q) of such Act is further amended by adding at the end thereof the following new paragraphs:

"(10) For purposes of applying paragraph (4), with respect to monthly benefits payable for any month after December 1977 to an individual who was entitled to a monthly benefit as reduced under paragraph (1) or (3) prior to January 1978, the amount of reduction in such benefit for the first month for which such benefit is increased by reason of an increase in the primary insurance amount of the individual on whose wages and self-employment income such benefit is based and for all subsequent months (and similarly for all subsequent increases) shall be increased by a percentage equal to the percentage increase in such primary insurance amount (such increase being made in accordance with the provisions of paragraph (8)). In the case of an individual whose reduced benefit under this section is increased as a result of the use of an adjusted reduction period or an additional adjusted reduction period (in accordance with paragraphs (1) and (3) of this subsection), then for the first month for which such increase is effective, and for all subsequent months, the amount of such reduction (after the application of the previous sentence, if applicable) shall be determined—

"(A) in the case of old-age, wife's, and husband's insurance benefits, by multiplying such amount by the ratio of (i) the number of months in the adjusted reduction period to (ii) the number of months in the reduction period,

"(B) in the case of widow's and widower's insurance benefits for the month in which such individual attains age 62, by multiplying such amount by the ratio of (i) the number of months in the reduction period beginning with age 62 multiplied by $\frac{19}{40}$ of 1 percent, plus the number of months in the adjusted additional reduction period multiplied by $\frac{43}{240}$ of 1 percent to (ii) the number of months in the reduction period multiplied by $\frac{19}{40}$ of 1 percent, plus the number of months in the additional reduction period multiplied by $\frac{43}{240}$ of 1 percent, and

"(C) in the case of widow's and widower's insurance benefits for the month in which such individual attains age 65, by multiplying such amount by the ratio of (i) the number of months in the adjusted reduction period multiplied by $\frac{19}{40}$ of 1 percent, plus the number of months in the adjusted additional reduction period multiplied by $\frac{43}{240}$ of 1 percent to (ii) the number of months in the reduction period beginning with age 62 multiplied by $\frac{19}{40}$ of 1 percent, plus the number of months in the adjusted reduction period, prior to age 62 multiplied by $\frac{19}{40}$ of 1 percent, plus the number of months in the adjusted $\frac{43}{240}$ of 1 percent.

such determination being made in accordance with the provisions of paragraph (8).

"(11) When an individual is entitled to more than one monthly benefit under this title and one or more of such benefits are reduced under this subsection, paragraph (10) shall apply separately to each such benefit reduced under this subsection before the application of subsection (k) (pertaining to the method by which monthly benefits are offset when an individual is entitled to more than one kind of benefit) and the application of this paragraph shall operate in conjunction with paragraph (3).".

(c)(1) Section 202(q)(7)(C) of such Act is amended by striking out "because" and all that follows and inserting in lieu thereof "because of the occurrence of an event that terminated her or his entitlement to such benefits.".

(2) Section 202(q)(3)(H) of such Act is amended by inserting "for that month or" after "first entitled".

(d) The amendments made by this section shall be effective with respect to monthly benefits payable for months after December 1977.

LIMITATION ON RETROACTIVE BENEFITS

SEC. 332. (a)(1) The first sentence of section 202(j)(1) of the Social Security Act is amended by striking out "An individual" and inserting in lieu thereof "Subject to the limitations contained in paragraph (4), an individual".

(2) Section 202(j) of such Act is further amended by adding at the end thereof the following new paragraph:

"(4)(A) Except as provided in subparagraph (B), no individual shall be entitled to a monthly benefit under subsection (a), (b), (c), (e), or (f) for any month prior to the month in which he or she files an application for benefits under that subsection if the effect of entitlement to such benefit would be to reduce, pursuant to subsection (q), the amount of the monthly benefit to which such individual would otherwise be entitled for the month in which such application is filed.

"(B)(i) If the individual applying for retroactive benefits is applying for such benefits under subsection (a), and there are one or more other persons who would (except for subparagraph (A)) be entitled for any month, on the basis of the wages and self-employment income of such individual and because of such individual's entitlement to such retroactive benefits, to retroactive benefits under subsection (b), (c), or (d) not subject to reduction under subsection (q), then subparagraph (A) shall not apply with respect to such month or any subsequent month.

"(ii) If the individual applying for retroactive benefits is a widow, surviving divorced wife, or widower and is under a disability (as defined in section 223(d)), and such individual would, except for subparagraph (A), be entitled to retroactive benefits as a disabled widow or widower or disabled surviving divorced wife for any month before attaining the age of 60, then subparagraph (A) shall not apply with respect to such month or any subsequent month.

"(iii) If the individual applying for retroactive benefits has excess earning (as defined in section 203(f)) in the year in which he or she files an application for such benefits which could, except for subparagraph (A), be charged to months in such year prior to the month of application, then subparagraph (A) shall not apply to so many of such months immediately preceding the month of application as are required to charge such excess earnings to the maximum extent possible.

"(iv) As used in this subparagraph, the term 'retroactive benefits' means benefits to which an individual becomes entitled for a month prior to the month in which application for such benefits is filed.".

(3) Section 226(h) of such Act is amended by adding at the end thereof the following new paragraph:

"(4) For purposes of determining entitlement to hospital insurance benefits under subsection (b) in the case of an individual described in clause (iii) of subsection (b) (2) (A), the entitlement of such individual to widow's or widower's insurance benefits under section 202 (e) or (f) by reason of a disability shall be deemed to be the entitlement to such benefits that would result if such entitlement were determined without regard to the provisions of section 202(l) (4).".

(b) The amendments made by subsection (a) shall be effective with respect to monthly insurance benefits under title II of the Social Security Act to which an individual becomes entitled on the basis of an application filed on after January 1, 1978.

DELIVERY OF BENEFIT CHECKS

SEC. 333. (a) Title VII of the Social Security Act is amended by adding at the end thereof the following new section:

"DELIVERY OF BENEFIT CHECKS

"SEC. 708. (a) If the day regularly designated for the delivery of benefit checks under title II or title XVI falls on a Saturday, Sunday, or legal public holiday (as defined in section 6103 of title 5, United States Code) in any month, the benefit checks which would otherwise be delivered on such day shall be mailed for delivery on the first day preceding such day which is not a Saturday, Sunday, or legal public holiday (as so defined), without regard to whether the delivery of such checks would as a result have to be made before the end of the month for which such checks are issued.

"(b) If more than the correct amount of payment under title II or XVI is made to any individual as a result of the receipt of a benefit check pursuant to subsection (a) before the end of the month for which such check is issued, no action shall be taken (under section 204 or 1631(b) or otherwise) to recover such payment or the incorrect portion thereof.".

(b) The amendment made by subsection (a) of this section shall apply with respect to benefit checks the regularly designated day for delivery of which occurs on or after the thirtieth day after the date of the enactment of this Act.

REDUCED BENEFITS FOR SPOUSES RECEIVING GOVERNMENT PENSIONS

SEC. 334. (a) (1) Section 202(b) (2) of the Social Security Act is amended by inserting after "subsection (q)" the following: "and paragraph (4) of this subsection".

(2) Section 202(b) of such Act is further amended by adding at the end thereof the following new paragraph:

"(4) (A) The amount of a wife's insurance benefit for each month as determined after application of the provisions of subsections (q) and (k) shall be reduced (but not below zero) by an amount equal to the amount of any monthly periodic benefit payable to such wife (or divorced wife) for such month which is based upon her earnings while in the service of the Federal Government or any State (or political subdivision thereof, as defined in section 218(b) (2)) if, on the last day she was employed by such entity, such service did not constitute 'employment' as defined in section 210.

"(B) For purposes of this paragraph, any periodic benefit which otherwise meets the requirements of subparagraph (A), but which is paid on other than a monthly basis, shall be allocated on a basis equivalent to a monthly benefit (as determined by the Secretary) and such equivalent monthly benefit shall constitute a monthly periodic benefit for purposes of subparagraph (A). For purposes of this subparagraph, the term 'periodic benefit, includes a benefit payable in a lump sum if it is a commutation of, or a substitute for, periodic payments.".

(b) (1) Section 202(c) (1) of such Act is amended—

(A) by striking out subparagraph (C);

(B) by adding "and" at the end of subparagraph (B); and

(C) by redesignating subparagraph (D) as subparagraph (C).

(2) Section 202(c) (2) of such Act is amended to read as follows:

"(2) (A) The amount of a husband's insurance benefit for each month as determined after application of the provisions of subsections (q) and (k) shall be reduced (but not below zero) by an amount equal to the amount of any monthly periodic benefit payable to such husband for such month which is based upon his earnings while in the service of the Federal Government or any State (or political subdivision thereof, as defined in section 218(b) (2)) if, on the last day he was employed by such entity, such service did not constitute 'employment' as defined in section 210.

"(B) For purposes of this paragraph, any periodic benefit which otherwise meets the requirements of subparagraph (A), but which is paid on other than a monthly basis, shall be allocated on a basis equivalent to a monthly benefit (as determined by the Secretary) and such equivalent monthly benefit shall constitute a monthly periodic benefit for purposes of subparagraph (A). For purposes of this subparagraph, the term 'periodic benefit' includes a benefit payable in a lump sum if it is a commutation of, or a substitute for, periodic payments.".

(3) Section 202(c) (3) of such Act is amended by inserting after "subsection (q)" the following: "and paragraph (2) of this subsection".

(c) (1) Section 202(e) (2) (A) of such Act (as amended by section 204(a) of this Act) is amended by striking out "paragraph (4)" in the first sentence and inserting in lieu thereof "paragraphs (4) and (8)".

(2) Section 202(e) of such Act is further amended by adding at the end thereof the following new paragraph:

"(8) (A) The amount of a widow's insurance benefit for each month as determined (after application of the provisions of subsection (q) and (k), paragraph (2) (B), and paragraph (4)) shall be reduced (but not below zero) by an amount equal to the amount of any monthly periodic benefit payable to such widow (or surviving divorced wife) for such month which is based upon her earnings while in the service of the Federal Government or any State (or any political subdivision thereof, as defined in section 218(b) (2)) if, on the last day she was employed by such entity, such service did not constitute 'employment' as defined in section 210.

"(B) For purposes of this paragraph, any periodic benefit which otherwise meets the requirements of subparagraph (A), but which is paid on other than a monthly basis, shall be allocated on a basis equivalent to a monthly benefit (as determined by the Secretary) and such equivalent monthly benefit shall constitute a monthly periodic benefit for purposes of subparagraph (A). For purposes of this subparagraph, the term 'periodic benefit' includes a benefit payable in a lump sum if it is a commutation of, or a substitute for, periodic payments.".

(d) (1) Section 202(f) (1) of such Act is amended—

(A) by striking out subparagraph (D); and

(B) by redesignating subparagraphs (E), (F), and (G) as subparagraphs (D), (E), and (F), respectively.

(2) Section 202(f) (2) of such Act is amended to read as follows:

"(2) (A) The amount of a widower's insurance benefit for each month (as determined after application of the provisions of subsections (k) and (q), paragraph (3) (B), and paragraph (5) shall be reduced (but not below zero) by an amount equal to the amount of any monthly periodic benefit payable to such widower for such month which is based upon his earnings while in the service of the Federal Government or any State (or any political subdivision thereof, as defined in section 218(b) (2)) if, on the last day he was employed by such entity, such service did not constitute 'employment' as defined in section 210.

"(B) For purposes of this paragraph, any periodic benefit which otherwise meets the requirements of subparagraph (A), but which is paid on other than a monthly basis, shall be allocated on a basis equivalent to a monthly benefit (as determined by the Secretary) and such equivalent monthly benefit shall constitute a monthly periodic benefit for purposes of subparagraph (A). For purposes of this subparagraph, the term 'periodic benefit' includes a benefit payable in a lump sum if it is a commutation of, or a substitute for, periodic payments.".

(3) Section 202(f) (3) (A) of such Act (as amended by section 204(c) of this Act) is amended by striking out "paragraph (5)" in the first sentence and inserting in lieu thereof "paragraphs (2) and (5)".

(4) (A) Section 202(f) (7) of such Act is amended by striking out "subparagraph (G) of section 202(f) (1)" and inserting in lieu thereof "subparagraph (F) of section 202 (f) (1)".

(5) Section 202(p) (1) of such Act is amended by striking out "subparagraph (C) of subsection (c) (1), clause (i) or (ii) of subparagraph (D) of subsection (f) (1), or".

(6) Section 202(s) (3) of such Act is amended by striking out "Subsections" and all that follows down through "so much" and inserting in lieu thereof "So much".

(e) (1) Section 202(g) (2) of such Act is amended by striking out "Such" and inserting in lieu thereof "Except as provided in paragraph (4) of this subsection, such".

(2) Section 202(g) of such Act is further amended by adding at the end thereof the following new paragraph:

"(4) (A) The amount of a mother's insurance benefit for each month to which any individual is entitled under this subsection (as determined after application of subsection (k)) shall be reduced (but not below zero) by an amount equal to the amount of any monthly periodic benefit payable to such individual for such month which is based upon such individual's earnings while in the service of the Federal Government or any

State (or political subdivision thereof, as defined in section 218(b)(2)) if, on the last day such individual was employed by such entity, such service did not constitute 'employment' as defined in section 210.

"(B) For purposes of this paragraph, any periodic benefit which otherwise meets the requirements of subparagraph (A), but which is paid on other than a monthly basis, shall be allocated on a basis equivalent to a monthly benefit (as determined by the Secretary) and equivalent monthly benefit shall constitute a monthly periodic benefit for purposes of subparagraph (A). For purposes of this subparagraph, the term 'periodic benefit' includes a benefit payable in a lump sum if it is a commutation of, or a substitute for, periodic payments.".

(f) The amendments made by this section shall apply with respect to monthly insurance benefits payable under title II of the Social Security Act for months beginning with the month in which this Act is enacted, on the basis of applications filed in or after the month in which this Act is enacted.

(g)(1) The amendments made by the preceding provisions of this section shall not apply with respect to any monthly insurance benefit payable, under subsection (b), (c), (e), (f), or (g) (as the case may be) of section 202 of the Social Security Act, to an individual—

(A) to whom there is payable for any month within the 60-month period beginning with the month in which this Act is enacted (or who is eligible in any such month for) a monthly periodic benefit (within the meaning of such provisions) based upon such individual's earnings while in the service of the Federal Government or any State (or political subdivision thereof, as defined in section 218(b)(2) of the Social Security Act; and

(B) who at time of application for or initial entitlement to such monthly insurance benefit under such subsection (b), (c), (e), (f), or (g), meets the requirements of that subsection as it was in effect and being administered in January 1977.

(2) For purposes of paragraph (1)(A), an individual is eligible for a monthly periodic benefit for any month if such benefit would be payable to such individual for that month if such individual were not employed during that month and had made proper application for such benefit.

(3) If any provision of this subsection, or the application thereof to any person or circumstance, is held invalid, the remainder of this section shall not be affected thereby, but the application of this subsection to any other persons or circumstances shall also be considered invalid.

SUBSTANTIAL GAINFUL ACTIVITY IN CASE OF BLIND INDIVIDUALS

SEC. 335. Section 223(d)(4) of the Social Security Act is amended by inserting after the first sentence the following new sentence: "No individual who is blind shall be regarded as having demonstrated an ability to engage in substantial gainful activity on the basis of earnings that do not exceed the exempt amount under section 203(f)(8) which is applicable to individuals described in subparagraph (D) thereof.".

REMARRIAGE OF WIDOWS AND WIDOWERS

SEC. 336. (a)(1) Section 202(e)(2)(A) of the Social Security Act (as amended by sections 204(a) and 334(c)(1) of this Act) is amended by striking out "paragraphs (4) and (8)" and inserting in lieu thereof "paragraph (8)".

(2) Section 202(e)(3) of such Act is amended by striking out "In the case of a widow or surviving divorced wife who marries" in the matter preceding subparagraph (A) and inserting in lieu thereof "If a widow, before attaining age 60, or a surviving divorced wife, marries".

(3) Section 202(e)(4) of such Act is amended to read as follows:

"(4) If a widow, after attaining age 60, marries, such marriage shall, for purposes of paragraph (1), be deemed not to have occurred.".

(b)(1) Section 202(f)(3)(A) of such Act (as amended by sections 204(c) and 334(d)(3) of this Act) is further amended by striking out "paragraphs (2) and (5)" and inserting in lieu thereof "paragraph (2)".

(2) Section 202(f)(4) of such Act is amended by striking out "In the case of a widower who remarries" in the matter preceding subparagraph (A) and inserting in lieu thereof "If a widower, before attaining age 60, remarries".

(3) Section 202(f)(5) of such Act is amended to read as follows:

"(5) If a widower, after attaining age 60, marries, such marriage shall, for purposes of paragraph (1), be deemed not to have occurred."

(c)(1) The amendments made by this section shall apply only with respect to monthly benefits payable under title II of the Social Security Act for months after December 1978, and, in the case of individuals who are not entitled to benefits of the type involved for December 1978, only on the basis of applications filed on or after January 1, 1979.

(2) In the case of an individual who was entitled for the month of December 1978 to monthly insurance benefits under subsection (e) or (f) of section 202 of the Social Security Act to which the provisions of subsection (e)(4) or (f)(5) applied, the Secretary shall, if such benefits would be increased by the amendments made by the section, redetermine the amount of such benefits for months after December 1978 as if such amendments had been in effect for the first month for which the provisions of section 202(e)(4) or 202(f)(5) became applicable.

(d) Where—

(1) two or more persons are entitled to monthly benefits under section 202 of the Social Security Act for December 1978 on the basis of the wages and self-employment income of a deceased individual, and one or more of such persons is so entitled under subsection (e) or (f) of such section 202, and

(2) one or more of such persons is entitled on the basis of such wages and self-employment income to monthly benefits under subsection (e) or (f) of such section 202 (as amended by this section) for January 1979, and

(3) the total of benefits to which all persons are entitled under section 202 of such Act on the basis of such wages and self-employment income for January 1979 is reduced by reason of section 203(a) of such Act as amended by this Act (or would, but for the first sentence of section 203(a)(4), be so reduced),

then the amount of the benefit to which each such person referred to in paragraph (1) is entitled for months after December 1978 shall in no case be less after the application of this section and such section 203(a) than the amount it would have been without the application of this section.

DURATION-OF-MARRIAGE REQUIREMENT

SEC. 337. (a) Section 216(d) of the Social Security Act is amended by striking out "20 years" in paragraphs (1) and (2) and inserting in lieu thereof in each instance "10 years".

(b) Section 202(b)(1)(G) of such Act is amended by striking out "20 years" and inserting in lieu thereof "10 years".

(c) The amendments made by this section shall apply with respect to monthly benefits payable under title II of the Social Security Act for months after December 1978, and, in the case of individuals who are not entitled to benefits of the type involved for December 1978, only on the basis of application filed on or after January 1, 1979.

Part D—Study With Respect to Gender-Based Distinctions

STUDY OF PROPOSALS TO ELIMINATE DEPENDENCY AND SEX DISCRIMINATION UNDER THE SOCIAL SECURITY PROGRAM

SEC. 341. (a) The Secretary of Health, Education, and Welfare, in consultation with the Task Force on Sex Discrimination in the Department of Justice, shall make a detailed study, within the Department of Health, Education, and Welfare and the Social Security Administration, of proposals to eliminate dependency as a factor in the determination of entitlement to spouse's benefits under the program established under title II of the Social Security Act, and of proposals to bring about equal treatment for men and women in any and all respects under such program, taking into account the practical effects (particularly the effect upon women's entitlement to such benefits) of factors such as—

(1) changes in the nature and extent of women's participation in the labor force,

(2) the increasing divorce rate, and

(3) the economic value of women's work in the home.

The study shall include appropriate cost analyses.

(b) The Secretary shall submit to the Congress within six months after the date of the enactment of this Act a full and complete report on the study carried out under subsection (a).

Part E—Combined Social Security and Income Tax Annual Reporting

Subpart 1—Amendments to Title II of the Social Security Act

ANNUAL CREDITING OF QUARTERS OF COVERAGE

SEC. 351. (a)(1) Sections 209(g)(3), 209(j), 210(a)(17)(A), and 210(f)(4)(B) of the Social Security Act are each amended by striking out "quarter" wherever it appears and inserting in lieu thereof "year".

(2) Sections 209(g)(3) and 209(j) of such Act are each further amended by striking out "$50" and inserting in lieu thereof "$100".

(3)(A) Section 209 of such Act is amended by striking out "or" at the end of subsection (n), by striking out the period at the end of subsection (o) and inserting in lieu thereof "; or", and by inserting after subsection (o) the following new subsection:

"(p) Remuneration paid by an organization exempt from income tax under section 501 of the Internal Revenue Code of 1954 in any calendar year to an employee for service rendered in the employ of such organization, if the remuneration paid in such year by the organization to the employee for such service is less than $100.".

(B) Section 210(a)(10) of such Act is amended by striking out "(10)(A)" and all that follows down through "(B) Service" and inserting in lieu thereof "(10) Service", and by redesignating clauses (i) and (ii) as subparagraphs (A) and (B), respectively.

(b) Section 212 of such Act is amended to read as follows:

"CREDITING OF SELF-EMPLOYMENT INCOME TO CALENDAR YEARS

"SEC. 212. (a) For the purposes of determining average monthly wage and quarters of coverage the amount of self-employment income derived during any taxable year which begins before 1978 shall—

"(1) in the case of a taxable year which is a calendar year, be credited equally to each quarter of such calendar year; and

"(2) in the case of any other taxable year, be credited equally to the calendar quarter in which such taxable year ends and to each of the next three or fewer preceding quarters any part of which is in such taxable year.

"(b) For the purposes of determining average indexed monthly earnings, average monthly wage, and quarters of coverage the amount of self-employment income derived during any taxable year which begins after 1977 shall—

"(1) in the case of a taxable year which is a calendar year or which begins with or during a calendar year and ends with or during such year, be credited to such calendar year; and

"(2) in the case of any other taxable year, be allocated proportionately to the two calendar years, portions of which are included within such taxable year, on the basis of the number of months in each such calendar year which are included completely within the taxable year.

For purposes of clause (2), the calendar month in which a taxable year ends shall be treated as included completely within that taxable year.".

(c) Section 213(a)(2) of such Act is amended to read as follows:

"(2)(A) The term 'quarters of coverage' means—

"(i) for calendar years before 1978, and subject to the provisions of subparagraph (B), a quarter in which an individual has been paid $50 or more in wages (except wages for agricultural labor paid after 1954) or for which he has been credited (as determined under section 212) with $100 or more of self-employment income; and

"(ii) for calendar years after 1977, and subject to the provisions of subparagraph (B), each portion of the total of the wages paid and the self-employment income credited (pursuant to section 212) to an individual in a calendar year which equals $250, with such quarter of coverage being assigned to a specific calendar quarter in such calendar year only if necessary in the case of any individual who has attained age 62 or died or is under a disability and the requirements for insured status in subsection (a) or (b) of section 214, the requirements for entitlement to a computation or recomputation of his primary insurance amount, or the requirements of paragraph (3) of section 216(i) would not otherwise be met.

"(B) Notwithstanding the provisions of subparagraph (A)—

"(i) no quarter after the quarter in which an individual dies shall be a quarter of coverage, and no quarter any part of which is included in a period of disability (other than the initial quarter and the last quarter of such period) shall be a quarter of coverage;

"(ii) if the wages paid to an individual in any calendar year equal to $3.000 in the case of a calendar year before 1951, or $3,600 in the case of a calendar year after 1950 and before 1955, or $4,200 in the case of a calendar year after 1954 and before 1959, or $4,800 in the case of a calendar year after 1958 and before 1966, or $6,600 in the case of a calendar year after 1965 and before 1968, or $7,800 in the case of a calendar year after 1967 and before 1972, or $9,000 in the case of the calendar year 1972, or $10,800 in the case of the calendar year 1973, or $13,200 in the case of the calendar year 1974 or an amount equal to the contribution and benefit base (as determined under section 230) in the case of any calendar year after 1974 and before 1978 with respect to which such contribution and benefit base is effective, each quarter of such year shall (subject to clauses (i) and (v)) be a quarter of coverage;

"(iii) if an individual has self-employment income for a taxable year, and if the sum of such income and the wages paid to him during such year equals $3,600 in the case of a taxable year beginning after 1950 and ending before 1955, or $4,200 in the case of a taxable year ending after 1954 and before 1959, or $4,800 in the case of a taxable year ending after 1958 and before 1966, or $6,600 in the case of a taxable year ending after 1965 and before 1968, or $7,800 in the case of a taxable year ending after 1967 and before 1972, or $9,000 in the case of a taxable year beginning after 1971 and before 1973, or $10,800 in the case of a taxable year beginning after 1972 and before 1974, or $13,200 in the case of a taxable year beginning after 1973 and before 1975, or an amount equal to the contribution and benefit base (as determined under section 230) which is effective for the calendar year in the case of any taxable year beginning in any calendar year after 1974 and before 1978, each quarter any part of which falls in such year shall (subject to clauses (i) and (v)) be a quarter of coverage;

"(iv) if an individual is paid wages for agricultural labor in a calendar year after 1954 and before 1978, then, subject to clauses (i) and (v), (I) the last quarter of such year which can be but is not otherwise a quarter of coverage shall be a quarter of coverage if such wages equal or exceed $100 but are less than $200; (II) the last two quarters of such year which can be but are not otherwise quarters of coverage shall be quarters of coverage if such wages equal or exceed $200 but are less than $300; (III) the last three quarters of such year which can be but are not otherwise quarters of coverage shall be quarters of coverage if such wages equal or exceed $300 but are less than $400; and (IV) each quarter of such year which is not otherwise a quarter of coverage shall be a quarter of coverage if such wages are $400 or more;

"(v) no quarter shall be counted as a quarter of coverage prior to the beginning of such quarter;

"(vi) not more than one quarter of coverage may be credited to a calendar quarter; and

"(vii) no more than four quarters of coverage may be credited to any calendar year after 1977.

If in the case of an individual who has attained age 62 or died or is under a disability and who has been paid wages for agricultural labor in a calendar year after 1954 and before 1978, the requirements for insured status in subsection (a) or (b) of section 214, the requirements for entitlement to a computation or recomputation of his primary insurance amount, or the requirements of paragraph (3) of section 216(i) are not met after assignment of quarters of coverage to quarters in such year as provided in clause (iv) of the preceding sentence, but would be met if such quarters of coverage were assigned to different quarters in such year, then such quarters of coverage shall instead be assigned, for purposes only of determining compliance with such requirements, to such different quarters. If, in the case of an individual who did not die prior to January 1, 1955, and who attained age 62 (if a woman) or age 65 (if a man) or died before July 1, 1957, the requirements for insured status in section 214(a)(3) are not met because of his having too few quarters of coverage but would be met if his quarters of coverage in the first calendar year in which he had any covered employment had been determined on the basis of the period during which wages were earned rather than on the basis of the period during which wages were paid (any such wages paid that are reallocated on an earned basis shall not be used in determining quarters of coverage for subsequent calendar years), then upon application filed by the individual or his survivors and satisfactory proof of his record of wages earned being furnished by such individual or his survivors, the quarters of coverage in such calendar year may be determined on the basis of the periods during which wages were earned.".

(d) The amendment made by subsection (a) shall apply with respect to remuneration paid and services rendered after December 31, 1977. The amendments made by subsections (b) and (c) shall be effective January 1, 1978.

ADJUSTMENT IN AMOUNT REQUIRED FOR A QUARTER OF COVERAGE

SEC. 352. (a) Section 213(a)(2)(A)(ii) of the Social Security Act, as amended by section 351(c) of this Act, is amended by striking out "$250" and inserting in lieu thereof "the amount required for a quarter of coverage in that calendar year (as determined under subsection (d))".

(b) Section 213 of such Act is further amended by adding at the end thereof the following new subsection:

"Amount Required for a Quarter of Coverage

"(d)(1) The amount of wages and self-employment income which an individual must have in order to be credited with a quarter of coverage in any year under subsection (a)(2)(A)(ii) shall be $250 in the calendar year 1978 and the amount determined under paragraph (2) of this subsection for years after 1978.

"(2) The Secretary shall, on or before November 1 of 1978 and of every year thereafter, determine and publish in the Federal Register the amount of wages and self-employment income which an individual must have in order to be credited with a quarter of coverage in the succeeding calendar year. The amount required for a quarter of coverage shall be the larger of—

"(A) the amount in effect in the calendar year in which the determination under this subsection is made, or

"(B) the product of the amount prescribed in paragraph (1) which is required for a quarter of coverage in 1978 and the ratio of the average of the total wages (as defined in regulations of the Secretary and computed without regard to the limitations specified in section 209(a)) reported to the Secretary of the Treasury or his delegate for the calendar year before the year in which the determination under this paragraph is made to the average of the total wages (as so defined and computed) reported to the Secretary of the Treasury or his delegate for 1976 (as published in the Federal Register in accordance with section 215(a)(1)(D)),

with such product, if not a multiple of $10, being rounded to the next higher multiple of $10 where such amount is a multiple of $5 but not of $10 and to the nearest mutliple of $10 in any other case.".

(c) The amendments made by this section shall be effective January 1, 1978.

TECHNICAL AND CONFORMING AMENDMENTS

SEC. 353. (a)(1) Section 203(f)(8)(B)(i) of the Social Security Act is amended by striking out "was" wherever it appears and inserting in lieu thereof "is".

(2) Section 203(f)(8)(B)(ii) of such Act is amended to read as follows:

"(ii) the product of the exempt amount described in clause (i) and the ratio of (I) the average of the total wages (as defined in regulations of the Secretary and computed without regard to the limitations specified in section 209(a)) reported to the Secretary of the Treasury or his delegate for the calendar year before the calendar year in which the determination under subparagraph (A) is made to (II) the average of the total wages (as so defined and computed) reported to the Secretary of the Treasury or his delegate for the calendar year before the most recent calendar year in which an increase in the exempt amount was enacted or a determination resulting in such an increase was made under subparagraph (A), with such product, if not a multiple of $10, being rounded to the next higher multiple of $10 where such product is a multiple of $5 but not of $10 and to the nearest multiple of $10 in any other case.".

(b)(1) The first sentence of section 218(c)(8) of such Act is amended by striking out "quarter" wherever it appears and inserting in lieu thereof "year", and by striking out "$50" and inserting in lieu thereof "$100".

(2) Section 218(g)(1) of such Act is amended by striking out "quarter" and inserting in lieu thereof "year".

(3) Section 218(q)(4)(B) of such Act is amended by striking out "any calendar quarters" and inserting in lieu thereof "a calendar year" and by striking out "such calendar quarters" and inserting in lieu thereof "such calendar year".

(4) Section 218(q)(6)(B) of such Act is amended by striking out "calendar quarters designated by the State in such wage reports as the" and inserting in lieu thereof "period or periods designated by the State in such wage reports as the period or".

(5) Section 218(r)(1) of such Act is amended—

(A) by striking out "quarter" in the matter before clause (A) and inserting in lieu thereof "year",

(B) by striking out "in which occurred the calendar quarter" in clause (A), and

(C) by striking out "quarter" in clause (B) and inserting in lieu thereof "year".

(c)(1) Effective with respect to estimates for calendar years beginning after December 31, 1977, section 224(a) of such Act is amended by striking out the last sentence.

(2) Section 224(f)(2) of such Act is amended to read as follows:

"(2) In making the redetermination required by paragraph (1), the individual's average current earnings (as defined in subsection (a)) shall be deemed to be the product of—

"(A) his average current earnings as initially determined under subsection (a);

"(B) the ratio of (i) the average of the total wages (as defined in regulations of the Secretary and computed without regard to the limitations specified in section 209(a)) reported to the Secretary of the Treasury or his delegate for the calendar year before the year in which such redetermination is made to (ii) the average of the total wages (as so defined and computed) reported to the Secretary of the Treasury or his delegate for calendar year 1977 or, if later, the calendar year before the year in which the reduction was first computed (but not counting any reduction made in benefits for a previous period of disability); and

"(C) in any case in which the reduction was first computed before 1978, the ratio of (i) the average of the taxable wages reported to the Secretary for the first calendar quarter of 1977 to (ii) the average of the taxable wages reported to the Secretary for the first calendar quarter of the calendar year before the year in which the reduction was first computed (but not counting any reduction made in benefits for a previous period of disability).

Any amount under this paragraph which is not a multiple of $1 shall be reduced to the new lower multiple of $1.".

(d) Section 229(a) of such Act is amended—

(1) by striking out "shall be deemed to have been paid, in each calendar quarter occurring after 1956 in which he" and inserting in lieu thereof ", if he", and

(2) by striking out "wages (in addition to the wages actually paid to him for such service) of $300." at the end thereof and inserting in lieu thereof the following: "shall be deemed to have been paid—

"(1) in each calendar quarter occurring after 1956 and before 1978 in which he was paid such wages, additional wages of $300, and

"(2) in each calendar year occurring after 1977 in which he was paid such wages, additional wages of $100 for each $300 of such wages, up to a maximum of $1,200 of additional wages for any calendar year.".

(e)(1) Section 230(b) of such Act is amended by striking out the last sentence.

(2) Section 230(b)(1) of such Act is amended to read as follows:

"(1) the contribution and benefit base which is in effect with respect to remuneration paid in (and taxable years beginning in) the calendar year in which the determination under subsection (a) is made, and".

(3) Section 230(b)(2) of such Act is amended to read as follows:

"(2) the ratio of (A) the average of the total wages (as defined in regulations of the Secretary and computed without regard to the limitations specified in section 209(a)) reported to the Secretary of the Treasury or his delegate for the calendar year before the calendar year in which the determination under subsection (a) is made or (B) the average of the total wages (as so defined and computed) reported to the Secretary of the Treasury or his delegate for the calendar year before the most recent calendar year in which an increase in the contribution and benefit base was enacted or a determination resulting in such an increase was made under subsection (a).".

(f)(1) Effective with respect to convictions after December 31, 1977, section 202(u)(1)(C) of such Act is amended by striking out "quarter" wherever it appears and inserting in lieu thereof "year".

(2)(A) Section 205(c)(1) of such Act is amended by striking out "(as defined in section 211(e))".

(B) Section 205(c)(1) of such Act is further amended by adding at the end thereof the following new subparagraph:

"(D) The term 'period' when used with respect to self-employment income means a taxable year and when used with respect to wages means—

"(i) a quarter if wages were reported or should have been reported on a quarterly basis on tax returns filed with the Secretary of the Treasury or his delegate under section 6011 of the Internal Revenue Code of 1954 or regulations thereunder (or on reports filed by a State under section 218(e) or regulations thereunder),

"(ii) a year if wages were reported or should have been reported on a yearly basis on such tax returns or reports, or

"(iii) the half year beginning January 1 or July 1 in the case of wages which were reported or should have been reported for calendar year 1937.".

(C) Section 205(o) of such Act is amended by inserting "before 1978" after "calendar year".

(g) The amendments made by subsection (b) of this section shall apply with respect to remuneration paid after December 31, 1977, except that the amendment made by subsection (b)(2) shall apply with respect to notices submitted by the States to the Secretary after the date of the enactment of this Act. The amendments made by subsections (d) and (f)(2) shall be effective January 1, 1978. Except as otherwise specifically provided, the remaining amendments made by this section shall be effective January 1, 1979.

Subpart 2—Amendments to the Internal Revenue Code of 1954

DEDUCTION OF TAX FROM WAGES

SEC. 355. (a) Section 3102(a) of the Internal Revenue Code of 1954 is amended by striking out "or (C) or (10)", and by inserting after "is less than $50;" the following: "and an employer who in any calendar year pays to an employee cash remuneration to which paragraph (7)(C) or (10) of section 3121(a) is applicable may deduct an amount equivalent to such tax from any such payment of remuneration, even though at the time of payment the total amount of such remuneration paid to the employee by the employer in the calendar year is less than $100;".

(b)(1) Paragraphs (1) and (2) of section 3102(c) of such Code are each amended by striking out "quarter" wherever it appears and by inserting in lieu thereof "year".

(2) Paragraph (3) of section 3102(c) of such Code is amended—

(A) by striking out "quarter of the" in subparagraph (A); and

(B) by striking out "quarter" wherever it appears in subparagraphs (B) and (C) and inserting in lieu thereof "year".

(c) The amendments made by this section shall apply with respect to remuneration paid and to tips received after December 31, 1977.

TECHNICAL AND CONFORMING AMENDMENTS

SEC. 356. (a) Sections 3121(a)(7)(C) and 3121(a)(10) of the Internal Revenue Code of 1954 are each amended by striking out "quarter" wherever it appears and inserting in lieu thereof "year", and by striking out "$50" and inserting thereof "$100".

(b) Section 3121(a) of such Code is amended by striking out "or" at the end of paragraph (14), by striking out the period at the end of paragraph (15) and inserting in lieu thereof "; or", and by adding after paragraph (15) the following new paragraph:

"(16) remuneration paid by an organization exempt from income tax under section 501(a) (other than an organization described in section 401(a)) or under section 521 in any calendar year to an employee for service rendered in the employ of such organization, if the remuneration paid in such year by the organization to the employee for such service is less than $100.".

(c) Section 3121(b)(10) of such Code is amended by striking out "(10)(A)" and all that follows down through "(B) service" and inserting in lieu thereof "(10) service", and redesignating clauses (i) and (ii) as subparagraphs (A) and (B), respectively.

(d) Sections 3121(b)(17)(A) and 3121(g)(4)(B) of such Code are each amended by striking out "quarter" and inserting in lieu thereof "year".

(e) The amendments made by this section shall apply with respect to remuneration paid and services rendered after December 31, 1977.

Subpart 3—Conforming Amendments to the Railroad Retirement Act of 1974

COMPUTATION OF EMPLOYEE ANNUITIES

SEC. 358. (a) The last sentence of section 3(f)(1) of the Railroad Retirement Act of 1974 is amended—

(1) by inserting "paid before 1978" after "in the case of wages", and

(2) by inserting "and in the case of wages paid after 1977" before the period at the end thereof.

(b) The amendments made by this section shall be effective January 1, 1978.

PART F—NATIONAL COMMISSION ON SOCIAL SECURITY

ESTABLISHMENT OF COMMISSION

SEC. 361. (a)(1) There is hereby established a commission to be known as the National Commission on Social Security (hereinafter referred to as the "Commission").

(2)(A) The Commission shall consist of—

(i) five members to be appointed by the President, by and with the advice and consent of the Senate, one of whom shall, at the time of appointment, be designated as Chairman of the Commission;

(ii) two members to be appointed by the Speaker of the House of Representatives; and

(iii) two members to be appointed by the President pro tempore of the Senate.

(B) At no time shall more than three of the members appointed by the President, one of the members appointed by the Speaker of the House of Representatives, or one of the members appointed by the President pro tempore of the Senate be members of the same political party.

(C) The membership of the Commission shall consist of individuals who are of recognized standing and distinction and who possess the demonstrated capacity to discharge the duties imposed on the Commission, and shall include representatives of the private insurance industry and of recipients of benefits under the programs involved as well as individuals whose capacity is based on a special knowledge or expertise in those programs. No individual who is otherwise an officer or full-time employee of the United States shall serve as a member of the Commission.

(D) The Chairman of the Commission shall designate a member of the Commission to act as Vice Chairman of the Commission.

(E) A majority of the members of the Commission shall constitute a quorum, but a lesser number may conduct hearings.

(F) Members of the Commission shall be appointed for a term of two years.

(G) A vacancy in the Commission shall not affect its powers, but shall be filled in the same manner as that herein provided for the appointment of the member first appointed to the vacant position.

(3) Members of the Commission shall receive $138 per diem while engaged in the actual performance of the duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred in the performance of such duties.

(4) The Commission shall meet at the call of the Chairman, or at the call of a majority of the members of the Commission; but meetings of the Commission shall be held not less frequently than once in each calendar month which begins after a majority of the authorized membership of the Commission has first been appointed.

(b)(1) It shall be the duty and function of the Commission to conduct a continuing study, investigation, and review of—

(A) the Federal old-age, survivors, and disability insurance program established by title II of the Social Security Act; and

(B) the health insurance programs established by title XVIII of such Act.

(2) Such study, investigation, and review of such programs shall include (but not be limited to)—

(A) the fiscal status of the trust funds established for the financing of such programs and the adequacy of such trust funds to meet the immediate and long-range financing needs of such programs;

(B) the scope of coverage, the adequacy of benefits including the measurement of an adequate retirement income, and the conditions of qualification for benefits provided by such programs including the application of the retirement income test to unearned as well as earned income;

(C) the impact of such programs on, and their relation to, public assistance programs, nongovernmental retirement and annuity programs, medical service delivery systems, and national employment practices;

(D) any inequities (whether attributable to provisions of law relating to the establishment and operation of such programs, to rules and regulations promulgated in connection with the administration of such programs, or to administrative practices and procedures employed in the carrying out of such programs) which affect substantial numbers of individuals who are insured or otherwise eligible for benefits under such programs, including inequities and inequalities arising out of marital status, sex, or similar classifications or categories;

(E) possible alternatives to the current Federal programs or particular aspects thereof, including but not limited to (i) a phasing out of the payroll tax with the financing of such programs being accomplished in some other manner (including general revenue funding and the retirement bond), (ii) the establishment of a system providing for mandatory participation in any or all of the Federal programs, (iii) the integration of such current Federal programs with private retirement programs, and (iv) the establishment of a system permitting covered individuals a choice of public or private programs or both;

(F) the need to develop a special Consumer Price Index for the elderly, including the financial impact that such an index would have on the costs of the programs established under the Social Security Act; and

(G) methods for effectively implementing the recommendations of the Commission.

(3) In order to provide an effective opportunity for the general public to participate fully in the study, investigation, and review under this section, the Commission, in conducting such study, investigation, and review, shall hold public hearings in as many different geographical areas of the country as possible. The residents of each area where such a hearing is to be held shall be given reasonable advance notice of the hearing and an adequate opportunity to appear and express their views on the matters under consideration.

(c)(1) No later than four months after the date on which a majority of the authorized membership of the Commission is initially appointed, the Commission shall submit to the President and the Congress a special report describing the Commission's plans for conducting the study, investigation, and review under subsection (b), with particular reference to the scope of such study, investigation, and review and the methods proposed to be used in conducting it.

(2) At or before the close of each of the first two years after the date on which a majority of the authorized membership of the Commission is initially appointed, the Commission shall submit to the President and the Congress an annual report on the study, investigation, and review under subsection (b), together with its recommendations with respect to the programs involved. The second such report shall constitute the final report of the Commission on such study, investigation, and review, and shall include its final recommendations; and upon the submission of such final report the Commission shall cease to exist.

(d)(1) The Commission shall appoint an Executive Director of the Commission who shall be compensated at a rate fixed by the Commission, but which shall not exceed the rate established for level V of the Executive Schedule by title 5, United States Code.

(2) In addition to the Executive Director, the Commission shall have the power to appoint and fix the compensation of such personnel as it deems advisable, in accordance with the provisions of title 5, United States Code, governing appointments to the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates.

(e) In carrying out its duties under this section, the Commission, or any duly authorized committee thereof, is authorized to hold such hearings, sit and act at such times and places, and take such testimony with respect to matters with respect to which it has a responsibility under this section, as the Commission or such committee may deem advisable. The Chairman of the Commission or any member authorized by him may administer oaths or affirmations to witnesses appearing before the Commission or before any committee thereof.

(f) The Commission may secure directly from any department or agency of the United States such data and information as may be necessary to enable it to carry out its duties under this section. Upon request of the Chairman of the Commission, any such department or agency shall furnish any such data or information to the Commission.

(g) The General Services Administration shall provide to the Commission, on a reimbursable basis such administrative support services as the Commission may request.

(h) There are hereby authorized to be appropriated such sums as may be necessary to carry out this section.

(i) It shall be the duty of the Health Insurance Benefits Advisory Council (established by section 1867 of the Social Security Act) to provide timely notice to the Commission of any meeting, and the Chairman of the Commission (or his delegate) shall be entitled to attend any such meeting.

PART G—MISCELLANEOUS PROVISIONS

APPOINTMENT OF HEARING EXAMINERS

SEC. 371. The persons who were appointed to serve as hearing examiners under section 1631(d)(2) of the Social Security Act (as in effect prior to January 2, 1976), and who by section 3 of Public Law 94–202 were deemed to be appointed under section 3105 of title 5, United States Code (with such appointments terminating no later than at the close of the period ending December 31, 1978), shall be deemed appointed to career-absolute positions as hearing examiners under and in accordance with section 3105 of title 5, United States Code, with the same authority and tenure (without regard to the expiration of such period) as hearing examiners appointed directly under such section 3105, and shall receive compensation at the same rate as hearing examiners appointed by the Secretary of Health, Education, and Welfare directly under such section 3105. All of the provisions of title 5, United States Code and the regulations promulgated pursuant thereto, which are applicable to hearing examiners appointed under such section 3105, shall apply to the persons described in the preceding sentence.

REPORT OF ADVISORY COUNCIL ON SOCIAL SECURITY

SEC. 372. Notwithstanding the provisions of section 706(d) of the Social Security Act, the report of the Advisory Council on Social Security which is due not later than January 1, 1979, may be filed at any date prior to October 1, 1979.

TITLE IV—PROVISIONS RELATING TO CERTAIN STATE WELFARE AND SERVICE PROGRAMS RECEIVING FEDERAL FINANCIAL ASSISTANCE

FISCAL RELIEF FOR STATES AND POLITICAL SUBDIVISIONS WITH RESPECT TO COSTS OF WELFARE PROGRAMS

SEC. 401. Section 403 of the Social Security Act is amended—

(1) in subsection (a), by adding at the end thereof the following new paragraph:

"In the case of calendar quarters beginning after September 30, 1977, and prior to April 1, 1978, the amount to be paid to each State (as determined under the preceding provisions of this subsection or section 1118, as the case may be) shall be increased in accordance with the provisions of subsection (i) of this section."; and

(2) by adding at the end thereof the following new subsection:

"(i)(1) In the case of any calendar quarter which begins after September 30, 1977, and prior to April 1, 1978, the amount payable (as determined under subsection (a) or section 1118, as the case may be) to each State which has a State plan approved under this part shall (subject to the succeeding paragraphs of this subsection) be increased by an amount equal to the sum of the following:

"(A) an amount which bears the same ratio to $46,750,000 as the amount expended as aid to families with dependent children under the State plan of such State during the month of December 1976 bears to the amount expended as aid to families with dependent children under the State plans of all States during such month, and

"(B)(i) in the case of Puerto Rico, Guam, and the Virgin Islands, an amount equal to the amount determined under subparagraph (A) with respect to such State, or

"(ii) in the case of any other State, an amount which bears the same ratio to $46,750,000, minus the amounts determined under clause (i) of this subparagraph, as the amount allocated to such State under section 106 of the State and Local Fiscal Assistance Act of 1972, for the most recent entitlement period for which allocations have been made under such section prior to the date of the enactment of this subsection, bears to the total of the amounts allocated to all States under such section 106 for such period.

"(2) As a condition of any State receiving an increase, by reason of the application of the foregoing provisions of this subsection, in the amount determined for such State pursuant to subsection (a) or under section 1118 (as the case may be), such State must agree to pay to any political subdivision thereof which participates in the cost of the State's plan approved under this part, during any calendar quarter with respect to which such increase applies, so much of such increase as does not exceed 100 per centum of such political subdivision's financial contribution to the State's plan for such quarter.

"(3) Notwithstanding any other provision of this part, the amount payable to any State by reason of the preceding provisions of this subsection for calendar quarters prior to April 1, 1978, shall be made in a single installment, which shall be payable as shortly after October 1, 1977, as is administratively feasible.".

INCENTIVE ADJUSTMENTS FOR QUALITY CONTROL IN FEDERAL FINANCIAL PARTICIPATION IN AID TO FAMILIES WITH DEPENDENT CHILDREN PROGRAMS

SEC. 402. (a) Section 403 of the Social Security Act is amended by adding, after subsection (i) (as added by section 401 of this Act) the following new subsection:

"(j) If the dollar error rate of aid furnished by a State under its State plan approved under this part with respect to any six-month period, as based on samples and evaluations thereof, is—

"(1) at least 4 per centum, the amount of the Federal financial participation in the expenditures made by the State in carrying out such plan during such period shall be determined without regard to the provisions of this subsection; or

"(2) less than 4 per centum, the amount of the Federal financial participation in the expenditures made by the State in carrying out such plan during such period shall be the amount determined without regard to this subsection, plus, of the amount by which such expenditures are less than they would have been if the erroneous excess payments of aid had been at a rate of 4 per centum—

"(A) 10 per centum of the Federal share of such amount, in case such rate is not less than 3.5 per centum,

"(B) 20 per centum of the Federal share of such amount, in case such rate is at least 3.0 per centum but less than 3.5 per centum,

"(C) 30 per centum of the Federal share of such amount, in case such rate is at least 2.5 per centum but less than 3.0 per centum,

"(D) 40 per centum of the Federal share of such amount, in case such rate is at least 2.0 per centum but less than 2.5 per centum,

"(E) 50 per centum of the Federal share of such amount, in case such rate is less than 2.0 per centum.

For purposes of this subsection (i) the term 'dollar error rate of aid' means the total of the dollar error rates of aid for (I) payments to ineligible families receiving assistance; (II) overpayments to eligible families receiving assistance; (III) underpayments to eligible families receiving assistance; and (IV) nonpayments to eligible families not receiving assistance due to erroneous terminations or denials, and (ii) the term 'erroneous excess payments,' means the total of (I) erroneous payments to ineligible families receiving assistance, and (II) overpayments to eligible families receiving assistance.".

(b) Payments may be made under the amendment made by subsection (a) only in the case of periods commencing on or after January 1, 1978.

ACCESS TO WAGE INFORMATION

SEC. 403. (a) Part A of title IV of the Social Security Act is amended by adding after section 410 the following new section:

"ACCESS TO WAGE INFORMATION

"SEC. 411. (a) Notwithstanding any other provision of law, the Secretary shall make available to States and political subdivisions thereof wage information contained in the records of the Social Security Administration which is necessary (as determined by the Secretary in regulations) for purposes of determining an individual's eligibilty for aid or services, or the amount of such aid or services, under a State plan for aid and services to needy families with children approved under this part, and which is specifically requested by such State or political subdivision for such purposes.

"(b) The Secretary shall establish such safeguards as are necessary (as determined by the Secretary under regulations) to insure that information made available under the provisions of this section is used only for the purposes authorized by this section.".

(b) Section 3304(a) of the Federal Unemployment Tax Act is amended by redesignating paragraph (16) as paragraph (17) and by inserting after paragraph (15) the following new paragraph:

"(16)(A) wage information contained in the records of the agency administering the State law which is necessary (as determined by the Secretary of Health, Education, and Welfare in regulations) for purposes of determining an individual's eligibility for aid or services, or the amount of such aid or services, under a State plan for aid and services to needy families with children approved under part A of title IV of the Social Security Act, shall be made available to a State or political subdivision thereof when such information is specifically requested by such State or political subdivision for such purposes, and

"(B) such safeguards are established as are necessary (as determined by the Secretary of Health, Education, and Welfare in regulations) to insure that such information is used only for the purposes authorized under subparagraph (A);".

(c) Section 402(a) of the Social Security Act is amended—

(1) by striking out the word "and" at the end of paragraph (27);

(2) by striking out the period at the end of paragraph (28) and inserting in lieu thereof a semicolon and the word "and"; and

(3) by adding at the end thereof the following new paragraph:

"(29) effective October 1, 1979, provided that wage information available from the Social Security Administration under the provisions of section 411 of this Act, and wage information available (under the provisions of section 3304(a)(16) of the Federal Unemployment Tax Act) from agencies administering State unemployment compensation laws, shall be requested and utilized to the extent permitted under the provisions of such sections; except that the State shall not be required to request such information from the Social Security Administration where such information is available from the agency administering the State unemployment compensation laws.".

(d) The amendments made by this section shall be effective on the date of the enactment of this Act.

STATE DEMONSTRATION PROJECTS

SEC. 404. Section 1115 of the Social Security Act is amended—

(1) by inserting "(a) after "SEC. 1115.";

(2) by redesignating subsections (a) and (b) as paragraphs (1) and (2), respectively; and

(3) by adding at the end thereof the following new subsection:

"(b)(1) In order to permit the States to achieve more efficient and effective use of funds for public assistance, to reduce dependency, and to improve the living conditions and increase the incomes of individuals who are recipients of public assistance, any State having an approved plan under part A of title IV may, subject to the provisions of this subsection, establish and conduct not more than three demonstration projects. In establishing and conducting any such project the State shall—

"(A) provide that not more than one such project be conducted on a statewide basis;

"(B) provide that in making arrangements for public service employment—

"(i) appropriate standards for the health, safety, and other conditions applicable to the performance of work and training on such project are established and will be maintained,

"(ii) such project will not result in the displacement of employed workers,

"(iii) each participant in such project shall be compensated for work performed by him at an hourly rate equal to the prevailing hourly wage for similar work in the locality where the participant performs such work (and, for purposes of this clause, benefits payable under the State's plan approved under part A of title IV of the family of which such participant is a member shall be regarded as compensation for work performed by such participant),

"(iv) with respect to such project the conditions of work, training, education, and employment are reasonable in the light of such factors as the type of work, geographical region, and proficiency of the participant; and

"(v) appropriate workmen's compensation protection is provided to all participants; and

"(C) provide that participation in such project by any individual receiving aid to families with dependent children be voluntary.

"(2) Any State which establishes and conducts demonstration projects under this subsection may, subject to paragraph (3), with respect to any such project—

"(A) waive, subject to paragraph (3), any or all of the requirements of sections 402(a)(1) (relating to statewide operation), 402(a)(3) (relating to administration by a single State agency), 402(a)(8) (relating to disregard of earned income), except that no such waiver of 402(a)(8) shall operate to waive any amount in excess of one-half of the earned income of any individual, and 402(a)(19) (relating to the work incentive program);

"(B) subject to paragraph (4), use to cover the costs of the project such funds as are appropriated for payment to such State with respect to the assistance which is or would, except for participation in a project under this subsection, be payable to individuals participating in such projects under part A of title IV for any fiscal year in which such projects are conducted; and

"(C) use such funds as are appropriated for payments to States under the State and Local Fiscal Assistance Act of 1972 for any fiscal year in which the project is conducted to cover so much of the costs of salaries for individuals participating in public service employment as is not covered through the use of funds made available under subparagraph (B).

"(3)(A) Any State which wishes to establish and conduct demonstration projects under the provisions of this subsection shall submit an application to the Secretary in such form and conatining such information as the Secretary may require. Whenever any State submits such an application to the Secretary, it shall at the same time issue public notice of that fact together with a general description of the project with respect to which the application is submitted, and shall invite comment thereon from interested parties and comments thereon may be submitted, within the 30-day period beginning with the date the application is submitted to the Secretary, to the State or the Secretary by such parties. The State shall also make copies of the application available for public inspection. The Secretary shall also immediately publish a summary of the proposed project, make copies of the application available for public inspection, and receive and consider comments submitted with respect to the application. A State shall be authorized to proceed with a project submitted under this subsection—

"(i) when such application has been approved by the Secretary (which shall be no earlier than 30 days following the date the application is submitted to him), or

"(ii) 60 days after the date on which such application is submitted to the Secretary unless, during such 60 day period, he denies the application.

"(B) Notwithstanding the provisions of paragraph (2)(A), the Secretary may review any waiver made by a State under such paragraph. Upon a finding that any such waiver is inconsistent with the purposes of this subsection and the purposes of part A of title IV, the Secretary may disapprove such waiver. The project with respect to which any such disapproved waiver was made shall be terminated by such State not later than the last day of the month following the month in which such waiver was disapproved.

"(4) Any amount payable to a State under section 403(a) on behalf of an individual participating in a project under this section shall not be increased by reason of the participation of such individual in any demonstration project conducted under this subsection over the amount which would be payable if such individual were receiving aid to families with dependent children and not participating in such project.

"(5) Participation in a project established under this section shall not be considered to constitute employment for purposes of any finding with respect to 'unemployment' as that term is used in section 407.

"(6) Any demonstration project established and conducted pursuant to the provisions of this subsection shall be conducted for not longer than two years. All demonstration projects established and conducted pursuant to the provisions of this subsection shall be terminated not later than September 30, 1980.".

REIMBURSEMENT FOR ERRONEOUS STATE SUPPLEMENTARY PAYMENTS

SEC. 405. (a) Notwithstanding any other provision of law, the Secretary of Health, Education, and Welfare is authorized and directed to pay to each State an amount equal to the amount expended by such State for erroneous supplementary payments to aged, blind, or disabled individuals whenever, and to the extent to which, the Secretary through an audit by the Department of Health, Education, and Welfare which has been reviewed and concurred in by the Inspector General of such department determines that—

(1) such amount was paid by such State as a supplementary payment during the calendar year 1974 pursuant to an agreement between the State and the Secretary required by section 212 of the Act entitled "An Act to extend the Renegotiation Act of 1951 for one year, and for other purposes", approved July 9, 1973, or such amount was paid by such State as on optional State supplementation, as defined in section 1616 of the Social Security Act, during the calendar year 1974,

(2) the erroneous payments were the result of good faith reliance by such State upon erroneous or incomplete information supplied by the Department of Health, Education, and Welfare, through the State data exchange, or good faith reliance upon incorrect supplemental security income benefit payments made by such department, and

(3) recovery of the erroneous payments by such State would be impossible or unreasonable.

(b) There are authorized to be appropriated such sums as are necessary to carry out the provisions of this section.

TITLE V—MISCELLANEOUS

COVERAGE UNDER MEDICARE OF CERTAIN POWER-OPERATED WHEELCHAIRS

SEC. 501. (a) Section 1861(s)(6) of the Social Security Act is amended by inserting after "wheelchairs" the following: "(which may include a power-operated vehicle that may be appropriately used as a wheelchair, but only where the use of such a vehicle is determined to be necessary on the basis of the individual's medical and physical condition and the vehicle meets such safety requirements as the Secretary may prescribe)".

(b) Section 1842(b)(3) of such Act is amended by inserting after the fourth sentence thereof the following new sentence: "With respect to power-operated wheelchairs for which payment may be made in accordance with section 1861(s)(6), charges determined to be reasonable may not exceed the lowest charge at which power-operated wheelchairs are available in the locality."

(c) The amendments made by this section shall be effective in the case of items and services furnished after the date of the enactment of this Act.

FEDERAL ELECTION CAMPAIGN ACT AMENDMENTS

SEC. 502. (a) Section 328 of the Federal Election Campaign Act of 1971 (2 U.S.C. 441i) is amended—

(1) by inserting "(a)" immediately after "SEC. 328.", and

(2) by adding at the end thereof the following new subsections:

"(b) If an honorarium payable to a person is paid instead at his request to a charitable organization selected by payor from a list of 5 or more charitable organizations provided by that person, that person shall not be treated, for purposes of subsection (a), as accepting that honorarium. For purposes of this subsection, the term 'charitable organization' means an organization described in section 170(c) of the Internal Revenue Code of 1954.

"(c) For purposes of determining the aggregate amount of honorariums received by a person during any calendar year, amounts returned to the person paying an honorarium before the close of the calendar year in which it was received shall be disregarded.

"(d) For purposes of paragraph (2) of subsection (a), an honorarium shall be treated as accepted only in the year in which that honorarium is received.".

(b) The amendments made by subsection (a)shall apply with respect to any honorarium received after December 31, 1976.

And the Senate agree to the same.

Amend the title so as to read:

An Act to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, and for other purposes.".

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 9346) to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes, submit the following joint statement to the House and Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for both the House bill and the Senate amendment. The differences between the House bill, the Senate amendment, and the substitute agreed to in conference are generally described below, except for technical, clerical, conforming, clarifying, and minor drafting changes.

ADJUSTMENTS IN TAX RATES

The House bill contained changes in the social security tax schedule necessary to finance the social security system as modified by the House bill, as shown in table 1.

TABLE 1.—SOCIAL SECURITY TAX RATES—HOUSE-PASSED BILL

[In percent]

Calendar year	OASI [1]	DI [1]	OASDI [1]	HI	Total
	Employees and employers, each				
1977	4.375	0.575	4.95	0.90	5.85
1978	4.275	.775	5.05	1.00	6.05

1990 and later	7.6500	1.6500	9.30	1.45	10.75

[1] By allocation in law.

ALLOCATION TO DISABILITY INSURANCE TRUST FUND

The House bill would increase allocation to the disability insurance trust fund beginning in 1978. (See table 1 above.)

The Senate amendment would also increase allocation to the disability insurance trust fund beginning in 1978. (See table 2 above.)

The conference agreement modifies the allocation rates to finance the disability insurance program. (See table 3 above.)

CONTRIBUTION AND BENEFIT BASE

The House bill provided for 4 ad hoc increases in the contribution and benefit base for employees, employers, and the self-employed in 1978, 1979, 1980, and 1981. After 1981 the base would be automatically adjusted to keep up with average wage levels in the same way the present-law base is adjusted.

The Senate amendment provided for 4 ad hoc increases in the contribution and benefit base for employees and the self-employed of $600 each, above the level that would prevail under present law, in 1979, 1981, 1983, and 1985. After 1985, the base would be automatically adjusted to keep up with average wage levels.

The Senate amendment also provided for increasing the taxable earnings base for employers to $50,000 for 1979-84 and to $75,000 beginning in 1985. The base would remain at that level until the employee base reached that level, after which time both would be automatically adjusted.

The conference agreement follows the House bill except that no increase in the contribution and benefit base (over present law) is provided in 1978. Table 4 below shows the base for employers and employees under the House and Senate bills and the conference agreement. (Amounts shown under the Senate bill depend, in part, on automatic adjustments and are, therefore, estimates.)

TABLE 4.—CONTRIBUTION AND BENEFIT BASE

Calendar year	House-passed bill	Senate-passed bill		Conference agreement
		Employee, self-employed	Employer	
1978	$19,900	$17,700	$17,700	$17,700
1979	22,900	19,500	50,000	22,900
1980	25,900	21,000	50,000	25,900
1981	29,700	23,100	50,000	29,700
1982	(1)	(2)	(3)	(1)

[1] Automatic thereafter.

[2] Employee base, including $600 increases in 1983 and 1985, estimated to rise to $24,600 for 1982, $26,700 for 1983, $28,200 for 1984, $30,300 for 1985, with automatic increases (as under present law) thereafter.

[3] Remains at $50,000 through 1984; increases to $75,000 in 1985 and remains at $75,000 until employee base reaches $75,000.

Railroad Retirement tier-II.—Under the House bill, the tax base for tier-II of the Railroad Retirement Act for both benefits and tax purposes would be the same as under the automatic-increase provisions of the present law and would not be affected by increases in the social security taxable wage base contained in the bill. Under the Senate amendment the tax base for tier-II of the Railroad Retirement Act would not be affected but the amount of earnings used for computing the tier-II benefit would be the base used for social security benefits under the amended law.

The Senate recedes.

Pension Benefit Guaranty Corporation (PBGC).—The House bill provided that the pension insurance administered by PBGC would not be affected by the ad hoc increases in the wage base under social security. The insured pension amount would increase as it would under automatic-increase provisions of present law.

The Senate bill contained no similar provision.

The Senate recedes.

STANDBY GUARANTEE OF TRUST FUND LEVELS

The House bill provided standby authority for automatic loans to the OASDI trust funds from Federal general revenues whenever the assets of a cash benefits trust fund at the end of a calendar year amount to less than 25 percent of the outgo from the fund in the calendar year. The amount of the loan would be equal to the difference between the year-end balance in the fund and 27½ percent of the year's outgo.

Such loans would automatically be repaid with interest when assets at the end of a year exceeded 30 percent of the year's outgo from the fund. To provide for automatic repayment, there would be temporary social security tax-rate increases of 0.1 percent for employees and employers, each, and 0.15 percent for the self-employed, if at the end of any year after the year the loan was made the reserve level is less than 35 percent and the loan debt exceeds $2 billion. This temporary tax rate increase would go into effect one year later.

The standby loan authority would not be applicable for the HI trust fund.

The Senate amendment contained no such provision.

The House recedes.

REDUCTION IN TAXES FOR CERTAIN EMPLOYERS

The Senate amendment would limit State and local governmental and 501(c)(3) nonprofit employers' social security liability for 1979 to the liability that would be incurred for 1979 under the provisions of present law. For 1980 and after, such an employer's liability (in dollars) would generally be 90 percent of the liability under the law as amended by the bill, but not less than the 1979 liability. In no case would the provision require an increase in liability as compared with the regular provisions applicable to other employers. An authorization for appropriations from general revenues is provided to make up the loss of social security revenue to the trust funds that would result from enactment of the provision.

The House bill contained no such provision.

The Senate recedes.

MODIFICATION OF BENEFIT FORMULA

Both the Senate amendment and the House bill provided for basic changes in the computation of social security benefits for workers reaching age 62 after 1978. Although the provisions of the two bills were very similar, there were differences, described below:

BENEFIT FORMULAS

The House bill provided for a benefit formula producing benefit amounts roughly 5 percent lower than estimated present-law benefits at implementation (January 1, 1979). The formula for relating maximum family benefits to primary insurance amounts (PIA's) has a similar effect.

The Senate amendment benefit formula produced benefit amounts roughly equivalent to 1976 levels—about 2½ percent lower than estimated present-law benefits at implementation. The formula for relating maximum family benefits to PIA's had a similar effect.

The Senate recedes.

TRANSITIONAL PERIOD

The House bill provided a 10-year guarantee of benefit amounts based on the benefit table as of December 1978 in retirement cases.

The Senate amendment provided a 5-year guarantee in retirement cases.

The House recedes.

MINIMUM BENEFIT

Under the House bill, the December 1978 minimum benefit rounded to the next higher dollar (estimated to be about $121) would have been frozen for new beneficiaries. The minimum would have been increased in line with CPI increases only after a worker reached age 62, became disabled, or died.

The Senate amendment was similar except that it would have increased the minimum by CPI increases beginning with the year in which the individual (a worker, his widow, or child) actually became entitled to benefits, rather than from the point at which the worker reached age 62 became disabled, or died.

The House recedes with an amendment under which CPI increases for a worker or aged widow or widower generally would not begin to apply until the earlier of: (a) the first year the worker or aged widow (widower) was paid part or all of the benefits to which he was entitled for that year, after application of the retirement test; (b) the year of attainment of age 65.

SPECIAL MINIMUM

The House bill provided for an increase in the special minimum benefit up to a maximum of $230 a month for a worker ($345 for a couple) with 30 years of coverage under social security. The special minimum is calculated by multiplying $9 ($11.50 under the House bill) times the number of years of coverage (years in which earnings were at least 25% of the contribution and benefit base) in excess of 10 and up to 30—for a maximum multiplier of 20. Years of coverage would be based on the base as increased automatically by rises in average wages (without ad hoc increases as a result of H.R. 9346). Special minimum benefits would be increased automatically by CPI increases in the future.

The Senate amendment contained no such provision.

The Senate recedes.

DELAYED RETIREMENT CREDIT

The House bill provided for an increase in the delayed retirement credit to one-fourth of 1 percent for each month (3 percent per year) for which a worker does not receive a benefits between ages 65 and 72, for persons attaining age 62 after 1978.

The Senate amendment contained no such provision.

The Senate recedes.

DELAYED RETIREMENT CREDIT FOR WIDOWS AND WIDOWERS

The Senate amendment included a provision which would make the delayed retirement credit applicable to widow's and widower's insurance benefits, as well as to the worker's benefit.

The House bill contained no such provision.

The House recedes with an amendment making the change effective with June 1978.

LIBERALIZATION OF THE EARNINGS TEST

The House bill increased the exempt amount under the earnings test for beneficiaries age 65 and over to: $4,000 in 1978; $4,500 in 1979; $5,000 in 1980; and $5,500 in 1981.

The Senate amendment increased the exempt amount to $4,500 in 1978 and $6,000 in 1979 for all beneficiaries.

The Senate recedes adopting the exempt amounts in the House bill and increasing the exempt amount to $6,000 in 1982. These increases would apply only to beneficiaries age 65 and over.

AGE AT WHICH EARNINGS TEST NO LONGER APPLIES

The House bill lowered the age at which the retirement test no longer applies from age 72 to age 65 in 1982.

The Senate amendment lowered the age at which the retirement test no longer applies from age 72 to age 70 in 1982.

The House recedes.

LIBERALIZATION OF THE FOREIGN WORK TEST

The House bill provided for payment of benefits for any month in which a beneficiary engaged in noncovered work outside the United States worked 8 or fewer days in 1978, and 11 or fewer days in 1979 and thereafter.

The Senate amendment contained no such provision.

The House recedes.

STUDIES OF MANDATORY COVERAGE

The House bill required joint studies by the Office of Management and Budget, the Civil Service Commission, the Department of the Treasury, and the Department of Health, Education, and Welfare of mandatory coverage for Federal and State and local employees with reports and recommendations to the President and Congress within 2 years of enactment.

The Senate amendment contained no such provision.

The Senate recedes with amendments which would combine the studies of mandatory coverage of employees of Federal, State, and local governments and nonprofit organizations; would require the Secretary of Health, Education, and Welfare to conduct the study with appropriate consultation with Treasury, the Office of Management and Budget, and the Civil Service Commission.

The managers anticipate that the study will include, in addition to the evaluation of alternative proposals, examination of the following specific items: (1) Analysis of any possible constitutional questions involved in extensions of coverage; (2) review of the extent of State, local and nonprofit coverage under existing law; (3) analysis of the economic impact on State and local governments of mandatory coverage extensions; and (4) an analysis of the feasibility of developing a method of covering Federal employees without increasing their contributions or adversely affecting their benefit rights (except to the extent that any windfall benefit situations may be eliminated).

COVERAGE OF NONPROFIT ORGANIZATIONS

The Senate amendment included provisions to: (1) forgive through June 30, 1977, the social security tax liability of nonprofit organizations that stopped paying social security taxes before October 19, 1976, because they had not filed the proper certificate with the Internal Revenue Service to cover their employees under social security; (2) extend the deadline for filing waiver certificates for organizations that obtained refunds prior to September 9, 1976; (3) permit nonprofit organizations that paid social security taxes while waiting for the Internal Revenue Service to approve their request for tax-exempt status to receive a refund of those taxes in spite of P.L. 94–563 under which the taxes and social security coverage that resulted were validated; and (4) not require nonprofit organizations that received a refund of social security taxes for April-June 1973, to bring their employees under social security coverage.

The House bill contained no such provisions. (The Ways and Means Committee had reported a bill, H.R. 8490 that contained similar provisions.)

The House recedes with technical clarifying amendments.

LIMITED PARTNERSHIP INCOME

The House bill excluded from coverage the distributive share of income or loss received by a limited partner.

The Senate amendment contained no such provision.

The Senate recedes.

EMPLOYEES OF MEMBERS OF RELATED GROUPS OF CORPORATIONS

The Senate amendment provided that a group of corporations concurrently employing an individual would be considered as a single employer if one of the group serves as a common paymaster for the entire group. This would result in such corporations having to pay no more in social security and unemployment taxes than a single employer pays.

The House bill contains no such provisions.

The House recedes with clarifying amendments.

The provision limits the aggregate amount of employment taxes due for any taxable year with respect to an individual concurrently employed by two or more related corporations and compensated through a common paymaster which is itself one of the corporations employing the individual and which would have the responsibility for making payment to the Internal Revenue Service of employment taxes due. The provision is intended to establish a maximum total liability for the related corporations (including the common paymaster) as a group but is not intended to relieve any corporation of ultimate liability for any portion of the total amount of employment taxes due. The provision is not intended to have any effect on the deductibility for Federal income tax purposes of employment taxes or wages payable by a corporation; accordingly, since the corporation for which services are performed is the only one eligible to deduct wages and employment taxes paid with respect to such services, such wages and taxes will not be deductible unless the corporation for which the services are performed reimburses the common paymaster for such payments. For purposes of determining income tax deductions allowable, the conferees expect the Secretary of the Treasury to establish procedures for allocating employment taxes among related corporations establishing a common paymaster.

EMPLOYER TAXES ON TIPS

The House bill included a provision to require employers to pay social security taxes on tips deemed to be wages under the Federal minimum wage law.

The Senate amendment contained no such provision.

The Senate recedes with the understanding that the employer will be liable for the employer social security tax on the tips that are deemed wages, regardless of the amount of the tips the employee reports under section 6053(a) of the Internal Revenue Code of 1954.

COVERAGE FOR CLERGYMEN

The House bill permitted clergymen who filed application for exemption from coverage to revoke their exemption (but only during a limited period of time).

The Senate amendment contained no such provision.

The Senate recedes.

TOTALIZATION AGREEMENT

The House bill authorized the President to enter into bilateral agreements with foreign countries to provide the limited coordinaton of social security systems. Each such agreement would have to be transmitted to the Congress and could not go into effect until 90 days after one House had been in session. During that period an agreement could be rejected by action of both Houses enacting legislation.

The Senate amendment included the same provision except that: Each agreement must be transmitted to Congress with a report on estimated cost and number of individuals affected; an agreement must not be inconsistent with the provisions of title II of the Social Security Act; an agreement could not go into effect until 90 days after both Houses of Congress had been in session during which period an agreement could be repected by action of either House.

The House recedes.

ILLINOIS POLICEMEN AND FIREMEN

The House bill included a provision which would validate earnings erroneously reported for policemen and firemen covered under the Illinois Municipal Retirement Fund.

The Senate amendment contained no such provision.

The Senate recedes with an amendment that coverage for future periods would be provided for the policemen and firemen affected.

WISCONSIN RETIREMENT FUND

The House bill provided that a special coverage provision applicable to members of the Wisconsin Retirement Fund would be applicable to any successor system of that fund.

The Senate amendment contained no such provision.

The Senate recedes.

LIMITATION ON RETROACTIVE BENEFITS

The House bill provided that benefits would not be paid retroactively for months before an application is filed, when such payment results in a permanent reduction of future monthly benefits, effective January 1, 1978.

The Senate amendment was similar to the House provision except that it was effective upon enactment, rather than on January 1, 1978.

The Senate recedes.

DELIVERY OF BENEFIT CHECKS

The House bill required that whenever the delivery date for payment of either social security or supplemental security income checks falls on a Saturday, Sunday, or legal public holiday, the checks would be mailed "and delivered" on an earlier date. Any overpayment that occurs as a direct result of the earlier delivery of checks would be waived and would not be subjected to recovery.

The Senate amendment required in such circumstances that checks be "mailed for delivery" on the earlier date and did not include the waiver of overpayment provision of the House bill.

The Senate recedes with an amendment providing that checks be "mailed for delivery" by the earlier date.

REDUCED BENEFITS FOR SPOUSES RECEIVING GOVERNMENT PENSIONS

The Senate amendment provided that social security dependents' benefits payable to spouses and surviving spouses would be reduced by the amount of any public (Federal, State, or local) retirement benefit payable to the spouse based on the spouses's own work in noncovered public employment. The provision would have been effective with respect to benefits payable for months beginning with the month of enactment, based on applications filed in or after the month of enactment.

The House bill contained no such provision.

The House recedes with an amendment which would provide for an exception for certain people who are already receiving pensions based on noncovered public employment (or who would be eligible for such pension within 5 years of the month of enactment) and who could have expected to receive social security benefits as dependents or survivors under the social security laws as in effect on January 1, 1977. The managers are concerned that there may be large numbers of women, especially widows in their late fifties, who are already drawing pensions, or would be eligible to draw them within 5 years of the date of enactment of this bill, based on their non-covered work and whose retirement income was planned for on the assumption of the availability of full wife's or widow's benefits under social security. Inclusion of this exception to the applicability of the Senate provision, reinforces its prospective nature and avoids penalizing people who are already retired, or close to retirement, from public employment and who cannot be expected to readjust their retirement plans to take account of the "offset" provision that will apply in the future.

A separability clause is included for the exception clause established by the conference agreement so that if it is found invalid the pension-offset as passed by the Senate would not be affected, and the application of the exception clause would not be broadened to include persons or circumstances that are not included within it.

REPEAL OF WORKMEN'S COMPENSATION OFFSET

The Senate amendment repealed the provision of existing law which provides for a reduction in social security disability benefits for persons simultaneously entitled to workmen's compensation payments where the combined payments would otherwise exceed 80 percent of recent predisability earnings.

The House bill contained no such provision.

The Senate recedes.

DISABILITY BENEFITS FOR BLIND PERSONS

The Senate amendment provided for paying disability insurance benefits for blind people who have at least six quarters of social security coverage. The benefits would be paid regardless of the amount of an individual's earnings both before and after age 65 or his ability to work. The Senate amendment also excluded blind persons from the requirements of present law that disability benefits be suspended for any months during which a beneficiary refuses without good cause to accept vocational rehabilitation services.

The House bill contained no such provision.

The House recedes with an amendment which strikes the provisions of the Senate amendment but provides that the amount of earnings under the test of substantial gainful activity (SGA) which would terminate (or suspend for those age 55 or over) a blind individual's benefits would be increased to the monthly exempt amounts for persons 65 and over under the retirement test. The conferees are aware that this establishes a different test of SGA for blind persons than is applied administratively for persons with other disabilities. The conferees do not intend that the new SGA level established for the blind should be applied to other types of disability.

ELIMINATION OF MARRIAGE OR REMARRIAGE AS A FACTOR IN ENTITLEMENT TO, OR TERMINATION OR REDUCTION OF, BENEFITS

The House bill provided that marriage or remarriage would not bar or terminate entitlement to benefits as a divorced spouse, surviving spouse (including those caring for an entitled child), parent, or child, and remarriage would not cause any reduction in aged widow's or widower's insurance benefits.

The Senate amendment did not include such a provision.

The Senate recedes, with an amendment that would retain only that part of the House-passed provisions that would prevent reduction in benefits for widows and widowers who remarry after age 60.

DURATION-OF-MARRIAGE REQUIREMENT

The House bill provided that the length of time a person must have been married to a worker in order for benefits to be payable to the person as an aged divorced spouse or surviving divorced spouse would be reduced from 20 years to 5 years.

The Senate amendment did not include such a provision.

The Senate recedes, with an amendment which establishes a 10-year duration-of-marriage requirement.

EQUALIZATION OF TREATMENT OF MEN AND WOMEN UNDER THE PROGRAM

The House bill contained a number of amendments that were designed to eliminate certain gender-based distinctions from the social security program.

The Senate amendment did not include any such provisions.

The House recedes. It is the understanding of the managers that the entire question of such gender-based distinctions will be included in the 6-month study of proposals to eliminate dependency and sex discrimination provided by this legislation.

ANNUAL REPORTING

The House bill included provisions to simplify implementation of annual wage reporting.

The House provision changes the provisions of the Social Security Act that require the use of quarterly wage data so that only annual data would be needed—employers would no longer have to check off quarters of coverage or report quarterly wages on the forms W-2. It excludes from the definition of wages certain employment wherein the remuneration is less than $100 in a calendar year. State and local employers will continue to report on a quarterly basis but wages will be converted to annual figures.The provision also changes "quarter of coverage" definition so that after 1977 all workers would receive a quarter of coverage for each $250 of wages paid in a year (to a maximum of four quarters of coverage in a year). The amounts measuring a quarter of coverage would increase automatically each year as wages increase.

The Senate amendment contained no such provisions.

The Senate recedes.

NATIONAL COMMISSION ON SOCIAL SECURITY

The House bill provided for a nine-member National Commission on the Social Security Program, appointed by the executive and legislative branches, to conduct a 2-year study including: The fiscal status and adequacy of the trust funds; the scope of coverage, adequacy of benefits, conditions of qualification for benefits (including inequities arising out of marital status, sex, or similar classifications or categories), and quality of administration; the impact of the programs on and relation to public assistance programs, nongovernmental pension insurance programs, other governmental retirement and annuity programs, medical service delivery systems and national employment practices; and alternatives to current programs including, phasing out payroll tax, using general revenues or other financing, mandatory participation in private insurance programs and choice of public or private programs or both.

The Senate amendment did not include a provision comparable to the House provision.

The Senate recedes with an amendment which requires the National Commission to study the need to develop a special CPI for the elderly for purposes of social security cost-of-living increases.

ADMINISTRATIVE LAW JUDGES (HEARING EXAMINERS)

The Senate amendment converted the temporary administrative law judges established by Public Law 94–202 to permanent status under the Administrative Procedure Act.

The House bill contained no such provision, but the Ways and Means Committee has reported H.R. 5723 which contains identical language.

The House recedes.

ADVISORY COUNCIL ON SOCIAL SECURITY

The Senate amendment provided that the Advisory Council on Social Security to be appointed by December 31, 1977, would have an additional 9 months in which to submit its reports. The reports would be due October 1, 1979, rather than January 1, 1979.

The House bill contained no such provision.

The House recedes.

SEMIANNUAL COST-OF-LIVING INCREASES

The Senate amendment provided for semiannual cost-of-living increases in social security and SSI benefits whenever the CPI increased by at least 4 percent over a specified 6-month measuring period (an annual rate of over 8 percent per year).

The House bill contains no such provision.

The Senate recedes.

FISCAL RELIEF FOR WELFARE COSTS

The Senate amendment provided for a one-time payment to the States of $374 million as fiscal relief for State and local welfare costs for fiscal year 1978. Half of such funds would be distributed to each State in proportion to its share of total expenditures under the AFDC program for December 1976, and half would be distributed under the general revenue sharing formula. In those States in which local units of Government are responsible for meeting part of the costs of the AFDC program the fiscal relief payments would have to be passed through to local governments. States would not be required to pass through an amount in excess of 90 percent of the amount of AFDC costs for which the local government was otherwise responsible.

The House bill contained no such provision.

The House recedes with the following amendments. The amount of the one-time payment would be one-half of the amount in the Senate bill, that is, $187 million. Also States would be required to pass through to local jurisdictions the full amount of the payment but not more than 100 percent of the amount of the AFDC costs for which the local government was otherwise responsible.

FISCAL INCENTIVES FOR LOWERING AFDC ERROR RATES

The Senate amendment established a system of fiscal incentives for States which have low dollar error rates (below 4 percent) as measured by the AFDC quality control findings of excess payments.

Under the amendment States which have dollar error rates of, or reduce their dollar error rates to, less than 4 percent but not more than 3.5 percent of the total expenditures would receive 10 percent of the Federal share of the money saved, as compared with the Federal costs of 4-percent payment error rate. This percentage would increase proportionately as shown in the following table:

If the error rate is:	*Incentive percentage* [1]
At least 3.5 percent but less than 4 percent	10
At least 3 percent but less than 3.5 percent	20
At least 2.5 percent but less than 3 percent	30
At least 2 percent but less than 2.5 percent	40
Less than 2 percent	50

[1] The State will retain this percent of the imputed Federal savings.

The House bill contained no such provision.

The House recedes with an amendment which provides that the dollar error rate of aid will include the payments to ineligibles plus overpayments plus underpayments plus the amount which would have been paid as benefits if the case had not been erroneously terminated or the application erroneously denied. The incentive would be based on Federal savings as compared with a 4-percent rate of excessive payments—that is, erroneous payments for ineligibles and overpayments.

ACCESS BY AFDC AGENCIES TO WAGE RECORDS

The Senate amendment specifically authorized State AFDC agencies to obtain wage information from the wage records maintained by the Social Security Administration and the wage records maintained by State unemployment compensation agencies for purposes of determining eligibility for (or amount of) AFDC. The Secretary of HEW would establish the necessary safeguards to prevent the improper use of such information. Effective October 1, 1979, States would be required to request and make use of this wage information either from the State unemployment compensation agency (if available there) or from the Social Security Administration.

The House recedes.

STATE WELFARE DEMONSTRATION PROJECTS

The Senate amendment would authorize certain types of State demonstration projects related to the AFDC program to be implemented if the Secretary did not specifically disapprove the implementation of such projects within forty-five days after the State applies to have the projects approved. In other words, a State could proceed with such projects either when the Secretary approved them, or forty-five days after submitting them to the Secretary if no decision had been reached by HEW within that period.

Under this authority, States would be permitted to conduct not more than three demonstration projects but not more than one on a Statewide basis. Projects involving public service employment would have to meet reasonable standards related to health, safety, and other conditions, could not displace employed workers, would have to be reasonable for the individuals participating, and would have to provide appropriate workmen's compensation protection. Participation in any AFDC recilient would have to be on a voluntary basis.

States would be permitted to waive ordinary statutory rules requiring statewide uniformity, administration by a single agency, and regarding participation in the work incentive program and the disregard of certain amounts of earned income. (Not more than half of all income could be disregarded under the waiver authority, however.)

AFDC matching for these demonstration projects would be limited to the amount the State would have received through AFDC if it had not implemented the demonstration project. In addition the State's general revenue sharing funds could be used to cover the costs of salaries for participants in public service employment which are not covered by AFDC matching.

Once implemented, demonstration projects could continue for up to 2 years unless the Secretary took action to disapprove a State waiver of statutory rules before the end of the 2-year period. The provision would not apply after September 30, 1980.

The House bill contained no such provisions.

The House recedes with an amendment. The conference agreement provides that when a State submits an application it would be required to make a public announcement that such application has been made, make copies of the application available and receive public comments for at least 30 days. The Secretary would also be required to publish a summary of the proposed demonstration project and make copies of the application available. He would receive public comments for at least 30 days after publication of a summary of the proposed project (even if the publication is approved prior to the 30-day period).

The Secretary of HEW could deny applications by a State under this provision any time after receipt of the application, but could not approve an application until 30 days after it has been submitted.

A State would be authorized to proceed with projects submitted under this new authority 60 days, instead of 45 days under the Senate amendment, after the project application is submitted to HEW unless there is a specific disapproval by HEW.

The conference agreement also requires that when AFDC funds are used to pay wages of participants in such projects that the prevailing wage must be paid.

AFDC EARNED INCOME DISREGARD

The Senate amendment changed the earned income disregard so as to require States to disregard the first $60 earned monthly by an individual working full-time ($30 in the case of an individual working part-time), plus one-third of the next $300 earned, plus one-fifth of the remainder. Child care expenses would be subject to limitations by the Secretary and would be deducted before computing an individual's earned income. Other work expenses would not be deducted.

The House bill contained no such provisions.

The Senate recedes.

ERRONEOUS STATE SUPPLEMENTARY PAYMENTS

The Senate amendment provided authorization and direction for the Secretary of Health, Education, and Welfare to reimburse a State for erroneous State supplementary payments administered by them and paid during 1974 to the extent that an HEW audit determines is appropriate on the basis that the incorrect payments for the aged, blind, and disabled resulted from a State's good faith reliance upon erroneous or incomplete information furnished to the States by the Department or from a State's good faith reliance on incorrect supplemental security income payments made by the Department.

The House bill contains no such provision.

The House recedes with an amendment. The conference agreement provides that the Secretary of HEW would rely on findings of an audit by HEW which has been reviewed and concurred in by the Inspector General of the Department to determine the extent of payments under this provision.

VETERANS' PENSION AND COMPENSATION

The Senate amendment provided that the amount of any social security benefits resulting from a cost-of-living increase will not be used to reduce veterans' pension and compensation.

The House bill contained no such provision.

The Senate recedes.

MEDICARE COVERAGE OF DEVICES SERVING THE SAME PURPOSE AS A WHEELCHAIR

The Senate amendment expands the definition of durable medical equipment under the medicare supplementary medical insurance program to include specialized transportation vehicles (such as the *Amigo* wheelchair) designed to "serve the same or similar purpose as that performed by a wheelchair."

The House bill contains no such provision.

The House recedes with an amendment which expands the definition of durable medical equipment to include a power-operated vehicle that may be appropriately used as a wheelchair where such vehicle is determined to be medically necessary and meets safety requirements prescribed by the Secretary.

FEDERAL ELECTION CAMPAIGN ACT AMENDMENT

The Senate amendment provided that a contribution to a tax-exempt organization selected by the payor from a list of five or more organizations named by the government officer or employee would not be treated as an honorarium. It also provided that amounts returned to a payor before the end of the calendar year would not be treated as honorariums. The amendment further provided that honorariums would be treated as accepted in the year of receipt.

The House bill contained no such provision.

The House recedes.

COLLEGE TUITION TAX RELIEF

The Senate amendment modified the Internal Revenue Code to provide an income tax credit for educational expenses (tuition, fees, books, and equipment, but not meals, lodging, nor other living expenses) paid by the taxpayer for the taxpayer or the taxpayer's spouse or dependents to an institution of higher education or a vocational school. The amount of the credit would be limited each year to not more than $250 per student. The credit would apply to expenses paid in taxable years beginning after December 31, 1977; for 1978 only, it would be refundable. The student must be a full-time student working toward a baccalaureate degree or a certificate of required course work at a vocational school. Expenses eligible for the credit would be reduced by tax-exempt scholarship or fellowship grants and by certain educational assistance allowances and education and training allowances.

The House bill contained no such provision.

The Senate recedes.

THE CHRISTMAS STORY

(Mr. HUBBARD asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous material.)

Mr. HUBBARD. Mr. Speaker, it is thought that today will be the last time we will convene prior to Christmas Day and during the 1st session of the 95th Congress.

It is appropriate that we pause and celebrate the birthday of Jesus Christ. I ask that we jointly turn our thoughts to the famous Christmas story found in the Gospel of Luke, chapter 2, verses 1–14, which reads:

CHAPTER 2

And it came to pass in those days, that there went out a decree from Caesar Augustus, that all the world should be taxed.

2. (*And* this taxing was first made when Cyrenius was governor of Syria.)

3. And all went to be taxed, every one into his own city.

4. And Joseph also went up from Galilee, out of the city of Nazareth, into Judaea, unto the city of David, which is called Bethlehem: (because he was of the house and lineage of David:)

5. To be taxed with Mary his espoused wife, being great with child.

6. And so it was, that, while they were there, the days were accomplished that she should be delivered.

7. And she brought forth her first-born son, and wrapped him in swaddling clothes, and laid him in a manger; because there was no room for them in the inn.

8. And there were in the same country shepherds abiding in the field, keeping watch over their flock by night.

9. And, lo, the angel of the Lord came upon them, and the glory of the Lord shone round about them: and they were sore afraid.

10. And the angel said unto them, Fear not: for, behold, I bring you good tidings of great joy, which shall be to all people.

11. For unto you is born this day in the city of David a Saviour, which is Christ the Lord.

12. And this *shall be* a sign unto you; Ye shall find the babe wrapped in swaddling clothes, lying in a manger.

13. And suddenly there was with the angel a multitude of the heavenly host praising God, and saying,

14. Glory to God in the highest, and on earth peace, good will toward men.

AUTHORIZING THE SPEAKER TO DECLARE A RECESS AT ANY TIME TODAY, SUBJECT TO THE CALL OF THE CHAIR

Mr. WRIGHT. Mr. Speaker, I have a number of requests.

First, I ask unanimous consent that at any time during the remainder of the day it may be in order for the Speaker to declare recesses, subject to the call of the Chair.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

Mr. RHODES. Mr. Speaker, reserving the right to object, and I do not intend to object of course. I seek this reservation however to ask the majority leader if he is in a position to inform the Members as to the program for today and the balance of the 1st session of the 95th Congress.

Mr. WRIGHT. Mr. Speaker, if the gentleman will yield. I will be happy to do just that.

After agreement, which I presume will come through the resolution I have just offered, it would be our purpose to offer a resolution for sine die adjournment to take effect upon the conclusion of business today. Then, I will offer a resolution for our reconvening on the 19th of January as well as sundry other resolutions which would permit the House to conduct routine administrative business during that adjournment period.

There will be two items of legislation today before our adjournment. The first is the conference report on the Clean Water Act of 1977 and, second, the conference report on the Social Security Financing Amendments of 1977. Those two constitute the legislative program, and no additional legislation is anticipated.

Mr. RHODES. Mr. Speaker, I yield to the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. Mr. Speaker, we obviously are not going to have any report from the Energy Conference today, although it is not impossible that we will have something when the Congress returns on the 19th of January; but is there any plan in today's schedule for consideration of an Emergency Natural Gas Act or emergency legislation similar to that passed during the depth of the natural gas crisis during last winter's bad weather when there were major gas shortages in different parts of the country because gas could not be purchased at the controlled price set by Federal regulations?

I have been told there may be such a piece of legislation offered in the Senate today and under their rules that can be done and perhaps even passed. What happens if we get very cold weather between now and the 19th of January? Is there any possibility we might get such a piece of legislation here today?

Mr. WRIGHT. Mr. Speaker, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the distinguished majority leader.

Mr. WRIGHT. Mr. Speaker, this is the first I had heard about this matter. It was not scheduled on the program. I would suppose if the Senate acted and if there were no difficulty in obtaining a rule for immediate consideration, we might be able to consider it; but the gentleman has thrown me a question that I am not prepared to answer at this moment.

Mr. BROWN of Ohio. I was unaware that we were taking up the sine die adjournment resolution so early today or I would have raised the question privately. The Emergency Natural Gas Act expired last August. Under that act we passed last February, the President had the right to allocate natural gas in the case of a severe gas shortage and purchasers in need had the right to purchase at other than the price set by the Federal Government.

I was informed by Senator JACKSON yesterday, when I tried to offer such a resolution in the conference, that we break out that part of the conference on which the House and the Senate are generally agreed and offer it as a 2-year extension of the Emergency Natural Gas Act. I was informed by Senator JACKSON that such a bill might be offered in the Senate today. If that is the circumstance, rather than have the gas shortage problem this winter and again have to go unprotected in the next month, we might resolve the question today.

Mr. WRIGHT. Mr. Speaker, the gentleman raises a good question. Let us face that if and when the time does come.

Mr. BROWN of Ohio. I regret I had not had an opportunity to discuss it ahead of time with the majority leader.

Mr. SIKES. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Florida.

Mr. SIKES. Mr. Speaker, would the distinguished majority leader tell us if there are any plans for the consideration in this session of the supplemental appropriations bill which is now pending in the Senate and which contains a number of very important matters, including the B-1 bomber?

Mr. WRIGHT. It is my understanding, if the gentleman will yield, that the Senate is not going to act on that legislation this year.

Mr. RHODES. Mr. Speaker, may I then inquire further from the majority leader as to whether or not there will be any other matters brought up today, other than those involving requests for unanimous consent?

Mr. WRIGHT. I know of none, except for routine matters, or something that might arise of the nature discussed by the gentleman from Ohio. But so far as my knowledge goes, there are only two pieces of legislation scheduled for today, the conference reports that I mentioned earlier.

Mr. RHODES. Mr. Speaker, I thank the gentleman from Texas.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to

the request of the gentleman from Texas?

There was no objection.

CONVENING OF 2D SESSION OF 95TH CONGRESS

Mr. WRIGHT. Mr. Speaker, I send to the Speaker's desk the joint resolution (H.J. Res. 674) relative to the convening of the 2d session of the 95th Congress, and for other purposes, and ask unanimous consent for its immediate consideration.

The Clerk read the title of the joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. Res. 674

Resolved by the Senate and House of Representatives of the United States of America in Congress Assembled, That the second regular session of the Ninety-fifth Congress shall begin at 12 o'clock meridian on Thursday, January 19, 1978.

Sec. 2. That (a) notwithstanding the provisions of section 201 of the Act of June 10, 1922, as amended (31 U.S.C. section 11), the President shall transmit to the Congress not later than January 23, 1978, the budget for the fiscal year 1979, and (b) notwithstanding the provisions of section 3 of the Act of February 20, 1946, as amended (15 U.S.C. section 1022), the President shall transmit to the Congress not later than January 23, 1978, the Economic Report.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SINE DIE ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I send to the Speaker's desk a privileged concurrent resolution (H. Con. Res. 442) authorizing the Secretary of the Senate and the Clerk of the House to receive messages, including veto messages, from the President of the United States during adjournment of the two Houses, and ask for its immediate consideration.

The Clerk read the title of the concurrent resolution.

There was no objection.

The Clerk read the concurrent resolution, as follows:

H. Con. Res. 442

Resolved by the House of Representatives (the Senate concurring), That when the two Houses adjourn on Thursday, December 15, 1977, they shall stand adjourned sine die.

Sec. 2. During the adjournment of both Houses of Congress as provided in section 1, the Secretary of the Senate and the Clerk of the House, respectively be, and they hereby are, authorized to receive messages, including veto messages, from the President of the United States.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING CLERK TO RECEIVE MESSAGES FROM SENATE AND SPEAKER TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS, NOTWITHSTANDING SINE DIE ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that notwithstanding the sine die adjournment of the House, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING SPEAKER TO ACCEPT RESIGNATIONS AND TO APPOINT COMMISSIONS, BOARDS, AND COMMITTEES, NOTWITHSTANDING SINE DIE ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that notwithstanding the sine die adjournment of the 1st session of the 95th Congress, the Speaker be authorized to accept resignations, and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

REQUESTING THE PRESIDENT TO RETURN TO HOUSE OF REPRESENTATIVES ENROLLED BILL H.R. 7738

Mr. BINGHAM. Mr. Speaker, I call up the concurrent resolution (H. Con. Res. 443) requesting the President to return the enrolled bill (H.R. 7738) with respect to the powers of the President in time of war or national emergency, and providing for its reenrollment with technical corrections, and ask unanimous consent for its immediate consideration.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the concurrent resolution, as follows:

H. Con. Res. 443

Resolved by the House of Representatives (the Senate concurring), That the President of the United States is requested to return to the House of Representatives the enrolled bill (H.R. 7738) with respect to the powers of the President in time of war or national emergency. The Clerk of the House is authorized to receive such bill if it is returned when the House is not in session. Upon the return of such bill, the action of the Speaker of the House of Representatives and the Acting President pro tempore of the Senate in signing it shall be deemed rescinded and the Clerk of the House shall reenroll the bill with the following corrections:

On page 2, line 25 of the engrossed bill, strike out "or" and insert in lieu thereof "and".

On page 3, line 7 of the engrossed bill, strike out "section 5(d)(3)" and insert in lieu thereof "section 5(b)(3)".

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

PERMISSION FOR MEMBERS TO EXTEND AND REVISE REMARKS UNTIL PUBLICATION OF LAST AUTHORIZED EDITION OF CONGRESSIONAL RECORD

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that all Members of the House shall have the privilege, until the last edition authorized by the Joint Committee on Printing is published, to extend and revise their own remarks in the Congressional Record on more than one subject, if they so desire, and may also include therein such short quotations as may be necessary to explain or complete such extensions of remarks; but this order shall not apply to any subject matter which may have occurred or to any speech delivered subsequent to the adjournment of Congress.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

PERMISSION FOR CHAIRMAN AND RANKING MINORITY MEMBER OF EACH STANDING COMMITTEE AND EACH SUBCOMMITTEE THEREOF TO EXTEND THEIR REMARKS IN THE RECORD

Mr. WRIGHT. Mr. Speaker. I ask unanimous consent that the chairman and ranking minority member of each standing committee and each subcommittee thereof be permitted to extend their remarks in the Record, up to and including the last publication thereof, and to include therewith a summary of the work of that committee or subcommittee.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

STATEMENT ON BEHALF OF AMERICAN FARMERS

(Mr. BOWEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BOWEN. Mr. Speaker, I rise to direct some comments to urban America on behalf of our farmers and rural America. I am proud to represent a State that is part of rural America, and my congressional district is among our major agricultural areas.

It is tragic that farmers are forced to protest publicly in order to focus the attention of other Americans on the serious economic crisis facing farmers throughout our Nation.

Urban America must wake up to the fact that because of the American farmer we live in the best-fed and bestclothed civilization in history. Most urban Americans are not aware as they fill up their shopping baskets from supermarket shelves laden with plenty that our farmers receive at most 40 cents of each dollar paid for food and fiber products.

I have lived with farmers' problems all my life, and today's problems are not new. They have been building for several years.

Bad weather, mounting debts, and low prices have pushed many farmers to the brink of financial collapse. Only 4 percent of our population lives on farms, but their survival is essential to the Nation's survival.

Urban Americans should know that one American farmer produces enough to feed and clothe over 50 people. In Russia, one in seven must farm for that nation to subsist. Farm exports in addition significantly reduce our balance-of-payments deficit.

Agriculture is still America's largest single industry. Those of us who have tried to draft and pass sound farm legislation have warned that our farmers must receive a fair return on their work and investment if our Nation is to prosper. I hope that message will now fall on more receptive ears.

HOUSE ACTION ON B–1 BOMBER NOT ANTICIPATED THIS YEAR

(Mr. SIKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SIKES. Mr. Speaker, if I might have the attention of the distinguished majority leader, let me state that subsequent to our previous colloquy on the supplemental appropriations bill and on the B–1, I am now advised that the Senate does have on its calendar the consideration of the B–1, as a part of the supplemental, at 3 o'clock on today. If the Senate should not concur in the House position, obviously a further conference will be required, and if action were anticipated on the floor, I assume a rule will have to be granted subsequent to the outcome of the conference. May I ask the distinguished majority leader if there is a possibility that such action will result in the consideration of the supplemental appropriations bill during the day in the House?

Mr. WRIGHT. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Texas.

Mr. WRIGHT. Mr. Speaker, I would just respond to the gentleman that we have not anticipated that action might be completed this year on this matter.

Mr. SIKES. So the gentleman does not anticipate action today in the House upon that matter?

Mr. WRIGHT. The answer is, no, we do not.

THE FARM STRIKE

(Mr. PICKLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PICKLE. Mr. Speaker, last Saturday in Austin, Tex., I met with farmers and ranchers from all over the State of Texas at a rally at the State Capitol. I know that similar demonstrations and rallies were held in every State and I hope that my colleagues who were in their districts over the weekend took this opportunity to meet with agricultural producers and discuss their problems and possible solutions.

I do not think that it is enough to merely say that we are sympathetic to their situation. Sympathy is not going to make the mortgage payments on the farm. What we need to do is sit down and begin to work out some solutions. Right now, I do not think that anyone has the right answer for insuring that producers receive a fair return. But it is obvious that we cannot continue to depend on the same old programs and approaches. They simply have not worked well enough. I don't know that 100 percent parity is the right answer either, because I simply do not know if we can afford it. But we must afford whatever it takes to help keep the farmers strong.

But I would urge my colleagues who are returning to their districts after this session to meet with the farmers and ranchers in their area so that when we return in January we can begin serious discussions on how we should deal with this problem.

THREE NEW INTERNATIONAL SECURITY ASSISTANCE DEFERRALS AND ROUTINE REVISIONS TO FOUR DEFERRALS—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–270)

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Appropriations and ordered to be printed:

To the Congress of the United States:

In accordance with the Impoundment Control Act of 1974, I herewith report three new International security assistance deferrals totalling $806.4 million in budget authority and one new deferral of $3.4 million in outlays for the Antirecession financial assistance fund in the Department of the Treasury.

In addition, I am reporting routine revisions to four deferrals previously transmitted. A deferral for the Emergency refugee and migration assistance fund is increased by $5.8 million in budget authority. Three deferrals of funds provided to the Department of the Treasury are increased by a total of $13.3 million of which $11.9 million is deferred budget authority and $1.3 million is an increase to a deferral which only affects outlays.

The details of each deferral are contained in the attached reports.

JIMMY CARTER.

THE WHITE HOUSE, *December 15, 1977.*

RECESS

The SPEAKER. The Chair will declare a recess for 20 minutes. For the information of the Members, the Chair will state that the bells will not be rung, and the House will resume its business at 11 o'clock.

The House stands in recess for 20 minutes.

Accordingly (at 10 o'clock and 41 minutes a.m.) the House stood in recess until 11 o'clock a.m.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker at 11 o'clock a.m.

POINT OF ORDER

Mr. ROUSSELOT. Mr. Speaker, I make the point of order that a quorum is not present.

I move a call of the House.

The SPEAKER. The point of order is not in order, and the Chair is awaiting a rule which will be here forthwith, if the gentleman from California will withhold his motion.

Mr. ROUSSELOT. Mr. Speaker, I would like to move a call of the House.

TRIBUTE TO HON. BARBARA JORDAN

(Mr. BAUMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BAUMAN. Mr. Speaker, it was with a great deal of regret that all of us learned of the announced retirement of our colleague, the gentlewoman from Texas (Miss JORDAN). I know I heard with a great deal of surprise and chagrin the news of her intention to leave this body after 1 more year.

We do not often agree on many issues, but I have a great deal of respect for people who are competent and skilled at their profession and for people who have deep beliefs even though they may be different from mine.

There are so many politicians in life who care only for their reelection and are pragmatic or mercurial in their views toward that end. That certainly could not be said about the gentlewoman from Texas, aside from the fact that she is one of the most brilliant orators in the House.

I am sure we will all miss her, and I am hopeful there is some deep plot we do not now understand that will result in her being elevated to some higher public post in the future. I certainly hope that is the case. We all wish her well.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF CONFERENCE REPORT ON H.R. 3199, CLEAN WATER ACT OF 1977

Mr. MURPHY of Illinois, from the Committee on Rules, submitted a privileged report (Rept. No. 95–838) on the resolution (H. Res. 935) providing for the consideration of the conference report on H.R. 3199, to amend the Federal Water Pollution Control Act to provide for additional authorizations, which was referred to the House Calendar and ordered to be printed:

> *Resolved,* That immediately upon the adoption of this resolution it shall be in order to consider, section 401(a) of the Congressional Budget Act of 1974 (Public Law 93-344) to the contrary notwithstanding, the conference report on the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, said conference report shall be considered as having been read, and all points of order against said report for failure to comply with the provisions of clause 3, rule XXVIII and clause 2, rule XX are hereby waived.

Mr. MURPHY of Illinois. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 935 and ask for its immediate consideration.

The SPEAKER. The Clerk will report the resolution.

The Clerk read the resolution.

The SPEAKER. The question is, Will the House now consider House Resolution 935?

The question was taken; and (two-thirds having voted in favor thereof) the House agreed to consider House Resolution 935.

The SPEAKER. The gentleman from Illinois (Mr. MURPHY) is recognized for 1 hour.

Mr. MURPHY of Illinois. Mr. Speaker, I yield the usual 30 minutes to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Mr. Speaker, this resolution provides for the consideration of the conference report on the Clean Water Act of 1977, H.R. 3199. The rule grants three waivers of points of order. The first waiver is against points of order arising from a possible violation of section 401a of the Congressional Budget Act. This waiver is necessary, because section 35 of the conference report which deals with agricultural cost sharing provides advance contract authority which is not made specifically subject to amendments provided in appropriation acts.

The second waiver is against points of order arising from the failure to comply with clause 3, of rule XXVIII the so-called "beyond the scope" rule. The last waiver is against points of order arising from a failure to comply with clause 2 of Rule XX which bars any amendment of the Senate providing for an appropriation.

Lastly, the resolution provides that the conference report shall be considered as having been read.

Mr. Speaker, the House passed its version of the Clean Water Act last April by a vote of 361 to 43. The other body passed its version by a vote of 96 to 0 last August and all of the conferees signed the report on this legislation.

This measure authorizes $25.7 billion for fiscal years 1978 through 1982. The majority of these funds will be used for the construction of sewage treatment facilities. The bill sets forth extensions of time for compliance with cleanup standards, because of various problems that the municipalities and industries have encountered since enactment of the 1972 legislation. The conference agreement alters the formula for allocating program funds, insures that rural States will have a certain percentage of the alloted funds, and allows each State to determine the priority to be given federally funded treatment projects. In addition the conference report provides for the retention of Federal control of navigable waters and adjacent wetlands with respect to the disposal of dredging and fill material, but allows for State administration of the program. The report also exempts most farming, ranching, and forestry activities from this permit requirement.

Mr. Speaker, all of my colleagues are aware of the need for this legislation. Since the passage of the Federal Water Pollution Control Act of 1972 there have been numerous factors that have resulted in the delay of reaching its worthwhile goals. This legislation addresses those many problems and is the product of extended negotiation and effort on the part of both the House and the Senate. Therefore, Mr. Speaker, I urge the adoption of this resolution so that we might debate and vote on this matter.

Mr. LATTA. Mr. Speaker, I agree with the statements just made by the gentleman from Illinois. I would like to point out, however, that the report contains a Senate amendment under section 35 providing contract authority that would be subject to a point of order under section 401(a) of the Budget Act. Since section 401(a) bars the consideration of any bill, resolution, or amendment, which provides contract or borrowing authority unless it also provides the same shall be effective for any fiscal year only to such extent, and since section 35 of the report fails to so limit the availability for such borrowing authority, it violates section 401(a) of the Budget Act.

I am advised, however, that the chairman of the Committee on Public Works and Transportation will offer a concurrent resolution correcting this violation immediately following the adoption of the conference report and the gentleman so testified just a couple minutes ago before the Committee on Rules.

Mr. Speaker, I have no requests for time and I reserve the balance of my time.

Mr. MURPHY of Illinois. Mr. Speaker, I yield 5 minutes to the gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. Mr. Speaker, I just want to reiterate what the gentleman from Ohio has said about the Budget Act violation. The conference report has in it provisions which can be construed to provide contract authority in violation of section 401 of the Budget Act, as a result of an amendment of the other body adopted in conference.

I want to clarify with the gentleman from Texas the intent of the House conferees with respect to these provisions of the conference report. The Senate amendment, which was not in the House bill, would appear to provide a substantial amount of contract authority during the next few fiscal years. It does not expressly limit that authority to the amounts provided in advance in annual appropriations act, as required by section 401(a) of the Budget Act. It is my understanding that the gentleman will offer a unanimous-consent concurrent resolution to correct this potential violation immediately following adoption of the conference report.

The concurrent resolution is necessary, I understand, because the Senate amendment was not brought back in disagreement. Consequently, it cannot be amended during consideration of the conference report.

Mr. ROBERTS. Mr. Speaker, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Texas.

Mr. ROBERTS. I want to thank the distinguished chairman of the Budget Committee for his statement. We have a resolution which has been cleared with him, and we are delighted to say that what we want to do is exactly what the law provides. There is some question as to whether that would be a violation, but we do not want any question left. We appreciate the consideration of the distinguished chairman.

Mr. GIAIMO. I appreciate the gentleman's statement and the gentleman's efforts.

Mr. MURPHY of Illinois. Mr. Speaker, I have no further request for time, and I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms wil notify absent Members.

The vote was taken by electronic device, and there were—yeas 326, nays 6, not voting 102, as follows:

Mr. Udall with Mr. Yates.
Mr. Van Deerlin with Mr. Smith of Iowa.
Mr. Mollohan with Mr. Panetta.
Mr. Charles Wilson of Texas with Mr. Pattison of New York.

Mr. STOCKMAN changed his vote from "nay" to "yea."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERSONAL EXPLANATION

Mr. MIKVA. Mr. Speaker, I was unable to be on the floor to vote on rollcall No. 777, the rule to take up the clean water conference report. Had I been present, I would have voted "aye."

Mr. ROBERTS. Mr. Speaker, pursuant to the provisions of House Resolution 935, I call up the conference report on the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes.

The SPEAKER. The gentleman from Texas (Mr. ROBERTS) and the gentleman from California (Mr. DON H. CLAUSEN) will be recognized for 30 minutes each.

The Chair recognizes the gentleman from Texas (Mr. ROBERTS).

Mr. ROBERTS. Mr. Speaker, I yield myself such time as I may consume.

(Mr. ROBERTS asked and was given permission to revise and extend his remarks.)

Mr. ROBERTS. Mr. Speaker, I rise in support of the report of the committee on conference on H.R. 3199, the Clean Water Act of 1977.

The conference committee report on H.R. 3199 represents more than 3 years of investigations, hearings, and legislative activity on the Federal Water Pollution Control Act (Public Law 92-500).

On two separate occasions the House passed amendments to the act—each time by an overwhelming vote.

We went to conference with the Senate three times on this legislation—once last year and twice this year. We worked long and hard with the Senate to hammer out our differences. I am pleased to say that we did reach a successful compromise.

We were especially fortunate to have a broad representation from the Committee on Public Works and Transportation on the conference committee. Thirteen members of the committee served on the conference. I think this is especially significant because it was the Commitee on Public Works and Transportation which had developed the Federal Water Pollution Control Act Amendments of 1972, Public Law 92-500, this is the act which is amended by H.R. 3199. Public Law 92-500 was the product of more than 2 years of analysis and study by the Committee on Public Works and Transportation and is now recognized as a landmark piece of environmental legislation.

I compliment our distinguished chairman, BIZZ JOHNSON, of California, on his leadership in the development of the Clean Water Act of 1977. Also, I must recognize the contributions of the full committee, Mr. HARSHA, the ranking minority member of the committee, and Mr. CLAUSEN, the ranking minority member of the subcommittee. Without the cooperation and insight of these fine gentlemen, H.R. 3199, would never have come to pass.

The water pollution control program cuts across all sectors of our life—the massive construction grant program, the treatment requirements for industries and municipalities, the restoration and preservation of our waters for current and future generations—all of these affect us as a nation.

Because of these far reaching impacts, Congress, in 1972, called for a thorough study of the impacts of meeting or not meeting the goals and requirements of the 1972 act. We recognized that as we proceeded toward meeting the 1977 and 1983 requirements of the act it might be necessary to make adjustments in the law—to assure that our pace of environmental cleanup was a positive effort that did not result in unforeseen and disruptive economic dislocations and impossible technological demands.

In 1972 it was the House that called for the establishment of a national commission to assess the 1983 requirements of the act. The House felt so strongly about the need for a study that it provided for a "trigger mechanism" whereby the 1983 requirements could not go into effect until the Congress received the results of the study and then acted affirmatively on the 1983 requirements. In conference the House provision for a study was retained, but the "trigger mechanism" was abandoned, leaving the act with two sets of requirements—one for July 1, 1977, and another, more stringent set, for July 1, 1983.

The rest is history—the National Commission on Water Quality has completed its study and reported its results to the Congress. Many of the provisions in the conference report are supported by recommendations in the Commission's report.

The conference report addresses a wide range of problems. It is a well thought out effort to streamline the redtape that has hampered the water pollution control program—to recognize the reality of impossible requirements that are pitting industry and Government against each other instead of alining them side by side as partners. In H.R. 3199 we have tried to give the concept of a partnership among the Federal Government, the States, local governments and industry a basis in realty, not just on paper. The provisions of the conference report are needed to maintain a Federal law that is workable and enforceable. The report includes provisions that were recommended and endorsed by the Environmental Protection Agency, several provisions which were included in the recommendations of the National Commission on Water Quality, and others which were developed as solutions to the problems that were thoroughly explored in subcommittee hearings.

For example, the treatment works construction grant program has been subject to a series of stops and starts since 1972. A big problem has been inadequate Federal funding. As a result, about two-thirds of our cities could not meet the law's July 1, 1977, requirements. The conference report addresses this problem in several ways:

Construction grant funds are authorized for 5 years—$4.5 billion for fiscal year 1978, and $5 billion for each of fiscal years 1979, 1980, 1981, and 1982. An allotment formula is provided for 4 years—fiscal years 1978, 1979, 1980, and 1981. In this way, States have an estimate as to how much money will be available to them each year.

The procedures for getting a grant are streamlined, for example, in some circumstances, localities would be able to use ad valorem taxes to meet their user charge requirements and States could get special assistance to manage the grant program, and

Cities that did not meet the 1977 deadline could get a case-by-case extension up to July 1983.

Even though about 85 percent of all industries did meet their 1977 requirements, a good portion of the remaining 15 percent did not meet their requirements for good cause.

The conference report would permit industries that tie-in with municipalities receiving a time extension to get their own extension up to July 1, 1983. Other industries may bet a case-by-case extension up to April 1, 1979.

Over the past few years a major area of contention between the House and Senate has been the Corps of Engineers' dredge and fill permit program. I am pleased to say that we reached a fair compromise on this. Under the provision of the conference report, States may get approval to run their own permit programs. If this is done, the issuance of Federal permits is suspended. Also exceptions are provided for activities such as normal farming, ranching and silvicultural procedures.

Another major problem area was the law's strict requirements for industry that would cost millions of dollars and result only in a little more clean-up of our waters. The conferees wrestled with this problem and developed a fair and workable compromise. Strict requirements are still in effect for damaging pollutants, such as toxics. However, for certain other pollutants, industry may get a waiver.

Mr. Speaker, these are just examples of some of the important provisions contained in the conference report on H.R. 3199. If we are going to cut out the red tape in the Federal water pollution control program, we need these amendments. We have got to bring this effort back where it belongs—on a partnership level among the Federal Government, the States, cities and industry. No one group can afford to go it alone.

The conference report on H.R. 3199 takes care of problems that need to be addressed now and constitutes a major policy review of the act.

Mr. Speaker, much of the legislative history for this bill is included in the statement of managers and it is not my intent to restate that which is included in that document. However, it is important to state for the record the understandings and intentions of the House conferees with regard to some of the matters agreed to in the conference with the Senate. It is for this reason that I join with my colleague, the gentleman from California, who is managing this conference report for the minority (Mr. DON CLAUSEN), in presenting the following statement setting forth the views of the House conferees.

INNOVATIVE AND ALTERNATIVE TECHNOLOGY

Mr. Speaker, the conference report on H.R. 3199 contains a number of amendments at various points, amending several provisions of Public Law 92–500, which comprise a package encouraging development and deployment of innovative and alternative technology in the treatment of wastewater and the conservation of resources.

In combination, sections 9, 12, 13, 15, 16, 17, 20, 28, 37, 38, 49, 60, and 72 represent a major reorientation of the construction grants program. But they do not constitute a major reorientation of the act itself. Section 201(b) of Public Law 92–500, as enacted in 1972, called for municipal treatment technology "including reclaiming and recycling of water, and confined disposal of pollutants so they will not migrate to cause water or other environmental pollution."

So the policy has been there, the requirement has been there. But they have not been carried out, largely due to resistance on the part of EPA, the engineering community, State and local government and the private sector. For example, only 12 to 13 percent of construction grant awards have gone for land treatment—one of the alternative technologies—representing less than 3 percent of the funds under the program.

The conferees recognize the problems of inertia and the tendency to cling to the tried-and-true and to avoid risks, and accordingly have structured a comprehensive set of amendments to overcome them.

These include a set-aside of 2 percent of each State's allotment for fiscal years 1979 and 1980 and 3 percent in 1981 to be used to increase the Federal share of eligible project cost to 85 percent from the 75 percent prevailing for conventional technology.

This 2, 2 and 3 percent set-aside is to cover both innovative and alternative technology, with a minimum of one-half of 1 percent restricted to innovative technology as distinguished from alternative technology. The Administrator is directed to develop and issue guidelines which among other things draw a distinction between the two. This is discussed further below.

A certain percentage of the State's allotment is set aside for 85 percent grants for innovative and alternative technology. Those moneys are not exclusive of but rather overlap the 4 percent set aside for alternative or unconventional systems for small communities.

In the process, the Administrator, pursuant to section 49 of the Clean Water Act of 1977, shall develop guidelines for equipment which utilizes energy recovery or the reuse or recycling of resources. The intent of this is to make it clear that the guidelines which apply to cost effective evaluation, section 16 of the Clean Water Act of 1977, include energy recovery and reuse and recycling of resources.

Municipal applicants for financing will be required to demonstrate that such technologies have been studied and evaluated in the process of developing their projects, subsequent to September 30, 1978, to qualify as eligible for assistance. Grants made for such projects will be eligible for assistance even though their life-cycle costs exceed those of conventional techniques provided such conventional costs are not exceeded by more than 15 percent.

Excluded from eligibility for such assistance are collector sewers, interceptors, storm or sanitary sewers or the separation thereof, and major sewer rehabilitation. However, costs of the acquisition of land, otherwise not eligible under Public Law 92–500, will be eligible where the land is to be used for the storage of treated wastewater prior to its application to the land in land treatment systems.

In recognition of the risks involved in encouraging this departure from business-as-usual, the conferees adopted another amendment authorizing grants to cover the total cost of modifying or even replacing systems that do not perform as intended and result in capital or operating and maintenance costs significantly higher than anticipated. This, in effect, constitutes an insurance policy.

States will be permitted to modify their priority lists to give a higher priority to the preparation of construction drawings and specifications, step 2, involving application of innovative or alternative technology, and for projects eligible for combination of step 2 and at step 3, construction, employing such technologies.

Other requirements provide that the administrator must encourage wastewater treatment processes that foster energy conservation, and that applicants must analyze potential recreation and open space opportunities in the planning of treatment works.

The administrator is authorized to provide applicants, the Federal share of whose projects is increased to 85 percent to encourage innovative or alternative technology, additional grants covering the total cost of technical evaluation, training costs, and the dissemination of information.

Several criteria should be relied upon to evaluate the innovative or alternative character of technology. The criteria include cost reduction; improved reliability; energy conservation or recovery; recycling, reclamation, or reuse of effluents or resources; greater efficiency; the beneficial aspects of sludges or effluent constituents; better management of toxic materials; and environmental benefits. Where technology does not meet any of these criteria, the administrator should not consider the technology to be innovative or alternative under these provisions.

When a project involving innovative or alternative technology is constructed, the facility rightly becomes the focus of attention by waste treatment professionals in the public and private sectors, and entails unusual levels of study evaluation and monitoring. To the extent that these factors result in increased costs to the municipalities sponsoring such projects, these costs are also to be reimbursed in their totality by EPA.

The administrator is required to develop and operate a public information program with respect to the recycling and reuse of wastewater, land treatment, and methods for the reduction of wastewater volume.

The Administrator is further required to coordinate with the heads of all Federal agencies with properties using Federal wastewater treatment facilities to develop a program of cooperation for using control systems involving innovative treatment processes developed under the guidelines for municipal systems. In addition, no Federal facilities may initiate construction of new treatment facilities after September 30, 1979, unless innovative technologies are employed. This requirement is subject to waiver by the Administrator of EPA as in the national interest or in the interests of avoiding delay in compliance with a permit issued under section 402 of the act. No such technology is to be required in cases where the costs would exceed the costs of conventional treatment by more than 15 percent.

Finally, the Administrator is required to consult with Federal and State water quality and water supply agencies to develop, within 2 years, a package of legislative recommendations to require coordination between water supply and wastewater treatment plans as a condition of eligibility for funding under this act.

This study will be conducted separately, distinctly, and apart from the administration's review of water resource policy and will stress energy as well as water resource conservation. Special attention should be given the role of all agencies, particularly that of the Corps of Engineers and the Department of Agriculture. Attention should be given in the conduct of the study to the role of 208 agencies in the coordinating process.

As to intent, we want to make it clear that these innovative and alternative technology amendments are in no way intended to substitute for research and development programs under title I of the act. Nor is the funding for title I research to be diminished as a result of construction grant funds' being set aside for innovative and alternative technology.

As to definitions, we cited earlier the section requiring the Administrator to develop guidelines identifying innovative and alternative technologies, which are not synonymous by any means. Concerning which, a few observations:

Innovative technology, as referred to in the conference report, means new and promising technology which has not been fully proven under the circumstances of its contemplated use. The use of demonstrated technologies which eliminate pollution and conserve water resources and energy in places and under circumstances where they have not been tried before and where such use advances the state of the art, is innovative. It would fall between the extremes of unproven technology, and the old conventional methods which have been duplicated and repeated endlessly in this country. We think the key lies in the recognition and acceptance of a certain element of risk, which is why we provide the insurance policy in the form of the authorization for the Federal Government to assume 100 percent of the costs of modifying or replacing systems which fail to perform as intended. These risks are deemed acceptable in light of the potential benefits in terms of environmental enhancement, lower capital or maintenance costs, and reclamation, recycling and use of water which is becoming increasingly costly to provide.

Alternative technology is another matter, differing from such conventional secondary treatment technologies as activated sludge and advanced waste treatment, and includes land treatment, aquifer recharge, water reclamation, and other techniques for eliminating pollution and saving water. By definition these are better known than the technologies in the innovative category, but have not been used to their full potential because of the constraints we have referred to.

Members will note on page 57 of Report No. 95–830, statement of managers language cautions the Administrator in two respects as to implementation of these provisions.

First, in effect, the conferees do not intend to have the pendulum swing from the extreme of little or no consideration of innovative or alternative technologies, on the one hand, to that of an endless series of unnecessary studies, investigations or analyses which are irrelevant to new technology, recycling and reuse of water, or land treatment. We might add that it is further not the intention to require studies of technologies with no realistic potential for being used under the circumstances, such as, for example, land treatment in areas characterized by a high water table, steep slopes, impermeable subsurface rock strata, scant overburden, and intense and prolonged cold. The key criterion will be judgment on the part of the administrator, requiring realistic consideration of available alternatives to conventional technology without resulting in voluminous treatises analogous to the environmental impact statement to prove a negative. Such would merely waste scarce resources and delay the program.

Nor is it the intent to require such considerations in all cases where existing systems are being altered, remodeled, improved or extended. The criterion here should be whether the project is to result in a significant increase in the volume of treated waste from a municipal system, or a reduction in the polluting characteristics of discharges from the works.

A final caution relates to the phasing-in of the requirement, beginning in fiscal year 1979. Our concern is to avoid the disruption of construction such as occurred as a result of the enactment of Public Law 92–500. We fully intend that no step 1 or step 2 work, facilities planning and construction design, respectively, be redone as a result of these requirements, or that projects in process be otherwise delayed. Thus, the requirement for consideration of innovative and alternative technology will apply only to projects for which step 1 planning is undertaken in fiscal year 1979.

TRAINING

With respect to section 10 of the conference report, it should be noted that the Administrator in assisting the States in the development of training facilities is expected to encourage training for on-site treatment systems.

COMBINED GRANTS

Another modification affecting the administration of the title II construction grant program permits the combinaton in a single grant award of step 2 and step 3 grants—covering preparation of construction plans and specifications, and the building and erection of the treatment works, respectively—for projects whose total estimated cost is $2 million or less and the population of the applicant municipality is 25,000 or less.

This provision, section 18 of the conference report, is an outgrowth of the work of the Subcommittee on Investigations and Review, and while seemingly minor in scope should produce substantial benefits in terms of cost savings and acceleration of construction.

Recent EPA data demonstrate that this provision would cover nearly 80% of projects involving 30 percent of funds obligated in any given fiscal year. Assuming an authorization level of $5 billion per year, this provision would affect projects totaling $1.5 billion per year.

If just 6 months were cut off the processing time for each project and we assume an annual interest rate of 7.5 percent and an annual inflation rate of 10 percent, the annual yield in savings would be in excess of $125 million.

CONTRACT ENFORCEMENT

Section 19 of the conference report authorizes the Administrator to provide technical and legal assistance in the admnistration and enforcement of any contract in connection with treatment works assisted under title II of the act, and to intervene in any civil action involving the enforcement of such a contract. This section does not constitute authority for the Administrator or the Environmental Protection Agency to become a party to any contract. This section grants authority to the administrator only after the execution of a contract, and then only at the request of the grantee. Nothing in the section either adds to or detracts from other existing EPA authorities in the precontract or negotiation phase.

RESERVE CAPACITY

Section 21 amends section 204(a)(5) to require the Administrator in determining the amount of reserve capacity to take into account efforts to reduce total flow of sewage and unnecessary water consumption.

The amount of reserve capacity eligible for a grant under title II of the act shall be determined by the Administrator taking into account the projected population and associated commercial and industrial establishments within the jurisdiction of the applicant to be served by such treatment works as identified in an approved facilities plan, an areawide plan under section 208, or an applicable municipal master plan of development.

For the purpose of section 204(a)(5), section 208, and any such plan, projected population shall be determined on the basis of the latest information available from the United States Department of Commerce or from the States as the Administrator, by regulation, determines appropriate.

USER CHARGES

Section 22 amends the user charge requirement of section 204(b)(1). The amendment provides that a dedicated ad valorem tax system may be used to collect operation and maintenance costs for the classes of residential users and small nonresidential users, as defined by EPA, where:

The grant applicant uses such dedicated ad valorem system as of date of enactment;

EPA finds that the system of charges results in a proportional distribution of costs to each user class according to each class' contribution to the total operation and maintenance costs;

Industrial users meet the requirement of current law for user charges;

In defining small nonresidential users, EPA shall consider the volume and constituent elements of the waste.

The term "small nonresidential user" encompasses both commercial and industrial users. Examples of such users include warehouses, grocery stores, and small laundromats. Small nonresidential users are to be defined by the administrator according to the volume and characteristics of their discharges. In most cases, where the users' flow into the treatment works per day is equivalent to 25,000 gallons or less per day of sanitary waste, such user will be considered a small nonresidential user for the purposes of this section.

To the extent possible, existing ad valorem tax systems to collect the costs of treatment works should be allowed to continue with a minimum of interference.

A system of charges for residential users may be based on something other than metering, including ad valorem taxes. If the system is something other than metering, the grant applicant must dedicate the funds to operation and maintenance of the treatment works and must notify the residential user as to that portion of his total payment which is allocated to costs of waste treatment services.

INDUSTRIAL COST RECOVERY

It has long been the intent of Congress to encourage participation in publicly owned treatment works by industry. The conferees are most concerned over the impact the industrial cost recovery provision of existing law may have on industry participation on these public systems. Accordingly, the Industrial Cost Recovery Study, section 75, has been incorporated in the conference report, and EPA is encouraged to submit the results of the study as soon as possible so that Congress can take action on any recommendations that are forthcoming.

It is expected that the Administrator will consult with all interested groups in conducting this study and that the study will address at least the following questions:

First. Whether the Industrial Cost Recovery program (ICR) discriminates against particular industries or industrial plants in different locations, and do small town businesses pay more than their urban counterparts? What is the combined impact on such industries of the user charge and ICR requirements?

Second. Whether the ICR program and resultant user charges cause some communities to charge much higher costs for wastewater treatment than other communities in the same geographical area? (Some communities have indicated that disparities in ICR and user charges affect employment opportunities.) Whether a mechanism should be provided whereby a community may lower its user and ICR charges to a level that is competitive with other communities in order to restore parity?

Third. Whether the ICR program drives industries out of municipal systems, the extent and the community impact?

Fourth. Whether industries tying into municipal systems pay more or less for pollution control than direct dischargers?

Fifth. Whether the ICR program encourages conservation, the extent and the economic or environmental impact?

Sixth. Whether the ICR program encourages cost effective solutions to water pollution problems?

Seventh. How much revenue will this program produce for local, State and Federal governments, and to what use will or should these revenues be put?

Eighth. Determination of the administrative costs of this program, additional billing costs imposed, costs associated with the monitoring of industrial effluent for the purpose of calculating the ICR charges, ancillary benefits associated with the monitoring of industrial effluent, procedures necessary to take account of changes in the number of industries discharging into municipal plants, and the impacts of seasonal or other changes in the characteristics and quantity of effluents discharged by individual industries?

Ninth. Whether small industries should be exempted from ICR? How should small be defined? Is there a reasonable floor that can be established for ICR based upon percentage flow?

Finally, the conference report includes a provision, section 24, which will allow municipalities to reduce the industrial cost recovery charge for those industries which reduce their total flow of sewage or unnecesary water consumption. It is expected that the amounts to be paid will be reduced in proportion to the flow reduction achieved.

AUTHORIZATIONS AND ALLOTMENT

Section 30 of the conference report provides authorizations for the purpose of providing 75 percent Federal grants for the construction of municipal waste treatment works. The section authorizes $4.5 billion for fiscal year 1978 and $5 billion for each of fiscal years 1979, 1980, 1981, and 1982.

Section 25 provides that the authorizations for fiscal years 1978 through 1981 are allotted within 10 days after enactment of this legislation. A major change in the act is the provision making the amounts of each authorization subject to appropriations acts. This provision was adopted so as to comply with the Congressional Budget and Impoundment Control Act of 1974. However, it is recognized that making the authorizations subject to annual appropriations acts reintroduces the very uncertainty in the level of funding that Congress had attempted to eliminate in the Federal Water Pollution Control Act amendments of 1972 when it provided for contract authority. Therefore, an allotment is no longer a commitment to fund because, although contract authority is still theoretically available, it no longer has any significant impact on the availability of funds.

The Budget Impoundment and Control Act of 1974 anticipated that, in the absence of effective contract authority, the Appropriations Committees would make available advanced appropriations for those programs which require long-term planning commitments for efficient expenditure of funds. We would therefore hope and expect the Appropriations Committees will, with the support of the President and the Budget Committees, provide advanced appropriations for fiscal years 1979, 1980, and 1981. Only in this way can States and communities know in advance that adequate funds will be available and proceed to plan for construction of needed waste treatment works in an orderly manner.

Section 25, as noted previously, provides for allotment of funds for fiscal years 1978 through 1981. The allotment is to be in accordance with table 3 of House Public Works and Transportation Committee Print No. 95–30. Sums allotted are available for the fiscal year authorized and the next succeeding 12 months. Funds not obligated are reallotted on the basis of the then current fiscal year ratio except none of the reallotted funds are to be allotted to any State that failed to obligate any of the funds being reallotted. Such reallotted funds are in addition to funds allotted to a State in any fiscal year. For the fiscal years 1978, 1979, 1980, and 1981 no State is to receive less than one-half of 1 percent of the total allotment except that Guam, the Virgin Islands, American Samoa, and the Trust Territories are in the aggregate to be allotted not more than 33/100 of 1 percent. A separate authorization of $75 million per year for fiscal years 1978, 1979, 1980, and 1981 is provided for these minimum allowances.

Table 4 of House Public Works and Transportation Committee Print No. 95–30 gives the breakdown of what each State will receive, assuming full appropriations, for fiscal year 1978 $4.5 billion, and for each of fiscal years 1979, 1980, and 1981 $5 billion. The amounts are as follows:

Alabama	$57, 789, 000	$64, 210, 000
Alaska	19, 057, 500	21, 175, 000
Arizona	34, 906, 500	38, 785, 000
Arkansas	33, 808, 500	37, 565, 000
California	357, 804, 000	397, 560, 000
Colorado	41, 341, 500	45, 935, 000
Connecticut	49, 824, 000	55, 360, 000
Delaware	17, 982, 000	19, 980, 000
District of Columbia	14, 368, 500	15, 965, 000
Florida	172, 647, 000	191, 830, 000
Georgia	87, 381, 000	97, 090, 000
Hawaii	35, 676, 000	39, 640, 000
Idaho	22, 284, 000	24, 760, 000
Illinois	233, 743, 500	259, 715, 000
Indiana	124, 551, 000	138, 390, 000
Iowa	58, 288, 500	64, 765, 000
Kansas	39, 613, 500	44, 015, 000
Kentucky	65, 781, 000	73, 090, 000
Louisiana	56, 812, 500	63, 125, 000
Maine	33, 727, 500	37, 475, 000
Maryland	124, 996, 500	138, 885, 000
Massachusetts	132, 939, 000	147, 710, 000
Michigan	185, 877, 000	206, 530, 000
Minnesota	84, 109, 500	93, 455, 000
Mississippi	43, 470, 000	48, 300, 000
Missouri	112, 306, 500	124, 785, 000
Montana	15, 624, 000	17, 360, 000
Nebraska	24, 772, 500	27, 525, 000
Nevada	18, 621, 000	20, 690, 000
New Hampshire	39, 645, 000	44, 050, 000
New Jersey	160, 717, 500	178, 575, 000
New Mexico	17, 185, 500	19, 095, 000
New York	477, 940, 500	531, 045, 000
North Carolina	89, 136, 000	99, 040, 000
North Dakota	13, 981, 500	15, 535, 000
Ohio	290, 947, 500	323, 275, 000
Oklahoma	41, 755, 500	46, 395, 000
Oregon	58, 383, 000	64, 870, 000
Pennsylvania	196, 272, 000	218, 080, 000
Rhode Island	23, 634, 000	26, 260, 000
South Carolina	52, 947, 000	58, 830, 000
South Dakota	16, 798, 500	18, 665, 000
Tennessee	69, 687, 000	77, 430, 000
Texas	196, 353, 000	218, 170, 000
Utah	20, 056, 500	22, 285, 000
Vermont	17, 302, 500	19, 225, 000
Virginia	88, 209, 000	98, 010, 000
Washington	79, 596, 000	88, 440, 000
West Virginia	80, 563, 500	89, 515, 000
Wisconsin	87, 763, 500	97, 515, 000
Wyoming	13, 513, 500	15, 015, 000
American Samoa	2, 772, 000	3, 080, 000
Guam	3, 348, 000	3, 720, 000
Puerto Rico	52, 803, 000	58, 670, 000
Trust Territory of Pacific Islands	6, 885, 000	7, 650, 000
Virgin Islands	1, 701, 000	1, 890, 000
Total	4, 500, 000, 000	5, 000, 000, 000

A minimum allotment of one-half of 1 per centum for fiscal year 1978 is $23,500,000 and for fiscal years 1979, 1980, and 1981 is $25,000,000. Accordingly, as noted earlier, those States receiving less than such amounts could be brought up to the higher amount through the separate authorizations in section 25(c).

Section 25(d) provides that sums made available to the Administrator for obligation between January 1, 1975, and March 1, 1975, shall remain available for obligation until September 30, 1978.

STATE MANAGEMENT ASSISTANCE

Mr. Speaker, the State management assistance provision, section 26 of the conference report is a version of State certification which should be familiar to most Members, since it appeared in legislation which twice passed the House.

This approach represents a House response to problems which surfaced early in the administration of the title II construction grant program and which persist today, a fact documented by the National Commission on Water Quality, the Investigations and Review Subcommittee, and the Subcommittee on Water Resources, of the Committee on Public Works and Transportation.

This provision reflects the need to emphasize and extend the policies in Public Law 92–500 with respect to the role of the States in water pollution control and the efficient administration of the act, and to encourage effectuation of these policies as set forth in section 101(b) and 101(f). Experience has shown that these policies are not only compatible in concept but inseparable in implementation.

There is and has been no doubt that the Environmental Protection Agency has the authority to delegate to the States the authority to carry out certain requirements of the act under sections 201, 203, 204, and 212. Indeed, EPA has begun implementing this authority. But the conferees have recognized that full achievement of the potential for State management and the benefits to be derived therefrom requires further impetus from the Congress in the form of inducements to both EPA and the States.

Accordingly, section 26 of the conference report declares it to be the policy of the Congress that States manage the construction grant program, and also implement the permit programs under sections 402 and 404 of this act. The conference report further provides that 2 percent of a State's construction allocation—but no less than $400,000 per year—be reserved to enable States to equip themselves to assume the authority to manage these programs.

The Administator is authorized to grant to any State from amounts reserved to it the costs of administering any aspect of sections 201, 203, 204, and 212 of this act to the extent that the responsibility for administering them is to be delegated to such State. Once a State has received a grant in connection with the assumption of such delegated responsibility for the construction grant program, it may apply for additional grants from such reserved sums as remain available within the 2 percent setaside for the reasonable costs of administering an approved program under section 208, 402 or 404 of the act as amended.

However, because construction grant funds are involved, it is clearly the intent of this provision that first priority be given to State administration of the construction grant program. This can represent an extensive undertaking, in that the States are authorized to administer any aspect of the sections enumerated. Eligible expenditures include staffing and related expenses of State exercise of resident engineering responsibilities on projects, particularly in smaller communities.

It is the intent of this provision, then, that the funding provided result in an increase in staffing and an expansion of management activity at the State level. Further, the intent of this provision is that the sums provided not be used to reduce the level of Federal or State expenditures to administer water pollution control programs.

It is particularly and specifically not the intent of this provision that construction grant funds be substituted for State program funds under section 106 of Public Law 92-500, for which the annual level of authorization is increased by this legislation to $100 million from $75 million. In combination, these considerations dictate that highest priority in the use of construction grant funds set aside be accorded to State management of the construction grant program.

The Administrator will distribute up to 2 percent of the grant funds set aside in proportion to the functions of the construction grant program that the State is conducting or proposing to conduct. I want to emphasize the prospective aspect of the provision, whereby States can qualify for funding to staff up and otherwise equip themselves to perform functions which they are not currently performing.

Proper State administration of the construction grants program will depend in part on continuity of operation. There is some risk of disruption in that the funds for State administration are allotted yearly. It is incumbent on the Administrator to use the means available to him to assure continuity of operation in State programs from one fiscal year to the next.

I also wish to emphasize that States can qualify for such grants from the 2-percent reservation regardless of whether or not they are implementing the 402 permit program, whether or not they have assumed the State permit program under section 404, whether or not they have a statewide 208 program, or whether or not they have developed the capability to manage construction grants to small communities.

Similarly, States can qualify for such grants without demonstrating a determination to acquire the capability to manage grant awards to small communities. Thus, nothing in this provision shall be construed as authorizing the Administrator to require States, as a condition of eligibility for assistance under this provision, to acquire the capability to become the contract agency for any engineering, design, or construction agreements. It is one thing to strengthen State capability in this and related areas but quite another—totally lacking any basis in the statutory language—to say that States must be required to fulfill or perform the functions.

The availability of reserved construction grant funds for functions in addition to construction grant management is not intended to provide the Administrator a means of inducing States to assume responsibilities under sections 208, 402, or 404 which they would not assume in the absence of the State management assistance provision.

The Administrator is to base the size of the grant made to a State upon the State's capability, or its demonstrated commitment to acquire the ability, to assume responsibilities under title II.

We fully expect EPA to expedite implementation of this provision, long in the process of development and fully familiar to the agency. The committee will monitor the pace and extent of EPA's implementation of this provision and to hold hearings promptly if the circumstances warrant.

I am confident that the procedure of certifying qualified States will effect a more efficient means for expediting the municipal construction program, reduce duplication of effort at Federal and State levels of government, and reduce the needless drain on the resources of EPA.

The State management assistance language in the conference report differs from the original House language to the extent that the procedural requirements for State certification as contained in the House bill was not incorporated. I wish to emphasize that this modification was agreed to by the House conferees in the interests of more rapid assumption by the States of delegated responsibilities for administering the construction grants program. Thus it is manifestly not the intent of the conference substitute that a lesser degree of State management occur, but rather the reverse. It is intended that at least as many States expressing a desire to do so participate in the management of the construction grants program than would have been the case had the more structured certification process been adopted.

REIMBURSEMENT

Section 29 amends section 206(a) of the act to extend from July 1, 1972, to July 1, 1973, the date by which initiation of construction, as defined by the Administrator in 40 CFR 35.890 as in effect on May 1, 1976, on treatment works projects must have occurred in order for such projects to be eligible for reimbursement grants of 50 to 55 percent of project costs. Also, in order to be eligible for a reimbursement grant under this section, a project must have already received a construction grant award under Public Law 660, 84th Congress. Applications for reimbursement for such projects on which construction was initiated between July 1, 1972, and July 1, 1973, must be filed within 90 days after the date of enactment of this section.

AREAWIDE WASTE TREATMENT MANAGEMENT PLANNING PROCESS

Section 208(f)(2) of the act is amended by section 31 to provide that the first 2 years of the operation of any agency designated under section 208(a) prior to October 1, 1977 to conduct an areawide planning process under section 208 shall receive a Federal grant of 100 percent of the costs of the first 2 years of operation.

The committee would like to emphasize that section 208(b)(2)(E) requires agencies to include in their plan a method of financing the plan. Section 208(c)(2)(E) provides that the Administrator shall not accept any designation of management agencies which do not have the authority to raise revenues, including the assessment of waste treatment charges. It is expected that designated agencies, as provided by these sections, will develop a self-sustaining revenue base as soon as practicable. As Congress determines that agencies have had a reasonable opportunity to develop such bases, it will reassess the need for Federal funding. Until such time, however, it is fully expected that there will be continuity in Federal funding for all eligible agencies and that the first grants to agencies will be followed by subsequent grants of up to 75 percent of the costs of developing and operating the continuous management process. Subsection 31(b) specifically authorizes such continuing funding.

IRRIGATED AGRICULTURE

Section 33 of the conference report exempts return flows from irrigated agriculture from all permit requirements under section 402, and recognizes that this activity is not a point source within the meaning of the Federal Water Pollution Control Act.

This action was taken in recognition of a specific recommendation of the National Commission on Water Quality. The problems of permitting every discrete source or conduit returning water to the streams from irrigated lands is simply too burdensome to place on the resources of EPA. However, section 33 assures that areawide waste treatment management plans under section 208 include consideration of irrigated agriculture.

STATE BEST MANAGEMENT PRACTICES PROGRAM

Section 34(a) of the conference substitute amends section 208 of the act to provide for the development and implementation of section 208 programs, administered by the State government, for the regulation of a class or category of activity. For example, programs may be developed for the use of best management practices for various forestry activities or mining activities, including construction and maintenance of forest or mining roads and other forestry and mining activities which lend themselves to regulation through the implementation of best management practices. If a State regulatory program is approved by the administrator and if the State has a permit program approved by the administrator under section 404, then no individual permit is required under section 404 for the activities following best management practices under the section 208 program. The State-level section 208 program applies to activities in all the navigable waters, including those described as phase I waters in the Corps of Engineers 75 regulations.

AGRICULTURE COST SHARING

Section 35 of the conference substitute authorizes the Department of Agriculture, acting through the Soil Conservation Service and such other agencies of the Department of Agriculture as the Secretary may designate, to establish and administer a program to enter into contracts of not less than 5 years nor more than 10 years with owners and operators having control of rural land for the purpose of installing and maintaining measures incorporating best management practices to control nonpoint source pollution for improved water quality consistent with an approved areawide management plan under section 208.

GRANT ELIGIBLE CATEGORIES

Section 36 amends section 211 of the act concerning the eligibility of collector sewers for Federal construction grant assistance.

The amendment adds two new subsections to section 211 of the act. The first provides that if population density is used as a test of eligibility of a collector sewer for assistance population density shall only be used for the purpose of evaluating alternatives and in determining the needs for the collection system in relation to ground or surface water quality impact. The second provides that no grant may be made under title II from funds for fiscal years 1978 through 1982 for treatment works for control of pollutant discharges from separate storm sewer systems.

eligibility is still in place. Collector sewer eligibility is thus limited to communities

Existing law concerning collector in existence on October 18, 1972, with sufficient existing or planned capacity adequate to treat such collected sewage.

For the purpose of this section, it is recognized that a community qualifying for Federal grant assistance to construct a collector sewer system may be a geographic or jurisdictional area that is less than the municipality which is applying for the treatment works grant.

BUY AMERICAN

Section 39 creates a new section 215 which extends the application of the Buy American Act to any case where Federal construction grant funds for municipal treatment works are used. However, this provision is not to apply in any case where the administration of the Environmental Protection Agency determines, based upon those factors he deems relevant, including available agency resources, that enforcement is inconsistent with the public interest, including multilateral Government procurement agreements, the cost to be unreasonable, or the articles are not reasonably available in commercial quantities of satisfactory quality.

PRIORITIES

Section 40 creates a new section 216 concerning the determination of a treatment works project's priority for funding within a State.

The amendment provides that the determination of priority to be given each category of projects within each State shall be made solely by that State. However, if the administrator after a public hearing determines a project will not result in compliance with the enforceable requirements of the act the project shall be removed from the priority list and the State shall submit a revised list.

For the purposes of this section, the categories of projects for construction of publicly owned treatment works include: secondary treatment, treatment more stringent than secondary treatment as is necessary to meet water quality standards, correction of infiltration-inflow, major sewer system rehabilitation, new collection sewers and appurtenances, new interceptor sewers and appurtenances, and correction of combined sewer overflows.

Also, not less than 25 percent of funds allocated to a State in any fiscal year for construction under this act shall be obligated for major sewer system rehabilitation, new collector sewers and appurtenances, new interceptors and appurtenances, and correction of combined sewer overflows if they are on the State's priority list for that year and are otherwise eligible for funding for that fiscal year.

COST EFFECTIVENESS

Section 41 adds a new section 213 to require that cost-effectiveness guidelines published by the administrator provide for identification and selection of cost-effective alternatives to comply with the objective and goals of the act and sections 201(b), 201(d), 201(g)(2)(A), and 301(b)(2)(B).

This section is to have no effect on the funding and grant eligibility of collector sewers.

MODIFICATION OF SECONDARY TREATMENT REQUIREMENTS

One of the areas of greatest controversy concerning the 1972 amendments was the requirement of secondary treatment for municipal wastes being discharged into the marine environment. The philosophy behind the 1972 amendments mandated uniform requirements on all municipal discharges whether they discharge into lakes, rivers, estuaries or oceans. This was done without a true analysis of the costs and burdens associated with these uniform requirements. However, the 1972 amendments included a requirement for a national commission to study the impacts associated with carrying out the 1972 amendments. In its report, the commission included the following finding on nearshore ocean discharges:

> (1) *Near shore ocean discharges.*—Studies and testimony indicate that any benefit from the uniform application of the 1977 requirements to all ocean discharges may require a disproportionate expenditure of public and private resources if full adherence to the requirements is demanded. It may be better to study and analyze the specific environmental factors with selection of the degree and type of treatment dependent on the analysis and anticipated benefits.

The Commission addressed the problems of a relatively small pot of money having to be stretched a long way. In California alone which has many discharges into the deep marine environment the cost of achieving secondary treatment will be well over $1 billion. This billion-dollar expenditure for treatment for treatment's sake will come at the expense of many municipalities, localities, and small communities which currently did not even have primary treated effluent. Further quoting from the Commission's report:

> If reasonable precautions are followed, large volumes of municipal wastewaters can be discharged into some open coastal waters without undue damage to man's interests or to the ecological balance and productivity of coastal waters.
>
> The public is misinformed about the extent of ocean pollution and the damage to marine life by municipal wastewaters, generally believing the situation to be much worse than scientific studies show.

For all these reasons the conference report includes section 44 which allows for modification of the secondary treatment requirements for discharges from existing deep marine outfalls.

Section 44 amends section 301 to permit the Administrator to grant case-by-case waivers of the secondary treatment requirement to municipal ocean dischargers.

For those communities which can show that existing deep marine discharges require less than secondary treatment a case-by-case waiver is provided. The amendment is the result of recognition that for the western coast of the United States and the coastal areas of its territories natural factors provide significant and in some cases sufficient elimination of traditional forms of pollution from publicly owned treatment works to avoid the necessity of providing secondary treatment.

Any waiver would be reviewed every 5 years and would be granted where an applicant demonstrates that the following eight conditions are met:

The first condition is that there is an applicable water quality standard specific to the pollutant for which the modification is requested. The degree of effluent reduction necessary to meet this standard must be provided as a minimum.

The second condition is that the modified requirements would not interfere with the attainment or maintenance of that water quality which assumes protection of public water supplies and propagation of a balanced indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water.

The third condition is that the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota to the extent practicable.

The fourth condition is that the modified requirements will not result in any additional requirements on any other point or nonpoint source.

The fifth condition is that all applicable pretreatment requirements will be enforced.

The sixth condition is that to the extent practicable the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works.

The seventh condition is that there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit.

The last condition is that any title II funds available to the owner of the treatment works are to be used to achieve the degree of effluent reduction required by section 201(b) and (g)(2)(A) or to carry out the requirements of this subsection. The referenced provisions of section 201 may require a degree of effluent reduction which is greater than that required under this section of the act as amended. Available title II funds shall be used in this case to achieve the requirements of section 301 as amended before they are used to achieve the requirements of section 201. Uses of funds appropriate to carrying out the purposes of the section might include infiltration and inflow work, interceptor construction and repair, and proper location of outfall lines.

The amendment defines the "discharge of any pollutant into marine waters" as a discharge into deep waters of the territorial sea or contiguous zone or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines are necessary to comply with the second condition described above, and section 101(a)(2) of the act.

Depth is a key factor in determining the amount of circulation in waters of the territorial sea or contiguous zone. Circulation in turn affects the degree to which waste water discharges to these waters are rapidly dispersed. In some instances, depth of water in the territorial seas or contiguous zones in excess of 200 feet is necessary to achieve sufficient rapid dispersion (45 seconds) of waste water and waste water constituents. In some instances, depth of 200 feet is insufficient to provide adequate dispersion. Poor net flashing (stagnation) of a deep basin may cause undesirable vertical cycling of discharges.

Factors determining the amount and rapidity of dispersion of saline estuarine waters are the degree of tidal movement and other hydrological and geological characteristics. In some cases, rip currents and strong tidal movements which contribute to high flushing efficiency in certain bays and estuaries, may provide sufficient circulation. Additional precautions, however, need to be considered in or near the mouths of estuaries due to possible tidal transport of pollutants landward into estuarine areas where they may be retained.

Areas which can meet these conditions include the city of Los Angeles, San Diego, other coastal communities in California, Seattle, Washington, Hawaii, Puerto Rico, American Samoa, the Virgin Islands, and portions of esturarine water, such as Cook Inlet, Alaska, and Puget Sound in Washington.

Since waivers will be granted in the form of a permit under section 402 of the act, States with an authorized permit program may grant such waivers.

Several of the conferees particularly those from California are very concerned with the problems provided by the requirement of this section. During the conference the Environmental Protection Agency was asked to provide the conferees with a description of the ocean outfalls in the State of California which are likely to meet the criteria that the conferees have established. At this point in my statement I would like to include that list of existing ocean outfalls in the State of California:

Cresent City, CA.
Westport, CA.
Mendocino, CA.
Menodcino #2, CA.
Bolinas, CA.
San Francisco (Richmond Sunset), CA.
North San Mateo, CA.
Pacifica, CA.
Montaro, CA.
Granada, CA.
Half Moon Bay, CA.
Davenport, CA.
Santa Cruz, CA.
East Cliff, CA.
Aptor, CA.
Watsonville, CA.
Marina, CA.
Seaside, CA.
Pacific Grove, CA.
Monterey, CA.
Carmel, CA.
San Simeon, CA.
Morra Bay, CA.
Shell Beach, CA.
Pismo Beach, CA.
Avila, CA.
South San Luis, CA.
Golcta, CA.
Santa Barbara, CA.
Montecito, CA.
Summerland, CA.
Carpinteria, CA.
San Buenaventura, CA.
Oxnard, CA.
Port Hueneme, CA.
City of Los Angeles, CA.
City of Los Angeles (Terminal Island), CA
Los Angeles County Sanitation District, CA.
Avalon, CA.
Sunset Beach, CA.
Orange County Sanitation District, CA.
Laguna Beach, CA.
South Laguna, CA.
Dana Point, CA.
San Clemente, CA.
Oceanside, CA.
Encinitas, CA.
Cardiff, CA.
San Diego, CA.
Carlsbad-Buena Vista, CA.

Distance offshore for location of outfall lines is also a factor which must be considered in many situations. In these cases sufficient distance offshore is generally necessary so that adverse water quality conditions will not be created under assumed worst conditions of onshore current and wind based on data derived from historical records.

Greater distance off shore may provide the desired protection during adverse conditions of onshore currents and wind. Geological characteristics such as submarine canyons may also be utilized because of the same advantage of rapid dispersion and desirable circulation.

There are, of course, constituents, such as polychlorinated biphenols—PCB's—which, irrespective of depth, tidal movement, or other factors related to circulation in marine waters, cannot be adequately dispersed because of their persistence.

The conferees expect that the Environmental Protection Agency will carry out this provision in such a way that burdensome requirements are not placed on municipalities. The conference report calls for the Administrator to issue guidelines promptly to carry out the intent of the law. Those dischargers which contemplate being able to meet the criteria established in the law will have 9 months either from the date of enactment of this section or 9 months from the date effluent guidelines are promulgated.

Following the filing of an application for a waiver, the Administrator should discountinue any legal proceeding or enforcement actions which may have been initiated prior to the enactment of section 44.

The conferees expect the Administrator to make a decision promptly on the evidence presented to him and not permit protracted deliberations.

The waivers will be for a period of 5 years. During that period EPA should increase its expertise by conducting studies relating to deep ocean outfalls and the water quality of the receiving waters. The absence of such studies by EPA has hampered the communities' work in this area.

My colleagues from California (Mr. JOHNSON and Mr. ANDERSON) will comment further on this provision.

1977 DEADLINES

The Federal Water Pollution Control Act Amendments of 1972 established a systematic approach for dealing with water pollution from industrial and municipal sources. Publicly owned waste treatment facilities were required to have effluent limitations based on secondary treatment by July 1, 1977, and nonpublicly owned point sources were required to apply best practicable control technology by that same date.

Over the past 5 years significant progress has been made in cleaning our waterways. The Environmental Protection Agency estimates that 85 percent of major industrial dischargers have complied with the law. Many of the other 15 percent have been unable to comply through no fault of their own. Most of those sources which have not complied with the law have negotiated agreements with the EPA that will shortly bring them into compliance.

Because there have been some instances where industries have failed to comply with the law, section 56 of the conference report has included a procedure where the Administrator is given two options to grant an extension of the 1977 deadline until April 1, 1979. The first option authorizes the issuance of an enforcement order requiring a reasonable time for compliance, reserving the 30-day requirement for violation of operation and maintenance requirements included in interim compliance schedules. The second option authorizes up to an 18-month extension of the 1977 deadline where the Administrator finds that the discharger acted in good faith; that a serious commitment to achieve compliance had been made; that compliance will occur no later than April 1, 1979; that the extension will not impose additional controls on other sources; that an application for a permit was filed before December 31, 1974; and that the necessary abatement facilities are under construction. It is important to note that the second option allows a person other than a violator, not in compliance with the time requirements of the act, to have an extension of up to April 1, 1979.

Throughout the conference, the House conferees were very aware of the current fiscal problems of the American steel industry. In several instances the House conferees attempted to assist this industry to meet the requirements of the act in a way that would not place great financial stress on the industry causing further plant closings and greater unemployment. We are sorry to say that the House conferees were only partially successful.

The steel industry has had problems with capital formation for several years. In many instances the industry has not been able to modernize and install pollution control equipment at the same time. For that reason many individual facilities negotiated long-term agreements with EPA that carry the compliance date for BPT past July 1, 1977, and in some instances past April 1, 1979. Nothing in this legislation invalidates or in any way affects any orders, decrees, settlements, or other agreements in existence prior to enactment of this legislation pertaining to compliance dates for BPT.

On another matter, the House conferees were less successful. We offered language to the Senate conferees that would have allowed the President, after consultation with the Secretary of Commerce, the Secretary of Labor, and the Administrator of the EPA to exempt any point source or category of point sources, other than publicly owned treatment works, from compliance with the requirements of section 301(b)(1) and of section 301(b)(2) if he determined it to be in the national interest of the United States to do so. Any exemption would have been for a period not in excess of 2 years, but additional exemptions might have been granted for periods of not to exceed 2 years upon the President making a new determination. There would have to be assurances that they would meet interim effluent guidelines and would continue operations at the site in the future. Since the steel industry is of major national interest because of its defense and employment impact, as well as the ripple effect that occurs throughout the economy whenever the steel industry is impacted, the House conferees offered this language to the Senate conferees. This would not have been an automatic extension of environmental controls; a rigorous test had to be applied in each case. The House conferees were attempting to be responsive to the situation as we knew it. Unfortunately the Senate refused to accept this modification.

With respect to municipal requirements, we have not been as successful in reaching deadlines. Present estimates by the Environmental Protection Agency show that approximately one-third of all publicly owned treatment works have complied with the 1977 requirement in a timely manner. The primary fault lies with unavailability of Federal funding and redtape. After passage of the act in 1972 the President impounded half of the funds earmarked for the construction grant program. To compound the lack of funding, the EPA put so much redtape on top of the woefully inadequate funding that many communities simply threw up their hands and refused to deal with the Federal Government.

The conferees wrestled with this problem and came up with an equitable solution that recognizes the present realities of the situation. The conference report provides the Administrator with the flexibility he needs to grant time extensions through modifications of permits. To exercise this modification authority, the Administrator must find either that construction is underway but the facility was unable to be completed prior to July 1 of this year, or that the United States has failed to make financial assistance available in a timely manner. This modification procedure can only be instituted at the request of the owner or operator of a publicly owned treatment works and it must be requested of the Administrator within 180 days of the date of enactment. It is the conferees' intent that any modification should contain a schedule of compliance based on among other things availability of financial assistance from the United States.

This modification shall not extend any later than July 1. 1983, under any circumstances, and the Administrator may make additional requirements of the point source such as interim effluent limitations during time of construction of the treatment works.

Throughout the Nation many industries have contemplated tying into municipal works and have been unable to do so because of the inability of publicly owned treatment works to come into compliance with the law. These industrial dischargers are now, in many instances, out of compliance with the law without fault. Section 45 permits the owner or operator of an industrial source to request a similar time extension as that available to publicly owned treatment works when the owner or operator of that industrial source has a permit issued prior to July 1, 1977, contemplating discharge into a treatment works. Several other criteria were included to insure that the owner or operator was acting in good faith. The owner or operator must show that the point source had an enforceable contract to discharge into a treatment works and there is an application pending for a municipal treatment works reflecting in its engineering and design capacity for that point source.

As in the case with municipal discharges, it is the responsibility of the owner or operator of each point source to apply to the Administrator within 180 days of enactment of this section for the extension. The conferees expect the Administrator to grant such extensions when he finds that the owner or operator of this point source has acted in good faith. Any modified permit issued should contain a schedule of compliance similar to that included in the extension for publicly-owned treatment works including any pretreatment and interim effluent limitations that the Administration deems applicable.

Also, section 56 provides that where EPA finds that an industry cannot meet the requirements for a time extension under section 301(i)(2) as set forth in section 45 regarding industries which contemplate tying into a municipal treatment works, and the Administrator finds that the most expeditious and appropriate means of compliance is for the industry to discharge into a municipal treatment works, upon the industry's request, the Administrator may issue an order requiring the industry to come into compliance at the earliest date practicable, but not later than July 1, 1983, by discharging into a municipal treatment works.

The conferees do not expect the Administrator to make unnecessary demands on owners or operators of point sources. They do expect the Administrator to make permit modification decisions in a timely manner.

No such time modification shall be granted where it is not contemplated that the municipal treatment works will be in operation and available to the point source prior to July 1, 1983.

TOXICS—BAT

The highlight of this bill—the most important and far-reaching amendments are contained in a package of provisions responding to the most critical deficiencies in Public Law 92–500, dealing with toxic pollutants and the 1983 requirements in the act for treatment of industrial discharges.

Taken together, they will result in a major redirection and refinement of the Environmental Protection Agency's regulatory program and inmeasurably improve its capability to achieve the purposes and objectives of the act.

Basically, the problems are diametrically opposed in nature: Underregulation, or the lack of ability to regulate rationally in the case of toxic pollutants, and overregulation in terms of excessive and burdensome regulation in the case of conventional pollutants at costs not even remotely commensurate with environmental benefits in terms of water quality.

The conferees, to address these problems, have adopted a coordinated approach strengthening, on the one hand, regulation of the increasingly evident toxics hazard, while modifying requirements for conventional pollutant control, on the other hand. This is in line with the greater-than-expected degree of water quality already achieved and projected to be achieved once requirements for 1977 have been met.

This approach is fully consistent with the intent of Public Law 92-500, which reflected a recognition at the time of its enactment that the task of achieving its objectives would be compounded by economic, technological, and environmental unknown. The problems which could come into focus only with further study on the basis of operational experience have been under intensive scrutiny over the past 5 years by the National Commission on Water Quality, which was established by the act explicitly for this purpose, and the Subcommittees on Water Resources and Investigations and review of the Committee on Public Works and Transportation in the discharge of their continuing responsibilities.

Members of the House at large are entitled to take pride in the outcome of these undertakings as they can in the conference report on H.R. 3199, which, particularly in the area of toxic pollutants and other industrial treatment requirements, builds on the solid groundwork we laid in this area. In both, the amendments represent the "mid-course corrections" regarded as practically inevitable at the time the act was enacted with establishment of the National Commission on Water Quality.

House Members can also take satisfaction in the fact that the amendments which House conferees were able to negotiate with the Senate were made possible by the continuing support of our committee's efforts by the leadership and the membership now and at the time predecessor bills were considered by the House.

Public Law 92-500 fully intended that toxics be regulated. They have not only polluted drinking water and destroyed both commercial and sport fishing, but in many major water bodies they also constitute a hazard to aquatic environment and public health that has yet to be fully recognized. This problem has been amply documented in up-to-date fashion in a staff memorandum prepared for the committee, an excerpt from which we shall insert in the Record at the conclusion of remarks on this subject.

The principal regulatory mechanism for the control of toxics in Public Law 92-500 as originally enacted was contained in section 307(a), which set forth the requirement for toxic effluent standards to be issued for toxic pollutants identified by the Administrator. Frankly, it has failed.

Procedural requirements have proven insurmountable for the Agency, to the point where only six toxic chemicals—aldrin/dieldrin, endrin, DDT, toxaphene, benzidine and PCB's—have been regulated. Six chemicals in 5 years.

The Agency's problems have included uncertainty with respect to the intended breadth of the regulatory effort, lack of toxicological and biological data for many chemicals, and scientific disputes over what amount of a "toxic" pollutant which can be considered as "safe." But far and away the most severe single problem has been the formal, cumbersome rulemaking process.

The result of the failure to regulate toxics has been litigation leading to the consent decree ratified by the court in NRDC against Train, which in effect was has placed the toxics control program under the administration of the court. The court mandated that effluent guidelines based on Best Available Technology (BAT) be developed for 65 pollutants by December 31, 1979.

The conferees adopted a House-initiated proposal recognizing the inadequacy of existing law which led to the litigation and the validity of the BAT approach to toxics.

Several amendments constitute the toxics provisions.

The 65 pollutants specified in the consent decree have been included on the list of toxic pollutants under section 307 (a) (1). This represents a major step forward in the effort to control the discharge of toxic chemicals into the Nation's waterways.

For each of the 65 pollutants, the Administrator now has until July 1, 1980, to promulgate BAT effluent guidelines on an industry-by-industry basis, with which industry is required to comply by July 1, 1984. These dates represent extensions of 6 months and 1 year, respectively, for promulgation and compliance as prescribed in the consent decree. The Administrator also has the discretion to set more stringent toxic effluent standards on a pollutant-by-pollutant basis for the 65 if BAT is not adequate to protect public health or the environment. Any more stringent standards must be promulgated as soon as practicable, and industry must comply within 1 to 3 years as determined by the Administrator on basis of potential hazard to public health posed by the pollutant in question.

This legislation also authorizes the Administrator to add to or subtract from the toxics list, subject only to a standard of review limiting grounds for challenge to assertions of arbitrary and capricious action on the part of the Administrator.

With respect to chemicals thus added to the list, the Administrator is required to promulgate regulations as soon as practicable, industry compliance is required within 3 years in the case of BAT effluent guidelines and 1 to 3 years in the case of toxic effluent standards. Newly added chemicals may be regulated by section 307 toxic standards, BAT or both.

Members will note that the list of 65 pollutants, which are enumerated in Committee Print No. 95-30 of the Committee on Public Works and Transportation, contains many generic terms covering classes, categories, or families of pollutants, for the purpose of implementing the consent decree. EPA has devised a list enumerating 129 specific pollutants. We shall insert the list of 120 specific compounds in the Record at the conclusion of our comments on BAT toxics.

It must be recognized that a number of generic pollutants, both organic and inorganic, may well contain individual compounds or subclasses of compounds which are not in fact toxic, or which in fact may not be discharged by any industry or point source in more than trace amounts.

In implementing this section it is the intent that EPA will take a realistic approach with respect to classes of pollutants among the listed 65, or classes conceivably to be added by the Administrator under the discretion conferred by this legislation.

Thus, if a compound—or subclass of compounds—on or added to the list proves upon analysis not to be toxic, it is expected that the Administrator will exercise his discretion and drop it from the list. Thus, there would be no requirement for regulation under section 307.

In addition, the Administrator, in his discretion, may determine that certain toxic pollutants—or subclasses of pollutants—are not appropriate for regulation in certain circumstances. For example, the Administrator may use his discretion when equal or more effective protection is already provided with respect to that pollutant by an effluent limitation and guideline promulgated pursuant to other sections of the act or, when the discharge of specific pollutant results from its presence in the intake water; or, where a specific pollutant is present in either insignificant or trace quantities and does not cause or is not likely to cause toxic effects to identifiable organisms affected by the discharge. Such pollutants will, of course, remain subject to regulation under 1977 requirements for best practicable control technology (BPT) or possibly by BAT under the provisions of nonconventional pollutants, a subject which I shall return to later in this discussion.

Due to the nature of toxic pollutants, those identified for regulation will not be subject to waivers from or modification of the requirements prescribed under this section, specifically, neither section 301 (c) waivers based on the economic capability of the discharger nor 301(g) waivers based on water quality considerations shall be available.

In summary, the revisions to the toxics regulatory program contained in the conference report on H.R. 3199 simplify the procedures for identifying toxic pollutants and promulgating regulations according to their characteristics. The discretion exercised by the Administrator is broadened, the procedures less formally structured, and burdens of proof modified to the point where the program may proceed in a more rapid and orderly fashion without further recourse to the courts.

Crisis-by-crisis reaction to the problem of toxics must no longer be the norm, but replaced by an orderly program for adding compounds to the list, with the Administrator fully in charge. It, therefore, would be entirely appropriate for the United States to petition the courts to relinquish jurisdiction over toxic pollutant control under Public Law 92-500, now that the statutory basis has been laid for a workable regulatory program the lack whereof led to the litigation resulting in the consent decree. This is particularly appropriate in view of the large number of potentially toxic chemicals to be addressed by the program and the need for administrative discretion within the revised regulatory framework to carry out the provisions of law enacted herein.

This is the intent of this legislation, an outgrowth of House initiatives by the House conferees.

The regulation of conventional pollutants, characterized by biological oxygen demand, suspended solids, fecal coliform, and pH, is far less subject to unknowns than toxics, and has been characterized by far greater progress under the 1977 requirements for best practicable technology (BPT) than anticipated at the time of enactment of Public Law 92-500 in 1972.

One of the principal findings of the National Commission on Water Quality, charged with the specific responsibility of recommending midcourse correction to the act, was that application of the 1977 requirements would restore a large portion of the Nation's polluted waters to a level of physical and chemical quality to provide for achievement of its objectives.

Measurable progress has already been achieved with compliance by some 85 percent of industry with 1977 BPT requirements—as distinguished from 30 to 35 percent of municipalities—and significant further progress will be assured as further compliance is achieved.

Moreover, the intensified attack on the problem of toxic pollutants made possible by these amendments assures a level of industrial control technology that will provide spin-off benefits by removing substantial amounts of conventional pollutants as well. Thus, progress to date and justifiable anticipation of further progress in the conventional pollutant area militates against preserving the requirements in existing law that bat be required across-the-board for all conventional pollutants. The result would be treatment for treatment's sake, and the unnecessary expenditure of billions of dollars yielding no substantial improvement in water quality.

It would be unconscionable to impose this burden on the economy under any circumstances, it would be even more unconscionable to do so in view of the considerable—and altogether justified—increased burden to be borne by many segments of industry in achieving compliance with the toxic control requirements being strengthened under this legislation, requirements which, as noted, also will contribute to the reduction or elimination of conventional pollutants.

Accordingly, the conferees adopted an approach eliminating the requirement of BAT for conventional pollutants and the substituting a new concept known as best conventional pollutant control technology (BCT) not later than July 1, 1984.

This will apply to conventional pollutants as defined by the Administrator in compliance with the act as amended, generally those pollutants which are naturally occurring, biodegradable, oxygen demanding materials and solids. In addition, compounds which are not toxic and which are similar in characteristic to naturally occurring, biodegradable substances are to be designated as conventional pollutants for the purposes of this provision.

It is important that the Administrator, in classifying various chemicals for the purposes of this and other provisions, discriminate among them on the basis of their environmental effects. For example, color in and of itself may range from an esthetic problem having no environmental consequences to an indication of the presence in the water of the entire range of pollutants: conventional, nonconventional and toxic.

In assessing the need for BCT, the Administrator is required to consider the reasonableness of the relationship between the costs of attaining a reduction in effluents and the effluent reduction benefits derived. Essentially, we are talking about removing additional "cheap pounds" of conventional pollutants. Stated another way, BCT imposes a level of control technology which anticipates and accepts the possibility of an increase in stringency beyond BPT, but not resulting in increased costs beyond the "knee of the curve," the take-off point where incremental costs begin to exceed incremental benefits.

Comparison of the costs and level of reduction of such pollutants from the discharge of publicly owned treatment works to the cost and level of reduction of such pollutants from a class or category of industrial point sources is appropriate in making these determinations of reasonablness.

Because of the greater-than-anticipated results obtained under 1977 BPT requirements, the appropriate starting point should be BPT as currently promulgated. Guidelines have been promulgated, industry has substantially complied at costs regarded justifiable in terms of benefits, results are being achieved and water quality improved. It is, therefore, not the intent of this provision to launch an unnecessary exercise in development of BAT as a basis from which to scale down to BCT. The Administrator should first examine the adequacy of BPT in terms of the criteria herein established before making any determination that a higher level of treatment be required.

We might add in this connection that an additional justification for this upgrading of BPT as a starting point in devising BCT is rooted in the fact that guidelines promulgated under BPT have been more stringent that we expected originally. Furthermore, in view of the reasonableness of BPT and the anticipation that BCT will not prove substantially more burdensome, the conferees approved the elimination of any economic capability waiver from the requirement for BCT under section 301(c).

However, in recognition of the possibility that BCT may be equal in stringency to BAT for conventional pollutants in a limited number of instances, it is intended that in such cases the waiver provisions of section 301(c) will apply.

As a result of this legislation, Public Law 92-500, as amended, will recognize for the first time a category of nonconventional pollutants, embracing all pollutants not otherwise identified as toxic or conventional. Industry will be required to comply, by July 1, 1984, with applicable guidelines promulgated by July 1, 1981—including any guidelines in existence at the time of enactment of this act. For guidelines promulgated subsequent to that date, industry must be in compliance within 3 years, and in no case later than July 1, 1987.

Unlike the toxics and conventional pollutant control requirements added by this legislation, nonconventional pollutants will be subject to waivers under section 301(c) based on economic capability and section 301(g) based on water quality considerations, the eligibility requirement for this waiver is less stringent than that initially contained in the Senate bill.

A discharger seeking a waiver under section 301(g) must apply within 270 days after enactment of the Clean Water Act of 1977 or within 270 days of the promulgation of the applicable effluent guideline, whichever is later.

If a discharger applies for waivers under both 301(c) and 301(g), he must do so within the same 270-day time period to permit EPA to process both applications in the same period of time and combine the proceedings, as the agency is indeed encouraged to do.

Throughout the development of these BRT-toxics provisions, the House conferees initiating them were guided by an awareness of two objectives: First, the need to focus the provisions of the act on the most critical problems of water pollution control facing the Nation—addressing real problems in a realistic manner—and second, the need to conserve resources in terms of both the regulatory agency and its ability to conduct a regulatory program and the scarce resources of industry and in turn the economy, your managers on the part of the House are confident that if the amendments embodied in the conference report on H.R. 3199 with respect to toxics and other matters of industrial pollution control are administered in the same spirit, we will achieve the goals we all share practically—not punitively—and at the least cost in public and private resources.

LIST OF 129 SPECIFIC POLLUTANTS

COMPOUND NAME

1. *acenaphthene.
2. *acrolein.
3. *acrylonitrile.
4. *benzene.
5. *benzidine.
6. *carbon tetrachloride (tetrachlormethane).

*_Chlorinated benezenes_ (other than dichlorobenzenes):

7. chlorobenezene.
8. 1,2,4-trichlorobenzene.
9. hexachlorobenzene.

*_Chlorinated ethanes_ (including 1,2-dichloroethane, 1,1,1-trichloroethane and hexachlorothane):

10. 1,2-dichloroethane.

---

*Specific compounds and chemical classes as listed in the consent degree.

11. 1,1,1-trichloroethane.
12. hexachloroethane.
13. 1,1-dichloroethane.
14. 1,1,2-trichloroethane.
15. 1,1,2,2-tetrachloroethane.
16. chloroethane.

*_Chloroalkyl ethers_ (chloromethyl, chloroethyl and mixed ethers):

17. bis(cholorometheyl) ether.
18. bis(2-chloroethly) ether.
19. 2-chloroethyl vinyl ether (mixed).

*_Chlorinated naphthalene:_

20.2-chloronaphthalene.

*_Chlorinated phenols_ (other than those listed elsewhere; includes trichlorophenols and chlorinated cresols):

21. 2,4,6-trichlorophenol.
22. parachlorometa cresol.
23. *chloroform (trichloromethane).
24. *2-chlorophenol.

*_Dichlorobenzenes:_

25. 1,2-dichlorobenzene.
26. 1,3-dichlorobenzene.
27. 1,4-dichlorobenzene.

*_Dichlorobenzidine:_

28. 3,3'-dichlorobenzidine.

*_Dichloroethylenes_ (1,1-dichloroethylene and 1,2-dichloroethylene):

29. 1,1-dichloroethylene.
30. 1,2-trans-dichloroethylene.
31. *2,4-dichlorophenol.

*_Dichloropropane and dichloropropene:_

32. 1,2-dichloropropane.
33. 1,2-dichloropropylene (1,3-dichloropropene).
34. *2,4-dimethylphenol.

*_Dinitrotoluene:_

35. 2,4-dinitrotoluene.
36. 2,6-dinitrotoluene.
37. *1,2-diphenylhydrazine.
38. *ethylbenzene.
39. *fluoranthene.

*_Haloethers_ (other than those listed elsewhere):

40. 4-chorophenyl phenyl ether.
41. 4-bromophenyl phenyl ether.
42. bis(2-chloroisopropyl) ether.
43. bis(2-chloroethoxy) methane.

*_Halomethanes_ (other than those listed elsewhere):

44. methylene chloride (dichloromethane).
45. methyl chloride (chloromethane).
46. methyl bromide (bromomethane).
47. bromoform (tribromomethane).
48. dichlorobromomethane.
49. trichlorofluoromethane.
50. dichlorodifluoromethane.
51. chlorodibromomethane.
52. *hexachlorobutadiene.
53. *hexachlorocyclopentadiene.
54. *isophorone.
55. *naphthalene.
56. *nitrobenzene.

*_Nitrophenols_ (including 2,4,-dinitrophenol and dinitrocresol):

57. 2-nitrophenol.
58. 4-nitrophenol.
59. *2,4-dinitrophenol.
60. 4,6-dinitro-o-cresol.

*_Nitrosamines:_

61. N-nitrosodimethylamine.
62. N-nitrosodiphenylamine.
63. N-nitrosodi-n-propylamine.
64. *pentachlorophenol.
65. *phenol.

*_Phthalate esters:_

66. bis(2-ethylhexyl) phthalate.
67. butyl benzyl phthalate.
68. di-n-butyl phthalate.
69. di-n-octyl phthalate.
70. diethyl phthalate.
71. dimethyl phthalate.

*_Polynuclear aromatic hydracarbons:_

72. benzo(a)anthracene (1,2-benzanthracene).
73. benzo (a) pyrene (3,4-benzopyrene).
74. 3,4-benzofluoranthene.
75. benzo(k)fluoranthane (11,12-benzofluoranthene).
76. chrysene.
77. acenaphthylene.
78. anthracene.
79. benzo(ghi)perylene (1,2-benzoperylene.
80. fluroene.
81. phenathrene.
82. dibenzo (a.h)anthracene (1,2,5,6-dibenzanthracene).
83. indeno (1,2,3-cd)pyrene (2,3-o-phenylenepyrene).
84. pyrene.
85. *tetrachlorethylene.
86. *toluene.
87. *trichloroethylene.
88. *vinyl chloride (chloroethylene).

Pesticides and Metabolites:

89. *aldrin.
90. *dieldrin.
91. *chlordane (technical mixture & metabolites).

*_DDT and metabolites:_

92. 4,4'-DDT.
93. 4,4'-DDE (p.p'-DDX).
94. 4,4'-DDD (p,p'-TDE).

*_endosulfan and metabolites:_

95. a-endosulfan-Alpha.
96. b-endosulfan-Beta.
97. endosulfan sulfate.

*_endrin and metabolites:_

98. endrin.
99. endrin aldehyde.

*_heptachlor and metabolites:_

100. heptachlor.
101. heptachlor epoxide.

*_hexachlorocyclohexane (all isomers):_

102. a-BHC-Alpha.
103. b-BHC-Beta.
104. r-BHC (lindane)-Gamma.
105. g-BHC-Delta.

*_polychlorinated biphenyls (PCB's):_

106. PCB-1242 (Arochlor 1242).
107. PCB-1254 (Arochlor 1254).
108. PCB-1221 (Arochlor 1221).
109. PCB-1232 (Arochlor 1232).
110. PCB-1248 (Arochlor 1248).
111. PCB-1260 (Arochlor 1260).
112. PCB-1016 (Arochlor 1016).
113. *Toxaphene:
114. *Antimony (Total).
115. *Arsenic (Total).
116. *Asbestos (Fibrous).
117. *Beryllium (Total).
118. *Cadmium (Total).
119. *Chromium (Total).
120. *Copper (Total).
121. *Cyanide (Total).
122. *Lead (Total).
123. *Mercury (Total).
124. *Nickel (Total).
125. *Selenium (Total).
126. *Silver (Total).
127. *Thallium (Total).
128. *Zinc (Total).
129. **2,3,7,8 - tetrachlorodibenzo-p-dioxin (TCDD).

Regulation and Monitoring of Toxic and Hazardous Chemicals Under the Federal Water Pollution Control Act (Public Law 92–500)

(Staff memorandum of Subcommittee on Investigations and Review, Committee on Public Works and Transportation, November 1977)

TOXIC CHEMICALS: A UBIQUITOUS PROBLEM

Toxic chemicals are a very worrisome problem in 20th Century America. They have not only polluted drinking water and destroyed both commercial and sport fishing, but, in many major waterbodies, they constitute a hazard to aquatic environments that is probably only dimly perceived.

Kepone in the James River in Virginia, PCBs in lakes and rivers throughout the country, asbestos in Lake Superior, mercury in the Shenandoah River, hexochlorocyclopentadiene in the Ohio River are all recent highly visible examples of the chemical threat. Additional disclosures undoubtedly lie ahead as more and more scientific information is accumulated. The Safe Drinking Water Act of 1974 calls for the systematic monitoring of water supplies, which probably will contribute much to our body of knowledge and, concurrently, to public apprehension.

Some 30,000 compounds are now in commercial usage. An estimated 700 to 1,000 new ones are being produced annually. Among this vast array of chemicals, 12,000 compounds are already suspected as being toxic, 1,500 are suspected carcinogens, and countless others are considered capable of producing various human health and aquatic species disorders. While the Toxic Substances Control Act of 1976 establishes a program to evaluate new chemicals entering the marketplace, those already being produced present a sizable pollution control problem.

Probably the most disturbing finding by the Subcommittee is that, five years after enactment of the federal water pollution control law, we still do not know what toxic and hazardous chemicals are being discharged into the nation's waters. It is therefore difficult to perceive how these chemicals can be effectively regulated.

THE REGULATION OF TOXIC AND HAZARDOUS CHEMICALS

There are three approaches in PL 92–500 for controlling the discharge of toxic chemicals. The first might be characterized as a pollutant-by-pollutant approach. The authority embodied in Section 307(a) of the Act requires effluent standards for toxic chemicals to be established based on health and safety factors. Specifically, these standards must reflect a pollutant's toxicity, persistence, degradability in the environment, and effect on aquatic organisms.

The Act required the Environmental Protection Agency (EPA) to publish final standards for such toxic substances by January 1974, a deadline that the Agency did not meet. While there are literally thousands of chemicals suspected of being toxic, to date the Environmental Protection Agency has promulgated standards under Section 307(a) for only six: aldrin/dieldrin, endrin, DDT, toxaphene, benzidene, and PCBs.

Finalized in January 1977, some of the standards are being contested in federal court. To a large extent, usage of these six chemicals has either been eliminated or rapidly phased out, although it is a matter of opinion as to whether this has been due primarily to the federal regulatory program or to public anxiety and pressure.

EPA has experienced several problems in attempting to implement the provisions of Section 307(a). There has been uncertainty as to whether the section was intended to address a broad range of toxic chemicals or just a few "really bad actors." There is also a lack of toxicological and biological data for many chemicals. Scientific disputes, both within and outside of the Agency, center around what amount of a "toxic" chemical can be considered "safe."

Another problem encountered in attempting to promulgate toxic standards has been the Act's formal, cumbersome rulemaking process. It has proved to be time consuming, expensive and inconclusive as to the issues. The extent to which economic and technological factors intermix, including the obvious difficulty of achieving compliance by affected industries within one year, has virtually immobilized the Section 307(a) program.

The second mechanism for the regulation of toxic chemicals is to utilize the control

---

*Specific compounds and chemical classes as listed in the consent degree.

**This compound was specifically listed in the consent degree. Because of the extreme toxicity (TCDD). We are recommending that laboratories _not_ acquire analytical standard for this compound.

capability inherent in federally approved state water quality standards. This in effect requires a case-by-case evaluation of each discharge into a receiving water.

Theoretically, the discharge of a specific chemical or compound would have to be limited for each discharger to an amount that would not cause the aggregate amount of that chemical in the receiving water to exceed the level permissible by a water quality standard. To support this approach to the toxics problem, the Act requires the EPA, under Section 304(a), to develop water quality criteria by October 1973.

To date, the EPA has published water quality criteria for only 40 compounds. Among these are 15 pesticides, some heavy metals and a number of the more commonly occurring chemicals such as chlorine and phosphorus. While state water quality standards do incorporate much of the available data, they have not resulted in the setting of specific numerical criteria to any great extent. For example, only 10 states include numerical criteria for one or more pesticides. Only 27 states have a standard for cadmium, considered to be a highly toxic metal. In many cases, state water quality standards are narrative in form and simply require that the compound not be discharged in toxic amounts—whatever that may be. Literally thousands of potentially dangerous substances are not currently addressed in state water quality standards.

Often a bioassay is required to determine what constitutes a "toxic amount" of a substance. However, this technique usually provides only an "acute" or short term toxicity standard. Problems from long term, or chronic exposure to organic chemicals and heavy metals, many of which bioaccumulate, tend to be ignored in this rather narrow focus.

The third mechanism for regulating toxic chemicals under PL 92-500 is industry-by-industry, the same way more conventional pollutants are regulated. Effluent limitations (standards) can be established under the authorities in Sections 301, 304, and 306 of the Act. The actual standards must reflect the performance capabilities of essentially two levels of treatment technology. This approach, known as the effluent guidelines program, is complex and has been marked by controversy, legal haggling, and uneven performance.

The two levels of technology are "Best Practicable Technology" (BPT), which was to have been achieved by July 1, 1977, and "best available technology economically achievable" (BAT), for which the deadline is July 1, 1983. In the development of the BPT standards, regulatory emphasis was on conventional pollutants (e.g.: BOD and suspended solids) and toxic substances were generally ignored. Now, EPA is attempting to use the BAT requirement to address the toxics problem—an approach not necessarily specified in the law but which may turn out to be a feasible tactic.

The reasons EPA virtually ignored toxic substances in the first go-round of the effluent guidelines program were the complexity of the task, high costs, the lack of testing methodologies and available data, time constraints, and its stated intention to rely on the Section 307(a) chemical-by-chemical regulatory approach. Thus, EPA developed numerical standards, telling dischargers in various industrial subcategories what they had to do to achieve BPT and BAT for the traditional parameters, such as BOD, suspended solids, and pH, but very little about the control needed for such chemicals as carbon tetrachloride, Kepone, mirex, and others.

What isn't well known is how much removal of toxic substances is achieved by meeting BPT and BAT requirements. EPA officials claim there is such a concurrent benefit. It is recognized that 1977 BPT technologies generally rely on biological processes that are capable of removing certain biodegradable toxic wastes. However, nonbiodegradable chemicals tend to pass through these systems. Carbon tetrachloride, for example, is largely untouched by biological treatment. The non-biodegradable chemicals, such as PCB's, DDT, and chlordane, may be the most environmentally damaging pollutants in industrial waste streams.

Hearing witnesses and officials interviewed by the Subcommittee staff stress the fact that we do not know what chemicals are in most waste streams, and, consequently, we do not know to what extent biological and other types of treatment are removing various toxic compounds. Greater understanding of (1) what is in industrial and other wastestreams, and (2) how much conventional treatment is cleaning up these discharges is of obvious high priority. Otherwise, we will continue to guess about the benefits actually being achieved.

PRESENT STRATEGIES FOR REGULATING TOXICS

Because EPA was not developing a comprehensive list of toxic pollutants, or setting standards for them as specified in the law, two environmental organizations went to court to force EPA to adopt a more aggressive regulatory stance. One objective of the environmentalists was to force EPA to set standards for more than the six chemicals regulated in its initial action under Section 307(a).

In June 1976 the parties to the suit (EPA, the Natural Resources Defense Council, and the Environmental Defense Fund) entered into a Settlement Agreement. The key provision of the Agreement, often referred to as the Toxics Consent Decree, requires the EPA to upgrade its BAT effluent guidelines, Industrial Pretreatment Standards, and New Source Performance Standards to include specific limitations for 65 specified toxic compounds in 21 major industrial categories. Final promulgation of the revised standards must be accomplished on or before December 31, 1979. This will allow a minimum of 3½ years for industry to comply with the July 1983 BAT deadline.

In his testimony before the Subcommittee in the July hearings, EPA Assistant Administrator for Water and Hazardous Materials Thomas Jorling stated: "The effluent guidelines limitations development effort called for in the consent decree is ambitious and comprehensive. It is still too early to know whether or not all the deadlines will be met. To date, however, we have met practically all of the interim milestones and we are optimistic about completing the job on time."

EPA's program to comply with the Settlement Agreement is ambitious—possibly too ambitious. For example, some of the 65 substances specified in the Agreement are one in a family or class of chemicals. Because of this, the list has had to be expanded and now totals 129 compounds. The Agency must develop a specific numerical standard for each substance and incorporate it into the BAT effluent guidelines for, as presently perceived, 399 industrial subcategories. The numerical standards must in turn be included in the discharge permits of an estimated 14,000 factories and plants.

As part of its investigation, the staff has interviewed numerous toxicologists, epidemiologists, chemists, engineers, and other technically trained persons, many of them leaders in their fields. Some of these experts testified before the Subcommittee during the July oversight hearings.

It is probably fair to say that there is a consensus among these individuals that EPA does not have the resources to accomplish the toxics regulatory task within the time frame specified. Regulation will have to be tailored to fit the time and resources available, which is not conducive to quality and reliability in the finished product.

Concern along this line was expressed in a Research and Development publication issued by EPA in early 1977. Discussing the testing protocols for the development of standards for those organic compounds in the Settlement Agreement, the article stated: "In fact, the protocol developed for Effluent Guidelines Division contractors is far from adequately developed and addresses relatively few compounds. It represents a compromise to meet pressing deadlines."

Other observers express skepticism with the toxics' strategy based on the Agency's previous experience in developing BPT and BAT standards, hundreds of which have yet to be issued. Indicative of the difficulty is the fact that BPT–BAT effluent limitations for the organic chemical industry, a major producer of toxic chemicals, were considered so legally indefensible that the Agency withdrew its regulations rather than argue about them in the courts. Of the many guidelines which the Agency did attempt to defend, dozens were remanded for further review.

SCIENTIFIC IMPRECISION—HOW MUCH IS TOXIC?

A central issue in the field of toxicology is the determination of how much of a substance is a "toxic" amount. In large enough amounts, almost any substance can exhibit toxic characteristics. For example, a witness at the July hearings, addressing this question, declared: ". . . if I have an aspirin in my hand and I crumple it up and give you a piece of that, it is very difficult, if not impossible, to discern a medical effect. On the other hand, if you have a headache and I give you two aspirin, it might help it. If I give you 20 aspirin, you are going to be very, very ill, and if I give you 200, you are going to be dead."

Aside from the obvious hazard of acute toxicity, many chemicals are known or suspected to have characteristics of chronic toxicity. Serious questions exist about continuous exposure to small amounts of these substances over long periods of time. Laboratory experiments have shown fish and animal species to develop cancerous tumors, deformations, dysfunction of the central nervous system and various organs, reproductive abornormalities, and even to succumb as a result of various levels of exposure, sometimes relatively low.

Unfortunately, effects on humans cannot be readily extrapolated from laboratory experiments, although untoward effects on other species are taken as a warning of possible implications for man. Regulatory action by the Food and Drug Administration, the Occupational Safety and Health Administration and EPA is often postulated on effects observed in primates, rodents and other animal species.

Adding to the complexity of the task is the imprecision of the human response. Doctors know, for example, that individuals react differently to known medications and a particular reaction is not always predictable without complex testing. Confusion and controversy swirl around our exposure to chemical substances. Use of the artificial sweetener saccharin, and its alleged carcinogenic properties, is a good example of what we face in this field.

The ability to establish "safe levels" for the discharge of toxic chemicals is predicated on the belief that there is some level below which the presence of a given substance is harmless. Unfortunately, this school of thought is not shared by everyone. Some experts charge there are no threshhold limits for toxic materials, that there is a hazard associated with even small exposures.

These people subscribe to the theory that no amount of a known carcinogenic substance should be tolerated. Scientists in this camp generally endorse a "zero discharge" standard for such cehmicals, and applaud the language in PL 92-500 that sets such a goal for all pollutants for 1985.

Further complicating the measurement of health effects from toxic chemicals is the fact that in the real world chemicals are rarely present by themselves. Analyses of various rivers and treated water supplies have shown numerous chemicals to be present, and while each may be at a very low level, synergistic effects may make for a very potent cocktail.

Testimony at the July hearings discussed the results of recent tests of drinking water in several U.S. cities. The amount of toxic chemicals found in these water supplies are known to have caused genetic cell mutations. The full implications of such findings are not yet known. However, as a matter of reference, it was established that the drug industry will end pre-market testing of a possible new drug if similar mutagenic effects are found in the substance being tested.

The inability of scientists to resolve these uncertainties and agree on a regulatory course of action evolves quite naturally from the limited data base and the fact that professional judgments are often heavily influenced by individual and institutional values. To address this first need, to accumulate better data on which to make decisions, can easily take from three to five years time and can cost as much as $500,000 for each chemical. The "value" question will probably confound us forever.

Recalling that there are some 30,000 chemicals in commerce today, any chemical-by-chemical approach to establishing toxicity standards appears rather unsatisfactory unless carefully targeted toward the most suspect substances. Given the limited number of trained and qualified toxicologists in the country, the resources available to establish standards will obviously have to be marshalled on some priority basis. New chemicals entering the market each year will be subject to scrutiny under the Toxic Substances Control Act of 1976. Industry will undoubtedly soak up much of the scientific expertise available if it wishes to continue offering new chemicals into commerce at the present rate of 700-1000 a year.

The ability of a regulatory authority to translate legislated mandates into regulatory procedures is another area of difficulty. Public Law 92-500 contains many words and phrases which, in reality, have defied definition in a manner that satisfies all impacted parties.

One objective of the Act "is to restore and maintain the . . . biological integrity of the Nation's waters," and another is to prohibit the discharge of "toxic pollutants in toxic amounts." Under the requirements of Section 307(a), the Administrator is directed to provide ". . . an ample margin of safety" in imposing controls on toxic discharges.

In hearings on the thermal pollution associated with the generation of electrical power, held earlier this year, the Subcommittee heard testimony on the difficulty of ascertaining what constituted a "balanced indigenous population" in bodies of water. The law specifies that test be applied in protecting aquatic environments. In the final analysis, such decisions become a matter of judgment for the "experts," or the "Administrator." The decision-making dilemma which confronts the thermal pollution regulator equally confronts those charged with the implementation of toxic and hazardous chemical regulatory requirements. What is "an ample margin of safety?" Whose judgment is accepted as to whether a "preponderance of evidence" directs one course of action or another? Obviously, the task is imprecise, highly judgmental, and subject to reevaluation as new data become available.

MONITORING FOR TOXIC AND HAZARDOUS CHEMICALS

The regulation of toxic and hazardous chemicals assumes an ability to detect or monitor their presence. Unfortunately, the ability to do even this is extremely limited. Beyond the sheer number of chemicals to be examined, there is the need to detect contamination at very minute levels: parts per billion, even parts per trillion. In the words of one witness, this is like trying to find ". . . a shot-glass of vermouth in fifty thousand tank cars of gin."

As of April 1977, 309 compounds had been identified in drinking water supplies across the country. As our analysis of water supplies expands, some experts predict that thousands of additional compounds will be discovered. This will not be easily achieved. Monitoring for toxic chemicals requires the use of highly sophisticated analytical equipment, such as electron microscopes, gas-chromatographs, mass spectrometers, and atomic absorption units. This equipment is extremely expensive, with costs ranging as high as $400,000 per unit.

Beyond the initial purchase price, expertly trained chemists are required for proper operation of such equipment. These costs, too, are high. For example, the average cost of analyzing a single water sample to identify the 129 chemical compounds under the Toxics Settlement Agreement is $4000.

Another impediment in the effective use of this equipment is the pace at which such analyses are currently performed. A well trained chemist, using the most sophisticated equipment, can perform 4 to 6 analyses in an eight hour work day. This was one reason for the delay in analyzing samples in connection with carbon tetrachloride spills in the Ohio River basin earlier this year. Because of the limited number of analytical units available, tests were performed over a period of several days. As a result, one major chemical slug had passed the water supply intakes of several cities before anyone realized it.

In addition to the identification of toxic pollutants, tests are required to measure their persistence in the environment and bioaccumulation in human and aquatic species. This second level of analysis often must go on for years and focus on literally thousands of species and bio-systems.

During its review, the staff has been made aware of efforts to develop analytical techniques that constitute "surrogate indicators" and can short cut lengthy, expensive procedures. Certain fish species can be used like canaries were used in coal mines, to flash an early warning of a poisonous substance that may have both acute and long range toxic effects. Even trace levels can be picked up.

It is not always necessary to know the specific collection of chemicals present in an effluent being measured. The important factor is that a biological organism, the fish, is responding to something in the effluent that could inflict broader harm if expelled into the aquatic environment. The use of such surrogate toxic parameters is only one of several analytical techniques showing promise.

The Environmental Protection Agency has provided information to the Subcommittee which indicates limited application of such bioassay techniques in its present monitoring program. While this appears to be a step in the right direction, there is a need to ensure that this approach be vigorously pursued, although this is not to suggest that it is a quick cure to a complex problem.

In addition to the need for improved analytical techniques, there obviously is a need for a more coordinated effort among federal, state, and local jurisdictions in stream monitoring and surveillance. A recent report by the National Academy of Sciences identified serious shortcomings in national monitoring programs. Too much emphasis is placed on day-to-day problems, the NAS report says, with too little attention given systematic programs and policies. The crises situations, such as those involving Kepone and carbon tetrachloride, are the typical pattern.

One witness testifying about monitoring before the Subcommittee charged that "the situation is one of pure chaos and disorder." He added that "important interrelationships in the environment having to do with various toxic and other substances are missed and overlooked."

If the EPA is to shift from a mode of "fire-fighting" to one of long term regulatory enforcement and protection of the environment, substantive changes will have to be made in the Agency's entire approach to monitoring. Additional resources may be required. However, there is strong evidence that presently available resources could be better utilized and move EPA in the direction of achieving these ends.

TOXIC AND HAZARDOUS CHEMICAL SPILLS

A major component of the Federal Water Pollution Control Act's regulation of toxic and hazardous substances is contained in Section 311, "Oil and Hazardous Substance Liability." This section establishes a system for spill response under a "National Contingency Plan," and calls for the assessment of civil and criminal penalties where appropriate. The system, while functional for oil spills, has yet to be implemented for hazardous substances.

Under Section 311, the EPA is responsible for the development of regulations that (1) establish a list of hazardous substances; (2) determine the actual quantities of each substance which must be spilled to be considered harmful; (3) indicate which of the substances on the list are removable; and (4) establish rates of penalties for each substance.

These four sets of regulations have never been promulgated. Until they are, the hazardous substance provisions of Section 311 cannot be utilized. Today no party is legally responsible for reporting a spill of any toxic or hazardous substance to the EPA. The Nation is to a large extent without a national hazardous chemical spill control program. Further, the EPA and the U.S. Coast Guard (with which EPA shares its spill control responsibilities) are prohibited from using the Section 311(k) "revolving fund" to take mitigating actions in those cases where a responsible or liable party cannot be readily identified.

The Environmental Protection Agency has encountered difficulties in its attempts to implement the Section 311 program because of problems in determining what substances are "hazardous" in what amounts and over what period of time. Imposing penalties on spills is dependent on these determinations.

The Agency has tried. In December 1975 it published a proposed rulemaking covering 303 hazardous substances to be brought under the mechanism of Section 311. Its inability to resolve two critical issues caused the Agency to abort this rulemaking action.

One centers on the assessment of liabilities for spill clean-up. Almost all of the hazardous substances listed in the proposed rulemaking were designated as "non-removable." The question was raised as to whether a discharger of a hazardous substance could be held liable for spill clean-up and mitigation costs if, in fact, the substance was "non-removable."

The second issue involved the use of the term "gross negligence," which made the difference of whether high or low civil penalties were imposed. The difference in penalty rates involves millions of dollars and concern was expressed as to whether the higher level of penalties could ever be used.

During its investigation the staff attempted to determine the total number and magnitude of toxic and hazardous chemical spills occurring annually. We were not successful. No one appears to have this information, for various reasons.

First of all, due to the non-implementation of Section 311, no one is required to report a chemical spill to the EPA or to the Coast Guard. (A different situation exists for oil spills.) Additionally, there is no routine monitoring of the nation's waters for most chemicals, especially complex synthetic organic chemicals. The extreme costs and limitations in present analytical capability make this a momentous task.

We do not even have comprehensive information as to what chemicals are stored in land-based facilities along the shores of our rivers and lakes, or what chemicals are being transported on a given water body at a given time. This lack of knowledge compounds the problems of monitoring for spills.

Environmental Protection Agency officials acknowledge that they have no idea of the total number of toxic and hazardous spills that occur. In many instances State water pollution control agencies are notified of spills. The EPA is usually informed of such incidents only on those occasions when a State feels it needs assistance.

On this point, in contrast to the estimated 400 annual spills known to EPA, the State of Pennsylvania alone reported 1,419 spills during the three-year period of 1974–76. Seventy-five percent of them were designated as hazardous or toxic chemical spills. The State of Ohio had over 200 chemical spills in 1976.

Beyond the question of detection, there is the vital need to respond quickly to an identified hazard in a stream or lake. Serious deficiencies exist in Federal, State and local response capabilities, although some States, for example, Pennsylvania, West Virginia, Ohio, and Indiana, have spill notification and response procedures.

The carbon tetrachloride and hexa-octa incidents in the Ohio River basin early in 1977 jeopardized water supplies serving over two million people. In both incidents, EPA, working with information discovered largely by accident, attempted to provide notification of government officials and the public. The Agency's chief vehicle for notification apparently was through the news media. This was unsatisfactory and created an environment of anxiety bordering on panic, with local officials confused and bewildered as to what to do.

In communities along the Ohio River citizens were told to boil their water before drinking it. Some stopped drinking it altogether. Hospitals made emergency arrangements to obtain safe water for patients. A largely chaotic situation persisted. A day after the warning was issued the public was informed that the notice was over a week too late—that the carbon tetrachloride had already passed down the river!

It was apparent that the existing system of spill notification did not work. Compounding the problem of poor notice was the absence of toxicological information necessary to determine whether the chemical did indeed pose a serious threat to the health of the river basin's population. Even when people were informed, they were not really sure what they should do.

The absence of routine monitoring and analysis of streams and of public water supplies creates other problems, as demonstrated in the "hexa-octa" case in Louisville. The dumping of these chemicals into the sewerage system knocked out the wastewater treatment plant, causing over 100 million gallons of raw sewage to be discharged daily into the Ohio River, and thereby threatening downstream water supplies.

As a result, samples from Mt. Vernon, Indiana had to be shipped to EPA laboratories in Athens, Georgia for analysis—a time-consuming process. As the community waited for test results, it ran out of water and supplies had to be trucked in from neighboring communities. Schools and industries closed.

As these incidents demonstrate, reliance on a system of self-reporting of hazardous chemical spills appears to be wholly inadequate. Spills, accidents, and willful polluting acts are going to be with us forever. While it is not possible always to prevent them, there are measures that can be taken to provide a faster, more reasoned response than has hitherto been the case.

Accurate information on chemicals present at industrial and municipal sites along rivers, and in transport, is obviously needed. This would enable development of "early warning" systems to detect selected chemicals. Such systems could also test for the presence of other toxic chemicals on a random basis, providing further control over indiscriminate dumping, or failure to report hazardous chemical spills. Since many hazardous chemicals are not visible or readily detected in receiving waters, these steps would be very beneficial.

The promulgation of Section 311 regulations will not solve the problem posed by chemicals not on the official hazardous substance list. In fact, had the National and Regional Contingency Plans for spill response been operative during the carbon tetrachloride and "hexa-octa" incidents, the EPA would not have been authorized to respond under Section 311 because the two chemicals were not on their original list of hazardous substances.

INNOVATIVE TECHNOLOGY (INDUSTRY)

Section 47 of the conference report adds a new subsection 301(k) which provides that the Administrator—or the State with an approved permit program under section 402, in consultation with the Administrator—may establish an extension of the July 1, 1984, requirements to no later than July 1, 1987, for best available technology economically achievable for pollutants identified in subparagraphs (C), (D), and (F) of section 301 in those cases where existing production capacity is replaced with innovative processes with increased effluent reductions or significantly lower costs. This section should serve as an incentive for industry to develop and implement new processes and techniques for pollution control. The Administrator is expected to encourage industry to take advantage of this section. In doing so, the Administrator must recognize that certain new processes may be proprietary in nature or may be utilized to manufacture chemical products or chemical intermediaries which are proprietary in nature. The benefits which might accrue to the water pollution control effort from this section must not be vitiated by administrative requirements on disclosure of proprietary information. For the purposes of this section industrywide application should be interpreted to include more than one plant and the plants might be a part of the same corporation. Further, if proprietary information is disclosed to the Administrator in a request for a time extension the Administrator is expected to maintain the confidentiality of that information. In those cases where either the request is based upon proprietary information and request is rejected or where a corporation has made the application with the understanding that the process would be utilized at more than one plant owned by that corporation, there clearly is no reason to divulge proprietary information to anyone. Nothing in this section shall preclude a corporation from entering into agreements with other corporations which subsequently utilize the proprietary process. This section is intended to serve as an incentive to develop new processes.

BEST MANAGEMENT PRACTICES FOR INDUSTRY

Section 50 of the conference report provides the Administrator with the authority to control such things as spillage, leaks, sludge disposal practices, and drainage from raw materials not related to the manufacturing process. The guidelines for controlling these types of activities must be included in section 402 permits. It is not intended that the Administrator actually get involved in managing the plant or controlling production processes. Best management practices are aimed at housekeeping activities not directly related to manufacturing. Section 50 provides the Administrator with the authority to prevent such things as the release of carbon tetrachloride into the Ohio River from a chemical plant in West Virginia, and the runoff of Kepone into the James River in Virginia, from occurring in the future.

This section pertains only to those pollutants which the Administrator is charged with a duty to regulate as a toxic or hazardous pollutant under section 301(a)(1) and section 311. The Administrator is expected to use his discretion when applying best management practices for substances which will be regulated under section 311.

Whenever possible, the Administrator is to specify alternative control measures that may reasonably be anticipated to achieve the intended results. The Administrator will identify several options with reasonably equivalent pollutant reduction achievement potential and allow each industry to choose the most cost-effective alternative. It is recognized that the most cost-effective alternative may vary from one industry to another, and believe that this procedure should maximize the opportunity for the individual point source to consider such factors as the age and location facilities, and the engineering aspects of applying the requirements to those facilities. If only one option is provided EPA is expected to take these considerations into account.

Moreover, it may be appropriate for the Administrator to allow a point source to substitute control measures other than those specified by regulation where reasonably similar results can be anticipated to be achieved.

PRETREATMENT

Section 54 of the conference report amends section 307(b)(1) of the act to provide that if a toxic pollutant is introduced into a publicly owned treatment works and the treatment by those works removes all or any part of that toxic pollutant and the discharge from that works is not in violation of the effluent limitation or standard which would apply to that toxic pollutant if it were discharged by such source other than a publicly owned treatment works and does not prevent sludge use or disposal by such works in accordance with section 405 of the act, then the pretreatment required by sources actually discharging that toxic pollutant into that publicly owned treatment works may be revised by the owner or operator of those works to reflect the removal of that toxic pollutant by that works. In addition section 309 of the act is amended by adding a new subsection (f) to provide that whenever the Administrator finds that an owner or operator of any source is introducing a pollutant into a treatment works in violation of subsection (d) of section 307, he may notify the owner or operator of such treatment works and the State of such violation. If the owner or operator of the treatment works does not commence appropriate enforcement action within 30 days of the date of such notification, the Administrator may commence a civil action for appropriate relief, including but not limited to a permanent or temporary injunction, against the owner or operator of such treatment works. In any such civil action the Administrator shall join the owner or operator of such source as a party to the action. Such action shall be brought in the district court of the United States in the district in which the treatment works is located. Such court shall have jurisdiction to restrain such violation and to require the owner or operator of the treatment works and the owner or operator of the source to take such action as may be necessary to come into compliance with the act. Notice of commencement of any such action shall be given to the State.

Section 405 of the act is amended to require the Administrator to develop and publish regulations providing guidelines for the disposal of sludge and the utilization of sludge for various purposes. These regulations shall identify uses (including disposal) specify factors to be taken into account in determining measures and practices applicable to each such use or disposal (including information on costs) and identify concentration of pollutants which interfere with each such use or disposal. The determination of the manner of disposal or use of sludge is a local determination except that if a guideline has been established for a use it is thereafter unlawful for the owner or operator of a publicly owned treatment works to dispose of sludge from such works for that use except in accordance with the guideline.

Under the amendment to section 307 (b) the Administrator would establish national pretreatment standards for toxic pollutants based on the best available technology economically achievable, or any more stringent effluent standards under section 307(a). Then in applying these pretreatment standards through its pretreatment program, the owner or operator of the municipal treatment works could modify the requirements applicable to individual classes of sources introducing that pollutant into the treatment works to reflect the degree of reduction of that pollutant achieved by the treatment works. The combination of pretreatment and treatment by the municipal treatment works shall achieve at least that level of treatment which would be required if the industrial source were making a direct discharge. Any effluent reduction attained by the treatment works and used to justify a modification of pretreatment requirements must be a permit condition enforceable against the owner or operator of the treatment work.

In promulgating national pretreatment standards the Administrator shall include a provision recognizing the option of the owner or operator to modify the requirements to reflect the degree of reduction achieved by the treatment works. An adequate pretreatment program under section 402(b)(8) may include municipal ordinances or regulations specifying pretreatment requirements and incorporated into the treatment works permit by reference, or pretreatment requirements applicable to specific sources set forth as conditions on the permit.

In promulgating national pretreatment standards the Administrator shall include a provision recognizing the option of the owner or operator to modify the requirements to reflect the degree of reduction achieved by the treatment works in order to avoid treatment for treatment's sake.

In addition to the express criteria of section 307(b), the Administrator in establishing pretreatment standards shall consider the guidelines for sludge disposal or use established under section 405.

It is expected that the Administrator will work with the Economic Development Administration to see that direct EPA loans as well as loan and lease guarantees are provided to eligible plants to offset the costs of installing pretreatment equipment.

Also, section 8 of Public Law 92-500 provides for loans from the Small Business Administration to small businesses for the installation of pollution control equipment. This section has never been fully implemented. It is expected that these loans will be made available to assist in the installation of pretreatment processes to industries such as metal finishers.

It should be noted that on line 7 of section 54(a) which appears on page 28 of conference report 95-830, as filed, should read "that effluent limitation or standard which would be applicable to such". The official documents, as filed, are correct.

OILSPILL LIABILITY

Section 58 extends section 311 of the Federal Water Pollution Control Act relating to liability for discharging oil or hazardous substances to such discharges in connection with activities under the Outer Continental Shelf Land Act or the Deepwater Port Act of 1974 or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States—including resources under the Fishery Conservation and Management Act of 1976.

Earlier in this Congress, the House passed and sent to the Senate legislation (H.R. 6803) authorizing creation of an oil spill superfund. The proposed legislation includes some of the concepts embodied in section 58 with respect to oil pollution but is far more comprehensive. The Senate conferees agreed to early consideration in this Congress of oil spill superfund legislation. In the interim the amendments to section 311 will provide assurance that adequate funds will be available to clean up most oil spills and will provide a basis against which the Senate can consider the superfund legislation.

The House conferees recognize that the amendments to section 311 may be far reaching as they pertain to our international relations with respect to international agreements on pollution beyond the territorial seas. However, we believe that such matters which may still be of some concern in this regard will be subject to further review and consideration in conjunction with the superfund legislation.

It should be noted that section 58 accepts the concept which appears in H.R. 6803, as it passed the House, of the distinction between inland oil barges and other vessels carrying oil for purposes of liability.

MARINE SANITATION DEVICES

Section 59 of conference report amends section 312 of the FWPCA to require secondary treatment of sewage and graywater from commercial vessels on the Great Lakes and to permit the Administrator, upon application by a State, to prohibit the discharge of sewage from vessels into drinking water intake zones. These provisions advance the Congress' concern that effluent from ships and boats not contaminate our waters.

In implementing section 312(f)(4)(B), the Administrator is cautioned to use discretion in establishing drinking water intake zones. This new subparagraph is intended to protect drinking water and not to result in far reaching discharge prohibitions unnecessary to protect drinking water. (The statement of managers contains an error on page 93. It should read 392(f)(4)(B) and not 304(f)(4)(B)).

In this connection, however, we would note that section 312 is intended to require the treatment of wastes from marine vessels without placing an unreasonable, insurmountable burden on boatowners. We regret that, in at least one instance, the Coast Guard has not met this intent.

By regulation, existing vessels are required to have type II marine sanitation devices installed by January 30, 1980. In order to provide an incentive to boatowners to install sanitation devices prior to that deadline, EPA and the Coast Guard have agreed to waive the applicability of that deadline to existing vessels which install a type I device prior to January 30, 1979. Such devices would then be permitted to remain through their useful life. The Coast Guard, however, in a notice published recently, will now require boatowners seeking a waiver to have a purchase order or "other evidence of a firm commitment" of purchase dated on or before January 30, 1978.

This requirement is senseless. The January 30, 1979 deadline for type I devices was established because they would not be available in sufficient quantity and variety before that date. It is pointless, then, to require boatowners to purchase devices that cannot be delivered until up to a year after they are ordered. In addition, the purchase order requirement produces no clean water benefit since the type I devices need not be installed until January 30, 1979. We, therefore, call on the Coast Guard to rescind the January 30, 1978, requirement while keeping the 1979 installation deadline. I am advised that the Environmental Protection Agency is prepared to join in this request.

CLEAN LAKES

Section 62 of the conference report provides that financial assistance to the States will be available to prepare surveys to identify and classify fresh water lakes. Further, the provision mandates that the Administrator will issue biannually information to the States on methods to restore and enhance fresh water lakes.

Funding is provided for fiscal years 1978, 1979, and 1980 at an annual level of $60 million for clean lakes program. It is expected that EPA will request the full amounts authorized. The past record of the agency in implementing this program is dismal and must be corrected.

EPA's proposal to implement this program also requires correction. It is intended that the clean lakes program will provide for a Federal share of 70 percent. The agency has arbitrarily limited the Federal share in all cases to 50 percent. This is unacceptable. In addition, the agency states that preapplication costs incurred by non-Federal applicants cannot be included in the non-Federal share cost of the project. Preapplication costs are to be included in the non-Federal share.

EPA is further proposing that * * * the appropriate areawide or State 208 agency certify the proposed lake restoration plan, or that the particular planning requirements for pollution control be delegated to the clean lakes grantee with the understanding that the final plan be incorporated into any 208 agency plan. Planning would include development, and assure implementation, or ordinances to control septic tank pollution, silviculture runoff, and irrigation return flows. While this coordination is appropriated, this requirement should not be used to needlessly delay the program. EPA is encouraged not to allow this to occur by exploring mandated time requirements for the 208 agency to act on the certification.

Finally, it is expected that EPA will give priority to lakes which offer the potential for use as recreation areas.

ESP ISSUANCE OF PERMITS

Section 65 of the conference report clarifies certain aspects of the EPA authority with respect to proposed permits issued under section 402 of the Federal Water Pollution Control Act by a State with an approved program.

Where a State proposes to issue a permit under section 402, the Administrator has authority to object to the issuance of a permit "as being outside the guidelines and requirements of this act" or in a multistate situation described in subsection 402(b)(5). Such objection prevents issuance of the permit by the State.

Section 65 modifies subsection 402(b)(2) by providing that any objection to the issuance of a permit by the Administrator shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator. In addition, a new subsection 402(d)(4) is added to provide the opportunity for a public hearing on the EPA objection to the issuance of such permit. If the State fails to resubmit a revised permit meeting the objection within 30 days of completion of the hearing, or within 90 days of the date of the objection if no hearing is requested, the Administrator may issue the permit for such source in accordance with the guidelines and requirements of the Act.

New subsection 402(d)(4) provides a means of resolution in the event an EPA objection to a permit leads to an impasse between the State and EPA, leaving the point source without a discharge permit and subject to an enforcement action. The new subsection provides a procedure with a forum for establishing a record on the areas of disagreement between the State and EPA which resulted in EPA's objection and for issuance of a permit by EPA if the State insists on its position and EPA determines not to withdraw its objection to the permit proposed by the State. Authorizing EPA to issue the permit in such an instance is intended as a means to protect the discharger and to provide an opportunity for resolving any remaining disagreements over a permit in the context of EPA's administrative procedures and any subsequent judicial review.

Section 65 is not intended to, nor does it, affect the substantive rights or duties of a State, EPA, or the discharger in the review of and subsequent objection to a State-proposed permit by EPA. This amendment does not modify the existing substantive standard of EPA's review to allow the Administrator to substitute his judgment for that expressed by the State in its proposed permit; EPA may object to a State proposed permit only in a case in which limitations and conditions of the State permit are clearly outside the guidelines and requirements of this act, or in the multi-State situation described in subsection 402(b)(5). The role of the Administrator in reviewing State-proposed permits, analogous to that of a Federal court reviewing the action of the administrative agency, is maintained under this amendment. Once the Administrator has approved a State permit program under subsection 402(b), his role in the NPDES process is limited to reviewing State-proposed permits, providing comments on proposed permits, and exercising the authority to object to issuance of a permit in those cases of a clear failure to conform to the guidelines and requirements of the act, or in the multi-State situation described in subsection 402(b)(5). This process for approval of State permitting programs was included in the act to continue the primary State role in water pollution control and not to establish EPA as a supervisor of State permitting activities.

It should be noted that nothing contained in section 65 eliminates the need for a State certification under section 401 where the permit is to be issued by the Administrator of the Environmental Protection Agency nor the requirements of section 511(c)(1) with respect to discharge of any pollutant by a new source.

PERMITS FOR DREDGED OR FILL MATERIAL

The Department of the Army and the Corps of Engineers have been charged since 1899 with the protection of the navigable waters of the United States. Under the Rivers and Harbors Act of March 3, 1899, no one may perform any work in a navigable water such as dredging, filling, erection of structures or alteration of the waterway unless the work is recommended by the Chief of Engineers and approved by the Secretary of the Army. For many years this authority was exercised only in the interest of protecting navigation and was, therefore, confined to those waters where sufficient navigation was taking place to warrant the exercise of the authority. The method employed to limit the authority in this manner was to consider administratively as non-navigable waters those waters where the jurisdiction was not exercised.

As the years passed and attitudes changed, however, the exercise of this authority has broadened considerably. This broadening has come about in two ways. First, the definition of what is a navigable water of the United States has been expanded by the courts. This has had the effect of increasing the number of waters to which the Corps of Engineers' jurisdiction applies. Second, in recent years the courts have upheld the responsibility—and the duty—of the corps to consider all matters affecting the general public interest when deciding whether or not to issue a permit. These matters include the environment, fish and wildlife, economics, flood control, navigation, and similar considerations. This meant, of course, that the corps could no longer confine the exercise of its regulatory authority to those bodies of water on which a substantial amount of navigation takes place. As a result of these two factors, the broader definition of navigable waters of the United States and the broader range of factors considered when evaluating a permit application, the corps' regulatory activities under the 1899 act have expanded considerably.

In 1972, when Congress passed the comprehensive amendments to the Federal Water Pollution Control Act, it established in section 404 of that act a new permitting authority for the discharge of dredged or fill materials in navigable waters, superseding the 1899 act for these two activities. The Corps of Engineers, in implementing section 404, applied it to the same waters as those over which it exercised jurisdiction under the 1899 act—the navigable waters of the United States. A suit was brought in the U.S.

District Court for the District of Columbia alleging that section 404 was not being interpreted broadly enough and the court agreed, ordering the corps to publish revised regulations correctly interpreting the phrase "navigable waters." *N.R.D.C.* v. *Calloway* (392 F. Supp. 687 1975). On July 25, 1975, the corps published new regulations.

Briefly, these regulations did the following:

Phase I, effective with the notice in the Federal Register, extended permit procedures to traditional navigable waters of the United States and to adjacent wetlands.

Phase II which became effective September 1, 1976, initiated regulation of discharges of dredged or fill material into primary tributaries of navigable waters of the United States, natural lakes greater than 5 acres in surface area and their adjacent wetlands.

Phase III, after July 1, 1977, extended the Corps of Engineers authority to regulate discharges of dredged fill material into other waters generally up to the headwaters, where streams flow less than 5 cubic feet per second.

On July 19, 1977, the Corps of Engineers promulgated revised regulations implementing section 404. These regulations were designed to simplify and clarify the program. Among other things these regulations permitted on a nationwide basis the discharge of dredged or fill material into nontidal rivers and streams above the headwaters and lakes that are less than 10 acres in surface area, provided that certain specified management practices are followed. The regulations also permit the discharge of dredged or fill material for certain bank stabilization activity, minor road crossings, and certain maintenance and repair activities. The regulations also make it clear, as did the 1975 regulations, that plowing, seeding, cultivating, and harvesting for the production of food, fiber, and forest products are not included in the section 404 program. Finally, the regulations provide for the issuance of general permits for activities which are substantially similar in nature, that cause only minimal adverse environmental impact when performed separately, and that will have only a minimal adverse cumulative effect on the environment.

The Committee on Public Works and Transportation was concerned that this program, fully implemented, would prove extremely difficult to administer in an effective manner. More importantly, the Federal Government cannot and should not be expected to assume the entire responsibility for environmental protection. The States and local governments have a significant role to play. Yet an expanded Federal program would discourage the States from exercising their responsibilities to protect water and wetland areas.

For these reasons the committee reported, and the House passed, an amendment to section 404 which defined the Federal role as being limited to traditionally navigable waters and which recognized the responsibilities of the States to regulate other waters and wetland areas. The amendment, recognizing that States might not have the capability to exercise such responsibilities, provided for Federal regulation of these other waters and wetland areas where the Governor of the State and the Corps of Engineers agreed that they should be regulated because of their environmental and ecological importance.

The House provision also provided for the issuance of general permits and excluded from regulation normal farming, ranching, and silvicultural activities, the maintenance of structures such as dikes, dams, and levees, construction and maintenance of farm or stock ponds and irrigation ditches, and Federal projects where an environmental impact statement for the project addressing the impact of the discharge of dredged or fill material has been submitted to Congress in connection with the authorization or funding of the project.

The conference report retains the basic principles of the House amendment. It provides a mechanism whereby the States can regulate the discharge of dredged or fill material into waters other than traditionally navigable waters, and it contains essentially the same exclusions from regulation of various activities.

The conference report gives the Corps of Engineers authority to issue general permits on a State, regional, or nationwide basis for any category of activities involving discharges of dredged or fill material if the corps determines that the activities are similar in nature, cause only minimal adverse environmental effects when performed separately, and will have only minimal cumulative adverse effect on the environment. Any general permit shall be based on the guidelines set forth in subsection (b) of section 404 and shall include the requirements and standards which apply to activities authorized by the permit. It shall be for a period of not more than 5 years and may be revoked or modified if after opportunity for public hearing the corps determines that activities authorized by the permit have an adverse impact on the environment or are more appropriately authorized by individual permits. Where a general permit has been issued, a person performing an activity covered by the general permit should not be required to obtain permission from the Corps of Engineers before proceeding with the activity. While requiring some degree of notification of the proposed activity to the corps may be reasonable, it would be unreasonable to require that the activity not be commenced until the corps grants its consent. This would defeat the purpose of general permits, which is to avoid individual applications and review.

The conference report also adds a new subsection (f) which provides that the discharge of dredged or fill material: First, from normal farming, silviculture, and ranching activities; second, for the purpose of maintenance—including emergency reconstruction of recently damaged parts—of currently serviceable structures; third, for the purpose of construction or maintenance of farm or stock ponds or irrigation ditches or the maintenance of drainage ditches; fourth, for the purpose of construction of temporary sedimentation basins on a construction site which does not include placement of fill material into the navigable waters; fifth, for the purpose of construction or maintenance of farm roads or forest roads, or temporary roads for moving mining equipment, where such roads are constructed and maintained, in accordance with best management practices, to assure that flow and circulation patterns and chemical and biological characteristics of the navigable waters are not impaired, that the reach of the navigable waters is not reduced, and that any adverse effect on the aquatic environment will be otherwise minimized; and sixth, resulting from any activity with respect to which a State has an approved program under section 208(b)(4) which meets the requirements of subparagraphs (B) and (C) of such section, is not prohibited by or otherwise subject to regulation under section 404 or 301(a) or 402 of the act—except for effluent standards or prohibitions under section 307. This subsection (f) shall not apply if the discharge of dredged or fill material into the navigable waters is incidental to any activity having as its purpose bringing an area of the navigable waters into a use to which it was not previously subject where the flow or circulation of navigable waters may be impaired or the reach of such waters be reduced.

In Senate Report No. 95-370 accompanying S. 1529 it is stated that the term "normal silvicultural practice" does not include, for Eastern mixed hardwood forests, clearcutting of timber, or harvesting associated with even-aged management of timber. The House conferees do not agree with this statement and do not consider it to be factually correct.

The Eastern mixed hardwood forests are especially well suited to various management practices such as shelterwood cutting and clearcutting. Even-aged practices such as clearcutting create the widest range of plant communities of any regeneration method and are appropriate for areas where wildlife habitat diversity and water yield are primary objectives.

Perhaps more than any other forest type, Eastern hardwoods require a wider range of cutting methods and cultural methods with prescriptions varied to fit each particular tract. For these reasons the interpretation of normal silvicultural activities should not restrict or constrain the use of a wide range of scientifically proven silvicultural practices. An informative description of these practices is contained in a letter from the Chief of the Forest Service of the Department of Agriculture to Representative JOHN BREAUX and I ask that this letter be printed at the end of my discussion of section 67. We wish to point out that although discharges of dredged or fill material associated with normal silvicultural activities are not to be regulated under section 404, matters such as sedimentation problems resulting from silvicultural activities will continue to be subject to the requirements of section 208 relating to nonpoint sources of pollution.

The conference report establishes a process to allow the Governor of any State to administer an individual and general permit program for the discharge of dredged or fill material into phase II and III waters and historically navigable waters after the approval of a program by the Administrator.

The Administrator must, upon receipt of a program from a State, submit copies of such program to the Secretary of the Army and the Secretary of the Interior, acting through the Director of the U.S. Fish and Wildlife Service, who have 90 days from the date of receipt of the program to submit any comments with respect to the program to the Administrator in writing. Within 120 days after the receipt by the Administrator of a program submitted by a State the Administrator shall determine, taking into account any comments received from the Secretary and the Secretary of the Interior, whether such State has certain authority with respect to the issuance of permits pursuant to the program. The authority which the State must have in order for the program to be approved by the Administrator is essentially the same authority it must have to administer a 402 permit program under the act. If, with respect to a State program, the Administrator determines that the State has the requisite authority to carry out the program he shall approve the program and notify the Secretary who shall suspend the issuance of permits for activities covered by the State program. If the Administrator determines that the State does not have the requisite authority to administer the program, he must so notify the State, which notification is to include any revisions or modifications necessary so that the State can resubmit the program for a new determination by the Administrator. The Administrator cannot disapprove a program because he has not completed his review of it—the disapproval must be a positive one that the State does not have the requisite authority.

The waters in which a State may not regulate the discharge of dredged or fill material under a State program approved under section 404 are those waters defined as the phase I waters in the Corps of Engineers 1975 regulations, with the exception of waters considered navigable solely because of historical use.

These latter waters are considered more appropriate for State regulation rather than Federal since they do not support interstate commerce either in their present state or with reasonable improvement. (A State can, however, regulate the discharge of dredge or fill materials into these so-called Phase I waters where it takes over the administration of a general permit issued by the Corps or under an EPA approved section 208 program regulating a class or category of activities).

If the Administrator fails to make a determination with respect to a State program within the 120 days provided, the program is deemed approved and the Administrator must so notify the State and the Secretary who shall suspend the issuance of permits under subsections (a) and (e) of section 404 for activities covered by the State program. Upon notification that a State program has been approved by the Administrator, the Secretary shall transfer any applications for permits pending with the Secretary for activities with respect to which a permit may be issued pursuant to the State program to the State for appropriate action. Also, if a State, after its permit program has been approved, notifies the Secretary that it intends to administer and enforce the terms and conditions of a general permit issued by the Secretary under subsection (e) of section 404 with respect to activities in that State, the Secretary shall suspend the administration and enforcement of such general permit with respect to those activities.

Each State which has an approved permit program under section 404 must transmit to the Administrator a copy of each permit application received by the State and a copy of each proposed general permit which such State intends to issue. The Administrator is to provide copies of each permit application or each proposed general permit within 10 days of its receipt to the Secretary of the Army and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service. If the Administrator intends to provide written comments to the State on the permit application or the proposed general permit he must notify the State within 30 days, and provide the written comments, after consideration of any written comments from the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, within 90 days after the receipt of the application or the proposed general permit. If the Administrator has notified the State within the 30-day period that he intends to submit written comments the State shall not issue the proposed permit until after the receipt of the comments from the Administrator or after such 90th day, whichever first occurs.

A State may not issue a proposed permit after such 90th day if it has received written comments from the Administrator in which he objects to the issuance of the proposed permit and the proposed permit is one that has been submitted to the Administrator pursuant to section 404(h)(1)(E) or the Administrator objects to the issuance of the proposed permit as being outside the requirements of section 404 unless the State modifies the proposed permit in accordance with such comments. If the State does not resubmit the permit revised to meet the objection within 30 days after completion of the hearing or, if no hearing is requested within 90 days after the date of the objection, the Secretary may issue the permit pursuant to subsection (a) or (e) of section 404, as the case may be, for the source in accordance with the guidelines and requirements of the act.

I wish to emphasize that an approved State program is one which is established under State law and which functions in lieu of the Federal program. It is not a delegation of Federal authority. This is a point which has been widely misunderstood with regard to the permit program under section 402 of the act. That section, after which the conference substitute concerning State programs for the discharge of dredged or fill material is modeled, also provides for State programs which function in lieu of the Federal program and does not involve a delegation of Federal authority.

Since it is a State program administered under State law, the National Environmental Policy Act and the Fish and Wildlife Coordination Act are not applicable to actions taken by the State in the regulation of the discharge of dredged or fill material. These two acts apply only to actions taken by Federal agencies. The same is true, of course, with regard to any other Federal statute which is applicable only to actions taken by Federal agencies.

The conference substitute provides that when the Corps of Engineers receives an application for a section 404 permit or proposes to issue a general permit, the Corps is to notify the Secretary of the Interior, acting through the Director of the U.S. Fish and Wildlife Service. The Director of the U.S. Fish and Wildlife Service must submit any comments with respect to the application or the proposed general permit in writing to the Chief of Engineers within 90 days. If the comments are not received within this 90-day period, the Corps of Engineers is to proceed with consideration and final disposition of the permit application. The comments which are required to be furnished within the 90-day period are the comments of the Director of the Fish and Wildlife Service and represent the final comments of that agency and of the Secretary of the Interior. For that reason if the authority to make such comments is delegated to a field office of the Fish and Wildlife Service, the comments furnished by the field office will also be in full compliance with the Fish and Wildlife Coordination Act and the memorandum of understanding between the Departments of Interior and Army.

The requirements that the comments be furnished within 90 days and that they be in writing were included to assure that a permit application is not delayed by the Fish and Wildlife Service and the Department of the Interior through various levels of review within these agencies and to assure that the full comments of these agencies are made known and are public information.

New subsection (r) of section 404 provides that the discharge of dredged or fill material as part of the construction of a Federal project specifically authorized by Congress, whether prior to or on or after the date of the enactment of this new subsection, is not prohibited by or otherwise subject to regulation under section 404, or a State program approved under that section, or section 301(a) or 402 of the act (except for effluent standards or prohibitincs under section 307) if information on the effects of the discharge is included in an environmental impact statement before the actual discharge of dredged or fill material in connection with the construction of the project and prior to either authorization of the project or an appropriation of funds for construction. Projects which meet the requirement of this provision are not required to have a Federal permit under section 404 nor a State permit where a State is administering a permit program approved by the Administrator. Likewise, where a State does not have an approved program it cannot regulate the discharge of dredged or fill material in connection with such projects under any other provision of State law. Only maintenance dredging activities of the Corps of Engineers are permitted to be regulated by a State where such a Federal project specifically authorized by Congress is involved.

The exemption from the requirement for a section 404 permit granted certain Federal projects in the conference substitute is in recognition of the constitutional principle of separation of powers. Where a project has been specifically authorized by the Congress that authorization should not thereafter be subject to nullification by an executive agency. The conferees have, however, limited the exemption so as to insure that the Congress will have full information on the impacts of the discharge of dredged or fill material associated with a project when it determines whether or not to authorize the project or to appropriate funds for its construction. Only those projects which have received an analysis of the effects of a discharge equivalent to that provided under the guidelines promulgated under section 404(b)(1) prior to authorization or specific funding for activities which would result in the discharge of dredge or fill material are exempt. An environmental impact statement addressing the impact of the discharge, with particular reference to the guidelines promulgated pursuant to subsection 404(b)(1), must have been submitted to Congress prior to either the authorization or the appropriation of funds. Thus Congress is to have the benefit of all the necessary information when it makes a decision. It is emphasized that the failure of a project to meet these requirements will result in the project having to obtain a section 404 permit. It would not require a reauthorization or additional appropriation action.

New subsection (t) of section 404 provides that nothing in section 404 shall preclude or deny the right of any State or interstate agency to control the discharge of dredged or fill material in any portion of the navigable waters within the jurisdiction of the State, including any activities of any Federal agency, and that each agency shall comply with the State, or interstate requirements, both substantive and procedural to control the discharge of the dredged or fill material to the same extent that any person is subject to its requirements. This new subsection is not to be construed as affecting or impairing the authority of the Secretary to maintain navigation.

This provision was accepted by the House conferees with the understanding that it applies only to maintenance dredging activities involving the discharge of dredged spoil in the navigable waters or into diked disposal areas as fill material. As it was explained in the report of the Senate Committee on Environment and Public Works accompanying the Senate bill its purpose was to overcome the ruling in the case of Minnesota against Hoffman that section 404 exempted the Corps of Engineers from State requirements relating to the discharge of dredged spoil from a Federal navigation project. The amendment was explained in the same terms during the debate on the legislation on the Senate floor and in the conference between the House and the Senate on this legislation.

The conference report differs from the Senate provision in that it provides that it is not to be construed as affecting or impairing the authority of the Corps of Engineers to maintain navigation. This provision is included in recognition of the possibility that there may be instances where State requirements relating to the disposal of dredged spoil may not be compatible with the responsibility of the Corps of Engineers to maintain navigation. It is intended that the Corps will apply for a State permit where one is required and will make every reasonable effort to comply with State requirements. However, where these requirements cannot reasonably be met, the Corps of Engineers has the authority to proceed with measures necessary to maintain navigation:

WASHINGTON, D.C., *October 31, 1977*.

Hon. JOHN BREAUX,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BREAUX: We appreciate the opportunity to respond to the questions you raised pertaining to a definition of normal silvicultural activities, procedures used to determine what system of timber management or harvest method is to be used, and procedures used to protect water quality.

Forest managers have two basic management options available to them for establishing forests and controlling composition and growth: uneven-aged and even-aged management. The normal silvicultural systems to achieve these management options are:

For uneven-aged management:

The selection system of silviculture:

(a) Single tree selection.

(b) Group selection.

For even-aged management:

The clearcutting system of silviculture.

The seed-tree system of silviculture.

The shelterwood system of silviculture.

The selection system of silviculture is the manipulation of a forest for a continuous high-forest cover, recurring regeneration of desirable species, and the orderly growth and development of trees through a range of age or diameter classes to provide a sustained yield of forest products. Individual tree selection involves the removal of individual trees rather than groups of trees. In mixed stands, it leads to a increase in the proportion of shade-tolerant species of the forest. Group selection can be used to maintain a higher proportion of the less shade-tolerant species in a mixture than individual tree selection.

The three silvicultural systems for even-aged management are used to manipulate forests for the periodic regeneration of desirable species, the orderly growth and development of trees to a given size in each stand, and progressive development of harvestable stands to provide sustained yield of forest products. Regeneration occurs at or near the time of complete harvest when the stand reaches the desired age or size. Stands are treated between harvests with thinnings, cleanings, or other cultural treatments designed to promote growth and improve quality.

In the *shelterwood system* the mature stand is removed in a series of cuts. Regeneration of the new stand occurs under the cover of a partial forest canopy. The *seed-tree system* involves harvesting nearly all the timber on a selected area in one cut. A few of the better trees of desired species are left, well distributed over the area, to reseed naturally. In the *clearcutting system*, the harvesting is accomplished in one cut of all trees on an area. The area harvested may be a patch, stand, or strip. Regeneration is obtained through natural seeding, through sprouting of trees that were in or under the cut stand, or through planting or direct seeding. All three techniques have the purpose of creating a new, even-aged stand.

The Forest Service believes any of the above silvicultural systems could be considered normal in certain timber stands under certain conditions. The complex aspect of silviculture is the application of the proper system to a specific stand to meet land management objectives taking into account a broad array of resource values and physical and biological factors. What would be appropriate under one set of conditions might not be appropriate under other conditions. Thus, the prime concern is the selection of the silvicultural system which best meets management objectives. To provide further background on the scientific base for the selection of silvicultural systems, we enclose selected papers prepared for congressional hearings in 1976, "The Scientific Base for Silviculture and Management Decision in the National Forest System," "Agriculture Handbook—Silvicultural Systems," and a recent paper by Dr. David M. Smith, Professor of Silviculture, Yale University, "The Scientific Basis for Timber Harvesting Practices."

We understand that the National Association of State Foresters has provided the conferees with the following definition of normal silviculture:

"Definition of normal silviculture activities as all those generally recognized by professional forest managers for the production of timber crops, including site preparation, planting, construction of roads and minor drainage ditches, harvesting methods including clearcutting, prescribed fire, and application of approved chemical pesticides and fertilizers."

We also understand that the Society of American Foresters has provided you and other interested members with a definition of normal silviculture. These definitions will be helpful to you in understanding the broad, recognized usage of the term.

Of particular concern in the Senate Report on S. 1952 is the selection of silvicultural systems for eastern mixed hardwood forests. As presented in our papers prepared for the congressional hearings in 1976, even-aged management practices, such as shelterwood cutting and clearcutting, are especially well suited to many eastern hardwood types because they satisfy the biological requirements of the present stands and maximize many of the resource values. Even-aged practices such as clearcutting create the widest range of plant communities of any regeneration method. These practices are appropriate for areas where wildlife habitat diversity and water yield are primary objectives. Single tree selection, an uneven-aged management practice, leaves the forest with a more undisturbed appearance and is suitable for areas where esthetic and recreational vaues are important. Timber values may be increased by either even-aged or uneven-aged management depending upon the species present or desired and the extent to which other resource values are to be maintained or enhanced. Perhaps more than any other forest type, eastern hardwoods require a wider range of cutting methods and cultural measures with prescriptions varied to fit each particular tract. We believe that the interpretation of normal silvicultural activities should not restrict or constrain the use of a wide range of scientifically proven silvicultural practices, including both even-aged and uneven-aged systems, in any forest or region.

As you can see, our discussion of the definition of normal silvicultural activities involves a discussion of factors used to determine the proper system for a specific stand. On National Forest System lands, specific management objectives are developed through multi-resource land management planning. In addition, generalized guidelines have been developed for broad classes of timber stands. Based then on the management objectives and guidelines and specific resource information, a specific prescription is prepared by a skilled silviculturist in consultation with other resource specialists. This prescription is made by the man on the ground and prepared and carried out to meet management objectives for the area. State and private forest landowners are similarly encouraged to define multi-resource land management objectives for their lands and proceed with specific silviculturally sound prescriptions.

In answer to your third question, the Forest Service has many procedures and activities underway to protect water quality from sedimentation caused by silvicultural practices. A great deal of research effort is directed toward this subject and results in new information, publications, and knowledge that help to guide action programs. Through our cooperative programs with State forestry organizations we provide technical assistance, training, and advice to loggers, forest landowners and others. This includes, for example, helping to develop and encourage best management practices on non-Federal forest lands.

Logging roads and skid trails are generally the greatest source of possible water quality degradation. Therefore, the engineering specifications for road construction and contract provisions that control road and skid trail use are of major importance. These controls need to be carefully drawn to meet specific problems for the area being harvested. On National Forest System lands we provide this close control and encourage similar controls on lands of other ownership.

Methods of logging and access route management that hold soil losses close to geological rates are well known and are included in our specifications and sale provisions:

(1) Do not log in streams;

(2) Build the least temporary access routes and skid trails possible, avoiding steep and unstable slopes;

(3) Locate roads away from streams, the distance depending on slope and soil characteristics;

(4) Design access routes carefully;

(5) Apply erosion-control measures as needed; and

(6) Revegetate all temporary access routes as soon as possible.

The selection of the most appropriate silvicultural system, the careful layout and supervision of the actual road construction and harvest, and the treatment of the area following harvest are key factors in protecting water quality.

The control of discharges of sediment from silvicultural practices is specifically identified in EPA regulations 131.11(J) which were promulgated pursuant to section 208 of P.L. 92-500. These regulations require the identification and evaluation of all measures necessary to produce the desired level of control through the application of best management practices to silviculturally related nonpoint sources of pollution. In addition, the National Forest Management Act of 1976 provides detailed direction for the planning and management of National Forest System lands with emphasis on the protection of watersheds and water quality.

We would be happy to meet with you or others to discuss the scientific base of silviculture and current management practices.

Sincerely,

JOHN R. MCGUIRE,
Chief.

EMERGENCY FUND

Section 69 amends section 504 of the act to authorize the Administrator to provide assistance in emergencies and establishes a contingency fund for this purpose. This fund is to be maintained at a level of $10 million. The Administrator is authorized to provide emergency assistance whenever it is immediately required to prevent, limit, or mitigate the emergency, there is an immediate significant risk to public health or welfare and the environment, and this assistance will not otherwise be provided on a timely basis. The Administrator is required to prepare and publish a contingency plan for responding to emergencies and, at the discretion of the Administrator, emergency assistance provided because of the discharge of a pollutant subject to section 311 of the act may be a removal cost added to liabilities under that section. The cost for emergency assistance provided as a result of the discharge of a pollutant in violation of section 301, 306, 307, 402, or 403 of the act shall be recoverable from the owner or operator of the source of the discharge. The existence of the contingency fund does not in any way affect the liability of the discharger for all damages resulting from the discharge.

Nothing in this section shall be construed to relieve the Administrator of any requirement imposed on the Administrator by any other Federal law. Also, nothing in this section shall affect any final action taken under such other Federal law, or affect in any way the extent to which human health on the environment is to be protected under such other Federal law.

This emergency section is comparable to the programs carried on by the Corps of Engineers under this section is intended to be implemented.

Nothing is to be done to undermine or delay the use of this authority.

There are several major programs carried on by other agencies under the jurisdiction of the Committee on Public Works and Transportation which deal with emergency relief. These include the Corps of Engineers so called Public Law 99 program and the disaster relief program now in the Department of Housing and Urban Development. Generally, these programs have been successful, because they are not constrained by budgeting considerations. They are used as needed. It is the conferee's intent that the Administrator shall not be encumbered by the Office of Management and Budget in carrying out the provisions of section 69. The Administrator should move immediately where there is need, and concern himself later as to what other agencies might have come in. The key in most cases will be expeditious action to avoid disastrous consequences.

COMBINED SEWER STUDY

Section 70 provides for a study of combined sewer overflow.

Historically, the cities have been left out of Federal assistance programs for the correction of the storm and flood problems of combined sewers. As a result, cities have been left to their own resources. This has meant that combined sewers have been developed to handle only the most frequent storm situation, not the intensive situations. The problem has become more acute with the development of suburban areas. The overflow from these areas is funneled into already overloaded urban treatment works, further exacerbating the problem. The TARP project in the city of Chicago is indicative of this situation. The development of the study authorized in this section is in no way to hinder the ongoing funding of this project.

There is a need for a strong and consistent national policy on this matter, providing adequate Federal assistance for the correction of combined sewers. This study should contain options for the Federal Government to develop a positive role of leadership and financial assistance.

LIMESTONE

The Committee on Public Works and Transportation received written presentations concerning the application of uniform technological controls under the act to discharges of limestone. The issue is whether limestone, because of its chemical composition, should be treated in the same manner as other "rock" substances such as granite, metallic ores, sand, gravel, coal, and traprock. The producers and processors of limestone maintain that limestone can provide certain benefits to water quality and therefore should not be subjected to the same requirements as other substances. The production and processing of limestone is carried out to a large degree by small firms, and concern was expressed as to the economic burden on such firms from controls which the industry claims are unnecessary.

To determine the extent to which these concerns are valid, the Senate Committee on Environment and Public Works in its Report 95-370 directed the Environmental Protection Agency to undertake a review of the application of the technological control requirements to limestone. Specifically, the Senate report stated EPA should consider the effect of limestone in varying concentrations on water quality and the appropriateness of classifying it with other "rock" substances. The House conferees agree that this review should be undertaken by EPA as soon as possible and that it should be completed by July 1978, and a report on the Agency's findings and conclusions submitted to the House and Senate committees.

SECTION 316(a) AND STATE WATER QUALITY STANDARDS

This act is not intended to change the regulation of thermal discharges. An addition, the conferees must disagree with the interpretation of section 316(a) expressed by the Senate Committee on Environment and Public Works on page 8 of their report (S. Rept. No. 95-370, on S. 1952) that section 316(a) of the existing law does not preempt State thermal water quality standards. In adopting section 316(a) as a part of the 1972 amendments to the Federal Water Pollution Control Act, we clearly intended that the section apply to thermal limitations based on State water quality standards as well as technology-based effluent limitations. Therefore, this committee cannot agree with the present interpretation expressed in the Senate report and by the subcommittee chairman in consideration of the Senate amendments to the FWPCA. We specifically note that EPA correctly interpreted the original intent of the effect of section 316(a) on State water quality standards, as set forth in the preamble to EPA's thermal discharge regulations (39 Fed. Reg. 36176 (October 8, 1974) at 36178), that section 316(a) operates to affect effluent limitations based on water quality standards relating to heat. The committee notes that the language of section 316(a) applies to "any effluent limitations proposed for the control of the thermal component of any discharge." This language clearly covers effluent limitations based on water quality standards, as well as effluent limitations based on guidelines or standards under sections 304(b) and 306 of the act. Moreover, section 316(a) covers dischargers "otherwise subject to the provisions of section 301," which includes discharges subject to the provisions of section 301(b)(1)(A) (technology-based limitations), as well as subject to section 301(b)(1)(C) of the act (more stringent limitations based on water quality standards). The purpose of section 316(a)—to provide for site-specific analyses of the impact of thermal discharges—applies to effluent limitations based on water quality standards, as well as to technology-based effluent limitations. In addition, section 303(g), which provides that water quality standards related to heat must be consistent with section 316 of the act, reinforces the intention that the "balanced, indigenous population" standard of section 316(a) be the guiding principle in evaluating thermal discharges. This interpretation tends to avoid unnecessary capital expenditure, and thus needless higher costs to the consumer, while assuring adequate protection of the aquatic environment.

NONCOMPLIANCE FEES

Section 309(d) of the Federal Water Pollution Control Act places broad discretionary power on the administrator to subject persons to civil penalties for violating permits issued pursuant to section 402 as well as for violations of provisions of the act. However, nowhere in the law was it contemplated that civil penalties were to be levied by EPA based upon the theory of recovery from a discharger of all economic gain achieved by noncompliance. Nothing contained in this legislation would change this. In fact, a provision to authorize noncompliance fees was included in the Senate version of the Clean Water Act of 1977, but was specifically rejected in the conference.

Mr. Speaker, permit me to take a moment to call to the attention of my fellow Members my utmost appreciation and thanks to the dedicated members of the Public Works and Transportation Committee staff whose untiring work has been such a vital contribution to the development of this legislation in the last 3 years.

As we all know, the 1972 Water Pollution Control Act included major and unprecedented amendments in a massive undertaking to clean up our Nation's water. Through extensive hearings and investigation, regularly conducted field inspections and discussions with representatives of professional organizations, industries, environmental organizations, and representatives of the Environmental Protection Agency, which has the primary responsibility of implementing the act, the staff has assisted the Members in closely monitoring the act since 1972.

The complexity of the act raised many points of controversy as it cut across all sectors of our life, and the staff has worked diligently to resolve these controversies in a most equitable manner for all parties concerned. Each and every one of the members of the staff has contributed greatly to our efforts to get on with the task of cleaning up the resources of our country. I would like to extend my special thanks to Dick Sullivan, Les Edelman, Errol Tyler, Joan Kovalic, Bill Corcoran, Larry Reida, Gordon Wood, Mike Toohey, and Jeffrey O'Neill.

Mr. Speaker, I urge my colleagues to join in supporting the enactment of this necessary legislation.

Mr. BAUMAN. Mr. Speaker, I wonder if the gentleman would yield for a question.

Mr. ROBERTS. I yield to the gentleman from Maryland for a question, and then I will yield to the chairman.

Mr. BAUMAN. I thank the gentleman for yielding.

The gentleman mentioned the great difficulty dealing with section 404 and the Federal jurisdiction over wetlands. I certainly want to compliment the gentleman and the members of the committee for the work that they did. As the gentleman knows, there has been some controversy as to exactly how this new legislation will be applied. I understand that the Federal Government will retain through the Corps of Engineers jurisdiction over navigable waters, but what does "adjacent wetlands" mean? How far will that go? I represent counties where when the tide comes up, a third of those countries could suddenly be adjacent wetlands. I would hope that the States would be able to have delegated to them control over such areas.

Mr. ROBERTS. Wetlands adjacent to traditionally navigable waters remain under Federal jurisdiction. Other wetlands may be regulated by a State under its own program if approved by EPA.

Mr. BAUMAN. But there will be an ability on the part of the Federal Government to delegate to the States control over the adjacent wetlands, next to navigable waters; is that correct?

Mr. DON H. CLAUSEN. Mr. Speaker, will the gentleman yield?

Mr. ROBERTS. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. I thank the gentleman for yielding.

In response to the gentleman's question, wetlands adjacent to traditionally navigable waters will remain under the jurisdiction of the Federal Government with one exception—jurisdiction over historically navigable waters can be assumed by a State if that State so chooses.

In further response to the gentleman's question, I would interpret the word "adjacent" to mean immediately contiguous to the waterway.

Mr. BAUMAN. I thank the gentleman.

Mr. ROBERTS. Mr. Speaker, I yield such time as he may consume to the distinguished chairman of the full committee, the gentleman from California (Mr. JOHNSON).

Mr. JOHNSON of California. Mr. Speaker, I take this time really to state to the House we have a very large program here. We have worked on it 3 years for renewed funding that will amount to an expenditure of $28 billion over the next 5 years that will go to the States and territories for grants for the purpose of cleaning up their pollution problems so that we can have clean water in our streams, lakes, bays, and oceans. During all of this time we have discussed this matter three different times with the Senate. I happen not to have been able to attend this last conference due to illness. I want at this time to commend the gentleman from Texas (Mr. ROBERTS) who handled this conference in a very, very efficient way, along with the total membership of the conferees representing the House and the Senate. Because all of the conferees signed the final report and are in unanimous support, the conference report as worked out is a good conference report, and we will now have a workable act. I think we have improved the original Organic Act of 1972, Public Law 92-500. Many of the matters of concern in this conference report were worked out after Congress received the National Water Commission report. This Commission was chaired by the Vice President of the United States, Mr. Rockefeller. Many of us in the House and the Senate served on that Commission. That Commission worked throughout the United States holding hearings. Much of the information that was gained in those hearings was included in the compromise that was reached between the Senate and the House, and it is here for our consideration today.

We have tried to meet every Member's matters of concern during the conference. We took a long time, and I am sure there will be colloquies involving the chairman of the conference, the gentleman from Texas (Mr. ROBERTS), who is here today to clarify some matters.

But in closing, I would like to congratulate the conferees and the staff of our Public Works Committee for doing a wonderful job in working this out. This morning when we appeared before the Rules Committee the conference report was very favorably received by all present.

Our rule contains the necessary waivers. As required by the rule, we will offer a concurrent resolution which will take care of that matter.

I think all of us here in the House can really get behind this conference report. I hope we have a very fine vote so that we can move forward with this. The States are out of money. There are some 30 of them at the present time. We need the legislation.

The emergency appropriation that was provided in the supplemental is tied up yet and we will not get to conference on that and work out our differences on that until we come back in January, so this is a very important piece of legislation for us to pass today.

Mr. DON H. CLAUSEN. Mr. Speaker, as ranking minority member of the Committee on Public Works and Transportation, the gentleman from Ohio, Mr. HARSHA, is necessarily absent today on committee business. I wish to insert his statement at this point in the RECORD.

STATEMENT OF THE HON. WILLIAM H. HARSHA

Mr. Speaker, I believe that the agreement reached by the Conferees on the amendment to Section 404 is a compromise with which all interested parties should be pleased.

I believe it appropriate to remind the Members that when the 1972 Amendments were enacted, Congress defined the term "navigable waters" to mean "waters of the United States including the territorial seas." The jurisdiction of the 404 program is not something that was established by the courts. The Congress of the United States established that definition.

In my judgment, the problems resulting from the 404 program have resulted not from the definition of "navigable waters" but from the implementation of the program. As many of you may recall, the gentleman from New Hampshire, Mr. Cleveland, and myself offered an amendment to 404 which was intended to address these problems with the program's implementation. Unfortunately the amendment was rejected. However, I believe that the conference substitute does contain not only an improvement on the amendment offered by Mr. Cleveland and myself but will, in fact, result in a simplification of the 404 process while accomplishing the environmental objectives mandated by Congress.

The conference amendment recognizes that the States should be responsible for controlling the discharge of dredge or fill material in State waters that do not involve interstate or foreign commerce. In the past, one of the greatest concerns of allowing the States to assume the 404 program was that they would not be able to implement the program due to a lack of funds. The conference substitute allows for financial assistance under the State Management Assistance Provision which is contained in Section 26 of the Conference Report.

It is the intent of the Conferees that any State permit program for the discharge of dredged or fill material approved by the Administrator must have demonstrated itself capable of accomplishing the same objectives as the Federal permit program. The State program must include enforcement authority comparable to the Federal program, adequate resources including staff and funds, and ensure full and complete coordination with all related Federal, State and local programs. A State permit program must include substantive decision making criteria at least as stringent as 404(b) guidelines, and should provide adequate education for applicants and follow-up procedures to ensure compliance with the permits that are issued.

In addition, it is imperative that the State permit program be fully coordinated with other processes, requirements and program elements that control pollution that alters the chemical, biological and physical integrity of the Nation's aquatic resources.

The amendment recommended by the Conferees also recognizes that the genuine environmental objectives of the 404 program will not be compromised by the exemption of certain activities. These exemptions clarify that the activities that do not involve point source discharges are exempt as well as specifically listed activities that may involve minor discharges that will be controlled by best management practices. The Conferees have clarified that plowing, seeding, cultivating, harvesting, minor drainage and soil and water conservation practices performed on uplands were not intended to require 404 permits.

New Subsection (f) of Section 404 provides that Federal permits will not be required for narrowly defined activities specifically identified in paragraphs A–F that cause little or no adverse effects either individually or cumulatively. To assure that the extent of these exempted activities will not be misconstrued, paragraphs (f)(1) (D) and (E) and (f)(2) provide common sense limitations to protect the chemical, biological, and physical integrity of the Nation's waters. While it is understood that some of these activities may necessarily result in incidental filling and insignificant harm to aquatic resources, the exemptions do not apply to discharges that convert more extensive areas of water into dry land or impede circulation or reduce the reach or size of the water body. For the same reasons, 404 (f)(1)(F) provides that farm and forest roads are to be constructed and maintained in accordance with best management practices, promulgated by the Corps of Engineers, to minimize adverse effects that may occur when water is displaced by fill material. I support these exemptions with one reservation. I am concerned that Federal projects which have a substantial impact on wetlands should not be exempted from the 404 program. However, I was in a minority in my viewpoint on this issue and the Conferees chose to adopt an exemption for all Federal projects which were specifically authorized by Congress if the impacts of the dredge and fill activity were addressed in an environmental impact statement submitted to Congress either prior to the authorization of the project or appropriation of funds for construction. I believe it is appropriate to point out that this provision is limited only to those projects specifically named by Congress in legislation which is enacted by vote of both bodies of Congress. It does not include Federally assisted projects nor projects authorized by Committee resolution. These must still apply for a 404 permit. I would remind the Members that the provision relating to Federally assisted projects was specifically deleted from the Federal projects exemption by the Conferees.

Finally, I would like to comment on the amendment to Section 208 of the Act which would allow certain categories of activities to be regulated under the 208 area-wide management program. The new 208 program is a supplement to the 404 program and is intended to complement and be coordinated with an approved State 404 permit program. The 208 program is not a substitute for the 404 program as most discharges of dredged or fill material require a case-by-case review through a permit process and it is not intended that activities conducted under a best management practice be required to obtain an individual permit. Activities that involve discharges of dredged or fill material that impair the flow or circulation of navigable waters or replace water with dry land will normally require individual permit review. For example, case-by-case permit review is necessary to minimize adverse effects from most channelization and real estate development fills. Moreover, the Conferees agreed that a permit should always be required where toxic substances are involved. A case-by-case permit review would not be required for narrowly defined activities that cause little or no adverse effects either individually or cumulatively, including those activities narrowly defined in 404(f)(1)(A–F).

A State must have a permit program approved under Section 404 and a statewide regulatory program approved under 208(b)(4) before the Administrator can approve any best management practices submitted by the Governor for appropriate activities. Any best management practice must be included in State laws or regulations prior to its final approval by the Administrator.

The Administrator cannot approve best management practices to replace the State's permit review process in its entirety as only certain activities are appropriate for best management practices. A best management practice might be an acceptable method of control for activities that are similar in nature and that cause no more than minimal harm to the environment either individually or cumulatively. Best management practices are appropriate for controlling farm roads, logging roads, temporary mining roads, stock ponds, farm ponds and maintenance of existing fills. Best management practices are not appropriate as the sole means of controlling activities if the impact varies according to location so that the test of "minimal adverse affect" is not met or where advanced permit-type review is necessary to assure that the discharge is conditioned to protect the environment. It is expected that best management practices would be approved only for those activities which are likely by their nature to be conducted in compliance with a management practice.

The 208 agencies should continue to concentrate on areawide management pollution and on non-point sources of pollution that degrade critical aquatic areas rather than attempt to duplicate 402 and 404 permit programs that control point sources of pollution.

The Administrator must ensure that best management practices are specific enough to inform each person conducting an activity what is specifically required of him. Where appropriate, a best management practice would require notice to the designated State agency in advance of discharge.

The Conferees expect that this 208 process will include an activity enforcement program with demonstrated capability and adequate resources.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield myself 7 minutes.

Mr. Speaker, as ranking minority member of the Subcommittee on Water Resources, I rise in support of this excellent piece of legislation.

The Federal Water Pollution Control Act Amendments of 1972, Public Law 92–500 which is being amended extensively here, was a truly landmark piece of legislation in which we can take continuing pride. I say that on the part of Members who have since 1963 been a part in our continuing effort to make our water pollution control program one of the keystones of our national effort to enhance our environment.

But I want to say that the perspective gained through long association with the program leads me to the assertion that this legislation is no less an accomplishment than the original 1972 act. In effect, it takes the policies and programs we deemed essential in light of 1972 knowledge—much of it intuitive—and makes those critically needed amendments we now deem essential in light of 1977 knowledge based on 5 years of experience.

This has been history of progress—in some areas far beyond what we considered possible, as in the degree of water quality achieved under requirements for best practicable control technology; and it has been a history of disappointments, as in the case of toxic pollutant control and administration of the grant program for construction of municipal wastewater treatment works.

Before offering further comments on the substance of the conference report, I want to emphasize that it stands as a tribute to bipartisan cooperation on the House Committee on Water Resources and its Subcommittee on Water Resources.

This is reflected in the degree of minority participation throughout the legislative and oversight hearings, subcommittee and full committee markup on this and predecessor legislation, floor action, and the joint statement of legislative intent submitted on behalf of the gentleman from Texas (Mr. ROBERTS), chairman of the Subcommittee on Water Resources who so ably led the House conference delegation, and myself.

Again, before proceeding to discussion of detailed provisions, I also want to emphasize that to a degree many of us had at times felt unattainable, the conference report fully merits the term mid-course correction envisioned when we enacted the 1972 act.

Many of you will recall the concerns, particularly on the House side, that unknown and possibly unacceptable economic and social costs might well result from stringent 1983 requirements for best available technology (BAT). This led to the establishment of the National Commission on Water Quality, charged with evaluating the consequences in their full dimension of meeting or not meeting the 1983 requirements.

Mr. Speaker, that work has been done, and in conjunction with legislative and oversight hearings ranging from deficient administration of the construction grant program to the impossibility of managing the toxic pollutant requirements of the 1972 act, permits the Congress to make the informed decisions embodied in this conference report.

Thus, in many ways, this legislation mandates a redirection of the municipal construction grants program, a reasonable and workable program for the control of industrial discharges widely varying as to the complexity of their control technology and severity of their environmental and health effects, and a revised program of control or outright prohibition of the discharge of toxic materials.

The highlight of the bill—and this statement bears repeating as we proceed with an explanation of the legislation—lies in its treatment of: First, toxic pollutants; and Second, conventional pollutants whose elimination or reduction has already proceeded far beyond expectations.

If any terms sums up our approaches to these two related issues, it is reality, reflecting the informed decisionmaking I mentioned a moment ago.

We know on the basis of an avalanche of information that the prevalence and severity of the toxic pollution problem are far greater than anticipated. Also sadly apparent is the fact that existing law is totally inadequate to the task.

We know, too, with equal certainty, that the 1977 requirements for best practicable technology (BPT) have produced and will continue to produce to an increasing extent a greater degree of water quality improvement than anticipated. Existing law and the manner in which it has been administered have proven more than adequate to the task to the point of calling into question the wisdom of proceeding to more stringent requirements now scheduled to take effect in 1983.

This conference report meets both needs.

In the toxics area, we provide strengthened and streamlined statutory authority for the Environmental Protection Agency to step up its enforcement activity under less cumbersome, time-consuming formal procedures.

In the area of conventional pollutants, we eliminate entirely the requirement for best available technology in 1983 (BAT) and substitute new and less stringent requirements termed "best conventional pollutant control technology" (BCT). This essentially represents an upgrading of BPT to the extent that the increased cost of treatment be reasonable in terms of the degree of environmental benefits.

I might add in this connection that the justification for this upgrading of BPT as a starting point in devising BCT is rooted in the fact that guidelines promulgated under BPT have been more stringent that we expected originally when BPT was considered a stop-off on the road to BAT in 1983.

For industrial discharges other than known toxics and conventional pollutants, we also establish a requirement for BAT, with compliance phased in between 1984 and 1987, and with waivers permitted on the basis of water quality needs and the economic capability of the industrial discharger.

As we have been drafting these amendments, we have never lost sight of the fact that an imbalance has arisen in our clean-up efforts; industry has, at its own expense, achieved 85 percent compliance with 1977 requirements, while municipalities—the public sector—has complied in the range of 30 to 35 percent.

In the municipal construction area, the defiency has stemmed from failure to avert bureaucratic delays and redtape, partially attributable to a related failure to accord to the States their rightful role as partners in the program as envisioned by the 1972 act.

We have therefore adopted amendments designed to smooth out a number of wrinkles which have proven burdensome to our municipalities, and moved across a broad front toward more efficient administration by a provision to enhance State authority and capabilities across the board.

But the problems of the construction grant program also reflect a disinclination on the part of all parties to move in the area of innovative treatment technology and wider use of alternatives to conventional community-wide collection and treatment systems which clean up dirty water and export it to the seas via our rivers and streams.

This has been a concern for a long time, since the early 1970's, in fact, when we had great hopes for progress in technology advancement as a result of the research and development provisions in Public Law 92-500. Those hopes were not fulfilled.

I therefore developed, my fellow House conferees supported, and the conference accepted a package of amendments to foster development and deployment of innovative and alternative technology in the municipal construction field.

I shall not now duplicate our joint House managers' explanation of all the interrelated provisions in this package, but rather briefly summarize them and highlight certain elements for emphasis.

This section authorizes a set-aside of construction grant funds to encourage innovative and alternative technologies. The set-aside of a State's annual construction grant allocation is 2 percent for each of the fiscal years 1979 and 1980, and 3 percent for 1981, to be used to bring grants for the Federal share of project costs up from the standard 75 to 85 percent for new technologies.

One-half of 1 percent is to be used for innovative technologies and the best for alternative, demonstrated technologies. Cost-effectiveness guidelines are to be revised to allow funding of a project which employs innovative or alternative technology, the cost of which is up to 115 percent of the cost of conventional technology.

This section provides encouragement and incentives to communities willing to attempt utilization of innovative and alternative technologies for the treatment of municipal wastewater. And I can say on the basis of sentiment in my own district and the California Water Resources Control Board as amplified by its chairman, John Bryson, that willingness is there. Communities in California and elsewhere have been willing to explore other options when they are presented and promoted.

The advantages of the innovative technology are many. They include acceleration of efforts to meet the long-range objectives and goals of the act, development of simpler options to conventional secondary treatment with concomitant lessening of operating costs and energy consumption, and the facilitation of reclamation and recycling efforts.

Reclamation-recycling facilities and devices and other alternatives to conventional secondary treatment have always been eligible for funding under the act. Included are water reclamation or recycling projects which entail a degree of treatment greater than conventional secondary treatment and projects to transport water which has been subjected to secondary treatment where its disposal does not violate water quality standards.

However, such projects often involve new technology and the risks that the new technology will not work as predictably and acceptably as a more conventional treatment process; possible higher operating and maintenance costs associated with new technology have served as disincentives to adoption of such solutions.

This section would encourage the development of new and alternative technology through three devices. First, it would provide for an increase in the Federal grant for treatment facilities to 85 percent for the construction of such technology.

Second, by setting aside a portion of the construction grant funds allotted to States so that these funds can be used only for nonconventional solutions, expertise and interest in such solutions will be promoted at the State level.

Third, revision of the cost-effectiveness guidelines to permit the funding of new technology projects that are up to 115 percent of the cost of conventional technology will help eliminate the present bias in the guidelines toward conventional secondary treatment.

It is intended that this provision will promote the long-range objectives and goals of the act to include encouraging technology that will lead to the reclamation and recycling efforts so crucial to attaining these ends.

I am convinced that this new departure will yield substantial dividends in advancing technology in the water pollution control field leading to improved water quality at lesser capital or operating costs, or the combination of the two. This can only be achieved if we provide incentives: legislative direction, backup in case of failures, and rewards for excellence.

Colleagues who have also followed the implementation of Public Law 92–500 with anything near the degree of closeness I have may well be concerned that we may see a repetition of the fiasco that followed enactment of the act, when the change in direction sent the train off the tracks and the construction grant program ground to a halt.

I want Members to know that I share these concerns, and personally received assurances from the Assistant Administrator of EPA for Water and Hazardous Substances—while these provisions were still under development—that the construction grant program will not be slowed down as a result of increased emphasis on innovative and alternative technology.

Only on the basis of that assurance did I proceed to introduce my amendments as H.R. 9464 and push for their adoption by the conference. Similarly, the gentleman from Texas (Mr. ROBERTS) and I, in our joint statement of legislative intent, make clear that these provisions will be administered with judgment, without unnecessary studies and evaluations, with no tendency to force innovative or alternative technologies inappropriate to the type of project or the area for which a project is proposed. Only projects for which step 1 grants are submitted after September 30, 1979, will be subject to any requirement for consideration of innovative or alternative technology.

With these assurances, and indeed because of them, I expect this program to be phased in, beginning in fiscal year 1979, to the point where fully one quarter of the funds obligated in fiscal year 1981 will involve such projects.

The opportunities are enormous, as are the benefits. This is particularly true in the case of land treatment and its potential for reuse of water and recapture of what heretofore have been considered pollutants as a nutrient resource.

This is of particular interest to water-short areas such as my own State of California, which has recently established an office of water recycling and others which increasingly will be experiencing water shortages.

Experience at Muskegon, Mich., site of the Nation's largest land treatment project, demonstrates its applicability elsewhere. Testimony from the gentleman from Michigan (Mr. VANDER JAGT) has been most persuasive as to the benefits.

This provision, of course, is not exclusively or even primarily a land treatment provision. No one would go so far as to argue that it is universally applicable in California much less across the Nation. The objective is to move technology forward along a broad front in the municipal treatment area.

I am pleased to be able to report that these provisions are supported by a broad coalition of environmental organizations, including the National Clean Water Campaign, on whose steering committee are representing the Clean Water Action Project, the Natural Resources Defense Council, the Sierra Club, and Environmental Action.

All told, some three dozen national, State, and local environmental groups support this legislation which also enjoys the support of the League of Women Voters and the American Consulting Engineers Council (AEC). In fact the AEC, the Clean Water Action Project—and EPA have been extremely helpful in the development of this approach.

The National Wildlife Federation also was very helpful in its comments, particularly in identifying the open space and recreation potential of alternative treatment systems, which in my view could take the form of tree farming, golf courses, and green belts surrounding cities.

One particularly important provision which should not be handled by EPA in mere routine fashion is the public information program which is intended to counter prejudices, misconceptions, and misundertanding as to the true meaning of innovative and alternative technology.

Far too few, in my judgment, understand the concept of land treatment, for example, which merely means the application of partially treated wastewater to land where absorption by the soil further removes the remaining impurities and the nutrients in the wastewater support anything from ground cover to crops.

Of possibly greatest ultimate impact, however, is the provision requiring a study by EPA and related Federal and State agencies to devise legislative recommendations to require the coordination of water supply and water quality.

A final thought on this subject; a pertinent observation from the standpoint of guidance to the agency, was made recently by T. C. Williams, an engineer from Grand Rapids, Mich., quoting Cardinal Newman:

> A man would do nothing if he waited until he could do it so well that no one would find fault with what he has done.

Throughout hearings and deliberations on this legislation the question of limitations on EPA resources was raised. This problem of resources must be confronted forthrightly. There is potential for conflict between the Agency's manpower and capability to manage the strengthened regulatory program and the objectives of these revisions in terms of a rationally focused effort.

The Agency's mandate is substantially expanded, but in statutory terms permitting—and even mandating—flexibility and sensitivity in dealing with a vast complex of problems varying widely as to severity and amenability to solution.

The principal focus of regulation, as distinguished from public financing of the construction grant program, is industry with all the implications for burdening if not exhausting reserves of private capital.

Therefore, it is not the intent of this legislative effort to best EPA with discretion in the interests of a precisely target series of regulatory activities, and then see this discretion nullified by agency shortcuts and across-the-board regulatory requirements. Constraints on agency manpower and other resources may well prove incentives to such an approach. But it is intended that the Agency bear in mind the potential cost to individual companies, entire industries, and the economy at large to result if the act is not administered as intended by the Congress. As reflected by the conference report on H.R. 3199, these concerns are prominent among those motivating this legislation. Excessive regulation in the name of administrative convenience will not be tolerated. This concern will remain uppermost in mind as the Congress continues to exercise its legislative and oversight responsibilities in this field.

Section 35 of the conference substitute authorizes the Department of Agriculture, acting through the Soil Conservation Service and such other agencies of the Department of Agriculture as the Secretary may designate, to establish and administer a program to enter into contracts of not less than 5 years nor more than 10 years with owners and operators having control of rural land for the purpose of installing and maintaining measures incorporating best management practices to control nonpoint source pollution for improved water quality consistent with an approved areawide management plan under section 208.

The Secretary is expected to utilize the Soil Conservation Service to carry out this section in those instances where that Service has the capability to do so. Other agencies of the Department of Agriculture are to be utilized where the Soil Conservation Service is not in a position to render the assistance for such reasons as the lack of facilities in the area involved.

There is a large body of litigation growing from Public Law 92-500. The Library of Congress prepared a report setting forth for each section of the water pollution control act a discussion of the case law and litigation history on that section. The report was completed and submitted in September. Because of the utility of this report to all those affected by the act, this report is being printed as Committee Print 95-35. The chairman of the Committee on Public Works and Transportation, Mr. Johnson, is to be commended for this. It will be useful to many people.

The report is House Public Works and Transportation Committee Print 95-35, "Case Law Under the Federal Water Pollution Control Act Amendment of 1977." Mr. George Costello, Legislative Attorney of Congressional Research Service, is to be commended for his efforts on this report. In addition, Roy Richards, John Weber, Larry Eig, and Marianne Filice are to be commended for their excellent efforts. I believe this report will prove to be most useful. A full understanding of Public Law 92-500 can only be achieved by having an understanding of the case law interpreting the public law.

Mr. Speaker, I would be remiss in my comments in this conference report if I did not recognize the contribution to this legislation made by a most important office of this body. I speak of the Office of Legislative Counsel. Specifically, I speak of Mr. Robert L. Mowson and Mr. Arnold I. Havens who have worked with our committee for months on this legislation. The combination of their industry, attention to detail, diligence, and over-all competence in this most complex area of the law is a credit to them and to the Office of Legislative Counsel.

Without the help of Mr. Mowson and Mr. Havens, it would have been most difficult to bring this conference report to the floor in this session. I personally very much appreciate their assistance to me, to my staff and to the Committee on Public Works and Transportation and to the committee on conference.

The members of the Committee on Public Works and Transportation have been assisted in the development of H.R. 3199 in a manner which has again demonstrated that level of ability, diligence, and dedication which we have come to expect from our staff as routine. Certain members of our committee staff deserve special mention for their efforts on H.R. 3199. The leadership by the chief counsel, Dick Sullivan, and the minority counsel, Larry Reida, has assisted us immensely by their coordination of the overall staff effort. In addition, I would like to compliment and express my appreciation to other members of the staff such as Lester Edelman whose combination of knowledge of water resources law and parliamentary procedure is unexcelled. He has been of great assistance to me for many years.

Joan Kovalic and Bill Corcoran contributed greatly to the legislation on the municipal program and the provisions on industrial discharges, respectively. Errol Tyler's expertise on section 404 contributed greatly to the development of this legislation. On the minority staff I wish to express my appreciation to Jeff O'Neill who has participated from the beginning in the development of this legislation and has consistently demonstrated his ability to write clearly, concisely and effectively. Mike Toohey has participated from the beginning in the development of this legislation and has spent a great percentage of his time on two most complex provisions, sections 404 and 208, which have been so difficult to resolve over the last 2 years and his background in water resources, forestry, and planning has served the committee well.

Jack Schenendorf who served most effectively as a staff member to Mr. Cleveland when he was a member of the National Commission on Water Quality has sustained his high level of excellence throughout the development of this legislation. Alise Peyton has done everything expected of a staff member and more. Mr. Speaker, I have saved for last my appreciation for Mr. Gordon Wood, the assistant minority counsel of the House Public Works and Transportation Committee. Mr. Wood, in my opinion, deserves special recognition. He is an expert in the water resources field and has special insight into the water pollution control program establishing him as a valuable counselor not only to the minority but to all of the committee members. His recommendations on the difficult provisions such as the 1983 best available technology requirements and toxic control provisions were the cornerstone of the conferees' agreement. Additionally, Gordon Wood has been of great assistance to me personally, especially with his assistance in developing innovative technology amendments which I and the other House conferees supported, and I would like to publicly say "thank you."

Mr. Speaker, I would like to express my appreciation to the members of the staff of the Committee on Environment and Public Works of the Senate who like our staff have contributed to the excellence of this legislation. Just as the members of the committee on conference conducted long and sometimes difficult sessions to resolve the differences between the two bodies our respective staffs have been involved in similar negotiating sessions for us. Through this process our respective staffs objective always was what is best for the program. Leon Billings who directed the Senate staff efforts, Phil Cummings, Jim Range, John Freshman, Mimi Feller, Sally Walker, Marsha Johnson, and Jackie Schaeffer deserve special recognition.

Mr. Speaker, I believe it most important at this point to congratulate all the conferees who worked under very trying circumstances and were able to reach agreement on one of the most difficult bills on which I have worked. Bizz Johnson, chairman of our full committee, Ray Roberts, chairman of the Water Resources Subcommittee, and Bill Harsha, ranking minority member of the full committee, deserve special credit for their leadership. Serving with them is a privilege. The other House conferees, Mr. Anderson, Mr. Roe, Mr. Breaux, Mr. Ginn, Mr. Oberstar, Mr. Nowak, Mr. Stump, Mr. Cleveland, and Mr. Snyder contributed to the success of this measure. Each conferee brought a special expertise to the negotiations which allowed us to bring to the American people a bill which we can recommend heartily.

Mr. Speaker, I urge approval of the conference report.

Mr. Speaker, I yield such time as he may consume to the gentleman from Arkansas (Mr. Hammerschmidt).

Mr. HAMMERSCHMIDT. Mr. Speaker, I rise in support of the conference report to accompany H.R. 3199, the Clean Water Act of 1977. I would especially like to commend our House conferees for a job well done. They faced a very difficult task in that the House had not adopted a position on so many of the very vital provisions that the Senate brought to the conference. It is no small task that they have been able to return to the House with a bill which I believe all can support.

Mr. Speaker, I am especially pleased that the amendments to the Federal Water Pollution Control Act that are embodied in the conference report recognize the need to make "midcourse corrections" to the ambitious undertaking that Congress embarked the country upon in 1972. The amendments to the best available technology requirement are both reasonable and environmentally responsible. In my judgment, these adjustments will result in better control of the toxic chemicals that find their way into our waterways while also minimizing the problem of "treatment for treatments sake" for those materials for which we have a wealth of knowledge and which can be controlled at lesser levels of treatment than BAT.

I am also pleased that the areawide waste treatment management planning process begun by the 1972 act will be continued. The work being accomplished by these 208 planning agencies will now be a continuous process, constantly being refined and updated. I believe we will find in the future that this work done by these agencies is the cornerstone of the nonpoint source pollution control program.

The funding for the construction grant program that has been included in the conference agreement will provide the Federal commitment needed to assure our communities that they can go forward with plans to construct the facilities necessary to meet the requirement of secondary treatment. We have been remiss in the past in not providing a long term funding commitment. We now have that commitment and in my own State this will mean $33.8 million will be authorized this fiscal year and $37.5 million for the succeeding 4 years.

The absence of this long term funding commitment coupled with the delay in releasing nearly one-half of the money authorized by Congress resulted in only 35-percent municipalities being able to comply with the July 1, 1977 deadline. The House recognized early on that our municipalities needed relief from unachievable deadlines when it passed H.R. 9560 in the 94th Congress. While the deadline passed without the Senate acting we now have legislation which will provide up to 5½ years relief for municipalities. The length of the extension for a community is to be based upon the date Federal funding becomes available.

It is expected that as soon as Federal funds are available municipalities will be on a compliance schedule. I think this is reasonable and reflects the "real world."

Mr. Speaker, I would like to comment briefly on the amendments on section 404, the dredge and fill authority of the corps. I have in the past supported strongly the House position both in committee and on the floor which would restrict the jurisdiction of the Corps of Engineers to traditionally navigable waters. I recognize that the House conferees faced insurmountable opposition to this position. While the provision that was agreed to recognizes that it is the States' right and responsibility to regulate waters other than those traditionally considered navigable, I am concerned that we may still have too much Federal presence. Therefore, Mr. Speaker, I think it will be most appropriate for the Committee on Public Works and Transportation to vigorously monitor the implementation of this new 404 program mandated by Congress to insure that the States are actually able to carry out their responsibility. On the positive side, we will now have for the first time statutory recognition that normal farming, ranching and silviculture activities do not belong in this permit program. These exemptions reemphasize that Congress never intended these activities to be considered discharges of dredged or fill material.

I would also like to thank the House conferees for allowing the Secretary of Agriculture to designate agencies, as deems appropriate, to carry out the agricultural cost sharing program authorized by section 35 of the conference report. I strongly believe that the Agricultural Stabilization and Conservation Service should manage this program and expect that the Secretary of Agriculture will provide for the active participation of ASCS in this new program.

In closing, Mr. Speaker, I highly recommend the compromise worked out with the other body by our House conferees and urge an overwhelming vote in support of the conference report on H.R. 3199, the Clean Water Act of 1977.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. Vander Jagt).

Mr. VANDER JAGT. Mr. Speaker, I want to compliment the committee for the outstanding legislation in this conference report. It is a brilliant and far-sighted accomplishment. I find particularly exciting the language encouraging reuse and recycle technology. Land treatment systems for wastewater management utilize this approach and will provide the Nation with clean water at low cost as the Muskegon system has accomplished in my district.

Mr. Speaker, I have several questions for the gentleman from California, my very highly respected colleague, Mr. Clausen, who, with the House conferees, so successfully introduced the recycle language to this legislation.

In the language amending section 202 of the Federal Water Pollution Control Act, the new paragraph (a)(2) increases the Federal grant share for any eligible treatment works or significant portion thereof to 85 percent. A feasibility study is underway in my district which may result in a very substantial project for the recycling of sewage sludge from southeast Michigan. The project would transport raw or partially processed sludge by rail, barge, or pipeline to a digestion facility. The digestion process may include the recovery of methane gas to be used as a fuel for domestic and/or industrial purposes. The digested sludge would then be spread on forest land as a fertilizer and soil conditioner to accelerate hybrid poplar or other tree growth rates or used on farmland to improve crop growth. Am I correct in assuming that this sludge management process, from the point at which the sludge leaves the conventional sewage treatment facility, would be eligible for 85 percent Federal construction grant funding because of its reuse and recycling characteristics?

Mr. DON H. CLAUSEN. Mr. Speaker, if the gentleman will yield, I have discussed the matter with the gentleman from Michigan, and the answer is affirmative, a definite "yes."

Mr. VANDER JAGT. Mr. Speaker, I thank the gentleman from California.

I again commend the gentleman for the extraordinary leadership and insight he has displayed in the development of the language in this conference report.

Mr. ROBERTS. Mr. Speaker, I yield such time as he may consume to the distinguished chairman of the full committee, the gentleman from California (Mr. Johnson).

Mr. JOHNSON of California. Mr. Speaker, as many of my colleagues know, the House has passed legislation on several different occasions and appointed conferees to meet with the Senate. Unfortunately since 1974 the two committees have never been able to reach an agreement on needed amendments to the basic act. Now Mr. Speaker, I am pleased to say we have before us these much needed amendments.

I would like to congratulate the chairman of the Water Resources Subcommittee, Ray Roberts, for his able and professional job in handling this legislation under difficult circumstances. I would also like to congratulate all the conferees: Glenn Anderson, Robert Roe, John Breaux, Bo Ginn, Jim Oberstar, Henry Nowak, Bob Stump, Bill Harsha, Jim Cleveland, Don Clausen, and Gene Snyder, for their willingness to stay in session and hammer out an agreement even after the House had recessed. This caused many personal hardships on these members and I think that they deserve special recognition for it. I also believe the staff should be commended for their hard work particularly Dick Sullivan, Les Edelman, Joan Kovalic, Errol Tyler, Bill Corcoran, Larry Reida, Gordon Wood, Mike Toohey, Jack Schenendorf, and Jeff O'Neill.

I would also like to express my appreciation to the conferees on the part of the Senate who, as usual, were very capable advocates for the positions they had chosen. I would also like to extend to Senator Muskie, and I know I speak for all the conferees when I wish him a speedy recovery for his recent back surgery.

When Public Law 92-500 was enacted into law over President Nixon's veto, a broad program for controlling water pollution was enacted for the first time. This legislation was hailed as a true milestone in cleaning up our environment. Because of the broadness of its nature and many of its rigid requirements, the bill called for the establishment of a national commission to examine the impacts of carrying out all the mandates of Public Law 92-500. That Commission, Mr. Speaker, reported to the Congress last year with a call for some reasonableness and flexibility in the interpretation and administration of the law. I was honored to serve on that Commission along with the distinguished former chairman, John Blatnik and Bob Jones, as well as the distinguished majority leader, Jim Wright, and the ranking minority member of the Public Works Committee, Bill Harsha, and Jim Cleveland.

H.R. 3199 is essentially a fine tuning of what was passed in 1972 in line with what was called for by the Commission. We have refocused our attention on the areas which have proven to be a persistent problem. During the hearings that we conducted, all groups whether they be citizen, environmental, or industrial, called for a reordering of priorities of our efforts under Public Law 92-500. One of the areas that I am talking about is the control of toxic discharges into the waterways. The provision of the 1972 act to control toxic discharges were simply unworkable. Together with the Senate conferees, we have established a lengthy list of toxic substances that should be controlled either by a complete prohibition or effluent standard establishing a much lower level of discharge to insure that there are no risks to public health and welfare. We have called for the first set of regulations to be issued by mid-1980 on the 65 pollutants called for in the bill. We have also given the Administrator the authority to add and subtract from this list. We expect him to use this authority with discretion. Compliance with this provision must be within 1 to 3 years by all sources with toxic pollutants in their discharges.

If this provision is administered effectively by EPA we can expect to see a vast reduction in the numbers of waters which are currently unusable because of toxic pollutants.

One of the areas of particular concern to those of us from the west coast is the problem of providing secondary treatment for publicly owned treatment discharging into the Pacific Ocean. California has a number of dischargers which use the assimilative capacity of the Pacific Ocean to help them treat their wastes. At this point in my statement I would like to include a list of some of those dischargers:

List of Dischargers

Crescent City, CA, Westport, CA, Mendocino, CA, Mendocnoc No. 2, CA, Bolins, CA, San Francisco (Richmond Sunset), CA, North San Mateo, CA, Pacifica, CA, Montaro, CA, Granada, CA.

Half Moon Bay, CA, Davenport, CA, Santa Cruz, CA, East Cliff, CA, Aptor, CA, Watsonville, CA, Marina, CA, Seaside, CA, Pacific Grove, CA, Monterey, CA.

Carmel, CA, San Simeon, CA, Morro Bay, CA, Shell Beach, CA, Pismo Beach, CA, Avila, CA, South San Luis, CA, Goleta, CA, Santa Barbara, CA, Montecito, CA.

Summerland, CA, Carpinteria, CA, San Buenaventura, CA, Oxnard, CA, Port Hueneme, CA, City of Los Angeles, CA, City of Los Angeles (Terminal Island), CA, Los Angeles County Sanitation District, CA, Avalon, CA, Sunset Beach, CA.

Orange County Sanitation District, CA, Laguna Beach, CA, South Laguna, CA, Dana Point, CA, San Clemete, CA, Oceanside, CA, Encinitas, CA, Cardiff, CA, San Diego, CA, Carlsbad-Buena Vista, CA.

One of the problems with the inflexibility of the 1972 amendments was that these dischargers had to meet secondary treatment requirements on July 1, 1977. Many of us know that to require secondary treatment for these discharges which are in the open, deep ocean is simply treatment for treatment's sake and a waste of the taxpayers' money. In California alone, the cost of applying secondary treatment to all of these discharges is above $500 million. Since we all know that this program does not have unlimited funds, the conferees expect this money will not be used for providing unneeded treatment, but for providing treatment which will enhance water quality.

The conferees have taken a major step by providing for a waiver from the ocean discharge requirement. It establishes an eight-point test which a discharger must meet before the Administrator determines that secondary treatment is wasteful. This test is unfortunately not as straight-forward as many of us would have liked to have seen. However the Administrator is expected to grant waivers from the secondary treatment requirement to an ocean discharger which can show that its discharge is at the appropriate depth required for rapid dispersion of waste, that pretreatment requirements are being complied with, and that toxic substances are not being discharged into the ocean environment. I can assure all of the members from the Pacific coast States that our committee will be keeping careful watch on the EPA's consideration of these waivers to make certain that the dischargers are not paying for treatment for treatment's sake.

Another of the important issues which was addressed over and over again during our hearings was the importance of a Federal funding commitment to the program. The conference report calls for $24.5 billion for the next 5 years. Present projections show that $25 billion over the next 5 years should take care of approximately half the backlog in the program. Also we no longer will be able to use contract authority for the construction grant program. We are hoping that we can work with the Appropriations Committee so that multiyear appropriations can be made. This would insure that States will know how much money they will be receiving and be able to make their long-term plans accordingly.

One of the important issues which came before the committee was consideration of the time requirements in Public Law 92–500; because of the work of the Commission we know now that many of these time requirements simply cannot be met. For instance the secondary treatment requirement of July 1, 1977, has been changed to July 1, 1983 in recognition of the fact that Congress perhaps underestimated the task ahead of them in 1972 in terms of both time and money and also because the program was afflicted with impoundment of large portions of its funds.

On the industrial side, the first requirement is to have best practicable control technology installed and working by July 1, 1977. On the whole, industry has been able to comply. The EPA estimates that 85 percent of the Nation's major industrial dischargers have complied with this requirement. However we do recognize that some sources may be out of compliance through no fault of their own, through equipment manufacturers' strikes or the unavailability of certain equipment or failure of the EPA to publish effluent guidelines and standards in time. For this reason we have provided an extension of the July 1, 1977 deadline to April 1, 1979, only in those instances where the discharger can prove good faith with the law and lack of compliance because of its circumstances beyond the discharger's control.

The other major issue which the conference report has addressed is the 1983 requirement of best available technology economically achievable. This is the most controversial portion of the 1972 amendments because it will require the greatest investment of dollars, both public and private, and in many instances the least benefit.

Our committee carefully considered the 1983 standard and its meaning and importance to the environment. What we did, Mr. Speaker, is establish several new requirements. The first new requirement is for EPA to establish what we have come to call best conventional technology (BCT). Many of the waters of the country will achieve the national water quality goal as a result of the combination of best practicable technology, secondary treatment, and water quality standards. The conferees recognized this and realized that in many instances it will not be necessary to require best available technology of point sources. This new level of technology, best conventional technology, is the equivalent of best practicable technology or something a little bit better, even as far as best available technology in some circumstances.

Its purpose is to control BOD, suspended solids, fecal coloform and acidity in a reasonable manner. We will be watching to make certain that we are not requiring treatment for treatment's sake and causing expenditures of large amounts of money to control small amounts of pollution. A July 1, 1984 date was agreed upon in the conference for compliance with this provision.

One type of pollutant yet to be discussed is that which is neither conventional nor toxic. The conferees have specified a new type of nonconventional pollutant control in many instances because there are pollutants which may not be toxic but they are harmful to the aquatic environment. Any owner or operator of a point source which discharges what EPA will designate as a nonconventional pollutant must have installed best available technology economically achievable not later than 3 years after the standards for the pollutant is set or not later than July 1, 1984, whichever is later, but in no case later than July 1, 1987. The conferees recognize the problem that we have had with rigid deadlines in the law so a waiver was established for the nonconventional pollutant requirements. I want to reinforce that this is not a waiver for toxic pollutants, it is not a waiver for conventional pollutants and it is not a waiver for heat. In order to receive a waiver the owner or operator of a point source must prove to the Administrator that it has complied with the 1977 requirements, the requested modification does not result in additional requirements on other sources and the modification does not interfere with the achievement of the national water quality goal. Before granting any such waiver the Administrator must take into account the pollutants persistency, toxicity, chronic toxicity, synergistic propensities and tendency to bioaccumulate.

Another area of concern to the conferees was the control of the way in which toxic materials are handled and stored. We are all too familiar with what happened to the Chesapeake Bay as a result of mishandling of Kepone at a small chemical plant in Hopewell, Va. People were permanently injured, a major fishery in the State of Virginia was wiped out, and severe economic hardship was caused to people who depend on fishing as a livelihood.

For this reason we have included a provision to insure that best management practices are used in storing, and disposing of toxic materials. This is not a blank check to let the EPA owners or operators how to run plants. It is simply a provision that allows the Administrator to give some guidance to industry in their housekeeping practices in order to prevent accidents such as the Kepone tragedy from happening again. The conferees expect the Administrator to use this provision carefully and not make undue demands on sources.

The conferees took an important step in realizing the resource problems of the Environmental Protection Agency by exempting return flows from irrigated agriculture from the section 402 permit program. Again this was in recognition of a specific recommendation of the National Commission on Water Quality. The problems of permitting every discrete source or conduit returning water to the streams from irrigated lands is simply too serious a burden to place on the resources of the Agency. The conference agreement transfers the burden from the 402 permit program to the section 208 areawide planning program.

Over the last several years one of the areas of most controversy in the 1972 amendments was the section 404 permits for the disposal of dredged and fill material. Today, others will go into it in greater depth, however, I just want to say that the provision agreed on in conference strikes a reasonable balance. We have successfully been able to turn the 404 program into a joint State-Federal program. I believe that this provision will go a long way in satisfying most of the problems that we have had. Finally, Mr. Speaker, we have included in the conference report a study of the seafood industry. The conference report requires EPA to conduct a study to determine the effects of seafood process waste into marine waters, and to determine its compatibility. The results of this study are to be reported to the Congress January 1, 1979. The conferees also expect the EPA to study the compatibility of wastes from limestone mining to determine whether or not the existing effluent guidelines are more stringent than necessary to control pollution from these sources.

Again, Mr. Speaker, there are other people who will elaborate on each of these sections more than I. What I have done is just give the tip of the iceberg. This is a complex bill and a great achievement to finally bring to the Floor for a vote today. I urge all my colleagues to support this major amendment to the 1972 act which has incorporated a reasonable approach while moving forward with the goal to make all the waters of the United States of a fishable, swimmable quality.

Mr. ROBERTS. Mr. Speaker, I yield 1 minute to the distinguished gentleman from New Jersey (Mr. Roe), one of the conferees.

Mr. ROE. Mr. Speaker, I rise in support of the conference report on H.R. 3199, the Clean Water Act of 1977.

I want to compliment our Chairman "Bizz" Johnson of California for his steady leadership on this bill. Also, I congratulate Ray Roberts of Texas, who is chairman of the Subcommittee on Water Resources, which developed this initial legislation.

I was privileged to serve as a conferee in 1972 when the Federal Water Pollution Control Act (P.L. 92-500) was developed. It was an especial privilege to serve as a conferee on H.R. 3199, which amends Public Law 92-500.

The 1972 act has been hailed as an environmental landmark. I am confident that the same will be said of the 1977 act.

H.R. 3199 provides for a range of technical and major amendments to the water pollution control program.

I will highlight a few of the significant provisions in regard to the treatment works construction grant program.

Over the past 5 years this program has been subject to a series of stops and starts in funding. To provide some certainty in this process for cities and States that are trying to plan their programs, the conference report provides $24.5 billion for 75-percent construction grants—$4.5 billion in fiscal year 1978, and $5.0 billion in each of fiscal years 1979, 1980, 1981, and 1982. An allotment formula is provided for 4 years.

Also, the conference report clarifies a matter which is of great concern to our States and cities—the ability of the States to establish their own project priority lists and the eligibility of collector sewers for grants.

It was necessary to clarify these matters because of the way the Environmental Protection Agency has implemented these matters. To a significant degree, the conference report provisions on States authority to set priorities and the 75-percent grant eligibility of collector sewers is a restatement of current law.

In addition, a special program of assistance has been provided for States who take on the management of the construction grant program.

Mr. Speaker, I have mentioned just a few of the important provisions of this bill. I urge my colleagues to join me in supporting the enactment of the Clean Water Act of 1977.

Mr. ROBERTS. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. Nowak).

Mr. NOWAK. Mr. Speaker, I would like to get a clarification of the eligibility for Federal funding of certain water pollution control projects. I am particularly concerned with the treatment of waste from separate storm sewers and from combined storm water and sanitary sewer systems. The law very clearly makes eligible the treatment of municipal waste "including storm water runoff, or industrial waste, including waste in combined storm water and sanitary sewer systems."

Mr. ROBERTS. That is correct; those types of projects are included in the definition of treatment works under section 212 of the current law.

Mr. NOWAK. And under this conference report we are considering today is included a change in the eligibilities, relating to separate storm sewer systems.

Mr. ROBERTS. That is only for the time period authorized in this bill. No grants shall be made during fiscal years 1978 through 1982 for separate storm sewer systems.

Mr. NOWAK. What I want to make clear is our intent in making separate storm sewer systems ineligible during this time period—that it is for this time period only, and makes no final commitment to the eligibility of the treatment of waste for separate storm sewer systems and that it is to have no impact on the eligibility of combined storm water and sanitary sewer systems.

Mr. ROBERTS. The change in eligibilities in this bill relating to storm water treatment is only for separate storm sewer systems and has no impact on the treatment of storm water in a combined sanitary/storm sewer system. Combined sewer overflow is a serious pollution problem which must be addressed in order to meet the enforceable requirements of the act.

Mr. ROBERTS. Mr. Speaker, I yield such time as he may consume to the gentleman from New Hampshire (Mr. D'Amours).

Mr. D'AMOURS. Mr. Speaker, following the colloquy the gentleman just had with the gentleman from New York (Mr. Nowak), I would like to ask the chairman if I am correct in my interpretation of section 36(c) of the act, that although funds are prohibited for the construction of facilities designed to control the treatment of storm waters, Federal funds for the construction of storm drains as part of a separation program in municipalities that have existing combined sewers would still be eligible under this act.

Mr. ROBERTS. I agree with the gentleman, and we make no changes that would affect the illustration he offers.

Mr. D'AMOURS. I thank the Speaker.

Mr. ROBERTS. Mr. Speaker, I yield such time as he may consume to the gentleman from Georgia (Mr. Ginn).

Mr. GINN. Mr. Speaker, I rise in full support of this conference report, for after many months of hearings and deliberations in the House and hard negotiation with the Senate, we have before us strong legislation, which will enhance our efforts to clean up our Nation's waters in a reasonable, efficient, and orderly manner. It provides much needed modifications to the landmark clean water bill which the Congress passed in 1972 and continues the essential Federal assistance to States and municipalities for the construction of modern and sophisticated sewage treatment facilities.

Most importantly, to my mind, it gives meaning to the program which we have undertaken to eliminate completely the discharge of toxic substances in our rivers and streams. As we are all aware the threat to human life and health which these substances pose is immense, but our ability in the past to deal with the situation has been limited. With the enactment of these amendments to the Water Pollution Control Act, we will be making great strides in our efforts to end this toxic threat. As chairman of the House Public Works Subcommittee on Investigations and Review, I intend to watch carefully the implementation of this toxic program, in order to insure that the Congress intent in this regard is met fully.

This conference report, however, is before us today only as a result of the determined and effective efforts of Public Works Committee Chairman Bizz Johnson, and Water Resources Chairman Ray Roberts who, as vice chairman of the conference provided strong leadership for the House conferees and insured that the conference report represented the expressed position of this body. I would like to take this opportunity to commend Chairman Roberts and the other House conferees for their determined commitment to report to the House this session a well-balanced and effective water pollution control bill. This report obviously represents a most successful effort.

There are several points of clarification to the report which I think need to be made for the benefit of the Members.

Section 29 of the conference report amends section 206(a) of the act concerning reimbursement.

This amendment has its roots in oversight hearings conducted by the Subcommittee on Investigations and Review in 1973, 1974, and 1975—these hearings examined myriad problems encountered by localities and States in applying for reimbursement and for treatment works construction grants. It was revealed that deserving communities had been deprived of access to both a 75-percent construction grant or a 50- to 55-percent reimbursement grant because of administrative problems.

Section 209 amends section 206 of the Water Pollution Control Act to correct inequities that have occurred in the implementation of the reimbursement grant program. Section 206(a) provides that any treatment works on which construction was initiated after June 30, 1966, but before July 1, 1972, that meets certain requirements of that section, would be eligible for reimbursement of 50 or 55 percent of eligible project costs.

The cutoff date for qualifying for a 50- to 55-percent reimbursement grant was July 1, 1972. After that a community could not qualify for reimbursement but could receive a 75-percent grant for a new treatment works. The law was not enacted until October 18, 1972. The first proposed regulations implementing section 206(a) were not published until June 23, 1973. Since there was a substantial lapse between the eligibility date in the act, the date of enactment, and the date EPA's definition was published, it is estimated that 107 projects in 24 States, which received a grant under Public Law 660, 84th Congress, which would have otherwise qualified for reimbursement, were declared ineligible.

In essence, these communities were penalized because of the intricacies of the legislative process and EPA's delays in administering the program.

Section 8 of H.R. 3199 corrects this inequity by extending to July 1, 1973, the date by which treatment works projects must have initiated construction in order to be eligible for reimbursement grants.

The term "initiation of construction" as used in this section means the issuance to a construction contractor of a notice to proceed, or, if no such notice is required, the execution of a construction contract (40 CFR 35.890).

It is estimated that $33 million would be required to reimburse these projects. On a national scale this is a small amount of money, but locally, each project's share is significant to each community—especially when one realizes that some of these projects are still undergoing construction. No new money is authorized for these projects, because there is still a substantial balance remaining from the existing authorization of $2.6 billion.

The following is a State-by-State listing of projects that received a construction grant under Public Law 660, 84th Congress, and initiated construction between July 1, 1972, and July 1, 1973. This list was prepared by EPA in September 1977.

Section 67 of the report includes an exemption from the 404 permit program for the discharge of dredged or fill material "for the purpose of construction of temporary sedimentation basins on a construction site which does not include placement of fill material into the navigable waters."

It is my understanding that the term "construction site", as used here, refers not only to activities normally construed as construction, such as the erection of buildings, shopping complexes, homes, and apartments, but also to other land-disturbing and excavation activities which are related to agriculture, silviculture, mining, or road construction and result in nonpoint runoff of sedimentation.

In addition, I interpret construction site to include land areas contiguous or adjacent to the actual land-disturbing activity where the sedimentation basins must be placed, since they cannot be located in the precise area where construction of this nature is taking place.

It should be noted as well that in the construction of temporary sedimentation basins for pollution control purposes the material dredged from the basin is used to form the walls of the basin. It is my interpretation that the exemption precludes only the placement of fill material into the navigable waters, and that this process of temporary sedimentation basin construction meets the requirements of the exemption.

Finally, Mr. Speaker, I want to reiterate the point made by Mr. ROBERTS in his statement that the House conferees firmly reject the notion set forth in the Senate report that the clearcutting of eastern hardwoods is not considered normal silvicultural activity. Quite the contrary, I believe that it has been scientifically confirmed that it is not only normal, but when properly applied, it represents the best timber management practices.

Once again, Mr. Speaker, I want to express my appreciation to Mr. ROBERTS for his enlightened leadership in this effort, and to my fellow conferees for their diligence and cooperation in drafting this essential legislation.

Mr. ROBERTS. Mr. Speaker, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. EILBERG).

Mr. EILBERG. Mr. Speaker, I wish to inquire as to the intent of this bill regarding extensions of time for municipalities to meet the secondary treatment deadline in the case where EPA itself may have contributed to the delay.

For example, the city of Philadelphia is carrying out a half-billion-dollar program to improve its abatement facilities.

While Federal funds have been available, EPA has delayed the city by refusing to approve Federal funding for parts of the program which are eligible for such funding; by insisting upon Federal bidding procedures rather than following State and local law as has been the practice; and by refusing to support the city's efforts to solve the difficult problem of sludge disposal on land rather than in the ocean.

Is the intent of Congress that EPA be particularly responsive in granting extensions in such cases as these, when EPA has or may have contributed to the delay?

Mr. ROBERTS. The conference report establishes a procedure whereby the Administrator, on a case-by-case basis, can extend the July 1, 1977 deadline for municipal waste treatment plant construction to July 1, 1983, when construction cannot be completed on time or the United States failed to make financial assistance available in time.

I want to stress that it is our intention that the provision be applied liberally—not in a restrictive, punitive, or arbitrary manner.

I am not in a position to judge each individual case, but I trust that the Administrator of EPA—or the State administrator, in the case where there is a section 402 permit program in the State—will administer the time extension in a manner that will be most concerned about reaching sound environmental results in the most cooperative manner.

Mr. EILBERG. I thank the gentleman.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 5 minutes to the gentleman from New Hampshire (Mr. CLEVELAND), a member of the committee.

Mr. CLEVELAND. Mr. Speaker, before I offer my formal remarks in support of this well-crafted conference report I would like to engage in a colloquy with the gentleman from Georgia (Mr. GINN), who is the very distinguished and able chairman of the Subcommittee on Investigations and Review of the Committee on Public Works and Transportation. The gentleman took the chair of that subcommittee from another very distinguished and able gentleman, the gentleman from Texas (Mr. WRIGHT), who is now the majority leader of this House.

Mr. Speaker, in the course of some of our investigations, we unearthed information that is embodied in much of this conference report. We also learned some lessons. One of the lessons we learned was that part of this water pollution problem is not only the pollution, but part of the problem is the Federal bureaucracy that we have established to attempt to cope with the problem. To be more specific, part of the problem—and a big part, at that—is the manner in which EPA actually administered or attempted to administer the Water Quality Act of 1972. I conceive it to be our task, serving as I do with the distinguished gentleman from Georgia on the Subcommittee on Investigations and Review, to try not only to make this legislation work, but to constantly exercise our oversight function, to be sure that EPA is trying to make it work, too, and is not contributing to the problems as they have so enormously in the past.

Mr. Speaker, one of the sections of this act, section 26, embodies what is known as the Cleveland-Wright amendment, which is the State certification program now euphemistically referred to as the State management assistance program. This legislation resulted from our hearings that clearly revealed the enormous amount of delay that EPA cranked into the system. In spite of this EPA resisted our attempt to enact State certification to give the States a greater role. It was resisted at first by EPA and the environmental groups. I would like to ask the chairman this question: Can I have assurance that, if EPA once again goes back to its old game of trying to delay and write new regulations, which in effect nullify what Congress is trying to do under section 26 our committee will go back into action early in 1978 and try to get some commonsense into EPA?

Mr. GINN. Mr. Speaker, will the gentleman yield?

Mr. CLEVELAND. I yield to the gentleman from Georgia.

Mr. GINN. Mr. Speaker, I do have concurrence of the chairman of the full Committee on Public Works and Transportation that the gentleman can be assured that the Subcommittee on Investigations and Review would move quickly and promptly, in an effort to cause EPA to properly administer the program.

As the gentleman knows, our subcommittee operates on a nonpartisan basis. The gentleman from New Hampshire (Mr. CLEVELAND) has been most cooperative, and he has my full assurance that we will move rapidly in this area.

Mr. CLEVELAND. Mr. Speaker, I thank the subcommittee chairman.

Mr. Speaker, it is my pleasure to note that the majority leader, the distinguished gentleman from Texas (Mr. WRIGHT), is on the floor. The gentleman from Texas was the predecessor of the gentleman from Georgia (Mr. GINN) as chairman of the Subcommittee on Investigations and Review, the subcommittee that laid the groundwork for so much of this legislation which led to our exercise of oversight authority and the enactment of the Cleveland-Wright section 26.

Mr. Speaker, I would be glad to yield to the gentleman from Texas, if he wishes.

Mr. WRIGHT. Mr. Speaker, if the gentleman will yield, I want to commend the gentleman from New Hampshire (Mr. CLEVELAND) on what he has been saying.

In 1972 this Congress passed what was to have been a crash program. We wanted to clean up the streams of this Nation in a hurry, and we made $18 billion available in the first 3 years for that purpose. But because of the proliferation of redtape and the unnecessarily burdensome regulations that were imposed on this program by the administrative branch of Government—the EPA, in particular—in the first 3 years only 9 percent of that money actually got out to the communities for use in cleaning up the streams.

What the gentleman from New Hampshire is saying cannot be overemphasized. It is important that we have an administration that will make the program work and not burden it with encumbrances and bog it down in a morass of redtape. That is essential to the performance of this program.

Mr. Speaker, I want to commend the gentleman from New Hampshire and the other members of this committee for their diligent, persistent work in trying to cut through that jungle of redtape and needless regulation.

The SPEAKER pro tempore (Mr. BROWN of California). The time of the gentleman from New Hampshire (Mr. CLEVELAND) has expired.

Mr. DON H. CLAUSEN. Mr. Speaker, may I inquire, how much time do I have remaining?

The SPEAKER pro tempore. The Chair will inform the gentleman from California (Mr. DON H. CLAUSEN) that he has 15 minutes remaining.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 3 additional minutes to the gentleman from New Hampshire (Mr. CLEVELAND).

Mr. CLEVELAND. Mr. Speaker, I want to thank the gentleman from Texas (Mr. WRIGHT) for his remarks and again compliment him for cosponsoring with me the Cleveland-Wright legislation, because I do think that legislation is going to help clean up our waters and speed up this program.

If the gentleman from Georgia (Mr. GINN) would be kind enough to respond again, I would like to have another assurance from him as chairman of this Subcommittee on Investigations and Review.

One of the problems that the gentleman from Texas (Mr. WRIGHT) and I found in our early investigations, after we passed the 1972 act, was that there was considerable delay. As the gentleman from Texas (Mr. WRIGHT) has eloquently pointed out, nothing happened after we passed the act. In fact we went backward.

This conference report we hope to adopt today is a very substantial and complex piece of legislation. It provides for midcourse corrections, and some new and innovative programs.

If EPA goes back to its old bad habit of bogging this program down with a lot of new regulations and a lot of unnecessary requirements, if there is any sign that this battle against water pollution is being suspended for awhile as they play bureaucratic games down at EPA, can I have the gentleman's assurance as a general proposition that our great subcommittee will go right back in action and try to get EPA to come to its senses?

Mr. GINN. Yes. Mr. Speaker, if the gentleman will yield further, I will be delighted to give him every assurance that we will do that, and we look forward to working with the gentleman in his efforts toward providing constant surveillance and oversight under this act over EPA.

The gentleman has my assurance of that.

Mr. CLEVELAND. Mr. Speaker, I know the gentleman from Georgia (Mr. GINN) has been very active in this area, and I believe some of the first hearings that were held during his time as chairman of the subcommittee involved toxic substances. This is a new program, which will be using the BAT device to cope with toxic discharges. EPA just might go overboard in regulating industry beyond the intent of our BAT and toxics provisions. This concerns me because industry has already assumed the burden of complying—85 percent, I believe—with the 1977 requirements, while municipalities—the much beloved public sector—has achieved only 30 to 35 percent compliance.

If EPA gets overzealous in this respect, and refuses to mend its ways in implementing the working of this section, again and for this purpose, I am sure I can count on the gentleman's cooperation in this regard and hearings will be promptly held.

Mr. GINN. Mr. Speaker, the gentleman is aware of the 5 days of hearings that we have already held on the subject of toxic substances. He is aware of the field hearings we recently held in Kentucky, Indiana, and Minnesota.

We stand ready to continue those hearings and cause EPA to move forward and do what should be done in order to combat toxic substances.

Mr. CLEVELAND. Mr. Speaker, I thank the gentleman. Again, I want to commend the gentleman for filling a big pair of shoes, the shoes of the gentleman from Texas (Mr. WRIGHT). The gentleman from Georgia (Mr. GINN) has done a great job.

I also wish to commend the Subcommittee on Water Resources for the work it did in writing the legislation. Our Subcommittee on Investigations and Review has used oversight to find out what is going on, and trying to bring EPA to a realization of its obligations. The Subcommittee on Water Resources, however did the hard work of writing the legislation.

The Subcommittee on Water Resources is under the chairmanship of the distinguished gentleman from Texas (Mr. ROBERTS). I thank the gentleman from Texas and also my friend, the gentleman from California (Mr. DON H. CLAUSEN), and the entire subcommittee for writing this legislation and implementing some of the recommendations which resulted from the many years of oversight hearings held by our Subcommittee on Investigations and Review. This is the way our congressional system should work, and it is a happy day for all when it works well as it sometimes does.

Mr. JOHNSON of California. Mr. Speaker, will the gentleman yield?

Mr. CLEVELAND. I am glad to yield to the gentleman from California (Mr. JOHNSON) the distinguished chairman of the Committee on Public Works and Transportation.

Mr. JOHNSON of California. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, this being the largest public works program and one of the most important ones throughout the Nation, I want to assure the gentleman that the Committee on Public Works and Transportation will stay on top of this matter.

The EPA people are right here in town and scattered in regional offices throughout the United States. Therefore, we are going to do a rather extensive job of oversight to make sure that this program works.

Mr. CLEVELAND. Mr. Speaker, I thank the chairman. That is a very reassuring statement.

Mr. ROBERTS. Mr. Speaker, will the gentleman yield?

Mr. CLEVELAND. I yield to the gentleman from Texas.

Mr. ROBERTS. Mr. Speaker. I want to commend the gentleman for the great job he has done in working on these matters.

The report which I just filed contains a lot of the information that the gentleman in the well and the gentleman from Georgia have worked on in their deliberations and their investigations.

Again, Mr. Speaker, I want to commend the gentleman for the work he has done.

Mr. CLEVELAND. Mr. Speaker, I thank the gentleman, and I now proceed to my prepared remarks. As a conferee, as ranking minority member of a subcommittee that laid the groundwork for much of this legislation, and as the author of some of its key provisions, I rise in support of the conference report on H.R. 3199.

This is a good, solid, workmanlike piece of legislation that—if administered as intended—will serve the country well despite its length, the complexity of its provision and the extent to which we are amending the basic act, Public Law 92-500.

I might say that its merits can only be appreciated after some reflection. As a conferee, wrapping up a conference after the breakdown of two previous conferences, I experienced the initial reaction of wonderment that we had managed to produce a bill. I felt pretty good about that.

Next morning, I realized more clearly that it was a pretty good bill. Then I picked up my Washington Post and found that the folks on the environmental fringe—like Environmental Action—thought it was a disaster, and I came to the realization that this bill may achieve true greatness.

In all seriousness, this is a good bill which I support strongly in that it goes a long way toward completing the job we launched in 1972. We can all take pride in it, but without the heady sense of euphoria we felt in 1972 as we bravely set out for the unknown. The merit of this bill lies in the fact that we have a much better idea of what we are doing and what the consequences will be for the environment and the economy.

The areas covered by this bill have been under study—particularly if not exclusively—in the House since the 1972 act was passed. We have the benefit of the findings of the National Commission on Water Quality, on which I served, and indepth investigations by our Subcommittee on Water Resources and our Subcommittee on Investigations and Review.

I want to commend the leadership of the former chairman of the Investigations Subcommitte, my friend the gentleman from Texas (Mr. WRIGHT), now our majority leader, and the gentleman from Georgia (Mr. GINN), his successor on the subcommittee.

Both have been good to work with and responsive to suggestions as to areas of inquiry from the minority as well as the majority, notably in the area of water pollution control grants and toxics.

Equal credit goes to the gentleman from Texas (Mr. ROBERTS), chairman of the Subcommittee on Water Resources, who has been most constructive and cooperative in his willingness to see the factual findings of our investigations given due weight in his legislative hearings and translated into legislative proposal.

The gentleman from Texas (RAY ROBERTS) also did an outstanding job as head of the House conferees in negotiating an agreement with the Senate on this conference report after the collapse of the two previous conferences.

I think we can all take pride in the outcome, stemming from the position taken by the House in 1972. It was the House side that was skeptical about rushing blindly into the stringent regulatory program prescribed for 1983 and wanted the Congress to have a chance to pause, take a deep breath, and see where we were a few years down the road.

It was the House side that insisted on establishing the National Commission on Water Quality to give us a highly professional, coordinated, and orderly mechanism to do just that on an ad hoc basis.

It was the House side that conducted oversight into the breakdown of the grants program for the construction of municipal waste water treatment works. It was the House side that initiated the investigation into the problem of toxics in our waterways and the inability of the Environmental Protection Agency to deal with the problem with the statutory tools provided by the Congress in Public Law 92-500.

Finally, it was the House side that initiated proposals now embodied in this conference report to deal with the problem of toxics, excessively burdensome 1983 requirements for treatment of conventional pollutants discharged by industry, and important reforms in the construction grant program.

If nothing else, this should demonstrate that not all truth, beauty, and environmental enlightenment flow from the north side of Capitol Hill. (Nor exclusively in Washington, for that matter. The great merit and strength of our investigative effort lies in the fact that we listen to the people who have to take our legislative product and try to make it work—the States, the counties, the municipalities, the environmental community in and ouside of Washington, and the professionals in the water pollution control field.)

When we enacted Public Law 92-500, it did not work as intended in many respects. Part of the problem stems from deficiencies in the act itself and part from the way it was administered. Now, with 5 years of hindsight and experience, we have attempted to make our water pollution control program more workable.

There will be fewer excuses this time around for all of us. We have done a much more extensive job in the way of identifying what we think is wrong with the act, taking corrective action, and being a good deal more specific than in the past as to what we want done. EPA, in particular, has had the benefit of both substantial operating experience and opportunity to participate in the development of this bill, especially in the area of BAT and toxics.

The Agency has been around the track a few times and has learned in great detail the intent of these provisions. For all its constraints and problems with manpower and other resources, EPA says it can live with this legislation and make it work.

With all the resources at my command, I intend to see that it does. We can only do so much with legislation. We found that out since 1972. The Agency simply must follow the intent of Congress. If it does not have the manpower and money, it ought to tell us, and it ought to be equally candid and let us know promptly if other problems arise which can be remedied with legislation. Our oversite committee is not going out to a long lunch and I am sure the gentleman from Georgia will bear me out on that.

A number of the provisions in this act will require judgment and sensitivity and common sense in the process of their administration. Innovative and alternative technology is a prime example. The gentleman from California (Mr. CLAUSEN), author of this package of provisions, is to be commended for his initiative as are the conferees for accepting it. I have shared the gentleman's concerns with respect to the failure of EPA's research and development program, and particularly the failure to deliver under the section 104(q) requirement for R. & D. and development of nonconventional alternatives for small rural communities, which I authored in 1972.

I must confess, though, that I am always leery of what can happen to a good idea once it is turned over to a Federal agency—any agency, not just EPA. And I also get worried when I see a concept embraced by an agency with the zeal of the newly converted, as in the case of EPA and land treatment as an alternative means of municipal waste disposal.

I am sure the gentleman shares my concerns and understands that he has certified himself that this provision will be administered sensibly and practically, without forcing communities to accept inappropriate treatment technology or delaying the program. I expect that the Investigations Subcommittee will be backing up both of us in that department.

The same is the case with State management assistance, a version of the State certification program which I authored with the gentleman from Texas (Mr. WRIGHT) and which passed the Congress two times running.

This provides for the delegation to the States of the authority and responsibility to take over the day-to-day operation of the construction grant program and allows the States to use a portion of their grant funds to bring their capabilities in this area up to speed.

EPA has had the authority all along to delegate in this fashion, and indeed has done so to a limited degree. But the intent of this provision is to put the Agency on notice that the Congress expects and insists on a lot more of the same, and is providing the funds to make it happen.

So the statutory language is there, and we will see what EPA does with it. I know the States are ready to go, and I cannot conceive of any justification for denying any State which seeks to participate the opportunity to participate.

These are just some of the concerns I have, and in no way detract from my overall enthusiasm for this legislation. We have done a good job on toxics, an area in which I requested our investigative hearings, and on BAT requirements for conventional pollutants, an outgrowth of the work of the National Commission on Water Quality.

This legislation resolves the controversy over wetlands protection under section 404 of the act, much along the lines of the Cleveland-Harsha amendment which the gentleman from Ohio and I offered 2 years in a row. And I will be frank to say that the conference version represents somewhat of an improvement in that it has a workable State permit program.

I shall now offer some further comment with respect to these and other provisions of the bill based on consultation with the New Hampshire Water Supply and Pollution Control Commission.

First, I want to repeat my earlier observation that the EPA record in implementation of Public Law 92-500 has been one of imposing new requirements as they were developed on ongoing projects with little regard for the extremely disruptive effects and delays that would result. By operating in this manner, EPA produced unwarranted and costly delays of 2 to 3 years in program implementation because of its insistence on subjecting projects to each and every new requirement as it appeared on the scene. This meant, for example, that if new step 1 requirements were established, all projects, regardless of level or stage of progress, had to be halted so that each new requirement could be incorporated in the work. Being aware of this, it is the clear intent of the conference committee that this EPA practice be abandoned and that all projects in the "pipeline" be allowed to go forward to completion of the step 3 process without the imposition of any new regulations which may stem from the 1977 legislation.

In plain language this means once the step 1 plan has been approved by EPA, the project shall then be allowed to go to completion through step 3 without the burden of new legislative and regulatory requirements under this legislation.

Without this assurance, there is no question but delays will follow, thereby preventing States from maintaining the construction schedules which are contemplated by the committee under the equal annual 5-year funding contained in the act.

The assurances given by the gentleman from Georgia (Mr. GINN) and the chairman of the committee (Mr. JOHNSON) that such will not be tolerated had best be heeded by EPA.

It seems hardly necessary to point out that the intent spelled out in the act in terms of the annual appropriations means that EPA must see to it that pollution control projects are not hamstrung by untimely application of new EPA regulations, guidelines, and memoranda which have seriously damaged the construction schedules of the past. Unless this concept is guaranteed, we might as well admit right now that construction and abatement goals set forth in the act simply will fall by the wayside in the same way the dates spelled out in 1972 failed to be met.

Turning now to the intent of certain provisions agreed by the conference committee:

SECTION 4(e)—208 PLANNING

This section, as we know, provides for continued funding for the 208 planning program. It is my understanding that an emphasis of this provision will now be on funding statewide agencies. This is consistent with recent EPA memoranda which assure the States that the next round of 208 funding will, in fact, concentrate on adequately funding statewide agencies.

It should be noted here that the Federal regulation confirmed by the court—specifies that State pollution control agencies have the responsibility for coordinating 208 activities so that they will properly mesh with other program activities covered under the law. This, in turn, will insure maximum effectiveness in use of the funds as well as maximum coordination of work programs, whether performed directly by the State agencies or locally designated agencies.

SECTION 4(f)—CLEAN LAKES

This section provides authorizations for the section 314 clean lakes program. As you will recall, the 1972 amendments to the act also provided appropriations for the clean lakes program which EPA employed in only a limited way. This time it should be made clear that the Congress by once again authorizing funds for the clean lakes program clearly intends that EPA will move forward with measures so that the moneys are usefully obligated.

If EPA is unwilling or unable to manage this program, we might consider transferring the responsibility to the Corps of Engineers.

SECTION 12—INNOVATIVE TECHNOLOGY

This section is designed to stimulate innovative and alternative treatment processes and techniques. As stated, however, in my opening remarks, it is the intention of the conference committee that this not be used to retroactively stall any phase of a project which has proceeded beyond the step 1 stage. At this juncture, I would also remind my colleagues that many States as well as municipalities throughout the Nation must bear their share of the costs and the ultimate risks which innovation entails.

Beyond that, municipalities must face the prospect of shouldering the entire cost of full operation of whatever innovative systems are installed. In view of these circumstances, EPA must employ a balanced approach and avoid mapping courses of action which municipalities and States will be required to follow in attempts at innovation.

It seems quite evident that EPA must not maintain a unilateral policy which it alone implements in this area. The voice of States and municipalities must be heard in this matter so that they will not be subjected to an arbitrary program of achieving innovation merely for the sake of innovation.

If this strikes as unduly alarmist, I call attention to the general memorandum issued by Administrator Douglas Costle on October 3, 1977, relative to land application for sewage. Anyone reading this material cannot escape conclusion that EPA goes overboard in its anxiety to lead the way.

Innovation must be approached with appropriate caution and only after a reasonable demonstration that the innovative techniques being proposed will perform. Otherwise, Federal, State, and local funds could be wasted in experimental projects which later prove to be operationally unsound. The fact that this bill authorizes funds for EPA to compensate advanced technologies which turned out to be too expensive for the localities induced to experiment with them is conclusive proof of this danger.

However, because we encourage innovation and because we recognize there is risk, new subsection 202(a)(3) provides for payment of all of the costs of modification or replacement of facilities which do not meet design performance specifications. This provision, an insurance policy, recognizes there will be risks where technology is pushed ahead.

I recognize, too, that there are risks of forfeiting the benefits of innovation if innovation is not encouraged.

It should also be noted that certain innovative treatment procedures, particularly methods for land treatment, may not be as applicable in certain regions or States such as northern New England where there is nothing but steep slopes, high groundwater levels, hardpan soils, little overburden over ledge, cold climate, and the like. It is not the intention of the conference committee to permit EPA to arbitrarily require in-depth planning studies of these systems when they are known to be not feasible in these areas.

Lest I leave the impression that the New Hampshire position is one of resisting change, let me say that my State was among the leaders in pursuing land treatment techniques when the situation suggests their applicability. Witness the fact that in 1969 the State of New Hampshire designed and constructed a spray irrigation project for Sunapee State Park to protect the waters of Lake Sunapee, a major recreational body of water. On the basis of results achieved at this installation, other similar projects of municipal size were designed and built in the towns of Grantham, Windham, Dublin, and Wolfeboro.

The point to be made is that we do not want to encourage detailed study and documentation of the obvious. EPA has gone far beyond reason in its insistence upon useless but costly and voluminous facility plan investigations. It is about time we put a stop to all of this unnecessary and expensive bureaucratic boondoggling. These remarks under section 12 are also applicable to sections 9, 16, 17, 20, 28, 37, and 49, and wherein requirements to "innovate" are included.

Here again, the expressions of intent contained in the statement of managers and the joint statement of the House floor managers have today assured me that these points are well taken and shared.

SECTION 18—COMBINED GRANTS

This section is intended to expedite construction projects in the smaller municipalities. The combining of steps 2 and 3 will speed up the construction of as many as 80 percent of projects. Many millions of inflation losses and interest dollars can be saved. This is a progressive step which will prove helpful to many State administrators.

SECTION 19—CONTRACT ENFORCEMENT

This provision will enable EPA to render technical and legal assistance to municipalities engaged in litigation; a useful tool which has not been available in the past. The New Hampshire Water Supply and Pollution Control Commission has had to provide services to local government in matters of this kind on occasion from time to time, but was unable to involve EPA which, unfortunately, was not equipped with clearly defined authority to assist in situations of this nature. Nothing in this section adds to or detracts from existing EPA authority in the precontract or negotiating phase.

SECTION 21—RESERVE CAPACITY

This section gives authority to the Administrator to establish capacity limitations with respect to treatment facilities as well as interceptor systems. In carrying out this responsibility, it will be essential that the Administrator be aware of the intent of the Congress as expressed in the language dealing with reserve capacity, which is intended to guarantee sufficient facility capacity to meet future known or anticipated needs.

Under Public Law 92–500 EPA, in recent months has exhibited an inclination to inject growth control and land use control by means of guidelines, regulations and other procedural requirements. PRM 77–8 is an example of the Administrator's attempt to limit EPA participation in collection systems. This trend was carefully discussed in committee and resulted in a specific prohibition in the Clean Water Act which reminds the Administrator not to attempt to use the Water Pollution Control Act as a device for the achievement of low population or industrial growth objectives.

The intent is that the Administrator will, in carrying out his responsibilities under this phase of the statute, be fully responsive to the need for sizing treatment works, interceptors, collectors plus other appurtenances involved in the construction of pollution control projects in order to accommodate for normal growth, as envisioned by State and local jurisdictions.

If we permit EPA a free hand in this area, projects will be so undersized that they will be over-taxed prematurely and the Congress will then be confronted with the prospect of funding plant expansion which should have been avoided in the first instance. The program cost is already high and we cannot allow ourselves to be trapped by unrealistically low growth projections by EPA. Municipalities are not going to absorb the extra cost of capacity over that which EPA will allow but which is truly needed to satisfy future needs. The result will be early obsolescence and the ultimate investment could easily reach twice the present estimates.

I would add in this connection that the conference specifically rejected language limiting reserve capactiy to 10 years in the case of treatment plants and 20 years for interceptors.

SECTION 22—USER CHARGES

As we all know, there has been a substantial amount of dissatisfaction with the user charge provisions contained in Public Law 92–500. Time after time, EPA and those of us who have been in touch with State agencies and municipal constituencies have encountered a plea for the use of ad valorem taxes as a reasonable approach for defraying the cost of waste disposal.

The ad valorem system has traditionally been used by municipalities in furnishing drinking water supplies, sewage treatment, solid waste disposal, plus a host of other activities which municipalities regularly offer their citizens. It appeared only logical that communities be allowed the opportunity to employ this method provided, of course, that the charges are equitably distributed to the consuming public.

SECTION 24—INDUSTRIAL COST RECOVERY

This modification is one which should significantly benefit many small industries throughout the States. I know from our own experience in New Hampshire that the industrial cost recovery features of Public Law 92–500 do not serve to encourage industries to participate in municipal treatment works. This not only results in more treatment plants to monitor, but also exacerbates a shortage of treatment plant operator problems; moreover, it involves industry in an activity for which it has only a secondary interest as opposed to its need to produce a product with some margin of profit.

The exemption which industry can obtain under the 1977 act without exposure to industrial cost recovery obviously will be of assistance to those small industries which do not produce in excess of 25,000 gallons per day of waste flow.

SECTION 25—ALLOTMENT

The return to the policy of allowing States a period of 24 months for commitment of funds is reasonable. Of even greater importance, however, is the decision to fund the construction program for a period of 5 years. This sort of assurance will enable State and local governments to plan more effectively in meeting their obligations under the program.

In our case where New Hampshire participates to the extent of 20 percent of the costs of pollution control facilities, the agency will now have a much more effective tool in advising the legislature of the financial commitment needed to match Federal moneys available for pollution control. This concept, providing EPA does not introduce unforeseen delays in the construction program, will permit steady progress in the construction of sorely needed publicly owned waste treatment plants. Frankly, examining the EPA track record under Public Law 92–500 causes a certain amount of discouragement and disappointment.

The flow of construction grant money has been hampered through burdensome administrative practices with the result that municipal and state agencies have frequently been accused of a poor performance in responding to the program needs. If EPA, under the new legislation, is responsive to congressional intent that situation will improve and we will be able to look forward to a decent amount of progress.

SECTION 26—STATE MANAGEMENT ASSISTANCE

This section of the act, a modification of the Cleveland-Wright provisions, has long been advocated as a means for accelerating the program. The section authorizes the use of 2 percent of each State's allotment (or a minimum of $400,000) for administering construction grant activities under the law.

In this connection, I would like to emphasize the intent of the conference committee that EPA proceed to implement this program of State management expeditiously for States which express a desire and have the ability to participate. It is also intended that EPA will allocate fully the funds necessary to carry out the provisions of this section. Delay in making these funds available will not be tolerated.

Your attention is invited to the fact that the section also provides for grant increases within the overall 2 percent reserved primarily for certification activities. The intent is that programs such as the 208, 402, and 404 would be funded only after the monetary needs for construction administration have been fully funded.

It is further stated that it is the policy of Congress that the States implement the permit programs under sections 402 and 404 of this act. Although States are afforded the opportunity to assume responsibility for these work functions, it is to be emphasized that the intent of the committee is that no State shall be obligated to accept these duties in order to qualify for construction certification duties and funding. Finally, we should all understand and appreciate that this section will permit State pollution control agencies to accept resident engineering responsibilities for small projects at the municipal level.

In New Hampshire this will enable the water supply and pollution control commission to implement the resident engineering responsibilities which were initially granted to the Commission in the 1975 session of the legislature and again renewed in 1977. This aspect alone will prevent many problems and save taxpayers countless millions.

SECTION 31—AREAWIDE PLANNING

This section provides that all 208 agencies which received their first grant prior to October 1, 1977, shall be eligible for 100 percent of the costs of developing and operating continuing areawide waste treatment management programs. In the case of the State of New Hampshire, this will involve a payback of the initial 25 percent matching funds which were advanced by the State. Such funding is subject to an appropriation act.

The section also provides that any grant to a newly designated agency after October 1, 1977, shall be in an amount not to exceed 75 percent. The committee's clear intent is that the 100-percent funding provision will not apply to newly designated 208 agencies.

SECTION 36—GRANT ELIGIBLE CATEGORIES

Paragraph (c) stipulates that no grants shall be made under section 211 of the act for "treatment works for control of pollutant discharges from separate storm water systems." By definition "treatment works" in Public Law 92–500 includes all facilities including treatment plants, interceptors, collector sewers, pumping stations, storm sewer systems, and so forth. The use of "treatment works" in paragraph (c) does not conform to the definition in section 212 of Public Law 92–500.

Hence, it can only mean no grant would be available to a treatment plan for flows discharged from separate storm sewer systems. This section in no way should be interpreted to prevent Federal grants to assist in storm water separation work when that is clearly the most cost-effective means of treating sanitary waste. Any other interpretation would be inconsistent with other provisions of the act.

While State pollution control agencies should continue to have the ability to assist financially in the construction of storm sewer systems under Public Law 92–500, priority for such work will vary in any given State. In the case of New Hampshire the agency would assign a low priority to projects of this nature because of the need to fund treatment plants, interceptors and other related facilities within the available funds appropriated by the Congress.

SECTION 45—MUNICIPAL TIME EXTENSIONS

This section provides for the Administrator, upon application of a permittee, to extend the compliance schedule in the NPDES permits for the publicly owned treatment works.

SECTION 49—IDENTIFICATION AND EVALUATION GUIDELINES

This modification requires that the administrator promulgate guidelines to identify and evaluate innovative treatment processes. However, the conference committee emphasized in the language of the section that the administrator must consult with State agencies along with other interested persons in the development of the guidelines. We expect that the consultation will be more on a partnership level participation rather than an opportunity for EPA to announce in-house achievement of the regulations. Past performance has been to give only perfunctory consideration to the real obligation to allow effective participation.

There is no question concerning the ability and competency which exists at State and interstate levels to offer constructive assistance to EPA, but it has not been utilized properly and to the necessary extent to date. I again would admonish EPA to comply with the intent of the Congress in inviting and accepting State and interstate participation in the program. The amendment to section 101 of the act regarding State participation means what it says.

SECTION 56—1977 DEADLINES

When the Federal Water Pollution Control Act Amendments of 1972 were being developed, Congress made it clear that industrial sources were encouraged to participate in joint municipal-industrial treatment works. This was done to reduce the number of individual sources of discharge to our waters.

Before participating in a joint system industry and municipalities can reasonably be expected to study and evaluate the economic effects of participating. These studies take time. Also, there may be some question whether the municipal system will be viable. Time can be consumed, time which is lost to the industry if the municipal system does not proceed and leaves the industry with the requirement to install best practicable control technology by July 1, 1977.

This situation was recognized clearly by the conferees. I refer to the fourth full paragraph in the statement of managers on page 9 of the conference report (H. Rept. No. 95–30) which follows:

> In any case where an industry planned on, negotiated with, and conducted joint engineering studies with a municipality which planned to construct a publicly-owned treatment works and subsequently decided not to proceed with such a works such industry would be eligible for an extension of its 1977 best practicable technology requirement for a time not to exceed that which elapsed during the negotiations with the municipality and the engineering studies.

In any request for a time extension under the amendment to section 301 of the act set forth in section 56 of the Clean Water Act of 1977, the clear intent of the conferees is that the Administrator recognize this source of delay and give credit for this lost time.

One such example of a company which lost time because of the decision by a municipality not to proceed with a municipal system is Paper Service Mills, Inc. of Hinsdale, N.H. While I cannot comment on all aspects of this situation, it is apparent that this company lost time by participating in a municipal system. The above quoted language of the statement of managers is consistent with the situation my district and EPA is expected to recognize this clear direction for Congress.

SECTION 67—PERMITS FOR DREDGED OR FILL MATERIAL

This is a welcome modification whereby States which have the statutory authority to act in matters dealing with dredge and fill can do so. Token amounts of financial assistance will be available by virtue of section 26 and it is to be hoped that States will undertake to perform this function where their legislatures have recognized the necessity for State action.

It is physically impossible for the Corps of Engineers to handle even normal obligations under section 404. I am told that between time of request and time of action on applications to the corps for fill and dredge activities, for even the simplest tasks, such as placing fill before a cottage at a beach, can consume a minimum of 6 months.

The answer is obvious: Delegate the responsibility to those States which wish to assume it and give them a small amount of financial encouragement to perform the task. The State of New Hampshire is presently operating in this area by State statute and the modest funding available under section 26 will allow this agency to improve its performance and relieve the corps and EPA of an activity which is burdensome.

SECTION 75—COST RECOVERY STUDY

Since there has been considerable discussion and uncertainty concerning the implementation of the industrial cost recovery provision of Public Law 92-500, this section provides for an 18-month moratorium on the implementation of the present provisions while the administrator studies the efficiency of and the need for payment by industrial users of any treatment works for that portion of the cost of the construction allocated to industrial waste treatment. It is the belief of many of the members of the conference committee that the need for the provisions of this section of the original act will be found to be unnecessary.

CONCLUSION

In conclusion, you will recall that after exhaustive study and investigation, the Commission on Water Quality concluded in part, as follows, concerning the institutional aspects of Public Law 92-500 implementation:

Perhaps the major initial delay in launching a new level of construction grants under Public Law 92-500 was virtual inactivity for 15 of the first 19 months because of the absence of final title II regulations. For the first 3 months, obligations were prohibited; during the next 15 months, prospective grantees apparently delayed formulating project applications according to the new requirements until the final rules were known, while being assured the regulations were imminent.

Some projects proceeding under the requirements of Public Law 84-660 (the prior statute) had to be redeveloped to comply with the new act, and there was delay in preparing and approving priority criteria and annual State priority lists. The EPA Deputy Administrator has reportedly admitted that the Agency made a great mistake in not honoring the in the pipeline projects under the old ground rules; to have let them proceed to completion under the prior law, however, might have precipitated a challenge in court. As late as 1975, EPA was stating that some percentage (of projects) for which funding is now being sought was conceived and planned before various requirements of Public Law 92-500 were applicable. In region II, for example, upwards of 75 percent of the applications expected through September of 1977 will involve such projects. EPA has said, issuance of regulations and guidance has been consistently tardy, thereby creating confusion and delay.

Late issuance of regulations was not the only cause for delay. Sometimes, multiple revisions of regulations have occurred. Changes in program requirements have sometimes occurred so many times that EPA regional personnel are reluctant to ask applicants for new or additional information.

Let it be clearly understood that the clear intent and determination of the conference committee is that the delays encountered under Public Law 92-500 not be repeated with this 1977 legislation. It is totally essential that all in the pipeline projects be honored under the existing ground rules.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 2 minutes to the gentleman from Kentucky (Mr. SNYDER).

Mr. SNYDER. Mr. Speaker, I want to say to my colleagues that this is a good bill.

As the Members go their diverse ways after the sine die adjournment of this first session, I want to suggest that they take along the conference report and the synopsis because they may be asked by their constituents back home to outline the accomplishments of the first session of this Congress. I want to say that if they will study that, they may find that this bill is one of the greatest accomplishments of the first session.

Mr. Speaker, all of us are indebted to the leadership, to the chairman of the full committee, to the chairman of the subcommittee, and to the ranking minority members on both the full committee and the subcommittee.

Mr. Speaker, Mr. ROBERTS, the chairman of the Water Resource Subcommittee and Mr. CLAUSEN, the ranking minority member of the Subcommittee on Water Resources, the floor managers of this conference report have carefully explained the provisions of the conference report. I shall not attempt to repeat anything they have covered. I will confine my remarks to section 311 which addresses oil spill liability. As everyone knows, this body has already passed comprehensive oil pollution liability legislation, H.R. 6803, commonly known as the superfund bill.

H.R. 6803 was worked out carefully through cooperation of the Committees on Public Works and Transportation and Merchant Marine and Fisheries, two committees on which I serve. While H.R. 3199 addresses a number of issues included in H.R. 6803, the conference report we have before you today is not a substitute for H.R. 6803. I call your attention to the second full paragraph on page 92 of the conference report where the Statement of Managers discusses the amendments to section 311 as follows:

> The Senate conferees are committed to consideration in this Congress of pending legislation authorizing creation of an oil spill superfund. Legislation to create such a fund has passed the House (H.R. 6803) and has been referred to the Senate Environment and Public Works Committee along with a similar bill reported from the Senate Commerce, Science and Transportation Committee (S. 2083).

The conferees on the part of the Senate have expressed clearly their intent to take up in this Congress superfund legislation. I commend them for this and look forward in this Congress to meeting with them again on comprehensive legislation.

The conference report on H.R. 3199 recognizes the difference between inland oil barges and large ocean tankers by setting different liability limits. From the testimony received, it is apparent that the danger of catastrophic spills from inland oil barges is diminished because of their smaller size as compared with other oil bulk carrying vessels. This distinction is recognized in a lesser dollar level of liability being required for inland oil barges.

It has been distressing to me for some time that for every *Torey Canyon* or *Argo Merchant* disaster which occurs on the high seas, that all vessels, in all waters, are included broadly in our corrective legislative language. The differing distinction of the types of vessels and the waters in which they operate was first recognized in H.R. 6803, the "superfund" bill and is included in the bill we have before us today.

The conferees also included other conforming amendments to section 311 which are consistent with the changes that will be made by the superfund bill. These include the definition of "inland oil barge," "inland waters of the United States," and "person in charge."

For the purposes of section 311, the meaning of the term "person in charge" is the same as defined in section 101(u) of H.R. 6803 as passed by the House of Representatives. The term "person in charge" means the individual immediately responsible for the operation of a vessel or facility. There are a number of places in section 311 where a clear reading of the act demonstrates that when the words "owner or operator" appear they should be construed to mean "owner, operator, or person in charge." This was an unintentional drafting oversight. Examples where this error occurred are (b)(6) and (j)(2). The principle addressed by the amendments to section 311 which add the term "person in charge" is carried over from H.R. 6803, and the definition should be considered to be a part of section 311(a) of H.R. 3199. Mr. Speaker, I was the author of this amendment in the committee of conference and believe this clarification of intent is necessary.

At this time, I would like to ask the floor managers if this is consistent with their views?

Mr. ROBERTS. Mr. Speaker, will the gentleman yield?

Mr. SNYDER. I yield to the gentleman from Texas.

Mr. ROBERTS. Mr. Speaker, I thank the gentleman for yielding.

The gentleman is absolutely correct. I want to commend him, not only for working on our committee and on the committee of conference, which worked this bill out, but also for working on the original bill in the Committee on Merchant Marine and Fisheries, on which he also served.

Mr. SNYDER. Mr. Speaker, I thank the gentleman.

I ask the distinguished gentleman from California (Mr. DON H. CLAUSEN) whether this is consistent with his views also.

Mr. DON H. CLAUSEN. Mr. Speaker, if the gentleman will yield, the gentleman's interpretation, as presented, is absolutely correct.

Mr. SNYDER. Mr. Speaker, I thank the gentleman.

Mr. Speaker, while I am pleased by the amendments to section 311, I must underscore the need to move forward with the superfund bill. It is a vital piece of legislation which will provide the comprehensive authority to insure the protection of our environment from the threat of oil spills. The amendments to section 311 are important but are not comprehensive. The House has provided for the comprehensive legislation that is needed and hopefully the Senate will soon follow suit.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 1 minute to the gentleman from Washington (Mr. CUNNINGHAM).

Mr. CUNNINGHAM. Mr. Speaker, I thank the gentleman for yielding.

I would like to ask a question that I have in looking over the bill and the report, but first, I want to compliment the committee and the conferees for the job they have done here.

Mr. Speaker, I do have a "Dear Colleague" letter circulated yesterday by the gentleman from Pennsylvania (Mr. WALGREN) to the effect that there is an inflexibility in this which would preclude the EPA from giving any case-by-case extension after April 1, 1979.

I want to know whether that is true.

Mr. DON H. CLAUSEN. Mr. Speaker, if the gentleman will yield, with respect to industry, that is correct.

Mr. CUNNINGHAM. Further, in looking at the Digest, it appears that if the industry uses a municipal facility and that municipal facility gets an extension—then that industry does get an extension.

Mr. DON H. CLAUSEN. For an industry which ties in with other treatment works, the extension will be granted; that is correct.

Mr. CUNNINGHAM. Mr. Speaker, I thank the gentleman.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield such time as he may consume to the gentleman from Minnesota (Mr. HAGEDORN).

Mr. HAGEDORN. Mr. Speaker, I thank the gentleman for yielding.

I want to commend the chairman of the full committee; the chairman of the subcommittee, the gentleman from Texas (Mr. ROBERTS); and, of course, my ranking colleague on the Republican side, the gentleman from California (Mr. DON H. CLAUSEN).

Mr. Speaker, I would like to direct a question to the managers concerning the amendments to section 314 of the act which is the clean lakes program.

In my own district, Albert Lea Lake is severely polluted and is thus a prime candidate for Federal assistance under this program. During the past 30 years, numerous studies have concluded that, in order to substantially increase the quality of the lake, it would be necessary to reduce the level of nutrients that enter the lake from nonpoint source runoff and the present wastewater treatment plant, and to deepen the lake by dredging.

Presently, programs are underway to deepen the lake and to move the discharge point of the treatment plant to a location near the outflow of the lake in order to bypass it. Experimental studies are also underway to control the inflow of nutrients from point sources.

The estimated cost of this program is roughly $3 to $4 million, with both the Minnesota Pollution Control Agency and the State Department of Natural Resources having indicated their approval for this program. I note now that the statement of the managers contains language encouraging EPA to accord priority to lakes with recreational potential. Albert Lea Lake will not only provide recreation for the town of Albert Lea but will also, as a result of the proposed project, create a wildlife and waterfowl area.

I would like to ask the managers if the Albert Lea program is an example of the type of lake that the conferees expect will be given priority under the clean lakes program?

Mr. ROBERTS. Mr. Speaker, if the gentleman will yield, the answer is yes, and I am sure that the lake the gentleman refers to will be adequately taken care of.

Mr. HAGEDORN. I thank the gentleman from Texas.

Mr. DON H. CLAUSEN. Mr. Speaker, if the gentleman will yield, let me state that I fully concur in the response made by the chairman, the gentleman from Texas (Mr. ROBERTS) and that the gentleman's lake falls within the category we have in mind.

Mr. HAGEDORN. I thank the gentleman.

Mr. ROBERTS. Mr. Speaker, I yield such time as he may consume to the gentleman from Washington (Mr. FOLEY), the chairman of the Committee on Agriculture.

Mr. FOLEY. Mr. Speaker, I rise in support of the conference report to accompany H.R. 3199, the Clean Water Act of 1977, and want to express my personal appreciation to Chairman RAY ROBERTS and to the other House conferees for their cooperation and assistance in working out matters of mutual concern.

I am particularly pleased, Mr. Speaker, that Chairman ROBERTS' floor statement indicates that the House conferees disagree with the definition of the term "normal silvicultural practices," as provided in the report accompanying the Senate version of this legislation.

Mr. Speaker, as our colleagues are aware, both Houses of the Congress held extensive hearings last year to review forest management practices as the initial step in the development of the National Forest Management Act. At that time the Committee on Agriculture, which I chair, received extensive testimony indicating that the type of forest management practice will vary depending upon the situation which faces the professional manager and that even-aged management, including clearcutting, is a normal practice in each of the areas of the country. Particularly significant, Mr. Speaker, is the fact that the U.S. Forest Service, the Society of American Foresters, which is the national association of forestry professionals, and the National Association of State Foresters, acknowledged to us that clearcutting is well suited for many eastern mixed hardwood species.

Mr. Speaker, by enacting the National Forest Management Act, the Congress made its intention clear that the professional forester should have access to all the tools of his trade, including the use of clearcutting when appropriate. I am convinced that it is very important for the Congress to continue to assure that the interpretation of the term normal silvicultural activities should not restrict or constrain the use of a wide range of scientifically proven silvicultural practices.

Mr. Speaker, I wish also to comment briefly on section 35 of the conference report, which deals with a new subsection (j) to section 208 of the Federal Water Pollution Control Act.

This section was added by a Senate amendment in order to establish a new soil conservation program for the Department of Agriculture in cooperation with the Administrator of the Environmental Protection Agency. As I am sure all of you know, the soil conservation program is administered by the Department of Agriculture. Moreover, under rule X of the Rules of the House, this particular area of concern lies within the jurisdiction of the House Committee on Agriculture. I am, however, happy to report that this particular jurisdictional issue, which confronted the House conferees, has now been worked out with the Committee on Agriculture to the satisfaction of the House Members. Again, I want to commend the chairman, the gentleman from Texas (Mr. ROBERTS), and all of his colleagues on their outstanding work.

Finally, I would like to take this occasion to make the record clear that, notwithstanding the fact that this provision appears in the Clean Water Act of 1977 as an amendment to the Federal Water Pollution Control Act, it continues to be a matter for the primary jurisdiction of the Committee on Agriculture.

I wonder if the chairman of the House conferees would confirm my understanding of this?

Mr. ROBERTS. Mr. Speaker, if the gentleman will yield, let me state that the gentleman from Washington (Mr. FOLEY) is indeed correct in that we have no jurisdiction over this and we do not want to change the jurisdiction in any way.

Further, Mr. Speaker, I want to compliment and commend the gentleman from Washington (Mr. FOLEY) the chairman of the Committee on Agriculture in the fact that the gentleman was a substitute conferee during the time we were discussing this amendment, which would have been nongermane in our operation, but which the gentleman handled and handled well. I think it is important to note that not a comma was changed.

Further, we certainly do not have any desire to change any part of this jurisdiction.

Mr. FOLEY. I thank the gentleman very much.

Mr. DON H. CLAUSEN. Mr. Speaker, if the gentleman will yield, I too would like to state that I concur with the statement of the gentleman from Texas (Mr. Roberts) in saying that the gentleman from Washington (Mr. Foley) will always be protected in this jurisdiction, and that we have no jurisdiction over it.

Mr. FOLEY. I thank the gentleman.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 1 minute to the gentleman from North Carolina (Mr. Taylor).

Mr. TAYLOR. Mr. Speaker, I too wish to commend the conferees on the manner in which the Federal Water Pollution Control Act has been acted upon by the conference, especially in view of the fact that many of the concerns and anxieties that could have unnecessarily adversely affected agriculture and commerce have been alleviated as a result of the diligent work of the Subcommittee on Water Resources under the chairmanship of the distinguished gentleman from Texas (Mr. Roberts). I commend also the chairman of our full committee, the gentleman from California (Mr. Johnson) and the ranking minority member of the subcommittee (Mr. Clawson) for their diligence in the conference in upholding the position of the House on these matters.

The principle "buy American" was a part of this legislation when it left the floor of the House. The principle of "buy American" provision is to insure continuation and improvement of American technology, and to assure that American workers may participate in this program.

There was a provision in the House that required that any funds expended by grants by the Environmental Protection Agency would be spent on products that were made in America.

I would like to inquire of the distinguished chairman of the subcommittee as to whether the House provision of the "buy American" is contained in the conference report?

Mr. ROBERTS. If the gentleman will yield, the buy America provision is in the bill. We do have a provision that if the cost exceeds 25 percent over what the bid was, the administrator has authority to buy. But the buy America provision is in the bill, and we were able to get the other body to accept it.

Mr. TAYLOR. I thank the distinguished chairman.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 1 minute to the gentleman from Illinois (Mr. Findley).

Mr. FINDLEY. Mr. Speaker, the Alton Box Board Co., of Alton, Ill., operates a 67-year-old paperboard mill and discharges its effluent into the Mississippi River. Following the enactment of the Federal Water Pollution Control Act in 1972, the company developed and submitted to the Illinois EPA a 5-year plan in August 1972 to meet the 1983 requirements of the act. After a delay of 1 year, the Illinois Pollution Control Board approved the plan and work was started.

The 1-year delay in Government approval necessitated corresponding delays in all phases of the project. However, both the Federal and Illinois EPA's approved the 5-year plan which called for a completion date of 1978, with no indication that the NPDES permit would not be renewed to coincide with the plan which had been approved.

On June 20, 1977, the Alton Box Board Co. learned that the U.S. Environmental Protection Agency had determined that the Alton Box Board Co. would not be in compliance with the BPT requirements on July 1, 1977, and that enforcement action would be taken.

The Clean Water Act of 1977 amends the Federal Water Pollution Control Act by adding a new section 309(a)(5)(B) to authorize the Administrator of EPA to extend the date of July 1, 1977, to no later than April 1, 1979, to those who did not meet BPT by the earlier date, where four specific criteria are met:

> (i) That any person who is a violator of, or any person who is otherwise not in compliance with, the time requirements under this Act or in any permit issued under this Act, has acted in good faith, and has made a commitment (in the form of contracts or other securities) of necessary resources to achieve compliance by the earliest possible date after July 1, 1977, but not later than April 1, 1979.

Alton Box Board Co. has from the inception diligently pursued its 5-year program since initial approval of its plan and has spent more than $10 million to date. It has never suspended the program pending the processing or issuance of subsequent required permits. Alton's enormous investment in and diligent implementation of its plan are evidence of its good faith attempts to adhere to the requirements of the law.

Alton Box Board Co. has converted its Alton mill from the use of wood fiber to the exclusive use of "recycled" paper fiber, thus eliminating the discharge of "black liquor" and reduced the volume of discharge into the Mississippi River from 8 to 10 million gallons per day to approximately 3½ million gallons. The effluent is discharged through a diffuser pipe immediately below the Alton dam and tests have proven that it has no environmental impact upon the river. To date, more than 80 percent of the suspended solids and BOD have been removed. Construction began on the final phase of the plan on May 3, 1977, and will be completed in the fall of 1978, which is the earliest possible date for completion. Thus, Alton has made the commitment over a long period of time and currently has signed contracts and construction is under way to meet 1983 standards by the end of next year.

> (ii) That any extension under this provision will not result in the imposition of any additional controls or any other point or nonpoint source.

Alton discharges its effluent through a diffuser pipe directly into the Mississippi River which does not affect any other point or nonpoint source.

> (iii) That an application for a permit under section 402 of this Act was filed for such person prior to December 31, 1974.

The original application for permits was first submitted in 1971, by the Alton Box Board Co. under the Federal Refuse Act of 1899. Upon enactment of the Federal Water Pollution Control Act the application was automatically converted to an application for an NPDES permit.

> (iv) that the facilities necessary for compliance with such requirements are under construction.

Contracts have been awarded for the final phase for a $5 million air activated biological water treatment facility which is now under construction and which, when completed next year, will bring the plant into compliance with 1983 standards.

Mr. Speaker, the joint explanatory statement of the committee of conference states in explaining this section, as it pertains to an industry like Alton Box Board:

> A person who wishes an extension must have made a serious commitment of the necessary resources to achieve compliance as soon as possible after July 1, 1977, but no later than April 1, 1979. Here the Administrator must determine whether purchase orders were executed, land cleared, and engineers and construction workers available, or other steps taken to insure that the job can be completed by the new extended date.

Mr. Speaker, there has never been any question as to whether Alton Box Board Co. has made a "serious commitment." As I have said, they have already spent $10 million and are currently spending an additional $5 million to complete their facility. Whatever EPA does, they will be in compliance with the standards by the end of next year—in fact, they will meet 1983 standards by the end of next year. There is no way that the construction schedule can be advanced, and EPA has not suggested otherwise. All purchase orders have been executed, land cleared, and engineers and construction workers are now on the job, and have been for some time. No one, not even EPA, questions whether the project will be completed on the new schedule, that is, by the end of 1978, fully 4 months before the April 1, 1979, deadline established by this act.

Mr. Speaker, clearly Alton Box Board meets both the letter and the spirit of the law. It fulfills each of the criteria established by this conference report for the purpose of determining when the Administrator of EPA is to extend the July 1, 1977, deadline to April 1, 1979. Would you clarify for me that this legislation is intended to provide a deadline extension in just the type of situation as Alton Box Board presently finds itself?

Mr. ROBERTS. If the gentleman will yield, from the information that he gave me before in the discussion, I think that in the Alton Box situation a time extension certainly would appear warranted and would be covered in this bill.

Mr. FINDLEY. I thank the gentleman.

Mr. ROBERTS. Mr. Speaker, I yield 2 minutes to the distinguished gentleman from California (Mr. Anderson), one of the conferees.

Mr. ANDERSON of California. Mr. Speaker, I rise in support of the conference report on H.R. 3099, the Clean Water Act of 1977.

I want to give my congratulations to my good friend and the chairman of this committee, Congressman Bizz Johnson, of California, whose able leadership was critical to the development of this legislation. Also, I compliment my good friend Ray Roberts, of Texas, chairman of the Subcommittee on Water Resources. It is this subcommittee which laid the groundwork for these necessary amendments.

The bipartisan support of Congressman Bill Harsha, of Ohio, and my California colleague Don Clausen, and their valuable input throughout the long proceedings were also necessary ingredients to this legislation.

There are many significant provisions in H.R. 3199. I would like to comment on just a few of them now.

R. & D. GRANT

Section 8 authorizes the Administrator to make grants for those costs of operating and maintaining a project which received a grant under section 104, 105, or 113, which exceed the operation and maintenance costs for a comparable community using a conventional treatment works. In addition, the Administrator shall review projects such as that in Avalon, Calif., for the purpose of providing operation and maintenance assistance during the period in which such community is studying and making necessary modifications to reduce excessive operation and maintenance costs. Seventy-five percent construction grants under title II of the act are available to assist in making necessary studies and modifications.

USER CHARGES

Section 22 of the conference report permits municipalities to meet the user charge requirement of the act by continuing a system of dedicated ad valorem taxes for residential and small nonresidential users, and user charges for industrial users. In most cases the user charge requirement for industry has been interpreted as metering.

The county of Los Angeles currently uses a metering system for its industrial users. This existing system is not to be interfered with if Los Angeles should choose to take advantage of the additional flexibility provided in this section to use ad valorem taxes for residential and nonresidential users.

The term "small nonresidential user" encompasses both commercial and industrial users. Examples of such users include warehouses, grocery stores, and small laundromats. Small nonresidential users are to be defined by the Administrator according to the volume and characteristics of their discharges. In most cases, where the user's flow into the treatment works per day is equivalent to 25,000 gallons or less per day of sanitary waste, such user will be considered a small nonresidential user for the purposes of this section.

With only small modification, existing ad valorem tax systems to collect the costs of treatment works should be allowed to continue with a minimum of interference. An example of such a system is that presently being utilized by the county of Los Angeles.

DEEP OCEAN DISCHARGE WAIVER

A major provision of this bill is section 44 which would permit municipalities that discharge into deep ocean waters be granted a waiver from the secondary treatment requirement.

There is some confusion as to the meaning of several of the specific terms used in this section. For example, the terms "applicable water quality standards," and "balanced, indigenous population."

One of the conditions of the waiver is that there is an "applicable water quality standard" specific to the pollutant for which the modification is requested.

The law requires States to develop water quality standards according to criteria developed by the Environmental Protection Agency. "Applicable water quality standards" for the purposes of this section are approved State water quality standards. In the case of California, a revision of the State ocean plan would meet this requirement.

The other matter, that needs clarification is the concentration of dissolved oxygen, which is one of the elements controlled by secondary treatment. Dissolved oxygen is measured by biochemical oxygen demand (BOD). Because of the special characteristics of ocean waters, there is no problem of oxygen depletion. BOD is not a relevant pollutant for marine discharges and it is unreasonable to develop a water quality standard for dissolved oxygen.

Therefore, under this provision, a locality could get a modification of the BOD requirement, but a State is not required to go through the meaningless exercise of developing an "applicable water quality standard" for dissolved oxygen for marine waters.

Another waiver condition is that the modified requirement will not interfere with attaining the water quality which assures protection of public water supplies and the protection and propagation of a "balanced indigenous population of shellfish, fish, and wildlife." This term cannot be defined in the absence of a good deal of additional scientific information which may not be readily available.

The House and Senate conferees discussed the meaning of the term "indigenous." It is clear that there was confusion as to how it would be applied to the oceans. An indigenous population is one produced, growing, or living naturally in a particular region or environment and reflecting a healthy population given the presence of man. Emphasis should be placed on maintaining the current indigenous population of shellfish, fish, and wildlife. It is completely meaningless and unreasonable to assess this condition according to any other time period—particularly a historical period such as pre-Columbian times. This term is not to be interpreted in such a manner as to negate the clear congressional intent of this section that waivers be granted.

At the time the waiver decision is made, it is quite possible that neither the State nor EPA will be able to determine the potential long-term effects of the approved level of treatment under the waiver provision. Therefore, the Administrator should make his decision by focusing on the effects projected within the first 5 years. During this period EPA should fund additional studies which will measure the effect.

The decision to grant a waiver will be subject to reassessment at the end of each 5-year period. Over time both the EPA and the locality will be in a better position to evaluate the long-term impacts with the information developed by EPA and by the locality under the required system for monitoring the impact of this discharge on a representative sample of aquatic biota, to the extent practicable. Construction grant money under title II of the act can be used to establish such a monitoring system. Where requested by the locality or State, EPA is to give the locality technical assistance in the design, installation, and operation of such a system.

The requirement under the new subsection 301(h)(7) set forth in section 44 also requires clarification. This provision provides that there will be no new or substantially increased discharges above the volume specified in the permit from the treatment works getting a modification. This provision does not mean that treatment works applying for a modification are to be restricted to the current volume or capacity of their plants. In the interest of continuing the policy of encouraging regionalization, these treatment works may increase their discharges over time, as capacity permits, as long as the pollutant controls are maintained. The volume of discharge may be revised, just as any other permit condition may be altered, as warranted by changes in circumstances.

EPA is to carry out this provision in such a way that burdensome requirements are not placed on municipalities applying for such waivers. The Administrator is to issue guidelines promptly to carry out the intent of the law. Those dischargers which contemplate being able to meet the criteria established in the law will have 9 months either from the date of enactment of this section or 9 months from the date effluent guidelines are promulgated. The Administrator is to make a decision promptly on the evidence presented to him and not permit protracted deliberations. In the interim, it is the responsibility of the Administrator to discontinue any legal proceedings or enforcement actions which may have been initiated prior to the enactment of this provision.

Since this waiver is granted as part of a municipal permit under section 402 of the act, consistent with the provisions of that section, a State with an authorized permit program may grant views under this section.

Included among the discharges eligible for a waiver under this section are the cities of Los Angeles and Avalon, Calif. The following is a listing of other eligible communities:

LIST OF OCEAN OUTFALLS TO TERRITORIAL SEAS AND BEYOND

Cresent City, CA.
Westport, CA.
Mendocino, CA.
Mendocino, No. 2, CA.
Bolinas, CA.
San Francisco (Richmond Sunset), CA.
North San Mateo, CA.
Pacifica, CA.
Montaro, CA.
Granada, CA.
Half Moon Bay, CA.

Davenport, CA.
Santa Cruz, CA.
East Cliff, CA.

South Laguna, CA.
Dana Point, CA.
San Clemete, CA.
Oceanside, CA.
Encinitas, CA.
Cardiff, CA.
San Diego, CA.
Carlsbad-Buena Vista, CA.

I wish to emphasize that I do associate myself with the remarks of my colleagues Mr. JOHNSON of California, and Mr. ROBERTS, of Texas, in regard to this provision. I would like to ask a question of Mr. ROBERTS concerning this provision. "Mr. ROBERTS, do you agree that the city of Los Angeles and Avalon, Calif., are intended to qualify for a waiver under section 44?"

Mr. ROBERTS. Yes, it is contemplated that these communities qualify for a waiver of the secondary treatment requirement under section 44.

Mr. ANDERSON of California. Thank you, Mr. ROBERTS.

Mr. DON H. CLAUSEN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of California. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. I thank the gentleman for yielding.

The answer to that is yes, but it does not only apply to southern California; it also has application to the entire west coast.

Mr. ROBERTS. The gentleman is correct.

Mr. ANDERSON of California. It applies to the coast of California, Hawaii, Puerto Rico, American Samoa, the Virgin Islands, and estuaries and waters such as Cook Inlet. But I wanted to make sure that the cities of Los Angeles and Avalon were specifically included, also basically the southern coast of California.

Mr. ROBERTS. That is correct.

Mr. ANDERSON of California. I thank the gentleman. I have some additional comments I would like to add at this point pertaining to other specific provisions in the bill.

1977 TIME EXTENSIONS

Section 45 provides that the July 1, 1977, secondary treatment requirement for municipalities may be extended to July 1, 1983, where construction cannot be completed in time or the United States failed to make financial assistance available in time. EPA, or a State with an authorized permit program, may grant the time extension. The owner or operator of a treatment works has 180 days after enactment to file a request for an extension. It is the conferees' intent that any request for a notification should contain a schedule of compliance based on among other things availability of financial assistance from the United States.

Throughout the Nation many industries have contemplated tying into municipal works and have been unable to do so because of the inability of publicly owned treatment works to come into compliance with the law. This has been a problem in southern California. These industrial dischargers are now, in many instances, out of compliance with the law without fault. Section 45 permits such industries to get a time extension up to July 1, 1983, in the following cases:

First, if a permit issued before July 1, 1977, to that source is based upon a discharge into publicly owned treatment works, or;

Second, if such a source had, before July 1, 1977, a contract enforceable against it to discharge into a publicly owned treatment works or

Third, if either an application made before July 1, 1977, for a construction grant for publicly owned treatment works, or engineering or architectural plans or work drawings made before that date for such works, show that the source was to discharge into the public owned treatment works and that the treatment works are presently unable to accept the source without construction and, in the case of a discharge to an existing treatment works, that the treatment works has an extension of its 1977 requirements.

An industry has 180 days after enactment or the filing of a request for a time extension by a municipal treatment works, whichever is later, to request an extension.

No extension can be granted unless the permitting authority finds:

First, that the treatment works can complete construction by July 1, 1983;

Second, that the treatment works will be able to meet secondary treatment and water quality standards when the waste from the contributing industry is received;

Third, the industry and the treatment works have entered into a binding contract providing that the industry agrees to discharge its waste to the treatment plant, and the plant agrees to accept and treat that waste by a certain date;

Fourth, the contract must provide that the industry agrees to pay all user charges and industrial cost recovery charges required under section 204; and,

Fifth, the industry must meet all toxic and pretreatment standards during the period of the time extension.

Because there have been some instances where industries have failed to comply with the law, the conferees have included a procedure where the Administrator is given two options to grant an extension of the 1977 deadline until April 1, 1979. The first option authorizes the issuance of an enforcement order requiring a reasonable time for compliance, reserving the 30-day requirement for violation of operation and maintenance requirements and interim compliance schedules. The second option authorizes up to an 18-month extension of the 1977 deadline where the Administrator finds that the discharger acted in good faith; that compliance will occur no later than April 1, 1979; that the extension will not impose additional controls on other sources; that an application for a permit was filed before December 31, 1974; and that the necessary abatement facilities are under construction. It is important to note that the second option allows a person other than a violator, who is otherwise not in compliance with the time requirements of the act, to have an extension of up to April 1, 1979. Also, if EPA finds that the most expeditious means of bringing the industry into compliance is for it to discharge into a municipal treatment works, EPA may issue an enforcement order, upon request of the industry, calling for it to tie in with the treatment works no later than July 1, 1983.

For the purpose of section 45 and 56 industries and cities that pursued their judicial rights in regard to the 1977 deadline are not to be penalized or be considered as having acted in bad faith.

Throughout the conference, the House conferees were very aware of the current capital problems of the American steel industry. The steel industry had had problems with capital formulation for several years. In many instances the industry has not been able to modernize and install pollution control equipment for the reason that many individual facilities negotiated long term settlements that carry past July 1, 1977, and in some instances past April 1, 1979. It is the firm intent of the conferees that nothing in this legislation invalidates or in any way affects any such orders, decrees, settlements, or other agreements in existence prior to the enactment of this language.

PRETREATMENT

Section 54 of the conference report modifies the pretreatment requirements of the act concerning the control of toxic pollutants and the enforcement of any pretreatment standard. Also, provisions are made for the utilization of sludge disposed from a municipal treatment works.

The provision concerning the level of pretreatment required for toxic pollutants specifically allows localities to reduce the level of treatment required by the industrial user, in certain circumstances.

Under this amendment the Administrator would establish national pretreatment standards for toxic pollutants based on the best available technology economically achievable, or any more strinent effluent standards under section 307 (a). In applying these pretreatment standards through its pretreatment program, the owner or operator of the municipal treatment works could modify the requirements applicable to an individual source or individual classes of sources introducing that pollutant into the treatment works to reflect the degree of reduction of that pollutant achieved by the treatment works. The combination of pretreatment and treatment of that pollutant by the municipal treatment works shall achieve at least that level of treatment which would be required if the industrial source were making a direct discharge.

In promulgating national pretreatment standards the Administrator shall include a provision recognizing the option of the owner or operator to modify the requirements to reflect the degree of reduction achieved by the treatment works. An adequate pretreatment program under section 402(b)(8) may include municipal ordiances or regulations specifying pretreatment requirements and incorporated into the treatment works permit by reference, or pretreatment requirements applicable to specific sources set forth as conditions on the permit.

The conferees recognize that some industries as well as individual plants within industries will be called upon to make significant advancements in their levels of pretreatment. In some cases, these advancements will be very costly and could force plant closings. There is a severe danger of this happening within the metal finishing and electroplating industry.

Federal assistance to such plants is available from both the Economic Development Administration and the Environmental Protection Agency. The Administrator is to work with the Economic Development Administration to see that direct EDA loans as well as loan and lease guarantees are provided to eligible plants to offset the costs of installing pretreatment equipment.

Also, section 8 of Public Law 92-500, provides for loans from the Small Business Administration to small businesses for the installation of pollution control equipment. This section has never been fully implemented. It is expected that these loans will be made available to assist in the installation of pretreatment processes to industries such as metal finishers.

Section 54(b) amends section 309 concerning the enforcement of pretreatment standards. The municipality has the primary responsibility to enforce such standards with their constituent industries. EPA is not to unilaterally enforce such standards against the industries.

However, where EPA finds that pretreatment standards are being violated by such industries, the Adminstrator may notify the owner or operator of the treatment works and the State of such violation. If the locality does not begin appropriate enforcement action within 30 days of notification by the Administrator, then EPA may institute a civil suit for appropriate relief, including but not limited to a temporary or permanent injunction against the municipality. In such civil action the owner or operator of the industrial source shall be joined as a party to the action.

Section 54(d) amends section 405 of the act to require the Administrator to issue regulations providing guidelines for the disposal and utilization of sludge. These guidelines shall identify uses for sludge, specify factors to be taken into account in determining the measures and practices applicable to each such use, and identify concentration of pollutants which interfere with each such use or disposal.

The determination of the manner of sludge use or disposal is a local determination. However, once EPA has published guidelines for a sludge use or disposal, it is unlawful for the owner or operator of a municipal treatment works to use or dispose of sludge except in accordance with such guidelines.

FEDERAL FACILITIES

Section 67 of the conference report amends section 404(T) to provide that nothing in the section shall preclude or deny the right of any State or interstate agency to control the discharge of dredged or fill material in any portion of the navigable waters within the jurisdiction of such State, including any activities of any Federal agency, and that each such agency shall comply with the State, or interstate requirements, both substantive and procedural to control the discharge of the dredged or fill material to the same extent that any person is subject to its requirement. However, this new subsection shall not be construed as affecting or impairing the authority of the Secretary to maintain navigation. For example, with regard to the day-to-day dredging of the ports of Los Angeles and Long Beach, this provision means that the Corps of Engineers is expected to make all reasonable effort to comply with State requirements. However, where these requirements cannot reasonably be met, the Corps of Engineers has the authority to, and indeed is expected to, proceed with measures necessary to maintain navigation.

SLUDGE STUDY

Section 71 provides for a study of the utilization of treated sludge. Such a study should include an assessment of sludge disposal and reclamation projects. However, in no case should this study be used as an excuse to delay development and funding of ongoing projects. In particular the Sepulveda, Calif., sludge disposal and reclamation project should be allowed to proceed as planned without further delay. If, however, the Administrator determines such plans require modification, he should so advise the municipalities, in writing as soon as possible, so that necessary changes in the plan may be made.

SEAFOOD STUDY

Section 74 provides for a study by the Administrator to determine the effects of seafood processes which dispose of untreated natural wastes into marine waters. This study is to be submitted to Congress no later than January 1, 1979. This study should include an assessment of the discharges from such canneries into Los Angeles harbor to determine the impact of the discharge of cannery waste into the harbor.

INDUSTRIAL COST RECOVERY

Section 75 of the conference report requires the Administrator to do a study on the efficiency of and the need for the payment by industrial users of any treatment works of that portion of the Federal contribution to the cost of construction of such works which is allocable to the treatment works.

In addition to looking at the impact on communities, the study should include an assessment of the impact of this requirement on selected industries, such as food processors. Such an assessment should include an evaluation of the combined effect on industries of the user charge and the industrial cost recovery payment.

Mr. Speaker, I urge enactment of these necessary amendments.

Mr. ROBERTS. Mr. Speaker, I yield 1 minute to the gentleman from Minnesota (Mr. OBERSTAR).

Mr. OBERSTAR. Mr. Speaker, I was disappointed that the conference rejected the so-called Nelson amendment to the Clean Water Act banning phosphates in cleaning products sold in the Great Lakes Basin States. However, our distinguished subcommittee chairman, RAY ROBERTS, has assured me that he would hold hearings on this important issue next year, and I want to take this opportunity to urge him to do so early in the second session of this 95th Congress.

The Nelson amendment was designed to effectively eliminate point source discharges of phosphorous into the Great Lakes Water Quality Agreement with fill its obligations under the 1972 Great Lakes Water Quality Agreement with Canada.

The 94th Congress enacted the Toxic Substances Control Act which set forth a procedure to investigate and regulate such substances. The Administrator of EPA, Doug Costle, has initiated an investigation of phosphorus which is expected to be completed in March of 1978. A Public Works Committee hearing on phosphorus, reviewing the scientific facts developed by EPA, early next year would be most appropriate and timely.

Questions that should be addressed are: First, whether the phosphate ban in the Great Lakes will have any significant environmental benefits; second, the economic benefits and costs of such a ban—a recent analysis by EPA's region V headquarters in Chicago claims a net savings to taxpayers of $26 million in the eight State Great Lakes region, from a phosphate ban; third, the practicability of a statewide ban; fourth, technological problems encountered in replacing phosphates; fifth, the extent of entrophication in the Great Lakes.

A major portion of Michigan lies within the Great Lakes drainage basin, and only a small portion of each of the other Great Lakes States is located within the basin. Therefore, this study should address the question of limiting the phosphate content of detergents in the entire region.

Moreover, 80 percent of all phosphates produced in the United States are used in fertilizers. The balance—15 percent to 20 percent—are used in a variety of products including foods, vitamins, detergents, sanitizers, and metal surface treatment products. Farmers use the largest amount of phosphate and farms located near bodies of water probably contribute more phosphate to water than does any other source. The amount of agricultural runoff generally is not measurable.

However, since readily available phosphate, usually ortho-phosphate, comprises a major portion of the Great Lakes phosphate load from all diffuse land sources—32 percent to 70 percent—control of diffuse source phosphorus must also be considered.

Today the sewage facilities in the Great Lakes that can meet EPA phosphate effluent objectives—1 milligram per liter—are 64 percent complete and in operation. They will be 100 percent in operation by 1982. They are all funded and in the construction phase. It is assumed that the most effective and least expensive way to reduce the flow of phospate is via the sewage treatment process. Does this approach merit review?

Mr. Speaker, another one of the major issues this conference report addresses is the regulation of toxic pollutant discharges to the Nation's waters. The dissemination of toxics into our environment has been of great concern to me for a number of years as it is to many people nation-wide. As the number of incidences involving the discharge of toxic pollutants into the environment has increased, it has become increasingly obvious that prevention must be the watch word, rather than taking ad hoc measures after a threat to human health and the environment has already been thrust upon us.

The President addressed the issue of toxic chemicals in his environmental message to the Congress last May: "Rather than coping with these hazards after they have escaped into our environment, our primary objective must be to prevent them from entering the environment at all." I share his concern for achieving that objective.

Clearly, section 53 of the conference report is an important first step in this direction with regard to preventing the discharge of toxic pollutants to surface waters of the United States. The Administrator must promulgate effluent limitations for a specific list of toxics and compliance must be achieved by dischargers of such pollutants no later than July 1, 1984. However, the conferees recognize that this list is not all inclusive. There exist many pollutants which are actually or potentially toxic that do not appear on the list. For this reason, the Administrator is specifically authorized under section 53 to add pollutants to the statutorily established list. It is very important that the Administrator use this authority as aggressively as possible if the preventive approach to controlling toxic pollutants is to succeed.

While the Administrator may choose to list pollutants on the basis of other criteria, at a minimum, I urge him to list any pollutant that has evidenced carcinogenic, mutagenic, or teratogenic effects in humans or in laboratory testing, or which has otherwise evidenced a significant degree of toxicity at low exposure levels to aquatic organisms or systems. He should then procede to issue effluent limitations for such pollutants as soon as practicable, as required under section 53 of the conference report.

I am committed to a continuing review of the problems of toxic pollutants in our environment; I know other members of the Committee on Public Works and Transportation are equally committed. This conference report represents an important first step which must be followed by sustained effort as we gain a greater understanding of the effects of toxic pollutants in our environment and develop better means of preventing the further dissemination of toxics.

Finally, Mr. Speaker, section 75, of the Federal Water Pollution Control Act Amendments, as approved by conference committee, requires the EPA Administrator to study the efficiency of and need for the payment of industrial cost recovery (ICR) assessments by industrial users of publicly-owned treatment works. The Administrator, in carrying out this study, should consult with industrial groups most heavily impacted by the ICR requirement, including individual firms in the food processing industry and their representative trade associations. During our hearings on H.R. 3199, we heard from several industrial groups, especially from food processors, that the combination of industrial cost recovery charges and rigid interpretation of the proportionate share concept for collecting operation and maintenance charges from industrial users has resulted in some communities having much higher costs for waste water treatment than other communities in the same geographical area. In written testimony, some communities have advised our committee that such disparities in costs adversely affect local industrial development programs and job opportunities.

It is my further recommendation that the Administrator, in carrying out this study, include in the report to the Congress his best response to each of the following questions, the answers to which will be important to us in our future deliberations on whether or not the ICR requirement should be modified:

First. Has the implementation of the user charge and industrial cost recovery requirements of section 204(b)(1) (A) and (B) resulted in some communities charging much higher costs for wastewater treatment than other communities in the same geographical area? If so, should the Congress provide a mechanism whereby a community may lower its user and industrial cost recovery charges to a level that is competitive with the other communities in order to restore parity? If so, how should parity be restored?

Second. Does the existing law encourage construction of regional publicly owned waste-water treatment facilities? If so, what is the impact on industrial users of such systems compared to industrial users of nonregional systems and those which construct their own waste water treatment systems?

Third. Are recent reports by the General Accounting Office and the Vertex Corp. valid, which show that the benefits of construction and operation of advanced waste treatment systems may not be worth the cost? If so, should industrial users of such systems be required to pay user and industrial cost recovery charges for them?

Mr. ROBERTS. Mr. Speaker, I yield 1 minute to the gentleman from Washington (Mr. McCORMACK).

Mr. McCORMACK. Mr. Speaker, I rise in support of this legislation. I congratulate the chairman of the subcommittee and the chairman of the full committee, and members of both parties for their participation in this conference report on this difficult piece of legislation.

Mr. Speaker, I have a question I would like to ask of the chairman of the Subcommittee on Water Resources, the gentleman from Texas (Mr. ROBERTS): The Administrator will have the authority to extend the July 1, 1977 compliance date—under section 56c which amends section 309a of the Act—under certain conditions for certain discharges who have acted in good faith, but the conference report gives no guidance as to the meaning of good faith. Would an industrial discharger, which, subsequent to the issuance of its permit, brought proceedings to modify the permit, or seek a variance, or which participated in other litigation appealing the EPA's effluent limitations and which delayed construction of treatment facilities pending the outcome of such proceedings or litigation, be deemed by reason thereof not to have acted in good faith?

Mr. ROBERTS. If the gentleman will yield, Mr. Speaker, the answer is "No. Good faith should be judged by the reasonableness of the legal position, the uncertainties of the statutory interpretations, the lack of dilatory intent, and other factors."

Mr. DON H. CLAUSEN. If the gentleman will yield, I just want to state I subscribe to the response of the chairman for purposes of legislative history.

Mr. ROBERTS. Mr. Speaker, I yield 1 additional minute to the gentleman from Washington (Mr. McCORMACK).

Mr. McCORMACK. Mr. Speaker, in section 16(k) of the bill H.R. 3199, as passed by the House, the Corps of Engineers was authorized to delegate to any State, on its request, all or a part of those functions vested in the Secretary by section 404 of the act, and by sections 9, 10, and 13, of the act of 1899, relating to the totally intrastate fresh bodies of water.

The Senate had no such provision, and Senate members of the conference objected to it. After some debate, we attempted to obtain agreement on a compromise designating some one State as a demonstration. This attempt failed, and finally the conferees agreed to provide such an authorization for the Corps of Engineers for the State of Washington only, and for Lake Chelan only.

I would like to ask the chairman to clarify the intent of the conferees, in choosing Lake Chelan in Washington State. Is it correct to say that the choice of Lake Chelan has no significance in itself except that it may constitute a demonstration project for this attempt to eliminate one unnecessary layer of bureaucracy, while still maintaining high standards of water pollution control?

Mr. ROBERTS. The gentleman is correct. We preferred to have it on a nationwide basis but were unable to secure the other body's approval, and this will be a demonstration project.

Mr. McCORMACK. I thank the chairman.

Mr. ROBERTS. Mr. Speaker, I yield 2 minutes to the gentleman from Pennsylvania (Mr. ERTEL).

Mr. ERTEL. Mr. Speaker, I would like to commend the chairman for his work on this bill, as well as the committee. I rise in strong support of it.

I would like to ask a clarifying question. This section 19 of the conference report, which relates to section 203 of the Federal Water Pollution Control Act, provides that EPA or the Administrator can give technical advice to the grantees. There was a remark made by one of the EPA people, and I would like to quote it, to make sure this is not a correct interpretation of the section. He stated "The new section 203(d) authorizes the EPA to represent communities in negotiation of engineering agreements and to supervise the construction on some jobs." It is my understanding that the term "technical assistance" does not allow the EPA to negotiate contracts. Is that true?

Mr. ROBERTS. If the gentleman will yield, I certainly agree with the gentleman from Pennsylvania. There is nothing in section 19 that would give EPA that authority.

Mr. ERTEL. It would be my position and I hope the position of the chairman that it is not intended that the agency act as the grantee's agent man, is it proper for the agency to act as a contractor in negotiation or to provide technical assistance that is normally provided by private engineering and construction firms. The agency is only to give technical assistance basically after the contract has been entered into. Is that correct?

Mr. ROBERTS. I agree with the gentleman from Pennsylvania.

Mr. ERTEL. I thank the gentleman from Texas.

Mr. ROBERTS. Mr. Speaker, I yield 2 minutes to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. Mr. Speaker, I rise in support of the conference report and I would like to commend the chairman of the committee, and the chairman of the subcommittee, as well as the ranking minority members and the managers on the part of the House for bringing back from conference a landmark piece of legislation. This is truly a monumental effort and will set the course of our clean water program for many years to come.

Having said that, however, Mr. Speaker, I must express disappointment at the fact that a very important feature of this bill which the House had in its version has been dropped. The feature that would give the elected Congress the right to veto the rules and regulations adopted by the unelected bureaucracy, was dropped in the conference proceedings. I think that it is unfortunate, because if there is any agency that is well in need of this type of oversight, it is the EPA and the types of rules and regulations they have published over the past years.

This House on many occasions has adopted, by majorities of almost 2 to 1, such legislation for congressional veto of bureaucratic rules. I think it is unfortunate that too frequently when we get into conference with the other body, we have caved in. I think the time is approaching when the other body is going to have to give. I intend to let the American people know their Senators seem to want laws passed by unelected bureaucrats.

If there was a trade in which we got something good out of it, then I am glad we had the opportunity, but I would hope henceforth the Members of the House in conference will dig their heels in. We represent the people of America. They are tired of the bureaucrats.

Mr. ROBERTS. Mr. Speaker, if the gentleman will yield, I would say that this amendment was adopted at one point in the conference, and then it was eliminated in the conference, and we could not get it back in, but we did our best.

Mr. LEVITAS. One other point I would like to make, and I know this is only hearsay, but I think the time has come where the Members of the other body need to do their own advocacy and not let their staff assistants handle the legislation. These staff people did not have the burden and inconvenience of running for public office. They do not represent America and the time for unelected staff in the other body playing a major role in conference policy decisions has got to end and that is another matter I plan to inform the American people about on this issue.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 1 minute to the gentleman from Alabama (Mr. BUCHANAN).

Mr. BUCHANAN. Mr. Speaker, I, too, join in commending the committee for its work and leadership and will support this conference report.

I wish to call the attention of the Members to the continuing and critical problems of the steel industry. A mechanic's grease-covered hands are just as important to the economy as an accountant's, but are much harder to make and keep clean. The steel industry by its nature has pollution control problems. It has expended more than $3 billion on pollution control. This capital intensive industry has many old facilities that may be needed in the long-term for our economy and national security purposes. Its profits are at an all-time low. It faces real problems.

I think that unless there is rationality and reasonableness in enforcement, the committee may have to look toward future legislative relief. The municipalities can get extensions on a case-by-case basis under the April 1, 1979, deadline and as I understand it, some industry can as well, but I want to call the attention of the Members to the problems of this critically important industry.

When the House Steel Caucus was formed in September, the Members acknowledged that the caucus would have to deal with a broad range of problems facing the steel industry—including economic and environmental.

This important legislation should assure continued progress in cleaning and maintaining the Nation's water supply. However, I do feel compelled to point out that various provisions of this legislation will create serious problems for the steel industry—more restrictive regulations which will add to the costs of an already cost-burdened industry. Some of the more significant problem areas are:

THE 1977 BPT DEADLINE

The conference report does not face the real problem of the steel industry—the inability to achieve BPT for several years. Testimony before the House Committee on Public Works and Transportation showed that the problems of the steel industry are quite comparable to those of municipal plants, their costs are as great and time schedules for their solutions are equally as long. In spite of steel industry investments of over $3 billion to date for environmental control facilities, in spite of the steel industry spending over $500 million per year to operate and maintain those facilities, the tasks set for completion by July 1, 1977, cannot be completed in the time allotted by the conference report. Municipalities are provided extensions until 1982 or 1983, but the conference report includes no clear means of providing the comparable time required for steel to achieve BPT.

THE 1983 BAT DEADLINE

The conference report extends for 1 year, from 1983 to 1984, the deadline for attaining BAT, and provides limited waivers for "conventional" pollutants. It quite properly puts the emphasis in future controls on toxic pollutants. However, the classification of an extensive new listing of substances as "toxic"—an action not taken in either the House or Senate versions of the bill—and denial of any waiver with respect to these materials can lead to new regulations more restrictive than any previously contemplated.

PRETREATMENT

The conference report provides that the treatment capability of the publicly owned treatment plant be considered in pretreatment requirements. The inclusion of requirements relative to the "toxic" pollutants, however, may take away any incentive or advantage from pretreatment.

BEST MANAGEMENT PRACTICES

Inclusion of practices required as best management practices in NPDES permits, and the requirement that they include consideration of the list of "toxics" will greatly complicate the permit process and monitoring requirement, and may well lead to EPA intrusion into plant operations.

Mr. Speaker, in light of these problems which can affect the steel industry and, we believe, other industries as well, I have some question concerning these provisions and am concerned about their eventual implementation.

I note, Mr. Speaker, that the recent report on the domestic steel industry from Treasury Under Secretary Solomon to the President mentions that the Environmental Protection Agency will conduct a regulatory review to determine the possibility of achieving our goals for a cleaner environment at a reduced economic cost if there are certain changes in the regulatory process. I urge that this study be done within 6 months and that it pay particularly close attention to the economic impact on the steel industry of the new regulations that will spring from H.R. 3199.

The Steel Caucus will also continue to review the necessity for legislative relief from onerous environmental regulations.

Mr. DON H. CLAUSEN. Mr. Speaker, I yield 30 seconds to the gentleman from Ohio (Mr. MILLER).

Mr. MILLER of Ohio. Mr. Speaker, back in 1972 I was a member of the Public Works Committee when it considered this legislation we are extending and modifying today. Subsequently, I was also a conferee on the legislation.

During those long deliberations in committee and in conference, I was concerned with the factors that would be used to assess best practicable control technology, best available control technology and new source standards. My concern was that by imposing these technologies we would perhaps be solving one environmental problem only to create or make worse another by the same action.

For example, to meet effluent limitations, great amounts of energy, particularly electricity, are needed to process, vacuum, heat, cool, pressurize, or centrifuge water in order to remove the effluent before discharge.

To generate that electricity, more coal would have to be mined, creating new demands for more strip mining, and more coal would have to be burned, causing added air pollution and sludge disposal problems.

It appeared at that time then that we would have to look at the balance sheet and make sure that what we would mandate would cause a net environmental gain rather than merely transferring one environmental problem to another area. Recognizing this potential problem, the House insisted that energy requirements be recognized as a factor or basis for setting effluent limitations for existing sources under the requirements for July 1, 1977, and July 1, 1983, and for new sources. That language was agreed to and made part of the 1972 act. The EPA Administrator, therefore, has been required for the past 5 years to take into account energy requirements, as one factor in determining the measures and practices available to comply with sections 304(b)(1)(B), 304(b)(2)(B), and 306(b)(1)(A).

The legislative history clearly shows that the Congress expected the Administrator to consider air pollution impact of increased energy requirements for improved water quality control but also the "full impact of the energy crisis facing the United States."

That crisis has deepened since 1972 making it even more incumbent on EPA to give added consideration to the effect its technology assessments may have on the country's energy needs. I submit to those then who will carry out the congressional intent of this act that cleaning up our Nation's water does not exit in a vacuum removed from other environmental, economic, and energy concerns. I would expect then that the Administrator will be more cognizant, more discerning in tying together the country's environmental and energy needs.

Mr. AMBRO. Mr. Speaker, while I strongly support the major thrust of the Clean Water Act of 1977—the authorization of billions of dollars for the sewage treatment grant program—I am gravely disappointed with several of its other key provisions. I will support this measure because a nay vote would be misconstrued by those who do not fully understand the ramifications of the legislation, but I cannot do so without stating my reservations.

The most injurious section of the conference report is the so-called 404 wetlands provision. The congressional district I represent, which is a part of Long Island and bounded by water on both north and south, will be severely affected by the new provision. Initially, the concern of people interested in protecting the wetlands was that the definition for "navigable waters" might be tightened. The definition remains fundamentally unchanged, but the language of the conference report will almost surely serve to destroy many of our most valuable, ecologically productive systems. In the name of saving time, the U.S. Army Corps of Engineers will now be able to issue "general" permits on a State, regional, or nationwide basis, essentially giving a State control over the wetlands. Without close supervision from either the corps or the Environmental Protection Agency, we will almost certainly see economically expedient activities, such as construction, development, and even some dumping, take precedent over the preservation of the ecological sensitive and valuable wetlands.

Equally distressing is the provision within the conference report to extend deadlines and expand criteria obligations. Several times this year—in the instances of ocean dumping and clean air—we have seen Congress extend deadlines to pacify howling industries. Now we see it once again in this bill. Either the deadlines Congress establishes are meaningful or they are not; apparently to most Members of this Congress they are not. Environmental protection is not a goal to be leisurely attained; it is a prerequisite to our continued existence. Rather than penalizing noncompliers, Congress simply extends deadlines, weakens standards, and then compliments itself for a job well done. Quality of life and life itself are both at stake. How long before Congress begins to behave in a manner that shows signs of a sense of urgency?

Not to end on a pessimistic note, I should add that I am pleased with some provisions of the bill. As stated before, the sewage treatment grant money is essential to cleaning up our water. I am also encouraged by the 75-percent innovative technology provision and the deadlines set for the Environmental Protection Agency to establish standards for toxic substance presence in water. But I cannot help but hope that in the future we will produce legislation that is actually worthy of the title bestowed on this one—clean water.

Mr. LEHMAN. Mr. Speaker, when the House passed H.R. 3199 on April 5, I voted against it because it represented an environmentally unsound approach to solving the problems of water pollution. I am pleased to see that the House version has been substantially modified in conference. While I am not completely satisfied with the final result, I now feel that I can support it because of important changes that were made.

One of my primary concerns was the weakening of the authority of the Corps of Engineers over dredge and fill activities in our Nation's wetlands. The conference report fortunately recognizes the importance of protecting the wetlands. As I mentioned in the House debate on this bill last April, wetlands provide us with $140 billion worth of flood protection and water purification services. I also noted that the wetlands in the United States had diminished by 50 percent over the last 200 years.

Although it is gratifying that the conferees kept the broad jurisdiction of the corps over the wetlands, it was disappointing that they chose to exempt Federal projects from 404 permits. I only hope that this exemption will not cause too much unnecessary damage to our precious wetlands.

I also had serious reservations about the cleanup deadline extensions contained in H.R. 3199. I was concerned that no good faith attempts to comply with previous deadlines would be required before granting an extension. The conference committee has agreed to much stronger language than that originally contained in the House bill, and we will avoid rewarding municipalities and industries for their blatant disregard of Federal mandates.

I realize that the purpose of conference committees it to work out a reasonable compromise between differing versions of legislation. Because the final form of this bill is a compromise, I find that I still disagree with some of the provisions. For example, the decision to give States sole authority over priorities for federally funded projects could well result in wasteful efforts. There should be some assurance that the States have the competence and resources to carry out this responsibility.

Finally, I would like to comment on the oil spill liability provision. This is of special importance to my district in south Florida because of its coastal nature. I strongly support the extension of liability for oil spill cleanup to 200 miles off the coast. I note also that the limits of liability has been raised from $14 per gross ton to $150. This represents a big step in the protection of coastal States which could suffer much damage from oil spills.

Mr. Speaker, I believe I can support this conference report. It is not the best possible bill we could have, but it is a good compromise and a considerable improvement on the legislation which passed the House on April 5.

Mr. WAMPLER. Mr. Speaker, I generally support the "agricultural cost sharing" provisions contained in this conference report. However, had this bill been either jointly or sequentially referred to the Agriculture Committee, I would have preferred more explicit language with respect to the manner in which the Department of Agriculture administers the section 35 program at the local level.

The provisions of section 23 of S. 1952, the Senate version of the Clean Water Act of 1977—Section 35 of the conference report—clearly fall within the jurisdiction of the Committee on Agriculture in my opinion. Conservation activities carried out by the Soil Conservation Service, under the Soil Conservation and Domestic Allotment Act and others, are a primary responsibility of the Committee on Agriculture, and section 35 is similar to ongoing programs, such as the agriculture conservation program and the Great Plains conservation program.

In addition, the Soil and Water Resources Conservation Act, which is an effort to provide better coordination and direction to the conservation activities of the Department of Agriculture, was passed by the House and the Senate and signed into law (Public Law 95-192) on November 18, 1977.

In consideration of these circumstances, the Subcommittee on Conservation and Credit held a public hearing on September 16, 1977, on H.R. 8150, the Agricultural Water Quality Act, which is similar to section 35 of the conference report.

Recognizing the interest of the Committee on Agriculture, the Committee on Public Works has been most cooperative in listening to our comments on those portions of the bill—including portions which might affect eastern hardwood forests—where we have a legitimate interest.

However, I consider that it may still be important to point out that the Agricultural Stabilization and Conservation Service has traditionally handled the administration of programs involving soil conservation practices, insofar as they related to applications, justifications, parceling out of funds, et cetera. Under this system, local ASCS committee members made judgments on entitlements, et cetera, rather than having those decisions made in Washington, D.C., by people unfamiliar with local problems.

On the other hand, the Soil Conservation Service traditionally has provided technical services, verification, and acceptance of projects and managed compliance because of the technical nature of the work performed.

I trust that our Committee on Agriculture will observe closely how this bill and its practices and programs are administered vis-a-vis our current agricultural conservation practices program. After the section 208 program—and perhaps those portions of the section 404 program relating to normal silviculture practices—is implemented, committee oversight hearings would appear to be in order to determine how the program is proceeding toward meeting the needs of farmers, ranchers, and foresters.

Mr. Speaker, I also wish to state that I support the conference report's exemption of normal farming, forestry, and ranching activities from section 404 permits. I want to make it clear, however, that in accepting this approach, I do not accept the conclusions of the Senate committee report concerning even-aged management of eastern mixed hardwoods. In 1972, and again in 1976, Congress held extensive hearings, with expert witnesses, on the subject of forest management and clearcutting. In both cases, Congress rejected the prohibition of, or permit requirements for, clearcutting of eastern mixed hardwoods.

Last year, the Congress rejected a proposal to ban or require permits for clearcutting on the 92,000,000 acres of National Forest timberlands. This year the Senate committee report could be interpreted to ban or require permits for clearcutting on the 254,000,000 acres of eastern mixed hardwood timberlands in both public and private ownership in every State east of the 10th meridian. This could cripple forest management in the Southern States, the Northeast, the Midwest, and the Lake States.

In my State of Virginia alone, there are 12,600,000 acres of eastern mixed hardwoods. Many important hardwood species such as aspen, birch, black cherry, walnut, and hickory are difficult, if not impossible, to regenerate without clearcutting. In Virginia 700,100 board feet of hardwood sawtimber is harvested each year. Much of this lumber is from species that cannot be regenerated without using clearcutting as a silvicultural technique. The House cannot condone the Senate committee report in this regard.

I emphasize that the vast majority of the 20,000 forestry professionals in the United States recognize that clearcutting or even-aged management is an appropriate practice when properly applied. Both the National Association of State Foresters and the Society of American Foresters sent resolutions to the Conferees urging them not to accept the Senate committee report language. I agree with these statements by professional foresters and reject the Senate committee report language on the subject.

In conclusion, I wish to compliment my colleagues Messrs. ROBERTS and CLAUSEN for their hard work in putting this legislation together, as well as for accommodating some of the agricultural interests in this bill which were pointed out to the conferees.

Mr. STARK. Mr. Speaker, I rise in support of the conference report on the Clean Water Act of 1977, and wish to commend the conferees on a job well done. I would also like to comment on my understanding of section 404, subsection (r)—the Federal projects exemption provision.

Subsection (r) provides a limited exemption from Federal and State permit programs for discharges of dredged or fill material to construct Federal projects specifically identified by Congress when authorized. If the procedural and substantive requirements of subsection (r) are satisfied, such discharges shall not require permits under this section, or under State permit programs approved pursuant to section 404 or section 402 of the Clean Water Act of 1977.

The exemption provided by this subsection applies only to discharges that are an integral part of constructing a Federal project which has been reviewed and approved by Congress. Federal projects include only those conducted by a Federal agency and by such contractors as the agency may employ. The conferees did not intend to exempt other discharges which may be associated generally with constructing Federal projects, but which are ancillary to the specific activity submitted to and approved by Congress. For such ancillary discharges, the full section 404 review and approval procedures shall be applied by the Secretary and the Administrator unless other exemptions are applicable. The conferees did not intend to exempt federally assisted projects from the section 404 review. The conferees did not intend to exempt maintenance dredging from the 404 review process.

In order to qualify for the exemption, an adequate environmental impact statement on the project must have been submitted to Congress prior to authorization of the project or appropriation of construction funds and, in all cases, prior to the actual discharge of dredged or fill material at any particular site. The statement must satisfy the requirements of NEPA and include complete information on the effects of the proposed discharge. Moreover, the guidelines developed by the Administrator under section 404(b)(1) must be fully complied with in developing and assessing such information.

Congress must have adequate siting, engineering, and environmental information and analysis on each proposed Federal project, as well as modifications recommended by reviewing agencies, in order to review the available alternatives to and potential adverse impacts of the proposed discharges, to weigh those impacts and alternatives against the benefits of the project. The Administrator will be expected to see that the section 404(b)(1) guidelines are sufficiently explicit to focus attention on those aspects of Federal dredge and fill material discharges that could result in environmental degradation caused by the construction of new projects. And the Administrator must assist other agencies by carefully reviewing draft environmental impact statements to insure that the guidelines are being interpreted and implemented properly.

Mr. DINGELL. Mr. Speaker, I am deeply disappointed in the conference report accompanying H.R. 3199. It is clear to me that the Conference Report weakens the 1972 provision of the Federal Water Pollution Control Act. It is, in my judgment, a step backwards. In particular, I am concerned that the conference report does not clearly use all of the goals established in 1972, but allows a retreat. It also does not provide for the protection established in 1972 for our Nation's dwindling supply of wetlands.

My concern is heightened by the fact that EPA, headed by Mr. Costle, has apparently introduced this legislation. This is the same Mr. Costle who several months ago championed what I consider a strong Clean Air Act. He was quite vocal and vigorous in his effort to enact clean air legislation which would penalize in many cases the auto industry and people who work in the industry. But, he has not been as vocal or vigorous in efforts to enact strong and effective clean water legislation in this Congress. In fact, he has been strangely silent indicating that he is a one issue person and does not want to buck the establishment unless all his associates are firmly behind him. In my judgment, Mr. Costle has let the American people down by failing to point out the vast deficiencies of this legislation.

At the same time, I want to commend my colleagues on the conference for many other improvements in the legislation under the 1972 statute. I only wish that those improvements were sufficient to outweigh some of the weakening positions that Mr. Costle has failed to object to. I am sure that if Mr. Costle had made his views known with vigor, my colleagues would have heeded him.

As former chairman of the Fisheries, Wildlife Conservation and the Environment Subcommittee of the Committee on Merchant Marine and Fisheries and as a current member of that committee, I am heartened at least by the fact that Members did not see fit to amend or in any way affect the Fish and Wildlife Coordination Act which has been a bulwark of protection for our Nation's fish and wildlife since 1958. The legislation quite properly does not do damage to that Act which, of course, is within the jurisdiction of the Merchant Marine and Fisheries Committee and not within the jurisdiction of the Committee on Public Works and Transportation.

In regard to section 404 of the 1972 act as amended by this conference report, I cannot say that I am delighted with the results. I personally do not think that transferring permit authority to the States in this regard is sound. This is not the same thing as a discharge of pollutants from a point source which is covered in section 402 of the 1972 act. This is the dumping of dredge material and fill in our Nation's waterways and most importantly in our estuaries and wetlands which are important to our fish and wildlife resources, and, yes, to pollution control. The States have shown a remarkable penchant toward development of these valuable and irreplaceable wildlife resources. It was not until the 1899 Refuse Act and section 404 that the States began to take heed of the need to protect these valuable resources. It is important, however, to note that the Fish and Wildlife Service will have an opportunity to comment on these permits when issued by any State in the same manner and to the same extent that they do now comment on proposed permit applications under the Fish and Wildlife Coordination Act. The conference report provides at least 90 days for the Fish and Wildlife Service to make their comments known not only to the States but also to the Environmental Protection Agency and, of course, to the public. The legislation does not preclude the Fish and Wildlife Service when it deems appropriate to meet with and discuss and to develop conditions regarding the permit applications. It is particularly important that the negotiation process is not unduly restricted to the 90-day parameter. This is crucial because, as we all know, information about these invaluable wetlands is not always readily available and it will take time in so many instances for the Service to receive the necessary and pertinent information and to make responsible judgments.

In conclusion, I want to say that I again deeply regret that more time was not provided to work out better legislation than is before us today.

Mr. STUMP. Mr. Speaker, as a member of the conference committees on the Federal Water Pollution Control Act amendments, I believe the chairman of the House Committee on Public Works and Transportation, the gentleman from California (Mr. JOHNSON) and the chairman of the Subcommittee on Water Resources, the gentleman from Texas (Mr. ROBERTS) should be commended for their leadership in constructing the remedies necessary to correct the conflicting interpretations and unsatisfactory experiences under the existing act. H.R. 3199, as revised and reported by the conference committee, moves to create a balance between environmental needs and economic realities.

In 1972 Congress established a mechanism to evaluate the legislation and to recommend the necessary and appropriate mid course corrections. One of the important corrections is for irrigated agriculture which desperately needed exemption from certain permit monitoring and control requirements. The conference report makes that change by providing that irrigation return flow will no longer be dealt with as a point source discharge of pollution. This change will eliminate the Federal requirement of a NPDES permit without restricting the States from taking action if local conditions require it. Under this section, the Federal initiative in controlling any pollution from irrigation return flows is clearly and correctly focused through the Areawide Waste Treatment Management process. This step should assure, among other things that dry arroyas or local irrigation systems are not confused with the major tributaries and navigable waters of the United States.

In addition, regulatory restrictions of the section 404 Dredge and Fill permit program are removed from the many normal agricultural operations. This action will permit agriculture to continue its operations with reasonable consideration for its use of water.

During a recent trip through my district, I found many of the small communities concerned with the establishment of an efficient sewer system. This bill also provides a practical vehicle to assist these communities in establishing efficient sewer systems at a reasonable cost to the community.

At a time when the Congress of the United States is all too often criticized for being neither responsive to nor responsible in allowing unprecedented excursions by the National Government into the prerogatives of State and local governments, this legislation is a responsive and responsible solution. It is particularly satisfying to support adoption of the conference report on H.R. 3199.

Mr. HARSHA. Mr. Speaker, I believe that the agreement reached by the conferees on the amendment to section 404 is a compromise with which all interested parties should be pleased.

I believe it appropriate to remind the Members that when the 1972 amendments were enacted, Congress defined the term "navigable waters" to mean "waters of the United States including the territorial seas." The jurisdiction of the 404 program is not something that was established by the courts. The Congress of the United States established that definition.

In my judgment, the problems resulting from the 404 program have resulted not from the definition of "navigable waters" but from the implementation of the program. As many of you may recall, the gentleman from New Hampshire, Mr. CLEVELAND, and myself offered an amendment to 404 which was intended to address these problems with the program's implementation. Unfortunately the amendment was rejected. However, I believe that the conference substitute does contain not only an improvement on the amendment offered by Mr. CLEVELAND and myself but will, in fact, result in a simplification of the 404 process while accomplishing the environmental objectives mandated by Congress.

The conference amendment recognizes that the States should be responsible for controlling the discharge of dredge or fill material in State waters that do not involve interstate or foreign commerce. In the past, one of the greatest concerns of allowing the States to assume the 404 program was that they would not be able to implement the program due to a lack of funds. The conference substitute allows for financial assistance under the State management assistance provision which is contained in section 26 of the conference report.

It is the intent of the conferees that any State permit program for the discharge of dredged or fill material approved by the Administrator must have demonstrated itself capable of accomplishing the same objectives as the Federal permit program. The State program must include enforcement authority comparable to the Federal program, adequate resources including staff and funds, and insure full and complete coordination with all related Federal, State and local programs. A State permit program must include substantive decision making criteria at least as stringent as 404(b) guidelines, and should provide adequate education for applicants and followup procedures to insure compliance with the permits that are issued.

In addition, it is imperative that the State permit program be fully coordinated with other processes, requirements and program elements that control pollution that alters the chemical, biological and physical integrity of the Nation's aquatic resources.

The amendment recommended by the conferees also recognizes that the genuine environmental objectives of the 404 program will not be compromised by the exemption of certain activities. These exemptions clarify that the activities that do not involve point source discharges are exempt as well as specifically listed activities that may involve minor discharges that will be controlled by best management practices. The conferees have clarified that plowing, seeding, cultivating, harvesting, minor drainage and soil and water conservation practices performed on uplands were not intended to require 404 permits.

New subsection (f) of section 404 provides that Federal permits will not be required for narrowly defined activities specifically identified in paragraphs A–F that cause little or no adverse effects either individually or cumulatively. To assure that the extent of these exempted activities will not be misconstrued, paragraphs (f)(1) (D) and (E) and (f) (2) provide common sense limitations to protect the chemical, biological, and physical integrity of the Nation's waters. While it is understood that some of these activities may necessarily result in incidental filling and insignificant harm to aquatic resources, the exemptions do not apply to discharges that convert more extensive areas of water into dry land or impede circulation or reduce the reach or size of the water body. For the same reasons, 404(f)(1)(E) provides that farm and forest roads are to be constructed and maintained in accordance with best management practices, promulgated by the Corps of Engineers, to minimize adverse effects that may occur when water is displaced by fill material. I support these exemptions with one reservation. I am concerned that Federal projects which have a substantial impact on wetlands should not be exempted from the 404 program. However, I was in a minority in my viewpoint on this issue and the conferees chose to adopt an exemption for all Federal projects which were specifically authorized by Congress if the impacts of the dredge and fill activity were addressed in an environmental impact statement submitted to Congress either prior to the authorization of the project or appropriation of funds for construction. I believe it is appropriate to point out that this provision is limited only to those projects specifically named by Congress in legislation which is enacted by vote of both bodies of Congress. It does not include federally assisted projects nor projects authorized by committee resolution. These must still apply for a 404 permit. I would remind the Members that the provision relating to federally assisted projects was specifically deleted from the Federal projects exemption by the conferees.

Finally, I would like to comment on the amendment to section 208 of the act which would allow certain categories of activities to be regulated under the 208 areawide management program. The new 208 program is a supplement to the 404 program and is intended to complement and be coordinated with an approved State 404 permit program. The 208 program is not a substitute for the 404 program as most discharges of dredged or fill material require a case-by-case review through a permit process and it is not intended that activities conducted under a best management practice be required to obtain an individual permit. Activities that involve discharges of dredged or fill material that impair the flow or circulation of navigable waters or replace water with dry land will normally require individual permit review. For example, case-by-case permit review is necessary to minimize adverse effects from most channelization and real estate development fills. Moreover, the conferees agreed that a permit should always be required where toxic substances are involved. A case-by-case permit review would not be required for narrowly defined activities that cause little or no adverse effects either individually or cumulatively, including those activities narrowly defined in 404 (f)(1)(A–F).

A State must have a permit program approved under section 404 and a statewide regulatory program approved under 208(b)(4) before the Administrator can approve any best management practices submitted by the Governor for appropriate activities. Any best management practice must be included in State laws or regulations prior to its final approval by the Administrator.

The Administrator cannot approve best management practices to replace the State's permit review process in its entirety as only certain activities are appropriate for best management practices. A best management practice might be an acceptable method of control for activities that are similar in nature and that cause no more than minimal harm to the environment either individually or cumulatively. Best management practices are appropriate for controlling farm roads, logging roads, temporary mining roads, stock ponds, farm ponds and maintenance of existing fills. Pest management practices are not appropriate as the sole means of controlling activities if the impact varies according to location so that the test of "minimal adverse affect" is not met or where advanced permit-type review is necessary to assure that the discharge is conditioned to protect the environment. It is expected that best management practices would be approved only for those activities which are likely by their nature to be conducted in compliance with a management practice.

The 208 agencies should continue to concentrate on areawide management pollution and on nonpoint sources of pollution that degrade critical aquatic areas rather than attempt to duplicate 402 and 404 permit programs that control point sources of pollution.

The Administrator must insure that best management practices are specific enough to inform each person conducting an activity what is specifically required of him. Where appropriate, a best management practice would require notice to the designated State agency in advance of discharge.

The conferees expect that this 208 process will include an activity enforcement program with demonstrated capability and adequate resources.

Mr. DON H. CLAUSEN. Mr. Speaker, I reserve the balance of my time.

Mr. ROBERTS. Mr. Speaker, I have no further requests for time.

Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. DON H. CLAUSEN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 346, nays 2, not voting 86, as follows:

Mr. Le Fante with Mr. Anderson of Illinois.

Mr. Burleson of Texas with Mr. Burke of Florida.

Mr. Pike with Mr. Cederberg.

Mr. Santini with Mr. Marlenee.

Mr. Chappell with Mr. McCloskey.

Mr. Breaux with Mr. Michael O. Myers.

Mr. Mollohan with Mr. Harsha.

Mr. Beilenson with Mr. Armstrong.

Mr. Wolff with Mr. Lent.

Mr. Conyers with Mr. Don H. Clausen.

Mr. Metcalfe with Mr. Pursell.

Mr. Neal with Mr. Rinaldo.

Ms. Burke of California with Mr. McEwen.

Mr. Baucus with Mr. Symms.

Mr. Traxler with Mr. Dickinson.

Mr. Risenhoover with Mr. Whalen.

Mr. Phillip Burton with Mr. Forsythe.

Mr. Ryan with Mr. Aspin.

Mr. Shipley with Mr. Quie.

Mr. Burlison of Missouri with Mr. Badillo.

Mr. Hefner with Mr. Krebs.

Mr. Nix with Mr. Roncalio.

Mr. Gammage with Mr. Ichord.

Mr. Holland with Mr. Lujan.

Mr. Carney with Mr. Wiggins.

Mr. Beard of Rhode Island with Mr. Maguire.

Mr. Hall with Mr. Sisk.

Mr. Fuqua with Mr. Bob Wilson.

Mr. Ottinger with Mr. Pettis.

Mr. Fithian with Mr. Udall.

Mr. Fary with Mr. Winn.

Mr. Meeds with Mr. Yates.

Mr. Long of Pennsylvania with Mr. Van Deerlin.

Mr. Koch with Mr. Ruppe.

Mr. Harkin with Mr. Pepper.

Mr. Dent with Mr. Andrews of North Dakota.

Mr. Akaka with Mr. Bonker.

Mr. Bedell with Mr. Cavanaugh.

Mr. Ford of Tennessee with Mr. Mathis.

Mr. Lundine with Mr. Smith of Iowa.

Mr. Panetta with Mr. Teague.

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

DIRECTING THE CLERK TO MAKE A CORRECTION IN ENROLLMENT OF H.R. 3199, CLEAN WATER ACT OF 1977

Mr. ROBERTS. Mr. Speaker, I send to the desk the concurrent resolution (H. Con. Res. 444) directing the Clerk to make a correction in the enrollment of the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes, and ask unanimous consent for its consideration.

The Clerk read the title of the concurrent resolution.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection?

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 444

Resolved by the House of Representatives (the Senate concurring), That in the enrollment of the bill H.R. 3199 the clerk is directed to make the following correction: in subsection 208(j)(1) of the Federal Water Pollution Control Act as added by Sec. 35 of the conference report insert after the word "contracts" where it first appears the following: ", subject to such amounts as are provided in advance by appropriation acts,".

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR PAYMENT OF GRATUITY TO MARGARET WOODWORTH, WIDOW OF LAURENCE N. WOODWORTH

Mr. ULLMAN. Mr. Speaker, I offer a privileged resolution (H. Res. 936) providing for payment of a gratuity to Margaret Woodworth, widow of Laurence N. Woodworth, and ask unanimous consent for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 936

Resolved, That there shall be paid from the contingent fund of the House as a gratuity to Margaret Woodworth, widow of Laurence N. Woodworth, a sum equal to the annual compensation which was payable by the House to the said Laurence N. Woodworth as Chief of Staff of the Joint Committee on Taxation. Such annual compensation shall be determined by reference to the monthly rate for such position in effect for December 1976.

The SPEAKER. Is there objection to the request of the gentleman from Oregon?

Mr. CONABLE. Reserving the right to object, Mr. Speaker, I do so to ask the gentleman to explain the resolution.

Mr. ULLMAN. Mr. Speaker, will the gentleman yield?

Mr. CONABLE. I yield to the gentleman from Oregon.

Mr. ULLMAN. Mr. Speaker, I thank the gentleman for yielding.

Larry Woodworth died an untimely death last week. He virtually gave his life to public service. He served with the Congress for 33 years, and I think he touched the lives of more of us and more of the people of this country during his public service as a staff director of the Joint Committee on Taxation than any other public official whom I have known.

Mr. Speaker, a year ago a number of us talked him into moving from the Hill down to the Treasury Department where he became Assistant Secretary of the Treasury for Tax Policy. If he would have stayed, his widow would have been eligible for the bequest that is granted to those who die during their public service with the House of Representatives.

As it is, she is ineligible. This resolution merely makes her eligible for the annual compensation due her under the gratuity that we always give survivors of employees of the House. This would make her eligible on the same basis as if he had stayed here, except based on the salary that he was receiving at the time he left.

Mr. THOMPSON. Mr. Speaker, will the gentleman yield?

Mr. CONABLE. I am happy to yield to the gentleman from New Jersey (Mr. THOMPSON).

Mr. THOMPSON. Mr. Speaker, both of my colleagues, the chairman, the gentleman from Oregon (Mr. ULLMAN) and the gentleman from New York (Mr. Conable) have discussed this matter with me and I am a cosponsor with my two distinguished colleagues on this resolution. I think it is only fair and equitable for the facts are that the deceased worked so diligently and so hard that his death was, in all truth, untimely and was, I am sure, hastened by his responsibilities which we persuaded him to undertake. I would therefore hope that there would be no objection so that this equity may be done.

Mr. CONABLE. Mr. Speaker, I thank the two distinguished gentlemen for their expressions in favor of this measure. Larry Woodworth worked for the Joint Committee on Internal Revenue Taxation for more than 30 years performing in a central capacity and in a manner which I believe earned him the respect of the Members of this body and the other body. He is indeed central in the planning of our tax laws. He was one of the most highly skilled tax experts in this country, and a person who could have made a great deal more money in some other position had he wished to leave the service of the Government.

He pursued his course here with selflessness and with extreme hard work and determination. Under the circumstances, I believe it is entirely appropriate that we make an exception to the rule, because of the length of time he worked for the Congress, because of the fact that he had only just recently left and continued to have a very important role in communication with the Congress.

Mr. THOMPSON. Mr. Speaker, will the gentleman yield further?

Mr. CONABLE. I am happy to yield further to the gentleman from New Jersey.

Mr. THOMPSON. Mr. Speaker, I would just like to add that I think all of us in appreciation for the more than 30 years he spent here, and for the work that he was doing when he died, would wish to accompany this resolution with our deepest and most sincere condolences to his widow and family.

Mr. CONABLE. I am sure the gentleman from New Jersey expresses the feelings of this entire body.

Mr. THOMPSON. I thank the gentleman for yielding.

Mr. CONABLE. Mr. Speaker, I withdraw my reservation of objection.

Mr. STEIGER. Mr. Speaker, the tragic and untimely death of Larry Woodworth came as a very real shock to me. It is a loss to all who are concerned with public policy in the United States.

Few men have had the opportunity that Larry Woodworth has had in his lifetime to be a significant partner in the development of tax and economic policy for the United States. Larry was a man of warmth, good humor, sensitivity and tremendous intellect.

For Janie and for me it is a personal loss because of his warmth to us. To the President of the United States and to the Secretary of the Treasury, his service as the Assistant Secretary of the Treasury for Tax Policy was a compliment to the President's efforts in the development of tax reform. He will be difficult to replace.

He played an invaluable role, whether as the Chief of Staff with the Joint Committee on Taxation or as Assistant Secretary, because of his knowledge of the players, knowledge of the code and an incredible breadth of experience and ideas. Larry Woodworth served his community of Cheverly, his church, his family and his country as one of the most distinguished public servants.

Janie joins me in extending our deepest sympathy to his wife, Margaret, and to their children.

The SPEAKER pro tempore (Mr. Evans of Colorado). Is there objection to the request of the gentleman from Oregon?

There was no objection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a concurrent and a joint resolution of the House of the following titles:

H. Con. Res. 442. Concurrent resolution providing for the sine die adjournment of the first session of the Ninety-fifth Congress; and

H.J. Res. 674. Joint resolution relative to the convening of the second session of the Ninety-fifth Congress, and for other purposes.

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 5322. An act to provide duty-free treatment for istle.

GENERAL LEAVE

Mr. ULLMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject matter of the resolution we agreed to a moment ago.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oregon?

There was no objection.

RECESS

The SPEAKER pro tempore. Without objection, the House will stand in recess until 1:15 o'clock.

There was no objection.

Accordingly (at 12 o'clock and 55 minutes p.m.), the House stood in recess until 1 o'clock and 15 minutes p.m.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker pro tempore (Mr. Evans of Colorado) at 1 o'clock and 15 minutes p.m.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF CONFERENCE REPORT ON H.R. 9346, SOCIAL SECURITY AMENDMENTS OF 1977

Mr. PEPPER, from the Committee on Rules, submitted a privileged report (Rept. No. 95-839) on the resolution (H. Res. 937) providing for the consideration of the conference report on the bill (H.R. 9346) to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes, which was referred to the House calendar and ordered to be printed:

Resolved, That immediately upon the adoption of this resolution it shall be in order to consider, any rule of the House to the contrary notwithstanding, the conference report on the bill (H.R. 9346) to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes, said conference report shall be considered as having been read, and all points of order against said conference report are hereby waived.

Mr. PEPPER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 937 and ask for its immediate consideration.

The Clerk read the resolution.

The SPEAKER pro tempore. The gentleman from Florida (Mr. Pepper) is recognized for 1 hour.

Mr. PEPPER. Mr. Speaker, I yield 30 minutes to the able gentleman from Illinois (Mr. Anderson), and pending that I yield myself such time as I may consume.

Mr. Speaker, this resolution provides for the consideration of a conference report on the Social Security Amendments of 1977 (H.R. 9346). This rule will waive all points of order so that this most important conference report might be considered by the House of Representative.

Mr. Speaker, I need not remind my colleagues that this is one of the most important measures which has ever been before this House because it sustains and insures the hope of millions of Americans, who have no other source of income in their later years except what they derive from social security, that this fund is going to be a solvent fund and what we promised them is going to be delivered to them. This special feature will strengthen the social security system, not just for the immediate future, but far into the next century. While this may entail increases in the tax rates commencing in the coming year and through the last years of the century, and even beyond, the benefits afforded to our citizens dating back to my first years in the Senate during the New Deal era will be guaranteed. Among important provisions of the bill are the increase in earnings allowed for beneficiaries who are 65 years of age and older. This amount will be increased to $4,000 in 1978, and by yearly progressions, to $6,000 in 1982.

Additionally, the retirement income test will be lowered from age 72 to age 70 in the year 1982. Mr. Speaker, I need not hesitate to disclose that my own sentiments are that it would have been far better had we written a more generous provision for the recipients of social security without any diminution in social security benefits, but that will come in time. We shall keep fighting until we do assure that elderly people who are in retirement and who are the recipients of social security will be able to earn all they can when they are in the low-income brackets of our country.

The bill also includes welfare provisions and miscellaneous provisions, such as the duration-of-marriage requirements, which would reduce the period of time to 10 years from the present 20 years. That is a very meaningful provision to many of the people in my part of the country. Now, under this provision in the conference report, if a lady has been married to Husband A for as much as 10 years and then he passes away and she is deriving social security benefits through that husband, if she marries again and is married to Husband B, she will be able to continue to enjoy fully the social security benefits she derived previously under Husband A. That makes it possible for many people who are lonely to find love and companionship in their later years with another person of the opposite sex and insure that they will have a substantial increase in their joint income by their happy union. This will be more fully detailed, I am sure, by the distinguished chairman of the Committee on Ways and Means in further discussions of the conference report.

Mr. Speaker, I know that every Member of this House wishes to pay deserved tribute to the distinguished chairman of the Committee on Ways and Means, the gentleman from Oregon (Mr. ULLMAN), for the masterful manner in which he has persistently, ably, and wisely represented the House and represented the people of this country in the confirmation of this conference report. This legislation is vitally important to the long-term soundness of the social security system.

I have been asked by citizens, as I am sure many other Members of the House have: Is the social security fund dependable and sound?

My answer to that has been this: that if a Government bond or a dollar of the U.S. currency is good, then the social security commitments made by the Government of our country are going to be explicitly discharged according to the obligation. This bill assures that for many years into the future.

There is an increase in the social security tax, and that is graduated over a period of years. Parity is retained at the 50–50 level of contributions by employers and employees. I think all of us look forward to the time when we may be able to devise a better system of supporting and providing the funds for the social security program than the one in which the burden is put upon the payrolls of employers and upon the employees of this country.

But this is a necessary step in the direction of solvency and the soundness of the fund. These improvements can and will, I am assured, come in due course.

There is, moreover, an increase in the contributions relating to the benefits base that is phased in over 3 years, with no change for 1978 and with automatic adjustments after 1981.

In addition to the provisions I have mentioned, there are three studies authorized by this legislation. We are familiar, of course, with the study required by the Fisher amendment adopted by the House which will look at the feasibility of incorporating Federal employees into the social security system. Another study will be made which will determine precisely what legislation would be necessary to eliminate gender-based discrimination from the social security system. This study should take approximately 6 months, and additional legislation will certainly be recommended on this basis.

Mr. Speaker, it is my understanding that this legislation will commence a 25-year surplus for the Social Security Trust Fund, followed by a gradual decline in the reserves-to-benefits ratio. The able chairman of the Committee on Ways and Means has stated that the 75 year outlook is for a deficit of 1.46 percent, and that is well within correctable limits as demographic changes may dictate.

So, Mr. Speaker, we are offering to the American people, so many of whom depend upon social security for either all or part of their sustenance and support, an assurance that those funds will be available to be paid when they are due. I think we can also express the hope that, since we have made some improvements in this bill, additional improvements responsive to the sensitivity of this Congress to the needs of the people of this country, this legislation will prove more beneficial in the years to come.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from New York (Mr. CONABLE), the ranking minority member of the Committee on Ways and Means.

Mr. CONABLE. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I rise in opposition to this rule. It is not a bad rule in itself, although it does not reserve to the House the right of a separate vote on the nongermane amendments added by the Senate, some of which are controversial and many of which I believe should not be incorporated in a social security bill of this dimension.

Mr. Speaker, I believe that it would be wise to oppose the rule primarily because the Members should have more time to reflect on what they are doing to the economy of the Nation, to American business and to the American workingman. Also, Mr. Speaker, I think the Members should have time to reflect on the question of tax equity which the American people would like to think is the concern of their public representatives.

It seems to me that we have time to reflect further on the direction social security is taking, and we should take that time. Congress is not going to let the social security system fail. However, any measure like this, which adds a tax burden of this dimension, should be given ample opportunity for full debate and discussion.

We have substantial increases in both the base and the rate taking effect under existing law as of January 1, 1978. The bill adds greatly to that burden in successive years.

Mr. Speaker, the American people are going to be saddened by the extent to which this will affect their livelihoods and the fruits of their labors. In addition, it will discourage employment.

I would like to say that the conference has not done a bad job in trying to find a compromise between the two versions of the bill which were themselves disasters. A compromise between the two disasters is likely to be a disaster also, and that is what I think we have achieved in this monumental and difficult piece of legislation.

For that reason, Mr. Speaker, I hope the Congress will fall back and regroup, take some further time for consideration, and try to find a nontax alternative such as those proposed in the Republican substitute measures, which would reduce the added burden we are placing on the American people at this time.

Mr. Speaker, I yield back the balance of my time.

Mr. ROUSSELOT. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore. The Chair has recognized the gentleman from Illinois (Mr. ANDERSON).

Does the gentleman from Illinois wish to yield time?

Mr. ANDERSON of Illinois. Mr. Speaker, I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I thank my colleague for yielding.

I make the point of order that a quorum is not present.

The SPEAKER pro tempore. Does the gentleman from California (Mr. ROUSSELOT) move a call of the House?

Mr. ROUSSELOT. Mr. Speaker, I will be glad to move a call of the House.

CALL OF THE HOUSE

Mr. ROUSSELOT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

By unanimous consent, further proceedings under the call were dispensed with.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9346) entitled "An act to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes."

CONFERENCE REPORT ON H.R. 9346, SOCIAL SECURITY AMENDMENTS OF 1977

The SPEAKER pro tempore. The Chair recognizes the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself 11 minutes.

Mr. Speaker, I rise in opposition to the rule. This rule, which was approved just before noon today, provides that the conference report shall be considered as having been read and waives all points of order against the conference report.

I oppose this rule for several reasons. First, we are moving much too quickly on this important matter which affects nearly every American. We are being asked to consider a conference report that was filed just this morning. Indeed, the explanation of the conference agreement was made available only late yesterday afternoon. We are taking an unusual step, one which usually requires an extraordinary majority for passage, of considering a rule on the same day as reported from Rules Committee. Like lemmings in their annual rush to the sea, we are being asked to plunge into a new wave of taxes without giving more than 24 hours of thought to the consequences. To move more cautiously would, in my view, be prudent.

Second, I object to the indiscriminate waiver of all points of order on the conference report. Let me detail what this covers. Not only is this a waiver of the 3-day layover rule on conference reports, but it prevents points of order on two important substantive areas. First, in somewhat typical fashion, the other body attached five amendments dealing with welfare programs to the House bill. These are not minor amendments—one provides a $187 million payment to States for fiscal relief. Each of these amendments were, in some form, adopted by House conferees.

I would typically object to any acceptance of nongermane Senate riders, but in this case, I strongly object because of the availability of a more proper vehicle for these amendments. The other body has had, since June 15 of this year, H.R. 7200, a bill making numerous changes in the SSI and AFDC welfare programs. Have they chosen to act on this bill? Did they consider adding their desired welfare changes to our bill dealing with welfare? No, they have tacked on these important changes to our social security bill, a virtually unrelated matter. The House Members having jurisdiction over welfare were not able to consider changes—they were not conferees on the social security bill. I respect the rules of this body. This type of action strengthens my convictions that our rules requiring germaneness are important. Too important to be waived in this case.

A second proper point of order could be raised against this conference report. This concerns a Senate amendment converting temporary law judges to permanent status. The conferees agreed to the Senate amendment, but an objection was raised this morning in Rules Committee by the chairperson of the Subcommittee on Employee Ethics and Utilization, Congresswoman PAT SCHROEDER. This matter falls under her subcommittee's jurisdiction, yet she is not allowed, under the rule now before us, to seek to delete it. The provision is an unwise one, I contend, because it makes an end run around the merit system, allowing temporary employees to be given a permanent job without proving their competence.

Other points of order could be raised against the conference report—violations of the Budget Act, acceptance of matters outside the scope of the conference—but these are the most troubling to me.

Mr. Speaker, I oppose this rule finally because I believe consideration of the social security legislation should be delayed. And not just for a day or for a week to meet procedural obstacles. I would hope that this matter would be delayed until next year so that a more rational economic policy could be developed.

We are being asked to consider the immediate passage of a conference report that will raise $227 billion in more taxes over the next 10 years. At the same time, we are being asked to wait for income tax cuts that are intended to offset the payroll tax increases. In other words, the American taxpayers are not being asked to take the bitter with the sweet, they are being asked to take the bitter now and to wait for the vague promises of tax relief to be realized later. That, I submit, is a fraud upon the American people. Let us consider both measures in the same session of Congress. Let us mesh the two proposals together, or at the very least, consider them at roughly the same time. In this light, I remind my colleagues of the chaos we had prior to adoption of the Budget Act. Spending matters were considered willy-nilly with no overall plan. We have made significant progress in rationalizing that process. We should be mindful of that reform and act accordingly.

Mr. FRENZEL. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Minnesota.

Mr. FRENZEL. I thank the gentleman for yielding.

Mr. Speaker, one of these nongermane amendments is called fiscal relief for welfare costs. It apparently appropriates $187 million. As I understand the rule, we are not going to be allowed to vote on that provision separately by making a point of order, as we would normally be able to do under the rules of this House.

Mr. ANDERSON of Illinois. The gentleman is correct.

Mr. FRENZEL. My further understanding is that, of that $187 million, about 20 percent goes to California and about 20 percent goes to the State of New York. Can the gentleman verify those figures?

Of course, we do not have any information on that. And, of course, this rule will waive the 3-day period in which we can usually find something about even these mysterious conference reports.

Mr. ANDERSON of Illinois. Mr. Speaker, the gentleman is a distinguished member of the Committee on Ways and Means, which does have within its jurisdiction the bill that I referred to a few moments ago, H.R. 7200. I think in the projections that he has made with respect to those two States, the figures are probably accurate.

Mr. FRENZEL. Mr. Speaker, I must agree with the gentleman that this is an absolute outrage, that we are called upon to vote for a rule and to approve with a single vote five nongermane amendments. Those five amendments represent enormous decisions and enormous sums of the taxpayers' money which we are agreeing to proper consideration being given by this body.

I certainly subscribe to the gentleman's statement. I think the rule should be defeated out of hand.

Mr. ANDERSON of Illinois. Mr. Speaker, I thank the gentleman for his contribution.

Mr. Speaker, I yield 3 minutes to the gentleman from Pennsylvania (Mr. COUGHLIN).

Mr. COUGHLIN. Mr. Speaker, I understand that the sticking point on the social security conference was indeed the tax credit for education. I take this time to ask the distinguished chairman of the Committee on Ways and Means, if I could have his attention, this question:

I understand that in connection with the social security conference, commitments were made on the tax credit for education, and I would wonder if the distinguished chairman of the Committee on Ways and Means could explain those commitments.

Mr. ULLMAN. Mr. Speaker, if the gentleman will yield, there were no commitments. Commitments were offered in the process of trying to resolve the issue at an earlier date, but when we finally concluded the matter on last Friday there were no commitments made except this: That I stated that this is an issue which was one that had to be faced up to by the Congress in an orderly manner.

Certainly the chairman of the Committee on Ways and Means was going to attempt to be as responsive to the issue as he could and act appropriately. We will be able to hold hearings and proceed in an orderly manner in the consideration of the alternatives.

Mr. COUGHLIN. Mr. Speaker, could the distinguished chairman of the committee tell me when the hearings will take place? Is it possible that hearings could be held in January on the subject of educational tax credits?

Mr. ULLMAN. Mr. Speaker, if the gentleman will yield further, let me state that I made no commitments beyond what I have revealed.

Mr. COUGHLIN. Mr. Speaker, whether or not any hearings would be held on the subject of a tax credit for educational purposes, is it possible that there is a commitment to bring this to a vote on the floor of the House?

Mr. ULLMAN. No, there was no commitment.

Mr. COUGHLIN. It seems to me, Mr. Speaker, that since this tax credit for education has been under consideration by the Committee on Ways and Means for at least 7 years, to my knowledge, it is high time that it be brought to the floor for a vote.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself 2 minutes for the purpose of addressing a question to the chairman of the Committee on Ways and Means, the gentleman from Oregon (Mr. ULLMAN).

I have just been informed that in a commentary that was carried this morning on one of the national networks very serious charges of incompetence were made against some of the administrative law judges who are included in the nongermane Senate amendment on which we are waiving a point of order under this rule. Some of those people were challenged as being incompetent, and under this amendment they would be frozen into lifetime jobs at even a higher salary than the one they now enjoy.

I wonder if the committee chairman has heard that report or if any discussion of that matter was had in the conference committee when this amendment was adopted?

Mr. ULLMAN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Oregon.

Mr. ULLMAN. Mr. Speaker, let me inform the gentleman that I did not hear the report. I have no knowledge and no information whatsoever as to the charges that were levied. As far as I am concerned, there is certainly no validity to them at this point.

However, let me say that this is a matter that has been too long delayed. We have fallen too far behind in our hearings. I believe we have now established an orderly procedure for meeting the issue. We have delayed our actions as to the positions of these judges, and this bill merely says that they shall be converted to regular administrative law judges.

Relative to the ALJ provision in the bill, I would like to correct a distortion of our committee report—House Report No. 95-617, part 1—which was made at the Rules Committee this morning. It was stated that we are blanketing-in a bunch of incompetents and that the Ways and Means Committee report so acknowledges this. So for the purposes of the RECORD I would like the full report put in the RECORD to put the legislation in the proper perspective:

CONVERSION OF TEMPORARY ADMINISTRATIVE LAW JUDGES

PURPOSE AND SCOPE

The purpose of H.R. 5723 is to convert to regular Administrative Law Judges (ALJ's) the temporary ALJ's who were appointed under Public Law 94-202 to hear cases under title II, XVI, and XVIII of the Social Security Act through 1978. These hearings officers have been conducting hearings under the provisions of the Administrative Procedure Act (APA) in the same manner as regular ALJ's. It was the intention of your committee in 1975 that they generally would be converted to the same status, tenure, and compensation as regular ALJ's. Moreover, such a development is highly appropriate since they are doing the same work as regular ALJ's in an equally effective manner.

GENERAL DISCUSSION

This legislation is necessary because the Civil Service Commission has disregarded the legislative intent of Public Law 94-202, clearly expressed in the reports of the Ways and Means Committee and the Senate Finance Committee, that these hearings officers would be expeditiously converted to regular ALJ status with "great weight" being given to their extensive experience adjudicating the social security definition of disability. After over 19 months only a handful of hearing officers have been appointed to regular positions and not many more are on the Civil Service Commission current register. The turn down rate of temporary ALJ's by Civil Service is about 50 percent. This has very adversely affected the morale of this group of hearing officers at a time when the backlog of hearings cases is increasing. They are greatly concerned that their appointments will expire before they are qualified by the Civil Service Commission and have reason to feel discriminated against in that they are paid at a lower rate for work comparable to that of regular ALJ's.

One of the principal objectives of Public Law 94-202, signed by President Ford on January 2, 1976, was to make it irrefutably clear that Congress intended that SSI adjudications were under the Administrative Procedure Act and that SSI hearing examiners could hear all types of social security cases. The idea was that the Bureau of Hearings and Appeals in dealing with the "appeals crisis" should not be forced to operate within the straightjacket imposed by the 1973 Civil Service Commission's interpretation which the Ways and Means Committee and ultimately the Congress stated in enacting Public Law 94-202 was inconsistent with the intent of Congress when the SSI program was enacted.

The process of merit selection envisioned by your committee has not and is not taking place. The Civil Service Commission, Office of Administrative Law Judges, appears incapable of making a meaningful assessment of which of the temporary ALJ's would do effective jobs as regular ALJ's. Their current selection procedures are not so much based on a determination of an individual's ability, experience, and skills to do the job of a Social Security ALJ, but are based on (1) his previous GS-grade rating or his "status" as a private attorney as evidenced by the level of the court in which he may have appeared as counsel, and (2) a subjective evaluation of a skeletal rating form circulated to various former employers, judges, and counsel who have appeared before him.

The Civil Service Commission's latest administrative proposal to forestall this legislation does not address the basic reason that the temporary ALJ' are not qualifying for the appointment register—lack of credit for the actual adjudication of social security cases for a substantial period of time. This experience is the most valuable and pertinent in appointing regular Social Security ALJ's but it, contrary to the legislative history, has been substantially ignored.

Your committee regrets that it must bypass the Civil Service Commission's appointment procedures because they are incapable of dealing with this situation. However, the original HEW appointment procedures established in 1974 for the SSI hearing examiners were almost identical to those used by the Civil Service Commission under the APA. Your committee is aware that there is a very small group of ALJ(T)'s and regular ALJ's who are not producing the number and quality of decisions which will enable the Bureau of Hearings and Appeals to meet its statutory responsibilities. Your committee is also aware that no ALJ's have been removed for such reasons even though there have been numerous instances where either singly or in combination the following conduct has existed:

(1) Consistently bad decision writing which prevents proper award implementation;

(2) Lack of documentation of cases so that decisions are chronically decided on insufficient evidence;

(3) Blatant disregard to applicable law, regulation, and Social Security ruling; and

(4) A level of production of cases clearly inconsistent with the workloads and requirements of the Social Security program.

Your committee emphasizes that such conduct by a few individuals is not characteristic of the performance of the corps of Social Security ALJ's who are responding to the continuing appeals crisis in an exemplary manner. Your committee is also fully aware that the ALJ's independence from agency control must be safeguarded in accord with the provisions and spirit of the Administrative Procedure Act but "career-absolute" status is not a license for the complete neglect of a reasonable standard of conduct and job performance. The Chairman of the Civil Service Commission has written in answer to the question whether lack of productivity can be proper cause of adverse action by an agency:

The independence provided by the Administrative Procedure Act (the Commission classifies Administrative Law Judge positions and determines good cause for removal) is to safeguard the decisional process. Thus, apart from his decisional independence, the Administrative Law Judge is an employee of the agency, fully responsible and accountable for his conduct and performance of duty, and adherence to reasonable standards of production, if such standards have been established by the agency . . . "it should be the policy of all agencies to establish and enforce reasonable and realistic standards of performance in terms of work produced and time expended. Programs of this type dealing with standards and more effective case management have been established in a number of State and Federal courts. We are unaware of any impediment, legal or otherwise, to justify withholding the establishment and implementation of like programs from one class of employees."

The committee has been advised of, and supports the Bureau of Hearings and Appeals' position that failure to meet production goals will not be used as a basis of an adverse action, but that such action shall only be taken where an ALJ consistently fails to perform at a minimal level after proper warning is given and reasonable assistance is provided to increase productivity. The committee commends the Social Security Administration for its efforts and the success achieved in increased ALJ productivity but the agency must sustain quality by review of cases and adequate quality assurance.

The Civil Service Commission has indicated that it will take action against deficient ALJ's under the Administrative Procedure Act to remove "for cause" if charges are brought by the employing agency and they are sustained after a hearing. Although the Bureau of Hearings and Appeals maintains that such actions are "difficult and complex" they are in the process of preparing charges in a number of appropriate cases. This action is to be commended and encouraged.

ANALYSIS OF H.R. 5723

H.R. 5723 would provide that the hearing officers appointed under section 1631(d)(2) of the Social Security Act (as in effect prior to January 2, 1976) to hold hearings under the supplemental security income program who had been deemed to be appointed under and governed by the provisions of the Administrative Procedure Act of Public Law 94–202, shall be appointed to career-absolute ALJ positions as if they had been appointed under the Administrative Procedure Act, section 3105 of title 5, United States Code. They would have the same authority and tenure as hearing examiners appointed directly under section 3105 and be compensated at the same rate as Social Security ALJ's (GS-15). All provisions of the Administrative Procedures Act shall apply to them in the same manner as they apply to other Administrative Law Judges. The former temporary Black Lung ALJ's who were appointed as temporary ALJ's under the authority of Public Law 94–202 are fully covered by this provision.

MATTERS TO BE DISCUSSED UNDER RULES OF THE HOUSE

In compliance with clause 2(1)(2)(B) of rule XI of the House of Representatives, the following statement is made relative to the vote by your committee on the motion to report the bill. The bill was ordered reported by voice vote.

In compliance with clause 2(1)(3)(A) of rule XI of the Rules of the House of Representatives, the following statement is made relative to oversight findings by your committee. As a result of investigations conducted by the Subcommittee on Social Security and the Subcommittee on Oversight, your committee concluded that it would be desirable to enact this legislation.

In compliance with clause 2(1)(3)(C) of rule XI of the Rules of the House of Representatives, your committee was advised by the Director of the Congressional Budget Office that since it was the intent of Public Law 94–202 that this conversion take place by this time any additional salary costs would have already been taken account of in the budget.

In compliance with clause 2(1)(3)(B) of Rule XI of the Rules of the House of Representatives, the following statement is made. Enactment of H.R. 5723 would not result in any new budget authority or increased tax expenditures.

In compliance with clause 2(1)(3)(D) of rule XI of the Rules of the House of Representatives, your committee states that no oversight findings or recommendations have been submitted to your committee by the Committee on Government Operations with respect to the subject matter contained in the bill.

In compliance with clause 2(1)(4) of rule XI of the Rules of the House of Representatives, your committee states that this bill would not have any inflationary impact on prices and costs in the operation of the national economy.

In compliance with clause 7 of rule XIII of the Rules of the House of Representatives, the following statement is made relative to the cost of the bill: The enactment of H.R. 5723 would not add to the cost of the social security program and should result in some saving to the program since the cost of hiring and training new hearing officers would be required without it.

Mr. WAGGONNER. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, in further response to the gentleman's query of the chairman of the committee, I think it needs to be said that the Committee on Ways and Means held hearings on this subject, and nothing of that nature of which the gentleman speaks developed during the course of those hearings. The committee did, without objection, report a bill that is designed to do exactly what the Senate amendment does, and it was for that reason the Senate amendment was agreed to.

Mr. PEPPER. Mr. Speaker, I yield 5 minutes to the gentlewoman from Colorado (Mrs. SCHROEDER).

Mrs. SCHROEDER. Squirrelled away in section 371 of the conference report on H.R. 9346, the social security financing bill, is an early Christmas present for about 150 employees at the Social Security Administration: lifetime jobs as GS–15 administrative law judges (ALJ's) starting at $36,171 per year.

There are quite a few reasons why section 107 deserves quick excision from this bill:

First. There is a bill, H.R. 5723, which is identical to section 371. This bill was jointly referred to the Committees on Ways and Means and Post Office and Civil Service. Ways and Means reported the bill as introduced. Our committee amended the bill and had not only a report but two sets of other views upon it. Maybe the fact that we had hearings on the bill had some bearing on this diversity of opinion. Unfortunately, if the House adopts section 371 you would not have a chance to explore these alternatives.

Second. The administration opposes the section.

Third. It is a disservice to all present permanent ALJ's who have met the rigorous testing and experience requirements for their job—18 of the 150 have not even applied for the permanent ALJ slots.

Fourth. It is an unprecedented attack on the merit system. The next time constituents tell you they cannot qualify for a Federal job, tell them you have just voted to give 150 people what amounts to lifetime Federal jobs.

Fifth. It is an unkind job at the Administrative Procedures Act (APA). Congress set up the APA and the independent ALJs who conduct its hearings to assure that due process would be granted to petitioners by qualified and independent people. People who have to be legislated into jobs are not qualified, nor are they very independent. Moreover, we fear the problems which would be caused when, under the toration requirements of the APA, which, to preserve their independence, move ALJ's among the agencies these ALJ's would begin to handle natural gas rate cases, truck route certification cases, or any other administrative action under the APA.

Sixth. It is not going to solve the disability caseload at the Social Security Administration under the SSI program. Take a look at the GAO report entitled "Problems and Progress in Holding Timelier Hearings for Disability Claimants" (October 1, 1976, HRD–76–173) if you think the answers to this problem are simple. A year from now, when your constitutent are still complaining about their SSI case delays, tell them you already solved their problem by giving 150 SSI ALJ's pay increases.

Seventh. We think that getting Congress into the business of giving out civil service jobs in the executive branch deserves a bit more consideration than an end of session amendment in a conference report. We urge you to join us in rejecting section 371 so that the matter may be given its proper and deserved debate in connection with H.R. 5723.

Mr. Speaker, I feel this morning a little bit like the skunk at the garden party. I rise to ask the Members to vote against this rule, and I take this position partially because of this administrative law judge issue we are talking about.

This issue was originally referred jointly to two committees, both the Committee on Ways and Means and the Committee on Post Office and Civil Service. We have just heard the gentleman from Louisiana (Mr. WAGGONNER) refer to what happened in the Committee on Ways and Means on promotion of the temporary administrative law judge issue, but in the Committee on Post Office and Civil Service, after long hearings, we came up with a different solution.

We were very surprised, after we had written the conferees and asked them not to squirrel this section away in the conference report, that the conferees went ahead and did it anyway.

I attempted to get a rule so that we could strike this from the conference report, but we were not able to get it. This section is clearly not germane to the bill as it originally came through the House.

This is an issue that has been present for a long time, and the Members will hear many different things said about it. Let me try to give the Members a little background as to what happened.

As we know, there was a backlog of cases in the Social Security Administration, and so they did appoint these temporary people at GS–14 levels. They can go up to GS–15, if they file and qualify; but like everyone else, many of them have applied, some are now GS–15's and some of them have not even applied.

However, what this bill would do is that it would automatically promote all of them to GS–15's where they are qualified and give them lifetime tenure as administrative law judges.

Mr. Speaker, it would be the first time in the history of this Congress that we have made an end-run around the merit system and promoted people automatically.

A lot of people have said that this is necessary because Civil Service has pushed these people around for a long time. They are right; Civil Service did push these people around for a long time. The only thing is that we now have a new Civil Service Board. We have been working very hard with them. None of these temporary people's tenure run out for another year. Therefore, there is no need to do this in the haste of the last minute. The new Commissioners are working on the problem. They are now going to give the temporaries seven points for their experience as temporary ALJ's.

Mr. Speaker, I think that is going to work out very nicely. Therefore, there is no need for the haste. Those who are qualified will be promoted.

Second, it will not do anything really about the case backlog. It does not add any new numbers whatsoever. It keeps the same numbers. It just gives the temporaries an automatic promotion without any qualification.

Third, there has been some question as to whether or not the people were qualified. Some of them obviously have not felt qualified because they have not even applied for the promotion. Maybe some are and maybe some are not; but if we make an end-run around the merit system and say that all of them automatically become GS–15's, even if some of them may not be qualified and may not be doing a good job, I do not think this House is doing anybody a great favor.

Mr. Speaker, one of the things that has happened in the past was that all of these agencies started to want more and mort supergrades, so this House started to add new supergrades in all sorts of places.

I see this the opening of a new loophole. Many will demand promotions no matter where they come from, and they can always say that if we do not promote them, they will not administer properly. Therefore, we will always have to make an end-run around the Merit System if the bill as it stands now, passes and creates this new precedent.

For example, Mr. Speaker, let us take airports. We can see this coming in airport legislation, with people saying that if we do not promote all the air-traffic controllers, they cannot administer the act properly, so forget the merit systems.

I am dismayed that we did not get a rule which will allow us to make a point of order against this section, thereby allowing the Committtee on Post Office and Civil Service to bring its bill to the floor on a joint referral from the Committee on Ways and Means so that we could discuss it and have the House make a decision about which way it wanted to go on this matter.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. Mr. Speaker, I would like to remind the gentlewoman from Colorado (Mrs. SCHROEDER) that the whole thrust of this legislation is to clean up the backlog of over 90,000 disability cases. It was as high as 113,000, and we are trying to pare that down.

It has been the result of the roadblock operation of the Civil Service Commission which has prevented those people who are entitled to hearings from being heard. It is a scandal in this country that we have totally disabled people who never even get a chance to be heard. They leave this world; they die after 18 months or so, and they never get a chance to have their cases acted upon.

Mr. Speaker, I think our moral judgment here was right and that we have to give these people a chance to be heard.

I can agree with a lot that the gentlewoman says. However, the important thrust is to give these people a chance to be heard right now. The Civil Service Commission has blocked them at every turn.

The SPEAKER pro tempore. The time of the gentlewoman from Colorado (Mrs. SCHROEDER) has expired.

Mr. PEPPER. Mr. Speaker, I yield 1 additional minute to the gentlewoman from Colorado.

Mrs. SCHROEDER. Mr. Speaker, I might respond to the gentleman from Massachusetts (Mr. BURKE)—and I know he has really been concerned about this matter—that he is right in saying that the Civil Service Commission in the past has given these people the runaround. However, there is a new Civil Service Commission, and they have been working with us. In 10 months we cannot turn everything around, any more than we can turn everything around overnight.

Second, Mr. Speaker, this creates no new positions. It really does not help us with the backlog. It keeps the same number of positions, and promotes them automatically.

Mr. Speaker, I think we should be allowed to deal with that problem on the floor in the future and not in this bill.

Mr. ROUSSELOT. Mr. Speaker, will the gentlewoman yield?

Mrs. SCHROEDER. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I thank the gentlewoman for yielding.

I think the point should be reemphasized that by forcing the House to take the language of the administrative law judge section and to include it in the social security bill, we will be voting, by voting for this rule, to automatically promote people who have not even applied to be promoted.

Mrs. SCHROEDER. The gentleman is correct.

Mr. ROUSSELOT. I think this makes Congress look absolutely silly. We look silly enough often enough without accepting this kind of rule, which is wrong for many reasons. I too urge the House to vote down the rule.

Mr. PEPPER. Mr. Speaker, I yield 3 minutes to the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Speaker, the conference report on H.R. 9436, social security financing, would impose greater increases in the social security tax than either the House-passed bill or the Senate-passed bill. I will vote for the rule and for the bill, but only with great reluctance and only because we have been offered no alternative for insuring the continued funding of social security. We all know that the social security tax is indeed a tax, not a form of insurance, and that the tax falls heaviest on lower- and middle-income working people.

I think it is a poor way to make tax policy, to say the least, for the Congress to increase this regressive tax before having any clear idea what kinds of cuts it is going to make in the personal income tax to offset the economic drag of the social security tax increase. We could well end up with tax reform in reverse.

For example, if, to offset the $20 billion increase in social security tax, we enact an across-the-board cut in income tax rates, those who would benefit most are the very ones who pay the smallest proportion of their incomes into the social security system. That kind of income tax cut would be a windfall benefit to those workers—1 out of 10—who do not pay any social security taxes. Worst of all, such a cut will not insure that the money would go back to those paying the increased social security tax, and it could even bring about a redistribution of income from the great majority of working people to those who are in the upper-income groups.

By approving this conference report, we will be passing up a golden opportunity to work some real reform into the social security financing system. Realistically, any such reform will probably involve financing part of the present benefits out of the general revenues of the government. If an income tax cut to offset the increased social security tax is eventually approved, as indeed seems inevitable, we will, in effect, be using general revenues to keep the system solvent. Continuing the pretense that social security is only being funded by means of the payroll tax and not by dipping into the general revenues will fool few people. Unfortunately, however, it will keep Congress in a "straitjacket" as far as developing more rational tax policy is concerned.

In 1975, Congress enacted a temporary earned income credit which, according to the Ways and Means Committee report, is intended "to offset the impact of the social security taxes on low-income persons." Mr. Speaker, the tax increases in this bill are so enormous and will be so burdensome to lower- and middle-income working people that it is way past time to start considering how we are going to give them relief without making the tax structure more regressive.

With that in mind, I am today introducing legislation to make the earned income credit permanent and to expand on that approach by providing an income tax credit which in 1979 and 1980 will equal up to 11 percent of social security taxes paid, in 1980 and 1981 up to 22 percent of social security taxes paid, and in 1983 and thereafter up to 33 percent of social security taxes paid. This credit would be reduced one-half percent for each $500 or fraction thereof by which a worker's income exceeds the wage base subject to the social security tax. A worker now earning $16,500 (the present wage base) or less would receive the full credit—equal to 33 percent of his social security tax. A worker earning $20,000 would receive a credit equal to 29.5 percent of his social security tax, since his earnings exceed the current wage base by $3,500. Under this proposal, workers currently earning over $49,000 would receive no income tax credit in 1977 for social security tax paid. If the employee's income tax obligation is less than the amount of the credit, the difference would be refundable to the employee, as is the earned income credit, and workers eligible for both could elect the larger of the two.

As the wage base subject to the social security tax goes up, so would the maximum dollar amount of the credit. However, the credit would still be reduced at the same rate where earnings exceed the wage base and would always phase out completely when earnings exceed the wage base by more than $32,500. The reason for the gradual reduction of the credit for those whose earnings exceed the wage base is to introduce an element of progressivity and to avoid carrying over the nonprogressive character of the social security tax into the income tax system.

Employers would be authorized by the bill to reduce employees' income tax withholdings by the amount of the social security tax credit, so that the money would never leave the employees' paychecks or the economy.

Mr. Speaker, the original drafters of the social security system envisioned that general revenues would eventually be necessary for social security funding. Many countries with social insurance systems like ours provide for some general revenue funding, and it is time for the U.S. Congress to face its responsibility in this area. My income tax credit is one approach. Our esteemed colleague JAMES BURKE, who chairs the Social Security Subcommittee, has proposed another, which would have employers, employees and the government each pay one-third of the cost of social security. This would not only relieve both employees and employers of part of this tax, but would stimulate economic recovery by reducing employers' costs for labor. A third possibility would be to remove the funding of disability benefits and health insurance from the social security trust fund and pay for them from the general revenues.

So there are several choices, but choose we must. The country should not and, I believe, will not long tolerate continued increases in the social security payroll tax.

Mr. PEPPER. Mr. Speaker, may I just say this word in conclusion. This rule is exactly the rule requested of the Committee on Rules this morning by the distinguished Committee on Ways and Means. I am sure every Member of this House is aware of the obstacles and the problems which have had to be encountered by this distinguished committee of this House in trying to present to us today this conference report which this rule will permit us to consider. So I hope this House will adopt this rule permitting us to vote on the social security conference report, a matter for which we have come back here today from all over the country, and a measure which, if adopted, will mean so much to our fellow citizens.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield 1 minute to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. Mr. Speaker, I rise in support of the provision in this measure that converts temporary administrative law judges to permanent law judges. I think it is a sound addition to this proposal. The temporaries were created to rid ourselves of the long and heavy backlog that has accumulated on social security disability hearing calendars. The temporaries were appointed to clear that backlog. They are doing work comparable to the permanent administrative law judges. They are not being certified because of the laxity of the Civil Service Commission in addressing itself to this problem. These administrative law judges are urgently needed. The temporaries are doing effective and diligent work in a competent manner. The status problems should have been resolved by the procedures set up under the prior law that was adopted during the administration of President Ford. It has not been done and we are still confronted with a growing case backlog of disability claims waiting to be heard by the Social Security Administration. The only effective way or way to break up this logjam is by this legislation.

The unquestionable need for converting these temporary hearing officers to permanent ALJ status was underscored in hearings on H.R. 5723 before the Committee on Post Office and Civil Service, of which I am a member, and the Committee on Ways and Means.

H.R. 5723, as introduced by the distinguished chairman of the Subcommittee on Social Security, the gentleman from Massachusetts (Mr. BURKE), provides that individuals who were originally appointed as supplemental security income (SSI) hearing examiners under pre-1976 provisions (Public Law 94-202) of title XVI of the Social Security Act be converted to regular administrative law judges.

In hearings before the Committee on Post Office and Civil Service I underscored the fact that the intent of Public Law 94-202—which created the position of temporary hearing officer—was to convert these hearing officers to the same status, tenure, and compensation as regular ALJ's. Expeditious conversion is exceedingly appropriate when we consider, as the material our committee received pointed out, that these temporary hearing officers are executing their duties as effectively and responsibly as regular ALJ's.

Unfortunately, the Civil Service Commission has not provided these individuals the opportunity for security and advancement they were initially promised. After more than 19 months since enactment of the above statute, only a small handful of the 189 temporary hearing officers have been appointed to permanent ALJ positions.

Despite a current backlog of over 83,000 SSI cases awaiting action—a backlog which was much higher but which has been whittled down by the determined efforts of these temporary hearings officers—the Civil Service Commission has failed to recognize the substantial contribution made by these hearing officers.

Presently, we are confronted with a demoralized corps of temporary hearing officers who rightfully feel that they have been discriminated against because they are paid at a lower rate for work comparable to that performed by permanent ALJ's. Their concern is compounded by the fact that they fear their appointment will expire before the Civil Service Commission qualifies them for permanent ALJ status. "Great weight," as Public Law 94-202 intended, has not been given to the extensive experience these proven hearing officers have received in adjudicating social security related disability cases.

As a cosponsor and firm supporter of H.R. 5723, I have consistently urged that we remedy the serious shortcoming suffered by these temporary ALJ's, and have fought attempts to weaken the well-reasoned and equitable provisions of H.R. 5723 as originally introduced.

Accordingly, I urge my colleagues to support this provision of the conference report on H.R. 9346, converting temporary hearing officers to permanent ALJ status. In this manner, we can reinstill confidence and an esprit de corps within this dedicated body of individuals who are now understandably preoccupied with consideration of their uncertain future.

Accordingly, I urge my colleagues to support this rule on this measure in order to remedy this delayed justice for our disabled.

Mr. PEPPER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. STEIGER. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 178, nays 175, not voting 81, as follows:

Mr. Van Deerlin for, with Mr. Wiggins against.

Mr. Charles H. Wilson of California for, with Mr. Dickinson against.

Mr. Yates for, with Mr. Burke of Florida against.

Until further notice:

Mr. Aspin with Mr. Gammage.

Mr. Bedell with Mr. Bob Wilson.

Mr. Bonker with Mr. Udall.

Mr. Burlison of Missouri with Mr. Rinaldo.

Mr. John Burton with Mr. Whalen.

Mr. Phillip Burton with Mr. Dent.

Mr. Fithian with Mr. Hall.

Mr. Harkin with Mr. Harsha.

Mr. Hefner with Mr. Ichord.

Mr. Krebs with Mr. Long of Maryland.

Mr. Maguire with Mr. Lujan.

Mr. Ryan with Mr. Mathis.

Mr. Shipley with Mr. Michael O. Myers.

Mr. Sisk with Mrs. Pettis.

Mr. Smith of Iowa with Mr. Ruppe.

Mr. Tsongas with Mr. Symms.

Mr. WEAVER changed his vote from "nay" to "yea."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mr. ULLMAN. Mr. Speaker, pursuant to the provisions of House Resolution 937, I call up the conference report on the bill (H.R. 9346), to amend the Social Security Act and the Internal Revenue Code of 1954 to strengthen the financing of the social security system, to reduce the effect of wage and price fluctuation on the system's benefit structure, to provide for the conduct of studies with respect to coverage under the system for Federal employees and for employees of State and local governments, to increase the earnings limitation, to eliminate certain gender-based distinctions and provide for a study of proposals to eliminate dependency and sex discrimination from the social security program, and for other purposes.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oregon?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of December 14, 1977.)

Mr. ULLMAN (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oregon?

There was no objection.

The SPEAKER pro tempore. The gentleman from Oregon (Mr. ULLMAN) and the gentleman from New York (Mr. CONABLE) will be recognized for 30 minutes each.

The Chair recognizes the gentleman from Oregon (Mr. ULLMAN).

Mr. ULLMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, there is no such thing as an easy way out of the social security dilemma. There are not going to be any more easy votes on social security. The fund is not insolvent, as a lot of people have said, but there are some decisions that have to be made to keep it from being insolvent, and those decisions are not easy decisions. Those who would tell us that there is some easy way to solve the social security problem are not telling us the way it is.

So we bring before the House a conference report that has been extremely difficult to achieve, but one that I think responsibly faces up to the issues of social security, both short range and long range.

Mr. Speaker, let me give the Members some reasons why they should go home with a vote in support of this conference report.

First, the critical issue is: Are we keeping the fund solvent, or are we letting it go into insolvency?

If the Members vote against this bill, they are voting for insolvency for the social security fund, because that is the way it is going. There are not going to be any easier answers next year than there are now. It puts us in a surplus posture in social security for the next 25 years.

It does away with about 90 percent of the long-range insolvency.

Mr. Speaker, let me give the Members some other reasons for their support. In this conference report we provide a decoupling formula, and that is something that had to be done. If we do not face up to the problem of the cost-of-living formula that is getting us into long-range insolvency, we are going to be in real trouble down the road. In this conference report we resolve the problem of decoupling.

In this conference report we increase the outside earnings limitation from the existing amount of $3,000 to $6,000 over a period of 5 years for those 65 and over. A year ago no one would have thought that we could do that, but, as I say, we are providing for a significant increase in allowable outside earnings. That is something that the Members can take home. That is something the Members ought not to be voting against, believe me, when they go home and talk to their senior citizens.

We are also moving on the issue of exempting altogether our senior citizens from any ceiling on outside earnings by reducing the 72-year age limit to 70. In this bill we are saying that by 1982 anyone who is 70 years of age or older can have unlimited outside earnings and still draw social security benefits.

I would not want to go home and be recorded as having voted against that provision, because that is extremely important to our senior citizens. That is something that none of us thought was possible to achieve even a year or so ago.

There has been a great hue and cry about doing away with the 50–50 or parity in the taxable wage base between employers and employees. In the House version we stood firm on the 50–50 formula. The Senate, however, adopted a higher employer tax, and this was a hard-fought issue. The President was in support of an unlimited employer tax. I was strongly opposed to it.

We won this issue in conference. We have retained the 50–50 formula, and that is an exceedingly important issue. It is a victory for the House, and it is an issue on which we can go home and say to every businessman up and down the street, "We won this battle, and having won it now, we are not going to be faced with it again in the immediate future." That is the message I believe we would all want to take home to the business people of our communities.

We also won the battle against general revenues. As all the Members know, from many sources from the administration on down there had been a big push toward the idea of general revenues. I am opposed to general revenues, and I will have something more to say about that in a minute or two, because I am not satisfied that our existing financing formula is as it should be. But the answer is not general revenues. We won that battle. There are no general revenues for the social security system in this bill.

There are three key issues facing us. They are issues that we must resolve in the not-too-distant future. We have set up very responsible study procedures in all three areas.

One of these issues is, of course, in the area of universal coverage, coverage of Federal, State, and local employees. In the Fisher amendment, which we retained in conference, we have provided a study, and under that study they must report back within 2 years a sound procedure to cover public and nonprofit employees under social security without doing them any harm. That is exceedingly important.

We have retained in the conference report the Jenkins amendment, which sets up a National Social Security Commission that is to look far beyond the issues being studied by the present advisory group. That Commission is going to look at every aspect of the long-range social security problem and come back to us within 2 years with some long-range recommendations.

I intended to appear before that Commission and make some recommendations as to financing, and I will get to that issue in a moment.

Mr. Speaker, a third study has to do with the problem of sexual discrimination. We need an authoritative, far-reaching, all-inclusive study by a competent group; and we have that in this package. That will come back within 6 months so that we can face up to the issue of sexual discrimination in a way that is responsible rather than through the kind of hit-or-miss operations that we have seen going on in the courts.

Mr. Speaker, I do not like the increase in payroll taxes any more than any other Members do. At the present sitting we have no alternative. We have brought before the House a conference report, however, that has no increases in 1978, either in tax or in base.

In 1979 we go back to the House formula on base increases. We have a very minor rate increase. Then after 1982 the usual automatic increases in the base will continue.

However, let me say this: A few years ago there was a great deal of talk of not wanting to go beyond an overall of 10 percent on payroll taxes. I concurred then, and I concur now. My judgment is that we should come back to that figure.

Mr. Speaker, I want to assure the Members of the House today that if we bite a hard bullet now and do the responsible thing and vote for this bill and keep the system in a position of solvency so that we can have time to work in a reasonable and studied atmosphere, it will be the intention of the chairman and of the Ways and Means Committee, if I remain as chairman, to move toward an alternative financing mechanism in social security so that we can back off on social security taxes. That is the way it has to be done. We simply cannot vote down a social security package when the fund is being depleted and go home and say that we have responsibly faced up to our responsibilities in social security legislation. Just keep in mind that a bigger and bigger block of our constituencies are senior citizens who have to depend upon social security as a major part of their retirement program. This bill will make sure that they have benefits when the day comes that they need them.

In addition, this also equally goes for all of those who are working now. They come to me and say, "Will there be funds in the social security system when I retire?"

Mr. Speaker, I want to say that if the Members vote for this bill, they can say, "Yes, there will be funds in the social security system when you retire."

If we vote against this bill and it fails, we cannot go home and say to either the people who are working or to the people who are on retirement and count on that check to keep them living, that we have acted responsibly.

Mr. Speaker, I make a plea to all of the Members. Let us vote for this bill, which is the best that we can achieve. If we put it off until next year, there are not going to be any easy answers then. We have looked at all of them. We have looked at all of the alternatives. Let us not kid ourselves that we can come back next year and find some easy answer. It is not going to be there. We may have to do something even tougher than this if we wait longer.

Therefore, Mr. Speaker, I make a plea that the Members vote for this package now. Then they can go home and tell their constituencies, "The fund is solvent. Those moneys will be there when you retire." The Members can also tell them that the chairman of the Committee on Ways and Means has assured them publicly that he will move as expeditiously as possible, certainly within the next 5-year timeframe, toward adopting a new revenue mechanism whereby we can back off from these major increases, but the problem that some are talking about is down the road, 5 or 6 or 8 or 10 years from now, not now.

But before the big bite takes place I want to assure the Members that we will be able to come in with a better financing mechanism. We will be able then to bring the payroll tax into a more reasonable posture.

So, Mr. Speaker, I rely on the good judgment of the Members to stay with us and vote for the best package it is possible to achieve now and the best package that it will be possible to achieve next year or the following year, and then let us attempt to face up to these long-range issues.

We have the three studies going that will result in many recommendations. We also will have the commitment from the chairman of the committee that we will move to alternative financing.

So I certainly make the plea to the Members: Let us vote for this conference report which is reasonable and which does put the social security system back into a condition of solvency.

Mr. ALLEN. Mr. Speaker, will the gentleman yield?

Mr. ULLMAN. I yield to the gentleman from Tennessee.

Mr. ALLEN. Mr. Speaker, do I understand the distinguished gentleman in the well to say that under the conference report that neither the tax rate nor the tax base is increased by so much as one penny next year?

Mr. ULLMAN. Not one penny more than existing law.

Mr. ALLEN. In other words, if we do not pass this act today we are not going to impair the revenues that will be going into social security next year by 1 cent; is that correct?

Mr. ULLMAN. That is correct except that we will be failing to face up to the issue of decoupling which is critically important at this time and simply delaying the implementation of outside earnings' liberalization which is very important to the gentleman and all of the rest of us, and failing to do a number of other things that need to be done that are part of this reform package.

Mr. ALLEN. If the gentleman will yield still further, what I am wondering about is why, if this is not going to take care of an immediate financial deficit in the social security fund, and if we are not going to have any more money in that fund next year, why, in other words, if this bill did not pass at this time, why this could not have been delayed until January or February and have it considered in a more orderly fashion and in time to take care of these other things we have to face?

Mr. ULLMAN. I would say to the gentleman, it is simply because the social security system requires a long lead time. The trust funds are getting rapidly to a posture of insolvency and if we do act now so as to begin turning it around, we are going to be in a very serious deficit posture. The Disability Fund may run out of money early as the end of next year. The economy would not have to turn down very much in order to get those funds into total insolvency. It seems to me that this is something that no Member of this Congress can afford to delay because we are running into the very serious chance that that might happen.

Mr. WHITE. Mr. Speaker, will the gentleman yield?

The SPEAKER pro tempore. The Chair would like to advise the gentleman from Oregon (Mr. ULLMAN) that he has consumed 16 minutes.

Mr. ULLMAN. Mr. Speaker, I yield myself 1 additional minute and I yield to the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, because of the differences between the House drawn bill and the Senate bill, there is something that disturbs me, and that is that the Senate provides, as I understand, that an existing civil service retiree's dependent will have an offset of her benefits from the social security system if she is receiving civil service retirement. As I understand, the conferees came back and gave a 5-year moratorium on this, but for those who do not come under the 5-year moratorium, that is during those 5 years they are in effect losing the benefits of the social security taxes that they put in for the early part of the year or during their work period.

Mr. ULLMAN. Only the people who have not had it in the past. The court decision put a lot of new people in. Those people who are newly brought in will come under the offset but those people who were eligible or who will be eligible in the next 5 years will not. Remember, we are only talking about the spouse's benefit. We are talking about a situation where a social security retiree has a wife who gets a spouse's benefit. If that spouse in turn has a Federal or a public retirement income, that will be offset. This was what the Senate amendment provided.

Mr. WHITE. This is strictly for new category people who have never been in it before.

Mr. ULLMAN. The Goldfarb decision made an awful lot of new people eligible for husbands' and widowers' benefits and what this provision does is it keeps the new people from going on, but for those people who were eligible under the old system, we have delayed the implementation of this for 5 years. Anybody who becomes eligible in 5 years, will get an exemption from this inclusion and will be able to draw both.

Mr. WHITE. Let me give the gentleman a quick hypothetical to be sure I understand. A person has worked in private employment prior to going with the Federal Government. He has built up a social security system fund, that is, he has been paying in so he has his quarters in and would be eligible upon his eventual retirement. When that person retires, or say that person dies, his survivor would be entitled to his social security retirement. Does he also have an offset against his social security?

Mr. ULLMAN. For the individual involved, if he had both retirements, it does not impact him at all. He can draw both his public pension and social security.

Mr. WHITE. After 5 years.

Mr. ULLMAN. But we are only talking about the spouse, in a case where the spouse also has a retirement. She worked, and she has a retirement from either the Federal or local government. Her husband retires. She would normally get the spouse's benefit. We are saying she can still get it. If she is eligible at the end of the year or if she becomes eligible within 5 years, she can still get it. So what we have done is delay the implementation to that extent. I think the gentleman will find this has taken care of most of the problems. We fought hard in the conference to eliminate this provision altogether. We could not win, but we modified it in a way that will take away most of the impact and correct most of the inequities that would have resulted.

Mr. CONABLE. Mr. Speaker, I yield myself 10 minutes.

Mr. Speaker, let us not delude ourselves—or anyone else—on this social security conference report.

The other body has approved it, and apparently there are enough votes in this Chamber to send it to the White House for signature into law. It seems we are faced with a fait accompli.

Even so, it is important for every Member here to understand exactly what a vote in favor of this report really means.

Primarily, it means a monstrous burden not only on the 107 million American taxpayers who already are supporting the social security system, but on all future generations of contributors as well.

For those paying the maximum, it will cost an additional $6,257 over the next 10 years. That averages out to $52 per month per taxpayer over the decade.

In the aggregate, the report will increase payroll levies over the next 10 years by an estimated $227 billion, thus giving it the notoriety, if not the distinction, of constituting the biggest peacetime tax increase in our history. How's that for a budget-balance for the Government, and a budget-buster for the American worker?

Despite this enormous yield in new taxes, the report leaves the social security system actuarially imbalanced—with a long-range deficit averaging about 1.45 percent of taxable payroll. Translated into dollars and taxpayer impact, that means our children and our children's children will have to raise an additional $750 billion plus accruing interest to keep the system going to the middle of the next century.

Second, a vote for the report means a vote to depress the jobs outlook even further, at a time when the unemployment rate continues to hover around 7 percent. Any economist worth his salt will tell you that increasing payroll taxes cuts employment prospects, and it is axiomatic that the more you tax employment, the greater will be the magnitude of unemployment.

In commenting recently on the higher social security levies contemplated by the Congress, a Washington Post editorial writer noted:

> These next few years are going to be a particularly bad time for the Federal Government to impose this kind of tax on labor.

> Because of the very high birth rates in the 1950s and early 1960s, unprecedented numbers of young people will be pouring into the job market. At the same time women are increasingly looking for paid work outside their homes. The proportion of the American population actually holding jobs has never before been as high as it was in November, according to the Bureau of Labor Statistics. But the unemployment rate—still a painfully high 6.9 percent—is evidence that the number who want to work is even higher.
>
> Congress keeps saying that, as a matter of national policy, it wants those people on payrolls. Quite right. But in that case, it does not make much sense to put a stiff and steadily rising, tax on the payrolls.

I happen to agree with the thrust of that editorial. I also believe that a third result of a vote for this report will be a greater clampdown on capital formation. Again, economists tell us we need greater capital formation, not less, yet this conference report gives us a great deal less for many years to come.

Mr. Speaker, we keep hearing our fiscal cheerleaders mouth those familiar buzz words—"capital formation" and "jobs creation"—but when the legislative chips are down, we do little to encourage either, as the history of this legislation shows so well.

The massive payroll taxes embodied in this conference report simply are not necessary. We did not have to take this route to save social security.

More than 4 months ago, some of my colleagues joined me in presenting for the consideration of the Congress a comprehensive, 15-point proposal which would have achieved several important objectives. Most importantly, it would have solved the social security system's financial problems for at least the next 75 years without increasing the tax rate more than 1.2 percent on the employer and on the employee. The proposal also would have made a number of substantive improvements in the equity of the system.

Although several major newspapers praised it editorially, and a number of social security experts thought it worth considering, the proposal was not embraced by the Congress. I suspect, Mr. Speaker, that its lack of acceptance in this body can be traced to an unreasoning fear of its two most controversial points—those calling for social security coverage of Federal civilian employees and for gradual advancement of the eligibility age for full retirement benefits to age 68, starting after the turn of the century and not becoming fully effective until 2011—34 years from now.

Those two points were rejected this year, but I want to make a prediction, Mr. Speaker. I predict that both will return as issues, stronger than ever, in the not-too-distant future.

More than 100 million Americans are covered under social security—mandatorily. Some of them might not want that protection, but they are forced by law to have it. Some 6 million Americans—42 percent of them Federal workers—are not covered under social security.

The ratio is about 17 to 1. And it is becoming increasingly difficult for the "17" to understand why the "1" is not covered. An increasingly enlightened number of those who are mandatorily covered are wondering why, if social security is good enough for them, it is not good enough for a relative handful of government employees, including us. I would think that military employees of the Federal Government, who have been covered under social security for years, also wonder about that.

From our own point of view, it will be increasingly difficult, politically, to continue raising taxes for others and not for ourselves. It also will be increasingly difficult to continue the charade of keeping those who administer the social security system outside its coverage—without a personal stake in its financing.

For those reasons, Mr. Speaker, I believe that the issue of social security coverage for Federal workers is far from dead. It is just dozing, and will be wide awake again soon. Knowledgeable citizens resent the omission of civilian Federal coverage; knowledgeable Federal employees are beginning to realize the benefit to them of inclusion.

I also predict that the House eventually will have to face up to the issue of an advanced eligibility age for full retirement benefits. Americans not only are living longer, they are living longer productive lives. Older people are disenchanted with mandatory retirement policies and in the next century they are likely to be needed in greater numbers in the labor market.

A declining birth rate has assured us of a smaller work force in decades ahead, which means there will be fewer workers contributing to social security while more will be retiring and drawing benefits. The ratio of worker to beneficiaries is about 3 to 1 now. In another generation, it may be 2 to 1.

The demographics are clear, Mr. Speaker, and they point directly toward consideration of this issue. We should be honest about it, and not pretend we have avoided it. We cannot do that.

If we should decide to advance the eligibility age for full retirement benefits, we should make the decision to do it sooner rather than later. The fairest thing we could do, if we should decide to make this move, would be to give affected workers as much advance notice as possible. The most unfair thing would be to make such a decision years from now, when the social security system faces another financial crisis and there is no time for adequate warning.

I will make another prediction, Mr. Speaker. If we do not decide to make such an adjustment, we will be forced to turn to other avenues of financing.

Seven years ago, my Republican colleagues and I on the Ways and Means Committee warned:

> We simply must remember that the income . . . a worker can . . . devote to future contingencies is limited by his ability to meet the immediate needs of his family. If the cost of social security cuts too deeply into daily living requirements, people will begin to make unfavorable comparisons between current costs and distant benefits. If the time ever comes that current workers are unwilling to bear the cost of providing benefits to current retirees, the social security system will be in real danger . . .

That warning, if not prophetic, was at least appropriate.

If we have not reached that danger point yet, we will—by taking the direction of this conference report.

I am convinced that we cannot continue to use the payroll tax to do all that we want to do with social security.

A leading alternative is, of course, the use of mythical general revenues. The Treasury is in heavy deficit, so what we really mean by general funding of social security are huge borrowings by the Treasury, which increase our public debt and ultimately lead to inflation and higher taxes for all.

Another alternative is to treat the medicare program realistically and divert at least half of the taxes now used for that purpose to the old-age, survivors, and disability insurance trust funds. Those two trust funds pay social security benefits based on wage-related contributions. The programs are actuarially based.

This is not the case with medicare. Although part A of medicare, which pays hospital costs, is financed entirely through the payroll tax, the program is not actuarially based. One does not benefit from it according to one's contributions, but according to one's medical needs.

It should be noted that part B of medicare, which pays for physicians' services, never has been financed through the payroll tax. Initially, the cost was borne half through premiums paid by participants and half through general revenues. Now, general revenues account for some 65 percent of part B expenditures.

If general revenues are to be used to help "bail out" the social security system, then I suggest the sound way to do it would be to divert half the medicare taxes to the "real" social security programs, and replenish the hospital trust fund from the Treasury. This would put the OASDI, or cash benefit, programs on a sound financial basis virtually indefinitely, without requiring any tax increases above present law levels.

This proposal was the essential element of the Republican motion to recommit the Ways and Means Committee's social security bill on the floor of the House October 27. The motion failed, 363 to 57.

Nevertheless, I predict that proposal, too, will make a comeback.

One final prediction, Mr. Speaker: I hope no one thinks the proposal for a tuition tax credit, which briefly held up agreement on the social security conference, is dead. It, too, is merely sleeping.

The resolution of the conference dilemma turned out to be another maneuver, oft repeated in the past, to deny the House an opportunity to work its will on the tuition tax credit concept. Its day also will come.

I find it interesting that the same conferees, and the same administration, that decried the tuition tax credit as a sop to some members of the middle class would endorse so warmly a conference report that is so deliberately burdensome to the entire middle class.

Mr. Speaker, I was a conferee but, for the reasons I have indicated, did not sign this conference report.

I believe it has some good provisions. Its decoupling-wage indexing "package" is sound. It also moves in the right direction by improving, ever so slightly, the treatment of widows and divorcees, and for those who have worked many years by updating special minimum benefits under social security at relatively low wages. These provisions were derived from the 15-point proposal, offered by Republicans, to which I referred earlier.

But the total tax load which this report piles on the backs of American taxpayers is unacceptable to me. And I frankly do not believe the Congress will find it tolerable for very long, because our constituents will insure our continued interest in this continuing disaster.

A vote against this bill will not end social security. It will give us a chance to reconsider a major mistake.

Mr. SCHULZE. Mr. Speaker, will the gentleman yield.

Mr. CONABLE. I yield to the gentleman from Pennsylvania.

Mr. SCHULZE. Mr. Speaker, the passage of the social security finance bill should be a matter of concern to every Member of the Congress and to the citizens we represent.

This bill is the most expensive peacetime tax increase in American history. Over the next 10 years, the American taxpayer will have to come up with an additional $227 billion as a result of this social security bill.

The impact of the new social security legislation on the typical American family is significant. By 1983 the $10,000 per year wage earner will have paid $131 more as a result of this bill. By 1987 that same worker will have paid a total of $376 more in taxes. The situation is similar for the $20,000 per year wage earner, who by 1983 will have had to pay $328 in additional taxes, and by 1987 will have paid $838 in additional social security taxes.

What makes this burden doubly offensive is the fact that this legislation does not address the long-term ills of the social security system, but merely represents a band-aid approach. We must be able to assure the young people entering the work force today that they will inherit an actuarily sound system.

The 15-point alternative proposal which was introduced by the Republican members of the Ways and Means Social Security Subcommittee, of which I am a member, could and should have been adopted by this body. The proposal addressed itself to the long-term deficiencies of social security and would have: First, made the social security system financially sound for at least the next 75 years with less than a 1.2-percent tax increase over present rates for the 75 year span; second, strengthened the insurance character of the program; third, improved the treatment of women under the program; fourth, made long needed adjustments to reflect changes in living and working patterns of the American people.

We must also be aware of the additional tax burden which could result from passage of the administration's energy proposals. There is a limit as to how much can be squeezed from the American taxpayer.

It will be necessary to cut taxes $20 billion per year for the next 10 years just to maintain the current level of spendable income for the American taxpayer after the passage of this measure.

I believe we, as representatives of the people, owe the American taxpayer an additional look at the possible alternatives to this bill.

Mr. ULLMAN. Mr. Speaker, I yield 2 minutes to the chairman of the Social Security Subcommittee, the gentleman from Massachusetts (Mr. BURKE).

Mr. BURKE of Massachusetts. Mr. Speaker, we have before us today the conference report on H.R. 9346, the Social Security Financng Amendments of 1977. This is the most important piece of legislation we have had before us in this Congress, as it provides for the financial stability of the social security system well into the next century. It provides assurance to the elderly of this Nation that their benefit checks will be forthcoming, and it restores the confidence of the workers of this country that the social security system will continue as a sound and viable institution.

In addressing the problems of financing the system we are faced with the difficult task of increasing revenues. This legislation, H.R. 9364, will perpetuate the present system whereby the cost of social security is divided evenly (50–50) between the employee and the employer. The bill calls for increases in the tax rates and the wage base, beginning in 1979.

Alternative methods of financing the system have been recommended and I think it is incumbent on this Congress to seriously review them. The use of general revenues has been suggested for the medicare program, the disability insurance program, and I have introduced legislation to provide that one-third of the cost of the entire social security program be financed from general revenues in order to mitigate the regressivity of the payroll tax and its dampening effect on the creation of jobs.

The tax burden on the workers of this Nation is becoming onerous and I, therefore, believe that we must begin active consideration of alternative financing methods for social security.

As the chairman of the Social Security Subcommittee, I commend my colleagues for their responsible actions to assure the integrity of the social security system. I caution you that the tax burden is getting too high, and I therefore strongly recommend future consideration of alternative methods of financing the social security system.

Mr. Speaker, I just would like to point out to my good friends who are opposing this bill that the day of rhetoric is over. For 2 years I have been trying to get a bill through this Congress to bring about the stability of the social security system and all we hear is nitpicking, nitpicking on one side or the other.

The whole thrust of this legislation is to assure the elderly of this country that their checks will be forthcoming, that the working men and women of this country who are on the work force today will be able to expect that their social security benefits will be forthcoming when they retire. We have been battling this up and down the road. All I hear is nitpicking and politicking about what the effects of the politicking is going to be.

The truth of the matter is that we have a responsibility in this Congress, a responsibility to enact the funds that are needed to enact the taxes that are needed. Do we hear of anybody who is opposing this bill recommending cutting down on the benefits? Oh, no. Look down through the rollcalls in the RECORDS, down through the years—they have voted for everything. They want to be loved by everybody, but today here we are setting legislation, as the chairman of the Ways and Means Committee has so well pointed out.

A vote against this bill is a vote against the elderly of this country, and that is the way it is going to be classified. A vote against this bill is a vote against the working men and women of this Nation who expect that those benefits will be there when they reach retirement age.

There are no two ways about it; you are not going to be loved by anybody if you vote against this bill. Believe me, you better have your asbestos pants on once that happens.

Mr. CONABLE. Mr. Speaker, I yield 5 minutes to the gentleman from California (Mr. KETCHUM).

Mr. KETCHUM. Mr. Speaker, as I listened to that silver-tongued orator, the chairman of our committee, I almost got confused enough to vote for this conference report, he made it sound so good. As a member of the conference committee we are bringing you today the Carter tax increase bill of 1977, and one can define it no other way, because it is a tax increase bill, make no mistake, and it is the Carter bill. As the gentleman from New York pointed out, it is the greatest tax increase in peacetime history.

Yet, the chairman points out to us that we can go home, and if we get a chance to get a word in edgewise with those working folks, we can tell them all the wonderful things we are doing for them here. Why, we are going to reduce that earnings limitation down to age 70. Now, that is a step in the right direction, but this House voted to eliminate the earnings limitation at age 65.

The chairman, when we were debating that issue, said that is just going to benefit rich folks. Well, I submit that there are rich folks at age 70, so I really do not know what the difference is. But, the House voted to eliminate the earnings limitation at age 65.

The conferees on the part of the House debated that issue, oh gosh, almost 5 or 10 minutes before they receded and accepted the Senate's version. I was constrained to comment during the process of the conference, after receding and receding and receding until our bill was not even recognizable, that I was going to ask Allen Drury to ghostwrite a book for me called, "Recede and Accept," because that is all we were doing.

Nobody has mentioned, or at least very briefly mentioned, all these marvelous welfare benefits. I do not know what that has got to do with social security, because the Ways and Means Subcommittee on Public Assistance sent a bill in June to the Senate to which all of these could have been attached, and as a matter of fact were attached, but was just never sent back here.

Now, you go home and tell those working men and women that you have really done a whale of a job for them. Now, Mr. ALLEN, my friend from Tennessee, asked the most pertinent question here: No matter what happens, whether we pass or fail on this bill today, it is not going to make a bit of difference—not one iota of difference—next year. And, he is right. It is not.

Then, the chairman said, "You go home and tell those people that the chairman of the Ways and Means Committee promises them that, in any event, we are going to change this so that this bite will not be so hard." I submit that if he can do it in 5 years, he can do it now.

As a matter of fact, as the gentleman from New York (Mr. CONABLE) suggested, those alternatives were placed before the Committee on Ways and Means. We are doing so much bullet-biting around here, we might as well bite one now and bring in the Federal employees, cover everybody, raise the age of retirement in 20 years, but do it gently. We could have done that. We could have had a bill. We could have had a good bill, one we could be proud of, and it could be done next year. There is no race to get this bill done. I submit to the Members that when they go home I do not know who they are going to be able to sell this program to, because they are liable to be asked two questions. One, our constituents are going to say, "Mr., Mrs. or Ms. Congressman, did you vote for that massive tax increase?" And if the Members must reply in the affirmative, I hope that their constituents ask them the next logical question, "Do you Congressmen have to pay this tax?" And when the Members tell them, "No," that is when the Members better have asbestos pants on, because they are going to have to be honest and tell them that they do not.

So I would hope that this body would exercise some judgment and turn down this conference report, and let us see if the Chairman of the Committee on Ways and Means can deliver on his promise that we can indeed structure this mechanism in a way that it will not be so onerous on our taxpaying citizens.

Mr. CONABLE. Mr. Speaker, I yield such time as he may consume to the gentleman from Washington (Mr. CUNNINGHAM).

Mr. CUNNINGHAM. Mr. Speaker, the radical increase in social security taxes is presented to us today in the form of the conference report on H.R. 9346. It will burden the taxpayers of the country and the employers as well with a rapidly rising wage base and rate assessed against those wages.

We are told there is no other way to bail out this faltering program but to throw good money after bad. That timid approach to real reform leaves me cold.

I want to make certain that people retiring are sure of receiving a fair share of their contributions. I do not want to abandon these people to the uncertainties of their future. But neither do I want to saddle future generations with outrageously high taxes when there might be a real answer in true social security financing reform.

We are told, cynically, that the administration cannot offer people an election year tax cut without this 1977 non-election-year tax hike. This is the most callous explanation that I have ever heard. It is the old case of out one pocket, in the other.

The American people should call those Members to account who vote for this tax increase. They are big spenders, not true reformers. And they should remember next year when they are magnanimously bragging about a great tax cut the bitter prelude which they are giving American citizens and businesses today.

I urge a no vote on the conference report so that we can truely reform social security.

Mr. CONABLE. Mr. Speaker, I yield 6 minutes to the gentleman from Texas (Mr. ARCHER).

Mr. ARCHER. Mr. Speaker, I was a member of the social security financing conference, but I also did not sign the report. I can think back to the Congress in 1971 and 1972 that passed a 30-percent increase in benefits to social security recipients in 1 Congress, 10 percent in 1971, another 20 percent in 1972. The latter 20 percent was not accompanied by any tax increase whatsoever, and I voted against that. So I would say to the chairman of our committee that was the tough vote for me. But at that time I predicted the deficits that were coming in the social security program. Had that 20-percent increase only been 10 percent, we would have no deficits today. We would not be on this floor today, because benefit increases far exceeded the cost of living and they were politically motivated, as every Member of this Chamber knows. And so we have the problem that we have today.

Parts of the report we are considering would improve the social security structure substantially, particularly the provision that decouples and overcomes part of the additional problem that was created in 1972. It stabilizes wage replacement ratios in future benefits.

I also approve of freezing the minimum primary benefit and I think it is a step forward to permit widows and widowers over 60 years of age to remarry without losing their benefits, without having to "live in sin" in order to receive their benefits. But I cannot support the oppressive tax increases which this report provides. They represent a potentially dangerous blow to middle-income and self-employed persons in this country, and they clearly would serve as a depressant to capital savings which we do desperately need to reinvigorate our economy. Small businesses are going to be adversely hit, less able to cope with these increases than major corporations.

Many cost figures are being tossed around today in the debate on this report, and I do not want to add to the statistical barrage. But I do think it is important to note that this legislation will cost those wage earners who earn $20,000 at least $838 more per year than under the present law over the next decade, and it will cost those who earn $10,000 a year $386 a year more. To some observers these may not seem to be awesome amounts, but to the wage earners themselves, from whom I have heard in great quantity, they loom large, indeed. For most of them, this bill offers nothing; for all of them it takes away.

Possibly the worst feature of the bill is its drastic increase in the maximum taxable earnings base. This was done based on the uninformed view that it is a wonderful financing method, and that is not the case at all. What really happens is that benefit liabilities for the future are raised, offsetting a large part of the additional revenues that are obtained in the near term. It actually is, to a large extend, a "fly-now-pay-later" approach. The result is to put more of the economic security responsibility of the Nation on the Government and thereby less on the private sector and on individuals.

The most illogical segment of the scheduled increases in the earnings base takes place from 1980 to 1981, when there is a huge jump of $3,800 in 1 year, from $25,900 to $29,700. Half of this actually occurred because of a technical blunder.

When the so-called Fisher amendment to remove Government employees from compulsory coverage was adopted, it carried with it what was supposed to be adequate financing to offset the coverage lost. Part of this financing came incorrectly from a further increase in the earnings base of $1,800 over what the committee originally intended. This should never have been done, because there is no valid relation between the level of the earnings and the coverage of Government employees.

In addition, this bill still leaves the social security fund in a long-term deficit of over $1 trillion when paid over the years ahead. That is based on actuarial estimates that presently call for roughly a 5½-percent increase in the CPI, reduced to 4 percent for the balance of the years ahead. If we can hold inflation in this country to 4 percent, with the Nation's deficit spending going on, it will be a miracle indeed. I do not think anybody believes the rate of inflation will stay at 4 percent or less. These projections are inadequate and inaccurate, and portend even larger deficits in the light of reality.

Those are a few of the problems I see, Mr. Speaker. We could have worked this out in a different way. I cosponsored with the gentleman from New York (Mr. CONABLE) a comprehensive method to solve the social security program's problems which he mentioned. Unfortunately, that was not accepted.

When the full import of this legislation is felt across the country, the words of warning of the Republican Members during the past 7 years about the dangers inherent in rising payroll taxes will finally get the attention they deserve from the American people. Because we then may face a different kind of social security financing crisis—one involving taxpayer revolt.

Mr. Speaker, I urge a vote against the conference report.

Mr. ULLMAN. Mr. Speaker, I yield 2 minutes to the gentleman from Louisiana (Mr. WAGGONNER).

Mr. WAGGONNER. Mr. Speaker, the easy answers for financing social security are all gone. There are no easy answers left. All we are left with are bad alternatives, and I submit to the Members that this conference report is the best of those bad alternatives.

What are our options? Our options are, first, to do what this conference report proposes. This legislation does a number of things that many of you are interested in, and in spite of what some say, it does improve the present social security system. It is a better bill than the House passed and better than the Senate passed.

This does raise taxes, but it raises benefits later for people who pay those taxes, and salaries are going up from which to pay those taxes. I dislike this as much as anyone but it is necessary.

This conference report maintains parity, and many of those who oppose this legislation will admit that has been a big argument. We do not unbalance the employer-employee contributions.

This does not allow Treasury borrowing, and many of the Members who are opposed to this conference report have been opposed to Treasury borrowing. You say it would convert social security to a welfare program and I agree.

The conference report does decouple. It corrects the mistake we made in 1972. It stabilizes the trust fund, because the actuary says that the OASDI trust fund will be stabilized until the year 2030. The DI trust fund will be stabilized until the year 2007, and the combined trust fund will be stabilized until the year 2027. If we do not do this, the DI trust fund will be bankrupt by 1979.

The OASDI trust fund will be bankrupt in 1982. What will you do then? I will tell you what—you will borrow from the Treasury.

Put it off until next year? How many of the Members are going to have nerve next year to raise the tax rate and stabilize the trust fund when it is an election year which we do not have now? Few indeed, because most of you will be trying to save your political hides instead of social security.

Bite the bullet? You will be biting marshmallows then because you will not bite that bullet now. You are going to run from it. How many of you will change your minds between now and January? Few if any.

Mr. Speaker, the second alternative to this is Treasury financing, and Treasury financing is what many Members have been trying to avoid, but that is what you are going to have if you vote against this conference report. If you vote against this conference report today you are casting a vote for Treasury financing of social security when the trust fund goes broke and that is just around the corner. Can you live with that? I think not.

Of course, Mr. Speaker, there is another alternative and that is to do nothing ever. Just consign social security to the tube. Say to hell with it. And I submit that is almost what you are doing if you reject this conference report.

Mr. CONABLE. Mr. Speaker, I yield 2 minutes to the gentleman from Wisconsin (Mr. STEIGER).

Mr. STEIGER. Mr. Speaker, I was not on the conference committee, but I watched it carefully.

It is unfortunate that the CONGRESSIONAL RECORD does not allow us to reprint Herblock cartoons because this morning's cartoon said it all and said it well.

This is a ticking time bomb. It is a Christmas tree time bomb that this Congress is leaving for the American people if the conference report is adopted.

Mr. Speaker, I most respectfully disagree with those who say that this unwarranted tax increase is needed at this time. It is not.

For those who voted for the House bill, may I suggest that you take a look at the decisions that were made in conference that led me to the conclusion that this conference report is a step backward even from the House's version. The outside earnings limit was reduced from that which was adopted by the House, another significant step backward was taken in terms of equity between men and women in an effort to get rid of gender-based distinctions.

Furthermore, the tax burden imposed is higher than that proposed under the bill adopted in this body.

For those reasons, Mr. Speaker, it seems to me that the American people would be better served by rejecting the conference report and attempting to see whether we cannot convince the Committee on Ways and Means and the Committee on Finance in the other body of the sound alternatives that exist, which do not impose this kind of tax increase.

The conference report is a bad one, Mr. Speaker, and it ought to be voted down.

Mr. CONABLE. Mr. Speaker, I yield such time as he may consume to the gentleman from South Dakota (Mr. PRESSLER).

Mr. PRESSLER. Mr. Speaker, I am voting "no" on both the rule and on final passage of the social security bill today. Since coming to Congress, I have been a strong proponent of the rights of older Americans and the solvency of the social security system. But the Senate and the conference committee have made changes that detract from this bill. This bill is a mess. Since it does not go into effect until 1979—the year after elections—I advocate that we defeat this bill and roll up our sleeves to produce a good bill. Here in a nutshell are some of my objections:

First of all, the taxes in this bill are higher than the House passed version. The rates are higher. Also the earnings limitations has been restored for which I voted to eliminate on the House side. I am disappointed that the sex bias portions of the bill have been taken out. I have received dozens of letters from my constituents outlining their problems in obtaining the social security benefits that are rightfully theirs, but which are denied to them directly or indirectly due to sex.

The House bill eliminated this discrimination. If the House language had been adopted, husbands would not have to prove their dependency upon their wives for financial support; nor would such proof be necessary for widowers to receive benefits for dependent children.

I am also concerned about the changes in veteran's benefits. There exists within the present system a built-in hardship for our veterans. Each time social security benefits increase, veterans benefits decrease. If we are truly looking for reform we should look for long-term solutions to the difficulties veterans encounter with seesawing benefits. A short-term solution to this hardship would be to leave veteran pensions intact.

Another concern I have is that the tutition tax credit portion was taken out, although five other none germane amendments were left in. I am a cosponsor of a bill that would encourage a tax credit for post-secondary students. Also, I think that the actuarial and the tax rates and the tax methods of this bill are not as good as we could have. As I have pointed out above, this bill will not go into effect until 1979, the year after the election, thus we have a full year in which to correct it and I believe a defeat of the bill today would be good so we could go back to the drawing boards.

Finally, the bill does not contain something I have long advocated. Since coming to this Congress, I have voted against every foreign military aid bill based on my experiences while serving in the military and as a Rhodes scholar abroad. I have visited over 40 foreign countries and became convinced that our foreign military aid is a mistake. I have advocated transferring 20 percent of this foreign military aid into a social security effort. This would result in the solvency of the program.

In short, our priorities are wrong. We are taxing and taxing without carefully analyzing our Federal budget. For this reason, I have voted "no" on both the rule and the social security bill today.

Mr. CONABLE. Mr. Speaker, I yield such time as he may consume to the gentleman from Florida (Mr. YOUNG).

Mr. YOUNG of Florida. Mr. Speaker, today we will vote on the conference report to accompanying H.R. 9346, the Social Security Financing Amendments of 1977. There are several provisions contained in the conference report which would bring about changes in present law which I have actively sought to correct. As originally passed by the House, this legislation would have phased out the present limitations on outside earnings by 1982. Although the conferees did not agree to this language, they have agreed to increasing allowable earnings to: First, $4,000 in 1978; second, $4,500 in 1979; third, $5,000 in 1980; fourth, $5,500 in 1981; and fifth, $6,000 in 1982 with further increases determined by the state of inflation. The conferees have also agreed that in 1982 the age for those persons subject to the earnings limits will be reduced from 72 to 70. Although this action may not appear to be of great importance to some, for many persons living on a fixed income it will be of great assistance.

This legislation will also prevent a reduction in benefits for widows or widowers aged 60 and over who remarry. Many of our senior citizens were hesitant to remarry after loosing their spouse because they were faced with a reduction or complete termination of their surviving spouse benefits. I am sure that you have all heard of cases where elderly people were faced with living their remaining years alone or "living in sin" as some call it, because they simply could not survive without the income they would lose by remarrying.

We are all aware that the growing problem with the social security system is that as the average life span increases and as benefits of retired workers continue to rise, outgo from the social security trust fund is exceeding income. According to the 1977 annual report of the social security system's Board of Trustees, the disability insurance fund will exhaust its back-up reserves in 1979, and the retirement and survivors fund in 1983, unless Congress makes the necessary financial improvements. Because of this predicament, it is clear that Congress has to make some hard decisions as to the future direction of the social security system so that income to the trust fund will be adequate to meet benefits for recipients.

In view of this, the Congress really has only two options. Either to provide additional income to the social security trust fund or allow the trust fund to be depleted and fail to meet the financial obligation to the millions of Americans now on social security as well as those who have been paying into the program but have not yet reached retirement age. Incidentally, in Pinellas County, Fla., which is my home there are 230,000 people receiving social security benefits, and for many of them this check is their only source of income. As a consequence, this money is kept in circulation. Most of these senior citizens do not hoard their money or hide it away. They spend it. Pinellas County's economy is strengthened by the $50 million in social security benefits received in our county each month. These social security checks are cashed and spent with local merchants for the purchase of those services and items necessary to meet one's daily needs. If the $50 million put into the Pinellas County economy every month, via the distribution of social security checks, were to all of a sudden stop because there were no longer any funds in the social security trust fund, the businessman and his employees would be severely affected, as well as those social security beneficiaries whose income would stop. The basic decision which we have to make is this. "Is the social security program important enough to warrant imposing additional taxes to keep it sound?"

I share the concern expressed by many over the fact that the Federal Government has placed the burden of bailing out the ailing social security trust fund on businesses and working people, but actually, who else is there? These are the very same people who have always paid for every government-sponsored program in the past and who will continue to do so in the future—even those programs which are excessive and wasteful. At least there is little fraud and abuse in the social security program when compared with many other Government programs and the program benefits those with no other sources of income.

We should never ignore the fact that those persons who are now receiving social security benefits were at one time the very same individuals who paid for the educational benefits enjoyed by the current work force and also contributed to the social security benefits of those who retired before they did. As for those of us now working and paying into the social security program, one day we will be the recipient—rather than the financer—of the program and it will be our children and grandchildren who will be supporting the program.

There is no doubt that this bill increases social security taxes, but early in 1978 it is planned to give the American workers and businesses a general tax reduction that will more than offset this social security tax increase.

There are several strong arguments I could use to justify a "no" vote on this conference report. When the original bill was before the House, I voted "aye" on final passage which establishes my support for strengthening the social security trust fund. However, the conference committee has agreed to several nongermane amendments and under the rule providing for consideration of this report we were denied any opportunity to reject those nongermane amendments. Some of these nongermane amendments relate to the welfare program and should not be attached to a social security bill. Social security is not a welfare program and I object to making a social security bill a hostage vehicle for welfare legislation.

However, since the bill will have no effect for more than a year, that is sufficient time to attempt to correct those problems and I intend to support this bill.

Mr. CONABLE. Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. HYDE).

Mr. HYDE. Mr. Speaker, we are being asked to support the social security conference report—a report which is being represented as "insuring the soundness of the social security trust funds far into the future," which includes a huge tax increase. It is interesting to note that the conferees decided not to make the increases effective until after the 1978 elections.

For the highest paid workers, social security taxes deducted from paychecks will triple over the next decade. Social security taxes for the lowest-paid workers will increase 20 percent. Conservative estimates of the cost to American workers amounts to $227 billion in new payroll taxes by 1987, on top of increases already built into the law, and on top of proposed increases in the President's energy tax bill.

Obviously, the incomes of those American workers will increase over the next decade, but will their income triple as these taxes do? Not likely.

Reform of the social security system is imperative, but not by simply squeezing more dollars out of the American taxpayers. This Congress is applying a band aid to a gaping wound by passing this legislation.

The basic principles of the social security system must be reevaluated and restructured to provide more solvency and equity for those paying the taxes and those receiving the benefits.

Responsibility demands that this Congress immediately undertake a constructive overhaul of the social security system—reform that is desperately needed since enactment of the program 41 years ago.

The Republican social security alternative, which we have been prevented from seriously considering, was designed to enable the 34 million Americans who benefit from social security today, and the 100 million who contribute today in the rightful expectation that they, too, will benefit when their time to retire comes, to be confident that the system is operating on a sound and equitable basis.

While I disagree with some provisions, at least the Republican alternative would place the social security system on a sound financial basis for at least the next 75 years, with no increase in taxes beyond those already mandated by law, until at least 1982. After that, taxes would increase a total of 1.5 percent, in three stages, over the 75-year life of the proposal.

The Republican alternative dealt with the long-term demographic problems posed by the changing composition of American society, and recognizes the enormous changes that have taken place in both population profile and in lifestyles since social security was first enacted.

In 1940, only 15 percent of married women held jobs. Today, half of all married women under the age of 60 are in the labor force. The Republican social security alternative included a number of proposals to redress inequities that work against women. The conference report calls for a study.

Mr. Speaker, sooner or later tax support for the social security system must be increased. But to substantially increase the tax in the face of our present economic instability, and with full knowledge that a tax increase will not solve the long-term problems of social security funding, is both foolish and ineffective.

The conference report represents the largest peacetime tax increase of any kind in recent memory, one which imposes massive new social security taxes over the next decade. We cannot continue to raise taxes on employers and employees. The working man and woman has a difficult enough time making ends meet. Employers will be left with only one recourse—raise the price of goods and services, which will only be counterproductive to our attempts to stimulate the economy. Hiring new employees will be discouraged by this program, when it should be encouraged instead.

Sooner or later we will have to reform the social security system, but we must do much more than simply increase taxes. Medicare should be taken out of the social security system, where it doesn't belong. The OASDI program is financed from taxes on covered earnings, because the benefits of the program are always related to the earnings of a worker-taxpayer. This is true even when the beneficiary is a spouse or dependent survivor. The same principle does not apply to benefits under part A of the medicare program. There the amount of the benefits is determined by the hospital and related health care costs of a particular person, and bear no relationship whatsoever to his wages or those of anyone else.

Governmental employees could well be brought into the social security program prospectively without disturbing existing pension rights of present government employees.

These are but some of the far-reaching but essential decisions that must be made if we are to really accomplish what we agree must be accomplished: the reform and solvency of the social security system.

I am sorry the rule was adopted, waiving points of order to the several nongermane amendments added to this already unfortunate legislation. These make an already poor situation even worse.

I hope my colleagues will vote no as I intend to on final passage.

Mr. CONABLE. Mr. Speaker, I yield such time as he may consume to the gentleman from Ohio (Mr. Ashbrook).

Mr. ASHBROOK. Mr. Speaker, I have serious reservations regarding the conference report on H.R. 9346, the Social Security Financing Amendments of 1977. Although we need to take steps to insure the fiscal integrity of the social security system, the bill before us is not the best answer to the problem.

Of most concern is the tremendous hike in social security taxes that would result from enactment of this legislation. Both the tax rate and the wage base would be substantially raised. It is estimated that this proposal would mean $42.8 billion a year in new taxes by 1987.

Low- and middle-income wage earners would lose a larger chunk of their salaries. By 1990 the social security tax rate would stand at a full 7.65 percent. This is a heavy burden for working men and women to carry.

Higher income people would experience an even more dramatic jump in taxes. A worker making $25,000 a year, for example, would find his taxes increasing about $600 a year in just 3 years.

American workers are already finding it difficult to make ends meet. Salaries are not keeping pace with inflation and the growing Federal tax bite. H.R. 9346 would mean an even heavier tax load for the people of this country.

The new tax increases would also be a blow to employers. They would be forced to somehow come up with the money needed to meet these additional costs. Small businesses and those with thin profit margins would be hard hit.

Imposition of such an onerous tax burden on our Nation's wage earners and employers would be a serious mistake. It is especially wrong at a time of high inflation and large unemployment. The American people deserve better from the Congress.

The problem is that we have gotten away from the original purpose of social security. Welfare-type programs unrelated to the protection of older Americans have been added to the system. The inclusion of these social welfare programs has been a major factor in pushing the social security system toward financial chaos. It is a mistake to enact the large tax increases proposed in this bill without first taking a hard look at the welfare programs which have caused the fiscal difficulties.

On the bright side, however, a provision adopted by the other body to assess a higher tax on employers than employees was rejected. This would have dried up needed investment capital, added to the unemployment problem and resulted in higher prices for goods and services. Fortunately the traditional 50-50 split is maintained in the conference report.

Another bright spot is in regard to the earnings limitation on social security. Currently, social security recipients are permitted up to $3,000 in annual earnings. Every $2 earned by a recipient beyond that amount results in a $1 loss in benefits.

The conference report would abolish the earnings limitation for those 70 and older. In addition, it would raise the limitation for those 65 to 69 years of age to $4,000 in 1978, $4,500 in 1979, $5,000 in 1980, $5,500 in 1981, and $6,000 in 1982.

Frankly, I preferred to go even further. I supported a successful amendment in the House that would have provided for a gradual phaseout of the earnings limitation. This seems only fair to our nation's older Americans. Although the conference report does not go as far as I would wish, nevertheless it is a major step forward.
